I one time wrote an essay which was printed in the Boston Transcript and which gained wide currency on "Negro Radicals and Conservatives." That was nearly a generation ago. Since then times have changed and definitions have changed with them. In those days Dr. DuBois was considered our arch radical and Booker T. Washington our counterbalancing conservative. I was considered the daysman balancing midway between the two. Since then the world has moved rapidly towards the left. Robert R. Moton, the legatee of Booker T. Washington, is still our outstanding conservative in that he holds fast to the things which have been proved to be good by experience and is wary of new and experimental doctrine. DuBois has drifted to the Right so that now the only difference between him and Moton is what Lord Macauley used to call a difference without a distinction. I will adhere to my original position of proving all things and holding fast to that which is good.

Since the World War there has sprung up a group of irresponsible radicals who revel in doctrinaire theories without any political, social or moral responsibility. Dr. Washington and his spiritual descendant, R. R. Moton, felt or feels a keen sense of responsibility for the present weight and pressure of the race problem. Mr. Washington used to say that his soul sustained a pressure of ten thousand pounds to the square inch. Dr. DuBois arrogated to himself the sole proprietorship of the propaganda which combatted all that Booker Washington stood for. If Booker Washington was the thesis, DuBois was the antithesis. He took his task seriohsly, but our modern day Negro radical show a lackadaisical indifference to the awful possibilites of the drastic doctrine which they release. They ridicule or condemn the church, the state and the present social order, and leave the poor Negro at the mercy of whatever disaster the outcome may hold for him. When Langston Hughes says "Good bye Christ" he may as well say farewell to common sense and human hope. The radical Negro is atheistical, and believes neither in God nor man. He is the product (1) of Northern Universities where he takes in undigested things, (2) Negro colleges, whose religious and moral moorings set by the missionaries and philanthropists he has abruptly broken, (3) foreign reenforcement; I have somewhere defined a Negro radical as an over-educated West Indian without a job. There is one peculiarity about the radical West Indian, they are as meek as Moses and submissive as a lamb while in their native country, but crossing the seas seems to fill them with the spirit of irresponsible revolt. (4) The self-educated variety—George S. Schyler, is the most cynical and caustic of that group. As a whole, they are incbriated with the first effects of a little learning which has always been a dangerous thing Chafing under severe restraints, they kick against the pricks for the sake of exercising their heels.

In order to be a genuine radical, one must be economically self-sustaining or economically indifferent. Socrates, Jesus Christ, John the Baptist, John Brown and Mahatma Gandhi spurned the alurements of wealth and power. But our would be Negro radicals never disdain to be thrifty. I have often said that William Monroe Trotter was the only Negro I know who willingly and of set purpose made a material sacrifice for the cause. The others are on the make. No man on a pay roll ean be a radical. He must needs subordinate his conscience to his job. A pay roll man must guage his radicalism by his rations. Society has built up and approved certain values and vested interests. It employs orthodox agents to safeguard and maintain these sanctioned values. Now the radical is at times necessary, else there would be no progress. But he must deny himself and take up his cross and be willing to carry it all the way to Golgotha.

We hear much about freedom of speech and conscience in our schools and churches but this freedom is of necessity limited to allowable latitude permitted by those who set up and allow existing order. If a preacher wants to overthrow the Church, he should have the courage to withdraw from the ministry and fight from without. If our Negro raicals are not satisfied with Negro schools and colleges, let them use all legitimate remonstrance for improvement from within, and then failing, resign from the faculties and fight like a man from their own foothold.

I am neither a radical nor a conservative; I am by nature and persuasion an ameliorist. I believe in using every feasible means, with dauntless courage, to change the bad into the good, the good into the better, the better into the best, and the best into the beatific.

I would that all educated Negroes were even as I am, in this persuasion. We are facing a dubious future. In this changing world, none have the vision to foresee what place any off-colored group will have in the final form of adjustment. The Negro race is about to be battered with the shocks of dooms. The signs of the times tell us that the day is at hand. I once called the "Negro Sanhedrin" for the purpose of taking wise heed of impending dangers. The time was not then ripe. The race mind was not then ready, but now it requires no soothsayer to see the portends at hand. We should be able to look to our educated young men and women to dream dreams and see visions. The old leadership may, in many respects, have proved incompetent to grapple with the issues of their day and generation, but, alas, it is too painfully obvious that the present day Negro radicals are woefully inadequate to the requirements of this day and hour.

CATCH HADDOCK OF GOLDEN COLOR

BOSTON, Sept. 17—A five-pound haddock with skin of a vivid golden hue, caught by a member of the fishing schooner Reliance off Chatham, was brought into port here to excite the curiosity of wharf habitues. While golden haddock may be found once or twice in the course of the year by fishermen, this is the first specimen which was entirely golden, the average golden haddock being colored only on the back.

PIGEON FLIES HOME FROM MOUNT HOOD

Portland, Ore., Aug. 5. —It took two homing pigeons a short time to get their bearings when they were released from the top of Mount Hood recently, but after a few minutes of reconnoitering they started for their home loft, seventy miles away. The birds were carried to the peak of the 11,225-foot mountain in a pack by their owner John A. Beckett.

SNAKE CAUSES FORCED LANDING

ROCKLAND, Me., Sept. 17—When Jack Dodge, aviator, took off one afternoon with two women passengers he was horrified to find a snake crawling around one of his legs. Dodge had his ship up 300 feet when he first noticed the reptile. He kicked at the snake and as the plane began to move crazily the women passengers were startled. Finally shaking the snake off his leg Dodge made a quick landing. The snake was a milk adder 4 feet long. —Herald and Examiner.

PEARL BUTTON MANUFACTURE REVIVED ALONG MISSISSIPPI

Keokuk, Ia., Sept. 17.—(Special) —The pearl button industry, one of the most important in this Mississippi river region ten years ago, is facing a revival. Announcement was made today that the Canton, Mo., plant, closed for months,, will reopen in 30 to 60 days with a large force of operatives.

GETS CHECK FOR $21,150 FOR 1,031 HOGS HE RAISED

Muscatine Ia. — Fred Kaufman has received check for $21,15[illegible] for 1,031 hogs raised on his farm and delivered today to Muscatine stockyards. The hogs weighed 327,890 pounds and were a record single Muscatine shipment.

BOSS OF HEN FLOCK LAYS UNUSUALLY SHAPED EGG

Rock Island — When a hen lays an egg its not news but when a hen which is the boss of a flock lays freak eggs everyday—that is news. Mrs. E. Durham, 1120 Seventh avenue, Rock Island, owns such a hen. The hen's eggs look more like almost everything else than they do eggs. Three guesses as to what one was resulted in answer of a sea shell, a mushroom and a baby's rattle.

RARE PINEAPPLE STOLEN IN BOSTON

BOSTON, Sept. 17.—Right from under the nose of the equestrian statue of General George Washington, in the Boston Public Gardens, probably in the early morning before dawn, someone stole a pineapple. Of course, that in itself would not be important, but it was the only one of that variety of tropical fruit ever grown in this northern clime, and Superintendent Richard Hayden, of the Public Garden, was proud of the specimen which he had nursed along carefully.—Herald-Examiner.

American Legion To Hold National Meet In Miami, Fla.

Miami, Fla., Sept.—(ANP)—The National American Legion Convention will be held in Miami, on October 22 to 25. At this time the city will be host to upwards of 100,000 legionaires and their families. Probably 1,000 of these visitors will be Negroes unless they are deterred by the impression generally held throughout the country that Miami is virulent in its segregative attitudes. While Negro Legionaires officially will have their place in the American Legion Program, their entertainment and housing will be the responsibility of the Negroes of Miami.

A joint committee from the Greater Miami Negro Civic League and the World War Veterans Organizations, has direction of the Community efforts in housing and entertaining the visitors. Headquarters have been established at 1022 N. W. 2nd Avenue, with Mark J. Young in charge.

The American Legion 1934 Convention has endorsed the Liasion Committee and is cooperating with it according to members in every way possible. Among entertainments to be provided will be Dancing, Boating, Sea Bathing, Fishing, Boxing, Football and Sightseeing. Board and lodging will be provided at reasonable rates. Proprietors of hotels and apartment houses are looking forward to the convention with no small degree of pleasure, and all Miamians will share in making it pleasant for the visitors.

Inquiries have come from as far as Los Angeles, California. Legionaires are anxious to know just what is being done in Miami toward caring for colored visitors.

The personnel of the committee is K. L. Pharr, H. H. Green, A. F. Twint, Executive Committee: Dr. J. R. Scott (President), Dr. H. H. Green (vice president), M. J. Young (Executive Secretary), A. F. Twine (Assistant Secretary), James A Espy (Treasurer), A. Lemon (Housing), Willie Slater (Entertainment), H. E. S. Reeves (Publicity), Tim Butler (Chairman of Decoration and Field Marshal).

GREEN CORN COMPARES WITH POTATOES IN FOOD VALUE

Green corn compares favorably in food value with potatoes. It carries important minerals in small quanties and some of the vitamins. Corn must be chewed thoroughly to insure proper digestion. A sharp knife run lengthwise through the kernels, breaking the skin, makes it easier to digest. This is particularly recommended for children.

RESOLUTION TO END ALL DISCRIMINATION IN CIVIL SERVICE TO BE OFFERED AT CONVENTION OF FEDERAL EMPLOYES

Document Cites Fact That More Than Ninety Per Cent of Colored Employes Are Put in Custodial Service

New York,—When the National Convention, American Federation of Government Employees, meets at the Hotel Pennsylvania on September 10 to 12, George H. Ryeraw, president, will present the following resolution deploring racial discrimination in federal departments and calling upon the present administration to end it.

Whereas, The Civil Service Merit System was meant to operate without regard to race, creed, religion or political affilition in appointments and promotions in the several departments and independent establishments, and:

Whereas, Hundred of colored people have qualified for appointment and promotion in the clerical administrative and fiscal, sub-professional and professional services but notwithstanding, more than ninety per (90%) of them are employed in one service, the custodial because of the failure of administrative officials to observe the spirit or the rules of the merit system, and;

Whereas, The public pay-roll is supported by taxes collected from all the various racial groups, therefore; Be it;

Resolved, By the National Convention of the American Federa- that it deplores racial discrimination in Civil Service appointments and promotions and urges the President of the United States to use the full force of his office in correcting such discriminations; and that all members and lodges are urged to cooperate to he utmost in helping to ferret out such discriminations, and that a copy of this resolution be forwarded to the President of the United States.

Bishop Wm. Johnson Stricken at Conference

Los Angeles, Calif., Sept.—(ANP) Bishop William Johnson, of the A. M. E. Church, was taken suddenly ill here following a conference in Yakoma, Washington.

The exact cause of Bishop Johnson's malady is undetermined and he is under the care of one of the city's finest specialists. His case was first diagnosed as neuritis, paralysis and other ailments affecting the knees, but his last physicians declined to make a definite statement until x-rays had been returned.

FRUITS ARE PRESERVED BY FREEZING IN ALASKA

NOME.—Canning methods in Alaska have a relation to modern freezing processes. To can fruit in Alaska, alternate layers of fruits and sugar are placed in empty butter kegs, which are set in the entrance hallway and frost-crystalized through the winter to keep the fruit in its natural state.

—Chicago Tribune.

Liberalism and Liberty

(From former President Herbert Hoover's "Challenge to Liberty" in the Saturday Evening Post of Sept. 8, 1934.)

"In haste to bring under control sweeping social forces unleased by the political and economic dislocations of the World war, peoples and governments are blindly wounding, even destroying, those fundamental human liberties which have been the foundation and the inspiration of progress."

Concerning the American scene, the former president writes:

"In every generation men and women of many nations have died that the human spirit might be free. In our race at Plymouth Rock, at Lexington, at Valley Forge, at Yorktown, at New Orleans, at every step of the western frontier, at Appomattox, at San Juan hill, in the Argonne are the graves of Americans who died for this purpose.

"From these sacrifices and in the consummation of these liberties there grew a great philosophy of society—liberalism. The high tenet of this philosophy is that liberty is an endowment from the Creator to every individual man and woman upon which no power, whether economic or political can encroach, and not even the government may deny.

"Out of our philosophy grew the American constitutional system. where the obligation to promote the common welfare was mandatory and could be made effective,. wherein was embodied in its very framework the denial of the right of the government itself or of any group any business, or any class to infringe upon inalienable rights; wherein the majority was to rule; wherein government was to be of laws and not of men; whereby the individual was guaranteed the just protection of these rights by its tribunals—the structure of American democracy.

Praises "American System"

"Out of these ideals, under this philosophy and through this structure we have developed the principles and forms of our social, economic and governmental life—the American system.

"The rise of our race under it marks the high tide of a thousand years of human struggle. Under it our country has grown to greatness and has led the world in the emanc.pation of men. When these boundaries of liberty are overstepped America will cease to be American."

BLACK HORSE TURNS WHITE OVER NIGHT

Ha.erhill, Mass., August 5. — William Takolfsky knew he put his black horse in the barn the night before, but when he returned in the morning a white horse was in its place— a miracle he thought.

The wonder of it all ceased when he diseovered that the animal had been painted by some jester.

HOUSEHOLD HINT

Never rub fine curtains on a board. To prevent their tearing squeeze gently in the soap suds so the suds is forced through the material. Rinse well.

Enemy of Colored Alabama Democrats Slated For Office

Montgomery, Ala., Sept.—(ANP) —Robert T. Goodwyn, Jr., brother of John L. Goodwyn, assistant city attorney, will be Mayor Gunter's hand-picked choice for the democratic nomination of a representative to succeed T. M. Arrington, deceased. To the political woes of colored people in this city and state will thus be added this, the elevation of public office of a man who gave orders to bar Negroes from voting in the May primary in Montgomery. Goodwyn's father is a member of the city board of education.

But Goodwyn's choice is not necessarily that of the democrats of Montgomery county, because the mayor has been convinced that there is serious doubt that his candidate could be nominated in the coming primary and is therefore denying the democrats the right to select their own representative in a primary election.

White Woman Sends $50 For Work Of N. A. A. C. P.

New York, Sept. 14—Mrs. Mary V. V. Blanchard of Carmel, Calif., has just sent her check for $50 o Miss Mary White Ovington, treasurer, National Association for the Advancement of Colored People.

She writes, "Enclosed please find my check for $50 to be used in the work of the National Association for the Advancement of Colored People. I am doubling my yearly subscription—not because my income is more—it is less than before—but my interest in your work is greater each year, and I wish most sincerely that I could do something really worth while and help you carry on this fine work. Perhaps some day I can do more."

Morgan College

TWENTY-TWO OUT DURING FIRST WEEK OF MORGAN PRACTICE

Twenty-two men have reported daily to Coaches Hurt and Hill, Bear Mentors, during the first week of practice, and football days have really come back as the Coaches put their charges through the rudiments of the game. No skirmishes have been held as yet, only exercises in blocking and tackling and other fundamentals.

The old men who have reported so far are: Captain Johnny Sturgis, "Bill" Simpson, Carl Drake, Otis Troupe, Frank Harmon, Hubert Crawford, Thomas Cheyney, Chesley Mack, Thomas Woolridge and "Bill" Lewis.

Among the new men who have been showing up well are: "Dick" Sowell from Newark, "Tom' Brown from Asbury Park, and Henry Lansdowne from Baltimore, at end; and "Ben" Hawkins from Newark, and Jesse Phillips from Baltimore, at tackle.

Next week the Coaches intend to hold their first scrimmages. They will be in a better position then to determine their chances of retaining their national championship.

Morgan-Union in a Night Contest

FARMER SEES BARN EXPLODE; DAMP ALFALFA IS BLAMED

Monona Ia. — While Enoch Mork was making hay in the field he heard an explosion and saw the roof of his barn flying in all directions and flames burst out. Damp alfala is supposed to have caused spontaneous eombustion. Barn, hog house, granary, and garage burned.

SHIP 'SHE' BECAUSE DIFFICULT TO HANDLE

New York, Aug. 5.— Commander J. G. Bissett, well-known Cunard Line eaptain thus tells why a ship is a "she:" After considerable research, I have come to the conelusion that the orgin of this custom is lost in the immemorial traditions of the sea, but the general opinion of seamen is that it is beeause a ship is difficult to handle espeeially in confined spaees.

COW 'BRINGS' MILK AT HONK OF HORN

RIDGEWAY, Mo., Sept. 17— Curb service on the hoof is the latest feature on Hershey Goodwin's farm near here. Instead of ealling the cow in; Goodwin drives to the pasture and honks his horn, Bossy, ever alert to her duty, brings her milk up to the gate.

The Federal Housing Administration promises that its activities will put five million Americans to work building and repairing homes and supplying materials.

AN OFFER TO....

Farmers Of The Nation

A plan for membership in the Federation and a yearly subscription of the Modern Farmer

ONLY $5.00 TO BE PAID

Any farmer who desires membership in the National Federation of Colored Farmers and who wants to read the Modern Farmer every month for a year, may have this membership and this newspaper for that period by sending a money order or a certified bank check or cash by registered mail for $5.00. Send this to the Modern Farmer, 447 4th Avenue, North, Nashville, Tennessee. We will certify to the membership and send the paper. You will get all of the benefits of the Federation of Farmers from the Chicago Headquarters Every Farmer should belong to the Association and read the paper This offer is for the months of September, October and November.

Send all mail to

The Modern Farmer

447 - 4th Ave., No., Nashville. Tennessee

PROMINENT SPEAKERS

(Continued from Page 1)

United States. Mrs L. A. Cauthen, of Chicago, writes:

"I will be on hand to meet my fellowmembers from all sections and especially those from my old state, Tennessee." Prof. V. W. Booth of southern Mississippi writes that he will head a big delegation from Jeff Davis County. Prof. W. F. Reden, former Mississippi educator, now of Sioux Falls, South Dakota, writes that he will attend. And many others are being received daily.

SUGGESTIONS

(Continued from Pag 1)

This treatment should be repeated in ten to fourteen days as it does not kill the eggs. All lime of whitewash should be removed from the roots before the nicotine sulphate is applied.

Scaly leg, caused by mites feeding under the leg scales, can be controlled by dipping the feet and legs in a solution containing two parts of raw linseed oil and one part of kerosene.

CORNSTALKS

(Continued from Page 1)

latter is valuable only in the area south of the Ohio river, according to local dealers. Red clover seed, country run, is salable in Chicago at $17.50 to $21.50 per 100 pounds with fancy recleaned at $23.00 to $25.00. Movement of sweet clover seed has been held up by unfavorable weather and is quoted at $7.50 to $8.00 per 100 pounds.

IOWA FARMER GROWING SIRUP FOR PANCAKES

(Continued from Page 1)

In making sorghum, the cane is ground by a power mill, the juice piped to an evaporating plant where it is boiled and thickened, requiring more than a half dozen operations. For about 48 days Mr. Shumate is assisted by his wife and five sons. His family has been on this particular farm for thirty years.

In spite of drouths, floods from the North Fabius river which all but drowned out the cane crops in a half dozen years, and other hindrances, including a fire which burned up the sorghum mill and its machinery, Farmer Shumate has been able to make a good living.

Grown on Rich Land

The land on which he grows his cane, 12 to 15 acres of it, is rich "bottom" acreage, disproving an old theory that the best cane comes from poor land. The Shumates have been making sorghum for nineteen years.

The AAA has not yet ordered him to plow under any of his cane acreage or to dump any of the finished product in the Fabius.

"NAZI" JEWS

(By William Pickens for ANP)

More than a year ago when Hitlerites launched their attack on the legal rights of Jews we wrote through the Associated Negro Press an editorial commending the unanimity with which Jews rallied all over the United States to the defense of the German Jew; thereupon Rabbi Stephen S. Wise, leading American Jew, wrote us his thanks, but called our attention to the strange fact that Jews are not united, not even against the extreme enemy. While a far greater percentage of Jews than of Negroes stick together in a common fight for their racial rights, some in both groups for personal and individual advantage, or because of their peculiar situation, refuse to "join up."

There is a group of Jews in Germany, chiefly in Berlin, which calls itself the "League of National German Jews," and who are trying as hard to court the favor of Hitler and his terrible gang, as ever Negroes in any part of the South ever tried to court the favors of local Negro-haters. They call themselves "National Jews",—which means "Nazi Jews". They advised their race to vote for Hitler in the sham election of August 19th; and they attacked the Jewish meeting in Geneva as "unwise", and assailed the boycott planned against German goods. While the great Rabbi Wise and devoted members of the Jewish race from all over the world stand ready to give their physical lives for their people, this little bunch of compromisers and boot-lickers in Berlin are ready to sell their honor for a "mess of pottage." Nobody expects them to say in Berlin what Wise and others can say in Geneva and in New York,—but they could keep their mouths shut; they could be silent and suffer, if need be, while others dare and do. They need not attack their rescuers, even if they dare not support them. But human nature is selfish,—often cowardly "white folks niggers"—"Nazi Jews".

Whatever gains are made in the forward struggle of any race will have to be made without complete unity or perfect co-operation within its own ranks. We need not call them "traitors": they are just humans "on the spot". And one who is on the spot is subject to different persuasions, almost to different logic and morals, than are those who are not so exposed. Even the cold-blooded, iron-nerved men may weaken in the moment when all the odds are against them: Napoleon retreated rather pathetically from Waterloo, and John Dillinger wanted to flee from the muzzles of fifteen police guns.

The Jews outside of Germany will have to save the German Jew: those inside must conform or shut up,—and some of them are too selfishly cunning to shut up. It was the Negroes outside of Arkansas who had to fight for the lives of those twelve peons: those within the power of Arkansas could do very little about it. Sometimes even the agitation from the outside hurts those who are on the spot,—but there are some evils in the situation which cannot be avoided, and which will have to be accepted. But when Hitler received a telegram from Berlin Jews "protesting" against the "meddling" by the Jews of the world. Hitler must have stuck his tongue in his cheek.

PRICE LIST SHOWS FARMERS CAN CUT FERTILIZER COSTS

How much the average farmer can save by purchasing higher analysis fertilizers without filler has been forcefully revealed since the schedules of retail prices submitted by the fertilizer manufacturers have been published for geographic zones under the NRA code. These schedules provide for accurate calculation of fertilizer costs. The results show that an increase in the plant-food content of a mixed fertilizer is invariably accompanied by a substantial decrease in the cost per unit of plant food to the consumer.

According to the findings of Dr. William H. Ross and Arnon L. Mehring of the U. S. D. A. Bureau of Chemistry and Soils, a farmer can save from 22 per cent to more than 30 per cent by buying a given quantity of plant food in a 5-20-5 mixture instead of a 2-8-2 mixture. The savings were revealed in actual prices prevailing in three important farming regions.

Analysis of the present schedules of fertilizer prices by these government scientists has shown that by complete elimination of filler from their fertilizers (as for example a 4-8-4 mixture) farmers of the Middle Atlantic states can save approximately 8 per cent in the cost of plant food. They pointed out that this is more than could be saved if the wholesale price of any one fertilizer constituent was cut in half.

Contrary to general opinion, said Ross and Mehring the plant food content in a mixed fertilizer can be double without changing its properties. In many farming regions the economies in lowered costs to the farmer are so great as to warrant wide-spread change in the present practice of using low analysis fertilizers. —Nashville, Tennessean.

ASPARAGUS FIVE FEET LONG

Julius Sutch, Madison, O., grew a strip of asparagus more than five feet long in a garden. —Chicago Tribune.

AAA TO GUARANTEE FARMERS $8 TON FOR THEIR CORNSTALKS

(Chicago Tribune Press Service)

Washington, D. C., Sept. 6.—To assure an adequate supply of forage for live stock this winter and to prevent undue price increases the Agricultural Adjustment administration with other federal agencies has decided to guarantee farmers a minimum price of $8 a ton for corn fodder or stover which heretofore has had no commercial outlet.

The decision is a part of a more ambitious plan to set up a central "clearing house" at Kansas City for the purchasing disbursing of livestock feed throughout the drouth area. Farmers without cash but with a fair credit rating will be permitted to borrow through the Far Credit administration for purchasing forage and feed supplies and where this is impossible, feed will be given them by the relief administration.

Underlying the plan for a price guarantee and central clearing house is a determination of farm officials to provide against depletion of livestock breeding herds which might result without government intervention.

Officials estimated about 10,000,000 tons of cornstalk that could be used for forage in the principal corn belt states were available. Agents of the AAA are now in the field taking a complete inventory of available feed and forage supplies. When this has been completed, the Kansas City Clearing house is to be established.

Junior Shoots His Dad For Scolding

Chicago, Sept.—(ANP)— Ernest Brown, 14 years old, 4938 Indiana Avenue, upon being scolded last week by his father, Ernest Brown, Sr., for reading wild west stories, shot and seriously wounded his sire and is in custody of juvenile authorities pending the outcome of the elder Brown's condition. Police officers arrested the young boy at the home of his aunt, Mrs. Marie Sledge, 19 L. 50th street, where he was found hiding under a bed. Belief that the lad was a mental case was advanced by Sergt. Napoleon Sutton and members of his squad who, upon interrogating young Brown, were told that his father had been feeding him "radium."

BUMPED ON HEAD, LOSES POWER OF SPEECH, TWICE

Carhondale, Ill., Sept. 17—(Special)—Sam Farley, 25, for the second time in the last few months was speechless, apparently due to a blow on the head. A few days ago he bumped his head on a desk and has been unable to talk since. When struck on the head the first time he was unable to use his voice for 15 days.—Chicago Tribune.

THE MODERN FARMER

Vol. VII. NASHVILLE, TENN., OCTOBER 15, 1934 No. 9

Editor Harris Comments on Letters

LAND OWNERS SEND INTERESTING LETTERS

Problems of Tenant Farmers Discussed for Benefit of all

I have recently received two letters. I believe the writers are publie spirited gentlemen, both frank and sincere. The writers are white men. I have reason to believe both are church members. I know that both are "Roosevelt" Demoerats, for they have said so. One writer lives in Chicago, Ill. The other lives in a rural Arkansas county. Mr. Lipowski, of Illinois, introduces himself thus:

"The writer is a Northern white man who has interests in a big plantation in————Parish, Louisiana. I know the Negroes' life, his faithfulness, devotion subordination, and if they are given the opportunity they do wonders."

The other writer, Mr. Sewall, of Arkansas, informs me:

"I own three large plantations and have been employing colored people all my life. Some have been on our plantations for years and have never worked for any family but ours. I treat them as they should be treated. I am satisfied with them and their labor and the very fact that they stick here with me is proof that they are satisfied."

Mr. Lipowski commented on an article which appeared in the July MODERN FARMER under the title, "Victims of the New Deal." He assumes that the article was elipped from the Republican press which he says rightly "is against the present Democratic administration and President Roosevelt's New Deal." He assumes also that Modern Farmer readers are mostly Republieans, probably because they are colored people. I will say right

The Biblical Wreck

A Rhode Island man leaned over to pick up a Bible from the floor of his car. The car lurched, struck a fence, was thoroughly demolished. If tihs wriver had ever read inelligently the Book he was reaching for he might have found out enough about patience and wisdom so that he wouldn't have taken his eyes off the road, his mind off his job and put himself in a position in whieh he lost control of his ear.

After all, the Bible has been thru a good deal and has waited patiently for men to eome to it and could well have waited the minute or two needful for the driver to pull off to the side of the road before reaching his hand to the floor.—Burlington Hawkeye Gazette

FARMERS-EDUCATOR ON COMMITTEE

Prof. L. B. Boler, a Farm Product Makes Good

The local committee of the Missouri units of the National Federation of Colored Farmers, Inc., which is working hard for the suceess of the annual convention of the organization which will open its sessions in Charleston, October 29, is headed by Prof. L. B. Boler, who heads the agricultural department of Lincoln Unit, the largest unit of the N. F. C. F. in Missouri.

Prof. Boler was born on a farm near Union, Miss., and attended the publie schools of Newton county, that state. He worked his way through high school and took his college eourse at the Arkansas A. M. & N. College. He has also taken post graduate work at Tuskegee and Hampton Institutes. During the World War he answered the call of his country and was discharged with the rank of sargeant.

Prof. Boler is the owner of a large farm in Mississippi county, Missouri and as a farmer mixes his theory with practiee. He is a wise adviser and a good leader. He believes in cooperation and his unit praetices it.

The committee is fortunate in having a man of Prof. Boler's ability as its active ehairman.

Explains Steps To Get Relief

The necessary steps for farmers to take to get relief under the Farm bankruptcy aet of June 7, 1934 and the regulations of the Frazier-Lemke bill have been fully explained by the Illinois agricultural conciliatory committee. Race farmers in any state who cannot come to any agreement with their creditors should follow these steps. Going through bankruptcy however is a serious matter for a farmer for it impairs his credit. The farmer should first petition the federal court and get the service of a conciliation commissioner and try in every way possible to keep out of baukruptey. It will eost $10 to get the services of the commissioner. The steps to be taken as given follows:

"When a debtor is unable to get voluntary settlement with his creditors and the county farm debt adjustment committee is unable to secure a voluntary settlement, the next step is for the distressed debtor to file application for conciliation with the federal court of his district.

"Under an amendment to the farm bankruptey act approved June 7, federal judges are instrueted to appoint a conciliation commissioner for each county. When a debtor applies to the federal court for relief, the case is referred to the commissioner, who endeavors to work out a settlement whieh is satisfactory to the majority of the creditors, both in number and amount.

"While seeured ereditors can not be required to seale down their claims, they frequently are willing to do so, in order to affeet a settlement. When such approval is ob-

WILL DISCUSS NEW DEAL

Main Topic of Discussion For Annual Convention in Charleston

Whether or not the New Deal has been a blessing or a curse to American Negro farmers may not be decided at the annual convention of the National Federation of Colored Farmers, Inc., which convenes in Charleston, Mo., October 29-31, but Race farmers from 21 states will tell their experiences in open meeting and the diseussions should be interesting and profitable. These delegates and visitors from all seetions will bring facts right from their own barn doors.

The efficient local committee is preparing to entertain the largest delegation that has ever attended a convention of organized farmers of our group. Prominent speakers will be present to instruct and entertain. The National seeretary will report on the work of the organization during the past year. Dr. Henry Allen Boyd, Secretary of the National Bapt. Publishing Board and prominent banker and Race leader of Nashville, Tenn., will deliver one of the main addresses of the second day's session. Manufacturers will exhibit their wares, some of the largest corporations in the nation having promised to send special representatives. Governors of eight states have commissioned special representatives.

All exeept the executive sessions will be open to the general public.

Seek Way To Breed Cattle With More Ribs

Providence, R. I.—More steaks or chops may be cut regularly from the average steer, lamb, or hog in the future if Brown University biologists can discover why some animals are born with extra ribs.

Advanced research into this problem is well under way at Brown under the direction of Dr. Paul B. Swain of the university department of biology. Dr. Swain is investigating hereditary transmission of an extra thirteenth rib in rabbits. This odd number of ribs, and oecasionally more, is sometimes found in swine, cattle, and other animals. Humans have been known to have an extra rib.

"With increased knowledge of the laws of heredity eontrolling sueh variations, it may be possible to breed eattle regularly with additional ribs and vertebrae," said Dr. Swain.

Any variation in the region of the ribs means extra steaks or chops, which are the most valuable cuts of meat. When the number of carcasses which pass through the nation's slaughter houses annually is taken into consideration, regular breeding of extra-ribbed animals would be of eonsiderable importanee to the meat industry.

Soy Bean Market Outlook Good

A WOMAN'S COURAGE

Editorial From Woman's Home Companion

We reproduee below an editorial from one of the best and largest of Amerieau magazines which should be read by every Race man and woman and child in America. We should read it and thank God for friends, our fellow eitizens of the white race, North and South, who can see the struggle so many of us are making for education and enlightenment, and bestow upon us their sympathy and encouragement. Again we have the proof that no matter how poor we are, no matter how hard the road, we can do what we want to do and be what we want to be if we only have—

COURAGE

"The Mother was a college graduate. Her own father had been blind for years. In spite of that, and even on his small salary as a preacher, he had contrived to get her a good education. In her turn she resolved that her children should go through college too. Perhaps when she made that resolve she did not expeet to have ten children. Nor could she have foreseen the depression. It was after the seventh baby was born that they lost everything, even their little Kansas farm, and had to move into the city. There her husband eked out a small living by doing odd jobs. She helped by writing squibs for farm papers and winning prizes with her recipes. One after another three more babies came along. Yet

Lieut. George Lee Writes Book

Delegates members and friends who attended the 1932 convention of the National Federation of Colored Farmers in Memphis, Tenn., remember with pleasure the stirring weleome address delivered Lieut. George Lee, General Manager of the Atlanta Life Insurance Co., Memphis District.

Mr. Lee has recently published a book entitled "Beale Street" which critics call the "saga of the southern city Negro." The book was selected the alternate book-of-the month for June. Mr. Lee has caught all that makes Beale Street one of the greatest Negro thoroughfares in the world. The book is interesting to southern people especially and from a historical standpoint it has no equal. It is stated that Lee wrote and re-wrote the book eight times. He worked for more than five years developing his subject and studying and writing. Another proof that nothing good can be gotten or produced without plenty of hard work.

The Modern Farmer congratulates Mr. Lee and wishes for him and his brilliant produetion mueh success.

NEW FIELD OPENED IN KANSAS AND NEBRASKA

Can be Used for Hay and Beans—Demand for Increase

Preliminary indieations are that Illinois farmers may find a satisfactory market for soybeans next year, say extension service economists.

It was estimated in the September 1 crop report that about 12 million bushels of soybeans would be harvested in the six leading soybean states this year, as compared with 10 million last year and nearly 12 million in 1932. The increase over last year in Illinois is equal to this total increase of 2 million bushels.

The demand for soybeans is strengthened by the crop's resistanee to drouth and chinch bugs and beeause a new market for seed is opening up in Kansas and Nebraska, where soybeans are increasing in popularity. Missouri's production is less than half of that a year ago.

Soybean acreage was increased from 192,000 in 1933 to 430,0000 this year in Iowa to supply emergeney demands. Because of the drouth, however, much of this acreage will be neither harvested for seed nor hay. About 100,000 acres of the total will be harvested for beans. Normally about 50,000 aeres are harvested.

At an estimated yield of 14 bushels per acre, this will result in a total outturn of about 1,400,000 bushels. This is only slightly more than last year because of the low yields per acre this year and is a further strengthening faetor on priees.

Soybeans—both for hay and beans—are reported to be in 65 per eent condition as compared with 85 per cent last year and an average condition of 1923-1931 of 88 per cent.

Mrs. Deanes Composes Federation Poem

Mrs. Mary Anne Deanes, member of the Cedar Bluff Unit, of the N. F. C. F., has composed a "Federation" poem which proves that she has caught the true N. F. C. F. spirit, the spirit of cooperation and loyalty. Three outstanding verses read:

"Ladies can your beans and peas,
It will make you live at ease.

"Stop a-trying to live alone,
It will make you weep and moan.

"Solomon deelares we will stand
If we tie our hearts and hands."

The N. F. C. F. congratulates Mrs. Deanes and is proud to have sueh a faithful and enthusiastic member.

CHILLICOTHE WOMAN GETS TOBACCO GIFT ON BIRTHDAY

Chillicothe, Ohio. — A drum of tobacco, shipped by a well-known company to one of its oldest users, was among the birthday gifts received Saturday by Mrs. Mary Elizabeth West in observance of the 100th anniversary of her birth.

From the time she was 10 years old— the same year of her migration over the mountains to Chillicothe — the aged colored woman has been a continuous smoker. Her physical condition is good except for slightly bad hearing. She refrains from housework but did some sewing over the week-end.

A firm believer in women's voting Mrs. West has always exercised her franchise and cast her ballot in the last election. For 75 years she has been a member of the Quinn Chapel A. M. E. Church.

Since none of her immediate family was particularly long-lived, attributes her century to maintaining a happy frame of mind, hard work and the fact that she has been an inveterate smoker. She lives here with her step-great grand daughter and blood third cousin.

Born at Richmond, Va., Mrs. West was the daughter of a free-born colored man who owned and operated a tobacco factory Her mother was an Indian squaw whose tribe formerly lived in the Blue Ridge section of Virginia.

With her brother, a Civil War veteran and other relatives, Mrs West journeyed to Chillicothe by covered wagon and has lived here ever since. She distinctly recalls the big fire which devastated the city in 1853, two years before her marriage to James West, well known as an outstanding fiddler and the city only weaver of carpets, shawls and coverlets.

About three years ago she cut six or eight teeth, the third set in her lifetime. Her one child died in infancy.

—Dayton, O. Forum.

DR. GEORGE HAYNES ON NEGRO CHURCHES

Oklahoma City, Okla.,— Speaking here to day before the National Baptist Convention, Inc., Dr. George E. Haynes, executive secretary department of race relations, Federal Council of Churches, New York City, declared that the Negro church today has a responsibility to train and support compentent consecrated, courageous leadership for the Negro people in three major fields: in morals and religion; in economic life; in civic and political life.

"The most powerful and important organization for group action and advance the interest of the Negro masses are their churches," said Dr Haynes, "With such a crisis in the economic, political, educational, moral and spiritual life facing them we may ask, Negro churches, what now? In the midst of the turmoil and confusion of our tottering economic and social order the race needs group action and leadership. This is a day when groups are organized for the protection and advancement of their members. The great industrial employers are organized into associations that speak and act for their members; employed workers in industry are organized into unions whose leaders speak and act for them; the planters in the cotton belt are organized to protect and advance their interests. What effective organized method of work do the Negro churches have?

"Negro laborers need an intelligent leadership. The Negro church is a workingman's organization. More than 90 per cent of its members earn their living by the sweat of their brow. The churches should select some of the ablest of their young people and give them elements of workers education; the churches should become the place where they learn about labor organizations and the technique orgauizations bargaining.

"The rank and file of Negro tenant farmers need leadership, and the churches are their best hope. But, alas, too many of the rural churches have absentee pastors.

"The Negro churches should furnish leadership in the civic and political field. Here their most important service is to secure competent, trustworthy Negro lawyer to instruct and guide the people. Negroes need legal advice to protect their lands and property from exploitation and to protect themselves from the denial of their liberty. They need competent legal counsel and defense when their lives and liberty are at stake in the courts, and when their cause is before legislative bodies. Radical groups have outstripped the churches in such service to working people. The Negro churches should furnish that leadership and go to the front for the masses of working people.

"The Negro churches have a call for leadership in the interracial movement. We stand at the cross roads in race relations. The doctrine which says that violence and hatred can adjust race relations is being widely heralded. The Ku Klux Klan on the one extreme and the communists on the other subscribe to this doctrine. If the Negro churches believe in the doctrine of love and fellowship which they profess, they should come into the arena and take their place with the conviction that they can overcome evil with good. There must be organization and leadership on both sides of racial lines if there is to be real interracial cooperation until the Negro bears his share of the responsibility through the highest type of leadership and moral and financial support. The Negro churches offer the greatest possibility for such leadership."

—Dayton, O. Forum.

FEDERAL MEN SPEED RUBBER PLANT TESTS

Goldenrod Is Believed Most Likely to Prove Valuable Commercially.

EXPERIMENT WORK SLOW

Guayule Shrub, Hevea Tree Also Undergoing Careful Trials.

If the price of raw rubber should ever be forced as high again as in 1923-27, the United States will be in a fair position to produce a good share of its rubber requirements.

Experiments by the United States department of agriculture —covering practically every important plant used for commercial production of rubber throughout the world— have singled out as the three most promising sources for domestic rubber, goldenrod, guayule, a shrub which grows well in the southwest, and hevea, the rubber tree of the tropics. Of these goldenrod is regarded as the most likely to develop commercially The transfer to the department recently of the Edison collection of goldenrod selections has given new impetus to the research program.

Rubber of good quality has been made from goldenrod, but the details of extraction and manufacture have not been developed sufficiently to produce rubber on a commercial scale. With present knowledge it would not be possible to make rubber from goldenrod at prevailing prices of about 15 cents a pound. However, experiments now in progress in the department lay the foundation for domestic rubber production in case of an emergency.

Guayule Being Grown

Guayule is a shrub native to Mexico and southern Texas which resembles sage brush and which can be harvested with machinery. Several thousand acres have been planted to guayule in California by a company interested in its development.

For maximum yields, guayule is harvested only every fourth year. Thus it would be necessary for farmers to have some assurance of a stablized price before this crop would be grown on a large scale. Because the whole plant is harvested, it is necessary to have a large area and a succession of plantings to insure a continuous harvest. It is a long-time, large-scale rotation.

Tropical Rubber Tree

Other sources of rubber which could be developed in this country if the price were high enough to warrant it include the hevea, the famous rubber tree of the tropics. The department now has 30,000 of these trees growing in Florida, some of them from seed produced there. There is every reason to believe that they will yield as well as those in the East Indies.

Another rubber tree which grows well in Florida is the Castilla, from Central America. It is not so resistant to frost as hevea, but it has a big advantage in that it yields a large percentage of its rubber at one tapping, a factor that would help to cut labor costs.

Rubber made from guayule and goldenrod in this country so far has not been so good as the imported product. With continued improved in methods of extraction, however, it is entirely possible that domestic rubber from these plants might be made to approximate that from the East Indies, in the opinion of L. G. Polhamus, who for several years has been engaged in a study of rubber plants for the department of agriculture.

Goldenrod Experiments

So far, solidago leavenworthii, one of the Edison selections, has the highest rubber ccontent of any of the goldenrods analyzed. Specimens have produced more than 12 percent rubber. Another species, S. fistulosa, selection by the department, has analyzed as high as 9 percent rubber. A third species which yields from 4 to 6 percent rubber is considered promising because of its greater leaf production.

In spite of the popular interest in goldenrod as a source of domestic.

Colored Bank Joins Clearing House

Washington, Oct., (ANP)—The Industral Bank of Washington, only colored institution of its kind operating here, was admitted this week as a member of the Washington Clearing House Association. It is the only colored bank ever to belong to the Association. Membership will greatly facilitate handling of checks, it is said.

DO YOU KNOW YOUR BIBLE?

1. What men were first called to fame and then doomed by the same prophet?
2. Who was advised to serve that he might afterward rule?
3. Whose hand was first withered and then cured by a man whom he sought to harm?
4. What swift runner was killed with the handle of a spear?
5. What crippled child was cared for by a king, and why?
6. What king had an income in gold of over nineteen million dollars a year?
7. Who rewarded with death the slayer of his worst enemy?
8. What psalm was probably sung as the ark of God was brought through the mighty gates of an old fortress?
9. Whose army was defeated by two hundred and thirty-two men?
10. Who lost his life by asking to marry his stepmother?

ANSWERS

1. I Samuel 10:1, 15:26; I Kings 14:2, 7-16. 2. I Kings 12:7. 3. I Kings 13:4-6. 4. II Samuel 2:18-23. 5. II Samuel 4:4, 9:1-13. 6. II Chronicles 9:13. 7. II Samuel 1:13-16. 8. Psalm 24. 9. I Kings 20. 10. I Kings 2:13-25.

THE CROW

With rakish eye and plenished crop
Oblivious of the farmer's gun,
Upon the naked ash-tree top
The crow sits basking in the sun

An old ungodly rogue, I wot!
For, perched in black against the blue,
His feathers, torn with beak and shot,
Let woeful glints of April through.

The year's new grass, and golden-eyed,
The daisies sparkle underneath,
And chestnut trees on either side
Have opened every ruddy sheath.

But doubtful still of frost and snow,
The ash alone stands stark and bare,
And on its topmost twig the crow
Takes the glad morning's sun and air.

—William Canton.

HUMBLE BUT BASIC PEANUT.

Philadelphia Inquirer: With the peanut, noisy mainstay of baseball fans and circus elephants, elevated by the senate of the United States to the list of "basic" commodities along with wheat, corn, cotton and hogs, the precedent is set for the similar dignifying—and regulating—of every farm crop.

Who shall deny to citrus growers that the squirty grapefruit is a basic commodity? Who shall cry down the assertion that the virile spinach though it transport into the home and the digestive tract acres of arable sand, is the crop that, if protected, will bring back prosperity?

Voluntary crop production is not proving very successful. As acreage is cut down intensive cultivation keeps production as high or higher than it was before. Legislation now being enacted by congress provides for compulsory crop limitation. Thus step by step the administration moves toward the full regimentation of agriculture.

One peanut, munched placidly, thoughtlessly, leads to another peanut. The peanut becomes a national symbol.

HEN'S EGG RECORD DOES NOT TELL WHOLE STORY

The egg record of the hen should not be made the sole basis for judging her breeding value or the breeding value of her offspring, cautions E. W. Henderson, head of the poultry department at Iowa State college.

Some of the important information that should be available in selecting breeding stock, Mr. Henderson says, is the weight of the hen, the size of the eggs, the percentage hatch of the eggs set, the growth rate and speed of maturity of the chicks, the livability of the chicks, and the egg production of the pullets.

The number of eggs produced by the daughters of the hen is a much better indication of her breeding value than her own egg record, Mr. Henderson asserts. Though the practice of getting such information is a rather expensive one, it is being followed extensively by progressive breeders.

A. F. of L. Head Accuses Negro Workers of Undercutting Wage

New York, Oct., (ANP)—In the October issue of Opportunity, William Green, president of the American Federation of Labor, takes upon himself to advise Negro workers.

His statement is calculated to arouse vigorous protest on the part of Negro leaders because of his failure to mention racial discrimination which is rife in the organization of which he is the chief.

He says in part

"Whenever any one group however small accepts sub-standard conditions, the wage structure for all is undermined. Although the labor movement has had every sympathy for the handicaps of Negro workers, willingness on the part of some to undercut standards of compensation and workmanship, have been the source of practical difficulties. While we appreciated the reasons for the situation, it is with frank gladness and relief we note the progress of these workers beyond the necessities which prevented them from working common cause with us."

Speaking of the Southern differential, he says:

"There is an immediate problem in many industries with which the advanced group may cope—the Southern differential which in so many cases means the determination of the industry to depress Negro wages. Opportunity for Negro wage earners lies not in undercutting wages for white workers but in cooperating for the elimination of such a differential."

Mr. Green concludes by urging Negroes to join the American Federation of Labor:

"All those Negro wage earners who want to undertake seriously the job of increasing their incomes and assuring themselves of definite work rights, should join the union of their fellow workers or apply to the American Federation of Labor for a charter.

"You can better yourselves if you are ready to make the effort. It will require courage and endurance, but what others have done you can do.

"The union is the first step.'

PROOF POSITIVE

"Oh, yes," said the pilot of the river steamboat, "I've been on this river so long I knew where every stump is"

Just then the boat struck a stump which shook it from stern.

"There," he continued, "that's one of them now."

HOW TO DOWN DEFEAT

What a new face courage puts on everything! A determined man, by his very attitude and the tone of his voice, puts a stop to defeat and begins to conquet.—Emerson.

Illinois Asked For Prisoner

Nashville, Tenn., Oct.—(A. N. P.)—Gov. Hill McAlister has sent a requisition to Illinois for the return to Tennessee of Walter Ellis, wanted in Shelby county for the murder of Joe Hooper in March, 1925. Ellis was arrested in Chicago.

EDITORIALS

From the Bible:—

"The Lord is my shepherd; I shall not want." Psalms 23:1.

Light

Just where the road is roughest
We find a helping hand.
Just where the burden's hardest
Kind friends beside us stand;
Just when the hours are dreary
A song of joy rings true;
Just when the days are darkest,
The sunshine filters through.
—Unknown.

THERE WILL ALWAYS BE KENNY BROWNS

Jack Brown, a prosperous colored farmer, has three sons. Two of the boys are doing very well. All are married and have families. The middle boy, Kenny, just can't make it for himself. He is a farm hand and not a very good one. No one will hire him by the month for he just won't stick that long. The community he lives in endures him but it would not miss him if he would go to town and go on "relief." He is living mostly off the labor of his good wife and children and the hand-outs he mooches from his relatives and the good white people.

We have been asked: "If the tenant and sharecropping system of farming is destroyed, what system will take its place? We reply, "The co-operative system,—each farm community a community of small farmers,—each farmer a member of the community cooperative organization. We realize the change will not come suddenly. Even now, many landowners are resorting to the "corporation system.' Large farms or plantations are being grouped and a manager is hired to supervise operations. Those who do the work are hired hands who work as needed, by the day, week or month.

The "corporation system" will fail because most farm hands will be Kenny Browns. Good farm hands will not stick. They will desire to be real farmers and if they are industrious and ambitious they WILL BE REAL FARMERS. A REAL FARMER CAN'T BE SATISFIED WORKING FOR THE OTHER FELLOW.

There will always be Kenny Browns. The communities in which they live will have to endure them. They will supply the extra help needed in the co-operative farm communities of the future. When there is no work for them to do the tax payers will have to support them.

Unless colored farmers are given special consideration by the "powers that be" there are going to be tens of thousands of Kenny Browns of our group. We do not want them or need them. We are willing to endure those we must have but why should we be cursed by any system of farming that makes,—or will make,—Kenny Browns out of thousands of us?

THE NATIONAL FEDERATION OF COLORED FARMERS

Several years ago we called this organization "The Organization For A Million." Almost a million of our group are farmers, tenants, sharecroppers or farm hands. Before the N. F. C. F. we had no national organization. The white farmers had three big ones,—the National Farmers Union, the American Farm Bureau Federation and the National Grange. Only a small percentage of American white farmers were members of their three big organizations. But one thing was sure and certain,—everything worthwhile they were getting and are getting today,—THEY WERE GETTING THROUGH OR BY THEIR ORGANIZATIONS. ORGANIZATION PAYS! IT ALWAYS PAYS!

Only a small percentage of American colored farmers have joined the N. F. C. F. Those who have joined and supported their organization during the past three hard years are men and women of faith and vision. They merit all the praise that can be given. They are the real farm leaders of our group.

In a few days we will meet in convention at Charleston, Mo., to "take stock." We will talk about our failures and successes. We will plan for the future. In spite of all difficulties THE N. F. C. F. MUST LIVE. IT MUST GO ON AND ON. IT CANNOT STOP. We have an organization worth supporting and we must support it. Let us back up our officers and leaders and may every member become a missionary and gather others into the fold.

CO-OPERATION

The Bible tells us that "no man liveth unto himself." Everything we do is tied on to that which others do. Because this is so, if we would get any real happiness out of life we must learn how to live together as we should. We must learn how to work together,—to love our neighbors and to do unto them as we would be done by.

This is not only good religion,—it is good old hard common sense. As a group of people,—an oppressed and mistreated group,—we can get nowhere unless we learn to get along together. Everyone should love his own job and should try to do the best he can if for no other reason but to get the satisfaction of knowing that what he has done he has done well. But he must also learn to apply the principles of co-operation. We must not want to come up ourselves and at the same time keep our neighbor down. All units of the N. F. C. F. should practice co-operative buying just to get a primary lesson in co-operation. Start it if you have not done so. It will do you good.

THE COTTON CONTROL TEST VOTE

Tenant farmers of the cotton states may soon have an opportunity to vote on the voluntary cotton adjustment program. It is probable that the voting will be confined to the Bankhead compulsory cotton bill.

We predict that when the method of voting is decided, it will be discovered that in some manner the landlord will be allowed to express the tenant's views for him. The tenant may have an opportunity to whisper but the landlord will be allowed to shout. But in any case, we hope he shouts the Bankhead law off the books.

The Bankhead law has been hard on the tenant and sharecropper. First,—it forced thirty per cent or more on "relief." Many tenant families picked up their few belongings and carried them on their backs to nearby towns and cities. Some might have stayed on the plantations and existed but why work for a full stomach when they could get filled up better and not work any? Then those who stayed on the plantations,—especially in the eastern cotton states,—have produced more than their allotment of cotton and can't sell it at the market price because of the tax. The landlords have gotten more than their share of all benefit payments the government has made and we are not certain how a majority of them will vote. But if tenants and sharecroppers are allowed to chirp or even whisper they will make a mighty racket. The Bankhead Act will go.

WILL "NEED-MORE" SOLVE THE RACE PROBLEM?

Reports from Coila, Miss., Carroll county, inform us that a teacher of the white group is teaching a school of Negro adults. There are half-a-dozen or more colored teachers in the community unemployed but none were given the job. The county relief committee picked the teacher.

The Race educationalists are kicking. Of course. Why shouldn t they? They have our sympathy. We feel that the relief committee has given them a pretty dirty deal. But who knows? Perhaps it is Providential. They may eventually be given jobs teaching white adults. Most all of us need to be taught by somebody. All of us need more of everything,—food, clothing, housing, money, knowledge, civilization, and religion. Old Man Need-more may even solve the big, troublesome Race Problem!

It is not too late to save more feed for your stock and food for yourself. Plant a good winter garden. If you do this you will be happy in case we have a long, cold winter.

Patch up the house and provide some conveniences for the womenfolk. Build a woodshed and get up an abundant supply of dry stove wood.

Get out of debt. Save all you can. Get ready to buy a farm and home. Don't trust the government to give you one. America expects every citizen to stand on his own feet.

Don't try to carry all the load of your N. F. C. F. unit. No one respects the big "I AM." Learn to work together and be agreeable.

Don't meddle with the private business or family life of your neighbor. Keep your own fireside clean.

Learn to want more and you will have more. A hungry cat will always catch the most rats.

A true friend is always a friend.

Don't expect your children to be perfect. Be wise and patient with them. You were once a child. Teach more and whip less.

Keep the MODERN FARMER coming into your home. Don't borrow from your neighbor who has paid his subscription.

ROOSTER GOES TO COURT; COMES OUT CROWING

Billings, Mont.—The court has upheld a rooster's right to crow in this city, irrespective of its effect on a nervous neighbor. The nervous one appealed to the Magistrate to do something about the rooster's noise-making every morning between the hours of 4 and 6. "My neighbor once had a bantam roster with a crow like a tin whistle," he complained. "I gave him $2 for the rooster just to get it out of he way. Then he bought a man-sized rooster with a voice like a fog horn. I can't stand it. I'm a nervous man. The Judge searched the statute books but failed to find legal grounds for stopping the crowing.

$1,900 FOR ALFALFA SEED

Garfield, Kansas—Despite the drought, A. H. Morrow, farmer near here, realized $1,900 for alfalfa seed after saving enough for his own use.

A BOON FOR THE SLEEPLESS

Those who have counted sheep to gain admittance to the Land of Nod will appreciate the following lines by the poet Wordsworth:

"A flock of sheep that leisurely pass by
One after one; the sound of rain, and bees
Murmuring; the fall of rivers, winds and seas.
Smooth fields, white sheets of water, and pure sky;
I've thought of all by turns, and yet do lie
Sleepless; and soon the small birds
Must have first uttered melodies from my orchard trees,
And the first cuckoo's melancholy cry.
Even thus last night, and two nights more I lay,
And could not win thee, Sleep! by any stealth;
So do not let me wear tonight away;
Without thee; what is all the waxing wealth!
Come, blessed barrier between day and day,
Dear Mother of fresh thoughts and joyous health!"

USE OF YEARLING AND OLDER HENS MORE PROFITABLE

Annual studies of Iowa record flocks show that mortality of the flocks is the most important factor influencing the farm poultryman's profit, says W. M. Whitfield, Iowa extension poultryman. The records also indicate that the mortality averages about 35 percent during the laying year and the longevity has been steadily decreasing.

That yearling and older hens should be depended on more in the coming years as the most reliable source of hatching eggs and should be re-established is suggested by Whitfield.

The fact that the records show that a major portion of the mortality loss occurs among pullets rather than older hens invites a revision of the poultryman's opinion of the comparative value of pullets and hens not only as producers of hatching eggs, but also as producers of market eggs, says Whitfield.

The studies further suggest that a greater cost to the poultryman may be incurred in the production of mature pullets than in carrying hens through the molting period, even though a good pullet may produce more eggs than a good hen. Certainly a good hen is more profitable than a poor pullet, especially in the capacity of improving the vitality of the offspring.

STATEMENT OF OWNERSHIP

The Modern Farmer as required by the Act of Congress, August 24, 1912

State of Tennessee, County of Davidson:

Personally appeared before me, a Notary Public in and for the State of Tennessee, County of Davidson, S. B. Wilson, who having been duly sworn according to law deposes and says that she is the Business Manager of the Modern Farmer, and the following is to her knowledge and belief, a true statement of the Ownership, Management, etc., of the said publication for the date sworn above caption requested in section 443 Post Office laws and regulations.

1. That the name and address of the publisher and business manager of the Modern Farmer, Nashville, Tenn., S. B. Wilson, Business Manager.

2. That the owners are Henry Allen Boyd and S. B. Wilson, both of Nashville, Tennessee.

3. That there are no known bonds, mortgages or other security holders holding one per cent or more and that there are no bonds, mortgages or other securities on the corporation.

(Signed) M. G. FERGUSON, N. P.

Sworn before me this 19th day of September, 1934.

My commission expires January 10, 1939.

Interesting NEWS Notes

Eleanor Willet, a girl of Jefferson, Kansas, ten years old, fell only three feet in a sitting position from a broad swing on the grounds of the rural school, but the fall broke her neck and she died instantly.

A potato patch in Australia sold recently for a quarter of a million dollars. Two brothers worked the patch as part of their farm. The patch was on a hillside. One night there was a heavy rain and part of the crop was washed off the hillside exposing a gold-bearing reef. Nearly fifty thousand dollars worth of gold has been taken from it to date.

A farm hand near Joliet, Ill. saved his employers life by driving the family fliver at a bull which had knocked the employer down and was trampling him. The farm hand drove the auto at the bull several times before he succeeded in driving him away.

A farm of 246 acres in the neighborhood of Bloomington, Ill., sold last month for $14 per acre. Farm land is coming back and the price will again be high. Race farmers should buy farm land now.

In 1930 the state of Georgia had 86,787 colored farmers. During the ten year period, 1920-30, this state lost nearly fifty thousand colored farm operators. In 1930 only 11,080 were full owners. 883,284 acres were owned and the value of land and buildings was about seventeen and a half million dollars. There are thousands of abandoned farms in this state which might be purchased by colored farmers.

A three-hundred bale cotton planter of Lowndes county, Miss., has served notice that he will attack the constitutionality of the Bankhead cotton act in the U. S. courts.

A cotton crop of 9,433,000 bales was predicted for the U. S. this year by the agricultural department. This is nearly four million bales less than the 1933 crop. Texas led in production although the crop was less than one-half of normal, and Miss. was second.

Four bandits near Chicago stole a large truck and trailer driven by a farmer of Avoca, Iowa. Nineteen thousand pounds of butter worth $3,700 and fifty cases of eggs worth $300 were stolen with the truck.

BATS ARE OUR FRIENDS

They Reduce Insect Pests by the Ton and Go Long Distance For Water

There are about 30 kinds of bats in the arid southwestern part of the United States, all with different habits and with ranges fitting into every nook and corner where they can find a place to stay and food to eat and water to drink.

Bats are thirsty animals and must have water once or twice every night. They are hearty eaters and hearty drinkers, and after sleeping all day in dark retreats in caves or cliffs or building they seek the nearest water, be it miles away, and dipping over the surface drink on the wing repeatedly until satisfied.

Some of the strong-winged species are found many miles from water or else they know where to find it in tanks or pools that we do not find. Every waterhole in the desert is a nightly center for bats, and often they swarm like dragon flies over still pools, before circling away to feed among the tree tops or along the cliffs or low over the bushes of the desert.

Different species find their favorite prey in different haunts, and while the bettles and moths and flying bugs of their menu are not exterminated, their numbers are reduced by tons and tons as shown by their remains in the bat guano in caves or other roosting places.

But dollars and cents saved us by the bats do not measure their whole value. Some day we will learn that they are mammals like ourselves but of a more ancient and highly specialized group.

Bats too are intelligent, far more than we generally credit them as being, and make most interesting pets for study. Fortunately their skins have no commercial value and they are not likely to be exterminated, but often their roosting or breeding colonies do need our protection and should have it, for bats are among our best friends.

SEED CATALOGS GAIN ACCURACY

U. S. D. A. Man Says Second-rate Vegetables Should Be So Described

Seed catalogs may be declining as poetic literature, but Dr. Victor R. Boswell of the United States department of agriculture says that some of them are definitely improving in horticultural accuracy. He told a meeting of vegetable growers recently that he doubted that any catalog of five years ago listed any variety of vegetables "as of only fair or poor quality."

Now there are a few such catalogs. Seedsmen used to defend themselves by saying that customers called for these inferior varieties and the dealers had to be ready to supply them. Even though there is some ill-advised demand for inferior sorts, and they must be listed for sale, it is only good business to tell the truth about them.

In the last five years vegetable specialists of the bureau of plant industry, in cooperation with those at the state experiment stations, have been making nation-wide standardization studies of varieties, and seedsmen now have authentic and unprejudiced evidence to present to their customsers with reference to the properties and behavior of the principal varieties.

Dr. Boswell points out that concentration on the best varieties will prove to be good business both for the seed merchant and for the customer. The customer will get carefully produced seed of varieties that have been proved superior by years of commercial experience by thousands of growers. The seedsmen will benefit because customers will profit and will be pleased. The seedsmen also will benefit because whenever they are able to drop the growth of an inferior variety they can devote more care and time to further improvement of the varieties that are really important.

SON SUES FATHER FOR U. EDUCATION

Omaha—Whether a father able to do so is obliged to give his son a college education was the question Judge Herbert Rhoades of Domestic Relations court here was pondering. Lloyd Skinner, Jr., seeks to force his father to finance a course at Creighton University. The elder Skinner says the boy will have to work a year at his manufacturing plant first.

ADVANCE IN GRAIN PUTS PREMIUM ON DESTROYING RATS

Urbana, Ill.—With grains and other farm products going up in price, Illinois farmers have an additional incentive this fall to get rid of rats and mice which in some years have destroyed more than $200,000,000 worth of crops and other property throughout this country, says G. C. Oderkirk, specialist of the United States biological survey.

Furthermore, as a result of the greatly reduced quantity of feed and feedstuffs harvested this year, it is especially worthwhile to prevent waste of supplies through rodent damage. On many a farm, if the grain eaten and wasted by rats and mice could be sold, the proceeds would more than pay all of the farmer's taxes, it is said.

"Don't wait until winter to start fighting the rodents," says Mr. Oderkirk, who is cooperating with the state natural history survey and the state college of agriculture in an effort to reduce the losses caused by rats and mice. "Fall is the best time to clean up and burn or destroy rubbish and refuse. Lumber, boxes and other materials should be stacked so there is a space of at least a foot between the ground and the pile. This will allow cats and dogs to go beneath the material and drive out the destructive pests."

Sheet meal and small-meshed wire netting can be used to keep rats from feed rooms and bins, and in many cases the corn crib can be made rat-proof with like materials.

Well-organized anti-rat campaigns are helpful in reducing the infestation of rats in towns and rural districts, thereby lessening the hazard of disease epidemics as well as affecting increased savings. To obtain the best results, such city or county-wide campaigns should be conducted this fall before extremely cold weather sets in. The destruction of a pair of rats now will prevent the reproduction of dozens of their potential offspring before spring. Arrangements to conduct a city or community campaign against rodents can be made through the office of the county farm adviser.

HUMMING BIRDS IN ALASKA

If you plan to go to Alaska keep your eye open for humming birds. Most people think you are telling a tall story when such a thing is mentioned. Yet Alaska is a favorite feeding ground for thousands of these feathered mites. In June they migrate through southeastern Alaska. Bird students estimate that it is only a day's flight for these little birds from the state of Washington or southern British Columbia, where they leave the Scotch broom and wild currant for the Alaska blueberry blossoms.

A NEW WRINKLE

"I grovel here in the dust at your feet," exclaimed the impassioned young suitor as he knelt on his knees in the parlor in order to press his suit.

"Dust! Dust! Do you mean to insult me?" she gasped—"after I spent the whole forenoon cleaning this room up?"

REMEDIES FOR COLD

Camphorated oil or old-fashioned goose grease are useful in cases of colds or croup.

Molasses, stewed, with castor oil added, is palatable and an excellent first aid remedy for children's colds.

To break up a cold, use doses of camphor at frequent intervals. A good way to prepare it is to take one teaspoonful of camphor, one teaspoonful of sugar, and add one cup of hot water. Take a spoonful of the mixture at a time. If taken at the start, it generally breaks up a cold very quickly.

Hot salt water snuffed up the nostrils will cure a cold in the head, if the treatment is used every three hours.

Not So Bad

"So you don't think that was a real cyclone we had up our way last week! I'll bet it was bad enough to lift anything on your old farm."

"If you think so, you don't know much about mortgages."

That's Too Strong

These are times when a body has to think big. Like our favorite political philosopher, the late Uncle Joe Cannon. Uncle Joe was telling Chauncey M. DePew about a fish he had almost caught.

"About the size of a whale, wasn't it?" asked Mr. Depew, softly.

"I was baitin' with whales," answered Uncle Joe.

The National Federation of Colored Farmers

Incorporated

ANNOUNCES ITS

Annual Convention

AT CHARLESTON, MISSOURI

October 29, 30, 31, 1934

All Race Farmers invited. Delegates representing Units in 21 States will attend.

MAIN SUBJECTS FOR DISCUSSION:

1. How to Own the Soil You Till.
2. How to Lift the Mortgage Hanging Over your Farm.
3. Purchasing Workstock and Cattle for Another Year.
4. Securing Loans to Improve Your Home and Farm.
5. Buying Groceries and Farm Supplies Cooperatively.
6. Producing and Selling Your Farm Products Co-operatively.
7. Home Canning and Sewing.
8. Legal Contracts Protecting Share-Croppers and Tenants.
9. Why all Colored Farmers Should be Organized.

Prominent Speakers, representing Federal and State Agricultural Departments, and Noted Race Leaders, have been invited to address this session.

MANY KILLED ON RAIL-ROAD TRACKS

Warning Issued to Boys and Girls Regarding Danger of Accidents

During the last ten years 1730 boys and girls under 14 years of age were killed and 2277 seriously injured while trespassing on railroad property. An additional 2652 boys and girls between 14 and 21 years were killed and 5495 seriously injured in the same manner.

More and more effort is made every year to avoid accidents that will impair the abilities of the victims. However, to completely do away with accidents, boys and girls as well as grown-ups must give their cooperation and consideration to the rules that are made and the precautions that are taken for their protection and convenience.

"Walking along railroad tracks where you do not belong is a form of trespassing," says a statement issued by the Burlington railroad. "It is also dangerous in that you may be inviting an accident by going where there is no protection for you. If you have to cross railroad tracks, do so at a place provided for that purpose and look carefully both ways so as to be certain that no trains are approaching when you cross.

"If you keep out of their way, trains can not hurt you because they can run only on the tracks while you have all the other room there is for your use. Since this is true there is no reason for people ever being injured by trains, if they use good judgment and consider the rule made by the rail roads for the benefit of people young and old folk alike.

"If you live near railroad property keep off of it, especially any part where there are tracks and trains in use. Never play about the switch tracks where cars are sometimes left for unloading or simply until there is a use for them. Never play in empty freight cars under any circumstances.

"Of course the danger of falling is an ever present one about cars, but even more important than that is the possibility that the cars will be moved and that you will be thrown off or run over or trapped in them. You never can know in advance whether the car will be needed elsewhere and taken way, so the best plan is to leave it strictly alone.

Don't Play on Tracks

"You never should play games on or near tracks. It may be fun to walk the track rails and count the ties, but it is not enough fun to offset the danger. Railroads do everything they can to eliminate danger, but they can not control everyone that lives near the tracks and keep them away from the rails except at crossings.

"When making a crossing always obey signals of bells or barriers or watchmen, if there are such signals. If there is none, be doubly carefnl to look both ways and assure yourself that no trains are approaching that may reach the crossing before you are off it.

"If there is a series of tracks be even more careful and do not try to cross any of them until they are all clear. Getting trapped between two trains on tracks that are close together is almost as dangerous as being in front of an approaching train.

"Remember that a train is heavy and that it can not be stopped in a short stretch of track. Even when it is traveling slowly, as trains usually do when approaching crossings, it takes some distance to bring a long string of cars to a complete stop. Naturally this could not be accomplished if you stepped out in front of a train without warning, when the train was very close."

HOW TO KEEP CUT FLOWERS PRETTY

Cut flowers last longer when the water in the vase is changed frequently and when they are placed in the coolest part of the rooms they decorate. At night they should be put out on the porch in the night air or floated in a tub of fresh water.

Some flowers keep fresh much longer than others. Some of the long-lived ones are aster, calendula, carnation, chrysanthemum, daisy, gladiolus, iris, lily, narcissus, rose, tulip and verbena.

To keep flowers from making the water in which they are kept foul-smelling all foliage which comes below the water line should be removed.

NO FOOD IN 7 YEARS, SHE LIVES TO TELL STORY

St. Paul, Minn., Sept. 20.—Although doctors scoffed at her story, Mrs Martha Nasch, 44, a housewife, has made the amazing statement that for seven years she has not eaten, nor drunk, nor slept— and she offered to prove it!

Louis J. Nasch, 50 her husband, said only this:

"I've never seen her eat or drink. That's all I know. I've tried surprises to find her eating, but never have."

Mrs. Nasch interposed:

"I will submit to any test that may be asked if necessary. I will consent to an indefinite constant watch."

THREE VOUCH FOR TRUTH

Nasch was one of three witnesses to sign Mrs. Nasch's statement concerning her condition. The others are Ralph Nasch, 12, their son, a high school student, and Lynette Claus, 18 a neighbbor.

Miss Claus frequently does house-work at the Nash home, and although she goes in and out all during the day, she has never seen Mrs. Nasch eat or drink, she said.

Mr. Nasch told reporters:

"I do not sleep, either. At least not like other people .. I seem, rather, to be in a trance—like some one under dental gas. It gives me no rest."

NO TASTE, BUT COOKS!

Mrs. Nasch is in excellent cook, although she has no sense of taste, being able to distinguish only between salt and sugar.

Mrs. Nasch was taken to the state hospital at St. Peter when she disclosed her condition to a St. Paul doctor following an operation.

There she claims she ate no food, although continual attempts were made to feed her forcibly.

EXPLAINS WITH BIBLE

Mrs. Nasch points to several biblical passages to find an explanation for her condition. She said:

"It says in the Old Testament that 'they shall see food, but not eat.' I don't see why I should be cursed like this, though."

One St. Paul doctor who once had taken care of Mrs. Nash said:

"I think it's all bunk."

SUFFICIENT REASON

When Julio de Diego, the Spanish artist, set out for his first visit to friends on North Park Avenue, Chicago— where he later established his studio— he attempted to find out from the conductor whether the street car he had boarded would take him to Menomonee Street.

"Menomonee?" he inquired with the accent of Madrid.

"What?" answered the conductor.

"Menomonee!" he repeated.

"What?" roared the conductor.

MENOMONEE! MENOMONEE!" shouted the volatile Jullio, glaring at the dumb ox.

"Well," ereeched the conductor, "if you ain't got no money get the hell offen this car!"

TRANSPORT EGGS LARGE ENDS UP, EXPERTS ADVISE

Placing eggs large end up in the case will help maintain their quality and increase profies of farmers, according to extension poultry specialists at Iowa State college. The reason is this: Immediately after the egg is laid, its contents cool and contract. This contraction causes a separation of the two membranes found immediately inside the shell. The separation nsually occurs at the large end of the egg and an air pocket, commonly called the air cell, is formed.

After eggs are placed in the case, if the large end is up, the membrane serves as a cushion to absorb shocks. If the small end is placed up and the producer drives rapidly to town, especially over rough roads, many of the air cells breaks loose. Eggs such as these go into lower grades and bring lower prices.

RATHER SNAPPY—IF TRUE

In the answers given to questions on the income tax from there are occasional flashes of unconscious humor. For instance, one taxpayer, stated: "My parents are partly but not wholly dependable."

Another said: "I am married now with a widow and four children."

A lady taxpayer stated that her occupation was "wrecking automobiles."

A man in a labored and quite unnecessary attempt to fill in the assets and liabilities statement of his individual income tax return, wrote against "Sundry": "None; I remember the Sabbath day to keep it holy."

'The Metropolitan' Literary Monthly Magazine to Appear Soon

New York City—(CNS)—According to an announcement, 'The Metropolitan,' a literary monthly magazine, will soon make its appearance to the public. This magazine, which will contain 86 pages, will be devoted to Negroes, featuring their creative efforts in factual articles, fiction, poetry, photography, and drawing. The periodical is being published by the Meeks Publishing Company, of New York City.

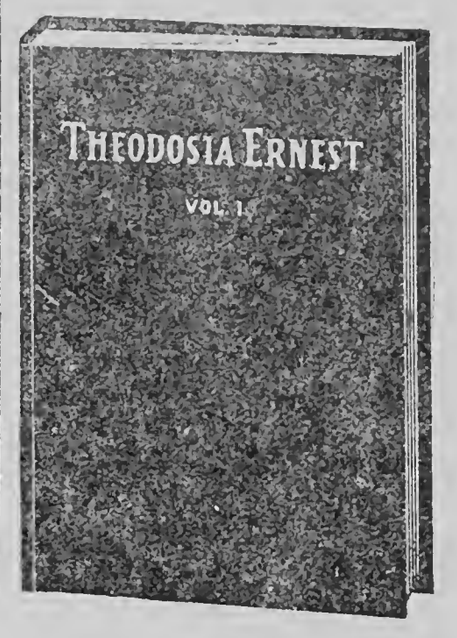
Pythians Resolved To Carry on New Orleans

New Orleans, La.—(CNS) A special mass meeting was held by members of the Knights of Pythias and Courts of Calantheans last week in Pythian Temple Theatre. The meeting was addressed by the Hon. Jas. O. Connor. State Attorney General, Loys Charbonnett and George Seth Guion, who in their addresses expresed their sincere pledges in assisting the Order of Pythias in regaining the grounds lost in the depression that resulted in a diminished membership to the Order. The leaders of the organization and a number of its members who have stood by the Order also pledged themselves in the campaign to reach out through the State in the interest of re-instating suspended lodges and for bringing new members into the Organization.

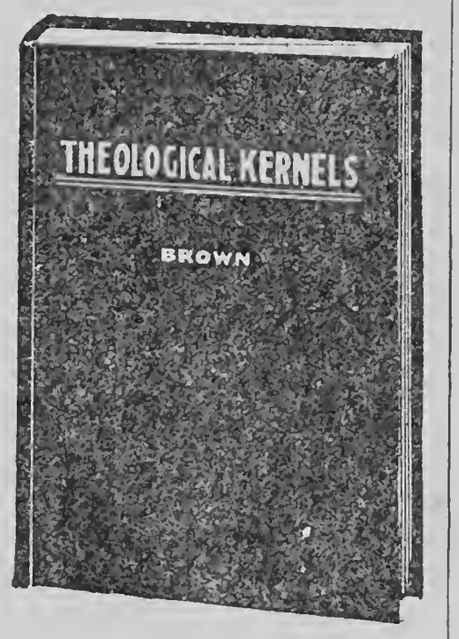
The Grand Lodge Knights of Pythias of Louisiana owns the beautiful Pythian Temple which was built at a cost of $350,000. The substance of Mr. Guion's address disclosed that it would be necessary for the unfinancial members to reinstate in order that the Grand Lodge would be able to float a loan sufficient to take care of all outstanding bills. The procedure will terminate the receivership for the endowment department and the Order would again regain its status.

Other speakers were Hon. F. B. Smith, grand attorney; John D. Brown, Grand Keeper of Records and Seals; and Grand Chancellor S. W. Green, who submitted a program by which the Organization may work out its problems.

Ministers and Laymen Should Seek Every Opportunity to Improve Their Minds.



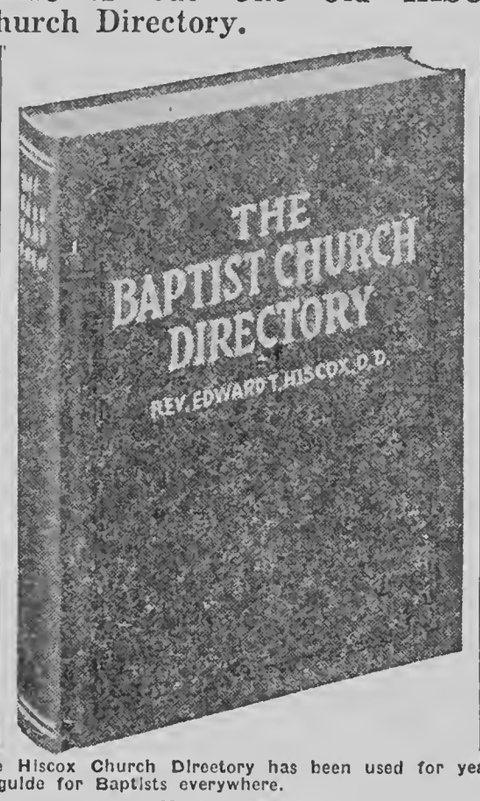
A religious Novel in most intriguing language. **Price $1.00**



Theological Kernels, the ministers best book of Helps.
Price $1.00

There is but One Old HISCOX Church Directory.

The Great Work of the late



REV. EDWARD T. HISCOX, D.D.

The Hiscox Church Directory has been used for years as a guide for Baptists everywhere.
Price $1.25

An Incomparable Church Record Roll And Minute Book
Price $2.50

The late Dr. R. H. Boyd devised a Church Record, Roll and Minute Book that was serviceable, indispensable and helpful to every church. It is three books combined in one. Aside from a place for the minutes of each session of the church meeting, a place for the enrollment of the members and a place for the financial record of the church, this publication has in it two outstanding ordinances of the Baptist Church, namely:—the ordinance of Baptism and the Articles of Faith, with other splendid helps. Any church clerk or financial secretary of a Baptist Church will be helped greatly in the keeping of his minutes, the preserving of their records and roll and the arranging of its financial side by purchasing one of these books for $2.50.

SAVE MORE! EARN MORE! HAVE MORE! BE MORE!

Every Colored Farmer

SHOULD BE A MEMBER OF THE

The National Federation of Colored Farmres

ORGANIZED, JUNE 5, 1922
PROGRESSIVE, Not Radical!

INCORPORATED, NOVEMBER 19, 1930
SANE, NOT VISIONARY!

IF A FARM OWNER, TENANT, SHARECROPPER OR
FARM HAND, YOU SHOULD JOIN THIS ORGANIZATION

It is the only national organization of colored farmers in America.
Its growth has been steady and substantial.
Its officers and leaders are men of experience and foresight.
It is non-partisan and non-secret.
Its actions speak louder than its words.
Its policies are sane, sound and progressive.

It teaches co-operative buying, production and marketing.
It is a builder of Negro farm communities.
It promotes the general interest of all its members.
It studies and investigates all agricultural problems.
It fosters the improvement of rural homes, and rural life.
Its members work together to accomplish what cannot be done individually.
It makes farm business more profitable.

Delegates to 1932 Annual Convention, N. F. C. F., Memphis, Tennessee.

The following are excerpts from letters on file in the national office:

"Through the N.F.C.F. we have been able to grow crops in Wisconsin that none thought could be grown here. We are planning for group cooperative farming next year since that is the only way we can get our people out of these northern cities back on the farms."

David Bassett,
Wisconsin Dirt Farmer.

"I have been with the N.F.C.F. more than five years, have traveled in every county in the Delta and have made a host of friends among both white and colored farmers. The N.F.C.F. makes colored farmers better farmers, better Christians, better citizens."

Rev. B. W. Byram.
Mississippi Farmer-Minister.

"The N.F.C.F. inspires the young Negro to turn back to the soil and again become a part of the backbone of the industries of the world, the industry of farming."

Grace Wilson Evans,
Indiana Clubwoman.

"Nothing is needed among colored farmers in the state of Oklahoma as much as such an organization as the N.F.C.F."

Rev. J. D. Brown,
Oklahoma Farmer-Preacher.

"I joined the N.F.C.F. when we were having trouble trying to save our farm. Our National officers got busy and saved it for us. The N. F.C.F. is the greatest organization in the country for colored farmers."

R. H. Sanders,
Missouri Farmer and Stockman.

"Since joining the N.F.C.F. we have saved in our community from 25 to 40 per cent on the purchase price of farm and home supplies."

J. H. Tenholme,
Alabama Dirt Farmer.

"We have asked our field representative to make a special investigation regarding the distribution of relief in counties where there have been complaints.

National Officers, The American
Red Cross, Washington, D. C.

"Today I'm holding the deeds to 86 acres of land, one mile from railroad station, on good road, with good house, water and a fine growing crop. For this I am indebted to the N.F. C.F.

J. L. Lebeaux,
Louisiana Dirt Farmer.

"The N.F.C.F. has safe and sane leaders. There is nothing we will not do for the organization that has done so much for us."

L. T. Gartside,
Georgia Dirt Farmer.

"The N.F.C.F. is worth much to humanity in general and to our group in particular. Your officers are some of the most beneficial leaders of the times."

President of a Georgia Agricultural College.

"You may have the complete assurance that the bank wishes to encourage the sale of its land to any of the members of your Federation who are in a position to properly take care of farms and handle them in a workmanlike manner."

W. E. Clark, Land Dept.
Federal Land Bank of
New Orleans, La.

"I am favorably impressed with the objective of your Federation and I sincerely hope that you will be successful in cultivating among the colored people the mind to cultivate the soil and thus insure a happier existence than that which accompanies them in the overcrowded cities especially in periods like that through which we are passing."

Hon. Daniel C. Roper,
Secretary of Commerce.

"We expect to produce several cars of sweet potatoes cooperatively this year. We have received more help from the N.F.C.F. in two years than from any other organization in the past twenty years."

John Thomas,
North Carolina Dirt Farmer.

"By following our leader's instructions and raising less tobacco and more something to eat, I have kept out of debt during these hard times and am better off than I have ever been before."

William Millson,
Virginia Dirt Farmer.

"I am tired of talking organizations. The N. F. C. F. is a sure enough DOING organization."

T. L. Brackenburg,
Florida Dirt Farmer.

What the American Farm Bureau, the Grange and the Farmer's Union have done for the white farmers of this country, the National Federation of Colored Farmers can do for you. Your membership in the N.F.C.F. tells the world how good a farmer you really are. Join today! A local unit in your community. If you have no unit, organize one. Write to the national office for all information.

here that the Modern Farmer is an independent publication and it matters little to its editor whether readers are for or against any particular political party. The article in question was not published to poison the minds of readers against the Democratic party, as Mr. Lipowski suggests. The article was interesting because it showed another side of the picture. Mr. Lipowski must himself admit that the New Deal is very much an "experiment". All experiments should be watched from all angles and corners. Unless we do so, watch them over a period of time, we will never be able to tell whether they are blessings or curses. It is for our readers to judge for themselves whether the New Deal makes serfs of farmers or free men. Mr. Lipowski says:

"The sufferings of colored people in Southern states is not the fault of the New Deal. It is the fault of local governments and southern gentlemen planters. They are prejudiced agaist the Negro Race and a square deal for these poor souls is unknown."

But Mr. Sewall, of Arkansas, who would probably be called a "gentleman planter" by Mr. Lipowski says:

"My colored tenants and sharecroppers didn't need any New Deal from Washington. It has done them more harm than good. Some of my best hands have gone to cities and are living on relief. As long as the "relief" lasts they won't work for anyone Those who stayed and were unable to plant cotton on account of acreage reduction, are dissatisfied in spite of the fact they have had good gardens and have plenty to eat. A full stomach isn't all of it. They want clothes and money to spend, but where is it coming from?"

Mr. Lipowski says further:

"The pitiful condition of the poor sharecropper in the Southern States is not only this year on account of the New Deal. It has always been with the exception of the years 1923-24, when conditions were slightly improved due to the fact that young people were leaving for the cities where there was plenty of work and thousands of acres were lying idle on account of a shortage of colored sharecroppers. Since the depression conditions have become intolerable.

Mr. Sewall says:

"When we were able to do so, our hands were fed, clothed and given medical attention when needed. They spent their money as fast as they got it and it was not my fault that they were always in debt to me. Some would leave owing me, but most of them would pay their debts."

Mr. Lipowski concludes his letter by saying:

"The time will come and must come when the colored people in the Southern Sates will have to be treated like human beings. The Modern Farmer can do much for their welfare. The Negro masses and their leaders should wholeheartedly support President Roosevelt for the wonderful showing he has made in such a short time."

And Mr. Sewall concludes:

"Planters who treat their tenants right are in the majority if Northerners would stop meddling we would have little trouble. So far, no one has been able to invent a better system of farming in the South than the one in existence. It has its faults. I believe your organization is doing good work. As long as you steer clear of the radicals and communists no landlord should object to your operations."

We thank these gentlemen for their interest and their letters. To Mr. Lipowski we might say that the National Federation of Colored Farmers favors a "New Deal" that will free colored sharecroppers, tenants and farm hands from debt-slavery and peonage, that will give those who are ambitious and industrious opportunity to purchase small farms (not homesteads) in permanent Negro farm communities, that will recognize and assist cooperative organizations in such communities to establish marketing and other facilities necessary for community development, that will even go so far as to recognize this gronp, this group of colored tenant farmers and sharecroppers as deserving special consideration.

We respect Mr. Sewall and even though he may be a good landlord he does not need three plantations. We hope he will sell two of them to his best tenants and sharecroppers. Cotton is no longer KING. The KING who will build the New South is the small farmer who owns the land he tills and tills the land he owns. The system of farming Mr. Sewall speaks of, is doomed. It must go. It is not Democratic, not Rooseveltian, not American A country of independent small farmers who love their farms and homes would look better to us than a country of big plantations, powerful landlords, good and bad, and many poverty-stricken tenants and sharecroppers.

A Woman's

(Continued from Page 1)

to the older children she kept on steadily saying. "You shall go to college." Under the spur of her ambition, one of the girls won a state drawing contest. That was done on an empty stomach; the day the child drew the picture there was no food in the house.

The hardest blow was when the last baby came down with scarlet fever and every one of the family caught it—all twelve of them. For seven weeks they were quarantined. Their house had no furnace, no running water, no bathroom. They nursed one another as best they could. In those weeks there was no chance of earning any money at all. For the first time in their lives they asked for help.

With this help they pulled through. Today every one of the ten children is in school. Each has chosen a profession at which to aim—musician, journalist, artist, doctor and so on—and who can doubt that they will go through college when they never doubt it themselves? They share their mother's conviction that they have lived by the power of her own training. The household is highly organized, each with his allotted task and schedule. The world around them can hardly think of them as poor, for they never let down, even though the neighborhood in which they live is sometimes scorned as the abode of "trash." Last year the entire family took part in a play at the university and the mother helped direct the chorus. The play was DuBose Heyward's Porgy. For these people are Negroes—Americans, of whom every American can be proud.

EXPLAINS STEPS TO GET RELIEF

(Continued from Page 1)

tained, the commissioner is empowered to make it binding on the minority unsecured creditors.

The final step which the distressed debtor can make, after all other means have failed, is to file an application in bankruptcy, under the recently adopted Frazier-Lemke amendment.

May Stay on Farm.

"This amendment was adopted as a result of the refusal of a minority of creditors to make any voluntary settlement. Under its provision the federal judge is authorized, in case no settlement can be reached, to permit the debtor to remain on his farm for five years on payment of a rental fixed by the court, and to purchase the farm at the end or during that period on payment of an appraised price determined by appraisers appointed by the court.

"It will be noted," Mr. Pollard states, "that the final step to be taken is the Frazier-Lemke amendment. Going through bankruptcy is a serious matter, as it impairs the farmers' credit. Farmers should first petition the federal court and obtain the service of a conciliation commissioner, with the idea of trying in every way to keep out of bankruptcy.

"Farmers of the Rock Island district are to petition the federal court at Peoria. There is a $10 fee involved to obtain the service of a commissioner. The farmer," Mr. Pollard states, "will save himself much trouble by first petitioning the federal court, and then later interviewing the commissioner, so the latter may get busy in the farmer's and creditors' behalf, in view to working out a satisfactory settlement."

FIGHTING TO SAVE THE SOIL

Boston Transcript: There is one PWA project that deserves from every American the most resolute and far-reaching support. With $10,000,000 allotted from the public works fund, the department of the interior is fighting to save millions of acres of this nation's arable land from destruction. Years of swift deforestation and intensive farming, conducted with almost complete disregard of the damage done by ever faster and faster erosion of the soil, have put great tracts of America's once richest farm land at the imminent hazard of ruin. President Roosevelt did not exaggerate the peril when he warned the congress on June 8 that in the absence of remedial measures a vast part of our country may become a stark desert, some sections being denuded of all but the meagerest topsoil, and other sections being buried deep beneath sand carried on the winds of such a mighty dust-storm as visited New England last May—the first of its kind ever known to sweep all the way over the continent and, as such, an ominous portent of the mounting force and extent of this risk.

Color Scheme Helps To Select Best Hens

A simple plan of selecting the best layers in a farm flock is described by H. L. Shrader, of the United States Department of Agriculture, as the red-white-and-blue method. It calls for the use of 3 colors of leg bands for marking desirable characteristics of hens in the breeding flock. The banding may be done on or near three easily remembered dates—November 11, March 4, and July 4.

The first culling date, November 11, provides a check on all pullets that have begun to lay. These are the early-maturing pullets and are marked with red leg bands. It is easy to determine an early layer, as she has a deep-red comb and wattles and a moist vent. If the bird belongs to one of the yellow-skinned varieties she will show distinct bleaching around the vent and on the beak.

The next culling period, in March, affords an opportunity to check the rate at which the pullets have laid during the winter. Those that have laid steadily will have lost, through the egg yolks, most of the yellow coloring matter assimilated from the yellow and green feed. But birds that have taken a vacation during the winter will have some of this pigment, readily observable, in the beaks and shanks. All pullets with bleached beaks and shanks are marked with a white leg band.

The last period for culling comes after the hot weather has arrived. This is the time to detect the birds that take their vacation before they have finished their laying year. The molt is a good indication of the time these pullets have been out of laying. The bird with ragged, worn feathers may not look like a blue-ribbon winner compared with her sister that has clean, bright feathers. But the bird with worn feathers deserves the blue leg band because she is a persistent layer and has kept up her production into the hot weather instead of molting a new crop of feathers. Leg bands are removed from birds that go broody.

The red-white-and-blue layers should be mated the next spring to males from flocks with trap-nest records that show heavy winter production of good-sized eggs of the proper color for the breed. A breeding program of this kind will not take much time from the farmer's regular duties and will aid greatly in developing a high-producing flock.

MORE PRODUCTIVE PINES

Coaxing pine trees to yield more turpentine is one of the activities of Federal workers at the Southern Forest Experiment Station of the United States Forest Service.

Several tests on the Olustee Experimental Forest, maintained by station in northwestern Florida have shown consistently that better results are obtained and the injury of trees markedly reduced by tacking tins to the trees rather than by inserting them in deep cuts.

That too freequent chipping injures the tree is shown by the fact that at the end of the second working season 41 per cent of three chipped daily had ceased to yield gum, whereas only 13 per cent of those chipped twice a week, and none of those chipped once a week, were dry-faced.

Slightly greater gum yields are obtained from the second set of turpentine faces than from the first, according to studies at Olustee Forest. Yields from faces on previously unworked trees were only from 70 to 85 per cent of those from trees of the same size already worked with one set of faces.

WATCH OUT!

That father of 21 children who thinks he ought to have financial assistance from the government in raising his family must think that Teddy Roosevelt is still president. In these days he'll be lucky if he doesn't get fined for overproduction.

—Chicago Drovers Journal.

NATIONAL FORESTS ARE GAINING SIZE RAPIDLY

Since President Roosevelt allocated $20,000,000 of emergency conservation works funds for the purchase of forest lands as a relief and conservation measure last July 21, the federal government has acquired or is now acquiring through purchase more than 3,000,000 acres for national forests east of the great plains. These purchasse bring the total area in gvoernment ownership within the national forests in the lake states and the eastern and southern states regions to 10,273,268 acres.

Of this area, 7,796,129 acres has been purchased with the approval of the national forest reservation commission, under the Weeks and Clarke-McNairy forest laws. The rest was acquired by exchanges and through withdrawals of lands from the public domain.

The area of land under national forest administration in the lake states January 15 was 3,010,344 acres. In the eastern and southern states the area was 6,885,623 acres. On February 21, the commission approved the purchase of 377,302 additional acres in these regions, to be placed immediatcly under forest service management.

ALONG COUNTRY ROADS

Walnuts, aye, and hickories now are ripening on the ridges; soon the oak leaves will be sifting through the frost-tanged autumn air. From the cornfields comes a rustle, as the summer burns its bridges; blackbirds gather in the poplars which the first hard frost will bare.

Mother Nature's green is turning into yellow, red and brown, as in this soft-spoken fashion she tells wild folk to prepare, for the fast-approaching season when she'll shed her pretty gown, don a sleeping robe of ermine, wear ice crystals in her hair.

Eerie cries of feeding nighthawks and the cawing of the crows stay the same—and yet they're different—floating by on restless breeze. E'en the river's quiet ripple, in the evening's still repose, tells that its great soul is waiting for the winter's bitter seize.

From the northland comes a message, mayhap brought by scudding teal, that the bugle calls is blowing for the imps of snow and sleet. Purple haze on the horizon, shortening daylight, all reveal, that the weakening elfs of summer soon must vanish in defeat.

From Moline (Ill.) Dispatch.

A SEEMING FRAUD

There seems to be ground for belief that the Department of Agriculture is wasting money. It has grown a strawberry which tastes like something else and restaurants have been serving that kind for years—Muscatine Journal.

N. Y. Boy on U. S. Relay Team

New York, (ANP)—On the United States sprint relay team which will take part in the international A. A. U. track meet at Yankee Stadium on Columbus Day, October 12, will be Leslie Lockhart of the Century H. C. and junior Metropolitan 220-yard title holder. Among the other members of the U. S. team are E. Peacock and Eddie Siegel.

BE IT RESOLVED:

That we express our sincere thanks to all who assisted in any way toward making this convention a success. We are especially indebted to governors of states who commissioned special representatives; to the corporations, business firms, associations and individuals for prizes donated and letters and telegrams expressing greetings and goodwill; to Dr. H. A. Hunt, of the Farm Credit Administration, Dr. Henry Allen Boyd, president Citizens Savings Bank, Nashville, Tenn., Mr. J. T. Stonson, Director of Agriculture, Missouri-Pacific R. R., and all others who brought us encouraging and instructive addresses; to the officials of the city of Charleston and supervisors and instructors of Lincoln High school for their cordial welcome and entertainment; to the citizens of Charleston for their hospitality; to the friendly students of Lincoln High who sang for us; to the local committee who, under the leadership of Chairman Marshall Currin and Prof. L. B. Boler, made our stay in their city so pleasant and profitable; to all who expressed an interest in our progress and a desire to encourage our efforts.

Be it further resolved that to the Chicago Defender, the Memphis Journal, the Nashville Globe and to all friends of the press we acknowledge our indebtedness and shall endeavor to reciprocate by giving our support.

COMMITTEE ON RESOLUTIONS:

The National Federation of Colored Farmers, Inc. Convention, Charleston, Mo., Oct. 29-31, 1934.

National Office: Chicago, Ill.

James P. Davis, President.
Maj. R. A. Byrd, Vice Pres.
Leon R. Harris, Secretary.
S. B. Wilson, Treasurer.
Cornelius R. Richardson, Chm. Board of Directors.

Sec'y Leon R. Harris' Address to Farmers

Officials of the National Federation of Colored Farmers at their recent Convention with Rev. Nathan London, who resides at Cache, Ill., and who is 107 years old, and raises his own crop every year.

"Own Your Farm" Missouri's Slogan

THIRTY-SEVEN CLOSE DEAL FOR PROPERTY

Over Two Thousand Acres Purchased in One Community

Chicago, Ill.— The National Federation of Colored Farmers, Inc., has announced from its national headquarters here through the secretary, Leon R. Harris, that 37 members of Lincoln Unit, Charleston, Mississippi county, Missouri, have purchased farms this year in that community. The farms range in size from forty to 120 acres. Total acerage purchased is 2100. This land is located in the garden spot of the state and is fertile and well drained. Some of the farmers have produced as high as a bale and a half of cotton to the acre, sixty bushels of corn per acre, and some have gotten three cuttings of alfalfa from plots sown only last April. No fertilizer was used.

In a statement issued by Mr. Harris he says: "The success of this group of Race farmers proves that organization and cooperation pay handsome dividends. These farmers had been share-croppers for years, living from hand to mouth, seldom having a penny to show for their labor af-

NEW FARM IMPLEMENT

Tows Machinery Over Thousand Miles

Demonstrates Invention In Cotton Chopping— Mr. Sutton Complimented

Charleston, Mo. — Impelled by the kind of faith and confidence that make men great, Milus Sutton, Race dirt-farmer of Elko Georgia, drove into this little farm city this morning, towing behind his auto a red and black painted, rubber-tired implement that may be destined to revolutionize cotton culture not only in America but in every cotton raising country on the globe. The implement was a complete working model of the only cotton chopping, bunching and listing machine in existence. It was invented and patened by Mr. Sutton.

Although the steele parts of the implement were made out of scraps and fashioned by common tools observers remarked that the model looked like it had been manufactured by International, Deere, or any of the other big farm implement corporations.

PRES. ROOSEVELT'S NEW DEAL DISCUSSED

Agricultural Adjustment Act Touched Upon and Explained

Delegates, Fellow Members and Friends:—

In addressing you,—you who are interested in farming,—which remains today as it has always been,— the biggest business carried on by our Race group in the nation, — and speaking as an officer of the National Federation of Colored Farmers,— I hope to say nothing but what will cause you to become more interested in your business,— this business of farming,—and will encourage you to make a success of farming no matter what the difficulties. I am no prophet . I cannot tell you whether we are getting out of the last three or four years of trouble or not. A geography teacher once asked a little boy: "Johnny, what is wind?" Johnny had forgotten the familiar definition so he stammered and replied, Why it's air— it's air— its air,"— and then he burst out,—'Its air that's goin' somewhere." As farmers all,— we know is that we are going somewhere. I believe all of us are thankful we are not standing still.

(Continued on Page 6 Col. 1)

IN DECEMBER MODERN FARMER

In the December Modern Farmer will appear the complete report of the Committee on Resolutions, appointed at the recent annual N. F. C. F. Convention. Mr. Harris will also resume his "Talks to Colored Farmers." We also hope to publish some convention photographs. Be sure and read the December Modern Farmer. Now is the time to subscribe. Address the Modern Farmer, 447 Fourth Avenue, North, Nashville, Tenn.

SIXTEEN STATES REPRESENTED AT SESSION

Officers for Nineteen Hundred Thirty-Five —Davis, Harris and Wilson

Charleston Mo. — This little town in southeastern Missouri, the center of a Negro farm population of approximately twenty-five thousand,— has been host to one of the largest conventions ever held, certainly the largest that ever met in a farm community. More than a thousand delegates and visitors to the annual convention of the National Federation of Colored Farmers, Inc., from sixteen states, arrived Monday to take part in the deliberations of this meeting of organized Race farmers.

The sessions were held in the beautiful Lincoln High School building,— the grounds of which accommodated hundreds of automobiles and even wagons and buggies. Prof. L. B. Boler, general manager of Lincoln Unit Charleston, and general chairman of the convention committee, called the meeting to order at 11 A. M. Invocation was offered by the Rev. B. W. Bryam , of Mound Bayon, Miss. Hon. E. E. Oliver, mayor, welcomed the visitors to the city and Prof. E. W. Emery, principal of Lincoln High School, delivered an address of welcome in behalf of colored citizens.

Some of the most noted agricultural leaders of the nation were present and addressed the convention. These included Dr. H. A. Hunt, Farm Credit Administration, Washington, D. C., Mr. J. T. Stonson, Director Agricultural Dept., Missouri-Pacific R. R., Dr. Henry Allen Boyd, banker and business leader of Nashville, Tenn., Prof. N. C. Bruce, Prof. C. A. Kitch and Mr. H. M. Holbert of Missouri, Prof. H. R. Drew and other representatives commis-

REGIONAL MEETING CALLED FOR DECEMBER TENTH AND ELEVENTH

President James P. Davis Plans Profitable Meeting To be Held in Charleston, Missouri Next Month

So great is the interest manifested by the Farmers in and around Charleston, Missouri, and so many benefits were derived from the National Convention of Colored Farmers recently held in this city until President James P. Davis, has been prevailed upon to hold a two day regional meeting here opening December tenth and continuing through December eleventh. All units and members located in the southeastern part of the state are asked to attend this session. Plans will be outlined by the President for cooperative acreage of melons and vegetables and for the purchase of seed, overalls and in fact all farm supplies through one purchase and to arrange for all the units to apply for their production credit through one application. This meeting promises much to those who are interested in putting their goods on

(Continued on Page 8)

STRANDED FAMILY OF TEN FOUND IN CITY AFTER ESCAPE FROM ALLEGED TEXAS PEONAGE FARM

Share-Cropper Claims White Farm Boss Holds 150 Families In Subjection.

Policeman Aids Family In Escape From Life Threat

By Malcolm S. Whitby

Editor's Note— This article is taken from the Oklahoma City Black Dispatch, edited by Mr. Roscoe Dungee, the farmer-editor. This is just one example of how the sharecropping system of farming is responsible for debt-slavery and peonage in many sections of the southland. This man had to take his family and slip away in the darkness of the night. There are thousands of colored sharecroppers today in the same fix Casey was in down there on the Red River in Texas. Because the National Federation of Colored Farmers, Inc., is attacking a system of farming, responsible for such conditions as this, is the reason why this organization merits the support of all real Americans.

Horror stories of thieving of share-croppers and their virtual peonage in the far south were given new impetus here this week when a half-starved family of ten colored people related their experience to a Black Dispatch representative after being discovered on a vacant lot at Seventh and Nebraska by Nathaniel Baker, courthouse employe.

The family, consisting of seven illiterate children under 12 years of age, had camped two days on the lot, surviving on dry bread and water from a nearby school drinking fountain when Baker located them Sunday night. Baker placed the group in the Old Folks Home, 1824 East Fourth Street.

According to the father of the large flock of children, who gave his name as Will Casey, he, with his wife, sister and family, went to Waco, Texas, from Tulsa in 1930 to pick cotton. Traveling there in a delapidated coupe, the car was left in Waco and a white farmer transported the family in a wagon sixty miles away to the large farm of a white man named Walter Field, a former prison farm guard, according to Casey.

With promise of half the crop he raised on an alloted tract, Casey said he anxiously made the trip but soon found conditions unbearable, but his inability to take his large family away prolonged his stay.

At the end of the first year on this farm Casey said he "worked 18 acres and got 20 bales of cotton out of it, besides working two months and nine days" at a stipulated salary of $1.25 per day. Casey explained that no money is ever given the 150 or more Negro share-croppers on the Walter Field plantation. All necessities and foodstuffs must be purchased from Field's general store on credit. When the crop was picked, Casey continued, "I went up for a settlement and Fields seemed angered but showed a bill for $378.50 that I owed him for clothes and food-stuffs. I asked to see my work credits and I hadn't made but $330, acording to Field's records,' said Casey. Each year there was a balance owed the boss, according to Casey, and in September, 1934, when he attempted to get some understanding of how his foodstuffs mounted so high, Fields showed him records of his purchases during the year.

The record showed ordinary loaves of bread selling at 15c, 20-lb. sack of meal, 75; 24-lb sack of flour, $1.65; and although pork and beef were supplied from farm stock, 4-lb and 8-lb buckets of lard sold for 91c and $1.82, respectively.

Casey said he objected to exorbitant charges for foodstuffs and at this junction Fields drove him from the place, swearing, "It ain't never to be known by a nigger what a white man gits for anything. Get out'a here before I kill ya! No d - - nigger talks like that in Texas!"

When he returned to his makeshift home, Casey said he found the two doors and windows boarded up with planks, evidently to prevent the Casey family from taking their household equipment in the event they attempted to leave the farm.

During the night Casey said he got his family on the road and for three weeks they tramped and hitch-hiked to Waco, Texas, a distance of nearly sixty miles. His delapidated car, a one-seat vehicle with improvised rumble, was located but the problem of a license plate bobbed up.

While on the street discussing his treatment on the farm a white patrolman overheard the discussion and called Casey away from the crowd. The patrolman admitted knowledge of conditions on the alleged peonage farm and went to his house later in the day, produced a Texas license plate and helped collect funds for five gallons of gas.

With this aid Casey said he got his old bus started and drove to Dallas on the first leg of his journey to Tulsa. Casey said after he left Dallas his car stalled time after time and he camped his family on the highways night after night, frequently getting aid from passing motorists. Fifteen miles from Oklahoma Friday morning. Casey said a white motorist towed his car into the city and demanded a South Robinson avenue garage to fix the carburator. The carburator was fixed and the "Good Samaritan" also found them lodging for the night on the west side of town.

Casey stated that he drove to the east side of town Sunday morning to tell his trouble to the colored population with hopes of getting further aid to Tulsa, but car trouble forced them to take refuge for the night on a vacant lot at Seventh and Nebraska. It was at this spot they were rescued by Mr. Baker, who took up a collection from passers-by and made provision for the destitute family to stay in the Old Folks Home at 1824 East Fourth street.

The Church of God membership, Nathaniel Baker, Fairview Baptist church, the Black Dispatch Publishing Co., and many Fair Grounds citizens donated foodstuffs, clothing and money, enabling the family to leave the city late Tuesday for Tulsa, where Mr. Casey hopes to find relatives he has not heard from since leaving the state four years ago.

NATURAL FINISH FOR PINE

A natural finish may be applied to a yellow pine porch floor by laying two coats of good spar vanish over a priming of boiled oil, turps and japan. Allow three days between coats in fair weather, and a week if the weather is damp and cold.

GOOD GARDENING

Bulb "Be Carefuls."

By Dean Halliday,

Central Press Garden Expert.

In growing bulbs indoors in moss one should be careful not to drown them by keeping the moss too wet, or to let them die for lack of moisture by keeping the moss too dry.

When starting a bowl of bulbs to be grown in moss, it is a good plan to give this material thorough wetting by placing it in a pail or pan and leaving it until it is completely saturated. Then, however, as much of this water as possible should be squeezed out,

When the fiber is placed in the bowls, which may be as ornamental as desired, it should be firmed with the fingers. Amateurs are inclined to leave it in a loose condition, which is a mistake. The best fiber is mixed with oyster shells. If moss is used, some broken shells or other sand may be mixed with it. In any event, a half inch of broken pots, or of pebbles mixed with charcoal, should be used in the botton of the bowl, and the fiber or moss may hold whatever surplus moisture there may be.

Hyacinth bulbs should be planted so that the crowns come almost flush with the surface Narcissi and other daffodils should have a little of the bulb projecting, while Due Van Thol tulips should be just under the surface. Paper white narcissi grow very quickly, and it is only necessary to keey the bowls in a somewhat shady, cool place for a few days. The other bulbs should be set away in a cellar or ventilated closet or a darkened room for several weeks, until a mass of roots runs all through the fiber or moss. Unless this is done there is very little chance of getting good blooms.

'THE OLD MAN'—

Known simply as The Old Man he is the "cashier" of probably the world's most unusual "savings bank.' Years ago he and about forty townsmen came to New York from a little Polish village and all settled in a single tenement. They still live there. As they neither spoke nor read English, The Old Man became a sort of shepherd for the flock.

He even took care of their money for them in a mysterious box kept in his room.

After the newcomers became acclimated they adopted American customs, but not to the extent of passing up The Old Man for ritzy trust companies. He still keeps books and guards their wealth, and in all this time not one cent has ever disappeared.

St. Louis Star-Times: Mr. Roosevelt says the nation is paying for past errors, and now it begins to look as if this error business had opened a new account.

"DON'T SAY IT"

If you think that you are better
Than your neighbor 'cross the way,
Or that nature has endowed you
With a more perfect form of clay,
Don't say it!

If you know that you have talent
And your neighbor naught but gold,
Or that all his goods are mortgaged
If the truth were only told,
Don't say it!

If you know some dreadful scandal,
Such as gossips always court,
And could add a few words to it
When they call for your support,
Don't say it!

Let your life be true and earnest,
Court discretion for your friend,
And though often you are tempted
A word to say that would offend,
Don't say it!

BARN IS FIRED BY GREEN HAY

(Special to the Democrat)

Fairfield, Ia., Aug. 11.—Spontaneous combustion in green alfalfa hay caused a fire in the barn on the Ray Yeager farm nine miles northwest of here about 10 o'clock last night, burning the large modern barn to the ground, and destroying about 50 tons of hay. Other buildings on the place, including another barn, were saved by fighters with the help of a north wind.

The place, but a few miles southeast of Packwood, is operated by Tom Myers. Yeager, local produce dealer, is in Janesville, Wis., but his tenant thought the loss was partly insured. Destruction totaled about $2,000. A large crowd gathered at the scene and farmers plowed around other buildings to prevent dry grass from spreading the flames.

COON WAS "CAT"

Augusta, Me.—(UP)— Francis Ouimet of Boston former national amateur golf champion, and Joe Conway, Boston sportsman, went coon hunting. Their dog treed what they supposed was a coon.

Quimet was getting ready to shoot when he discovered the animal was not a coon, but just an ordinary house cat.

He captured it as a souvenir.

TERRIER REWARDED

New York.— (UP) — Jacket, a fox terrier, was rewarded with a juicy steak today summoning aid to the three little girls of James Myers, who had lost consciousness in a gass, filled room.

Louise 5, Madeline, 4, and Ellen, 2, were revived by artificial respiration after Mrs. Myers was called by neighbors who heard Jackie's frantic barking and scratching.

COOK COUNTY RELIEF GARDENERS HARVEST THEIR BUMPER CROPS

Special from Monitor Bureau

CHICAGO—Carrots as big as your wrist, beets approaching the size of a sugar bowl, and Swiss chard that throws its luxuriant leaves in bush-like proportions, are being harvested here in the bumper garden crops of the relief gardeners, according to Mr. J. F. Machotka director of the subsistence garden service of the Relief Administration of Cook County.

August rains, better methods and courage of the unemployed men who toiled on the soil to get food for the family table, account for the far greater harvest this fall over last year's crop, it was said. More than 5000 gardeners made the trips to their plot of land in one of the 12 field gardens, set aside by the Relief Administration west of the city, during the summer to plant and hoe and cultivate.

Lawyers, carpenters, office clerks, and other tradesmen are included among the gardeners. Even a former Congressman who has traveled around the world several times and who accompanied Rear Admiral Robert E. Perry on his polar expedition, raised his own little plot of vegetables this summer. He intends to write a book on his experiences in relief work to help get himself off of relief, Mr. Machotka said.

A canning center was set up a few weeks ago where the excess beans, cabbage, squash, and other "fruit of the ground" are being scrubbed, cooked and sealed in shiny tins for the pantry shelves to tide the gardeners' families through the winter.

BLIND MAN PRIZE GROWER

Blind Horace Jackson of Caerphilly has won trophies and prizes with his flowers at every show and exhibition in the East Glaborgan district of Wales this year. It is the first season he has entered his blooms. His roses were unrivalled and his dahlias a riot of color. Jackson and his family conduct a garden. He feels the flowers and nips off buds not up to his standard.

"DIRT EATERS" IN MEMPHIS THREATEN MISS. RIVER BANK

POLICE HAVE NO WAY OF STOPPING PRACTICE AS COLORED FOLK SEEK MEDICAL BENEFITS IN CLAY

MEMPHIS, Tenn., Nov. 8.—(ANP)—The colored populace of this town has gone "dirt eating" and the river bank near Riverside Drive and Wisconsin street is gradually being eaten away, police state.

Effort to find a law to prevent the carrying off and eating of the clay deposits availed the officials nothing.

Wednesday night, Police Chief Lee was told by local physicians that the clay eaters will have no stomach troubles unless they get greedy and gorge themselves. The doctors also said that the clay would be of great medical benefit to victims of anemia or intestinal parasites.

"They are loading it by the bucket full," Chief Lee dolefully stated as he admitted his lack of power to interfere. "Diggin' it out with picks, knives and spoons. There is no law against it and there is no way we can stop them. To my personal knowledge they have been eating dirt or clay ever since I've been in Memphis.",

One colored man reported that his wife and sister-in-law had been eating an average of ten pounds of clay a week without any visible ill effects.

"Clay eating is not at all an uncommon practice among country people suffering from anemia or intestinal parasites," stated Dr. Louis Leroy.

"The practice is known to the medical profession as 'picre.' The clay eaten usually will be found to contain iron or arsenic which are helpful in these conditions. The practice is frequently found in children who sometimes eat slate pencils, chalk or bits of plaster. It is not dangerous unless carried to an excess or the clay is infected.

Wherever man goes to dwell, his character goes with him.—African Proverb.

CHOOSING OF BEST LAYERS EASY WITH USE OF LEG BANDS

A simple plan of selecting the best layers in a farm flock is described by H. L. Shrader of the United States department of agriculture, as the red-white-and-blue method. It calls for the use of three colors of leg bands for marking three desirable characteristics of hens in the breeding flock. The banding may be done on or near three easily remembered dates—November 11, March 4, and July 4.

The first culling date, November 11, provides a check on all pullets that have begun to lay. These are the early-maturing pullets and are marked with red leg bands. It is easy to determine an early layer, as she has a deep-red comb and wattles and a moist vent. If the bird belongs to one of the yellow-skinned varieties she will show distinct bleaching around the vent and on the beak.

The next culling period, in March affords an opportunity to check the rate at which the pullets have laid during the winter. Those that have laid steadily will have lost, through the egg yolks, most of the yellow coloring matter assimilated from yellow and green feed. But birds that have taken a vacation during the winter will have some of this pigment, readily observable, in the beaks and shanks. All pullets with bleached beaks and shanks are marked with a white leg band.

The last period for culling comes after the hot weather has arrived. This is the time to detect the birds that take their vacation before they have finished their laying year. The molt is a good indication of the time these pullets have been out of laying. The bird with ragged, worn feathers may not look like a blue-ribbon winner compared with her sister that has clean, bright feathers. But the bird with worn feathers deserves the blue leg band because she is a persistent layer and has kept up her production into the hot weather instead of molting a new crop of feathers. Leg bands are removed from birds that go broody.

The red-white-and-blue layers should be mated the next spring to males from flocks with trap-nest records that show heavy winter production of good-sized eggs of the proper color for the breed. A breeding program of this kind will not take much time from the farmer's regular duties and will aid greatly in developing a high-producing flock.

BRAZIL TREES GIVES ABUNDANT FRUIT

The curious jaboticaba tree, native of the southern states of Brazil from Rio Grande do Sul to Minas Geraes, is represented by a new exhibit added to the representatives of plants of the myrtle family in the hall of plant life at Field Museum of Natural History. This strange tree has delicious grape-like fruit which grows abundantly in small clusters directly from the thin bark of the trunk and large branches.

In South America the jaboticaba tree is cultivated as well as growing wild over a large area. The globular fruit has a tough and rather thick skin enclosing a juicy vinous pulp and one or more large seeds. Children of the vicinity in which jaboticaba grows, swarm over the trees when the fruit is ripening and gorge themselves on it, according to Dr. B. E. Dahlgren, curator of botany, who collected specimens for the museum in Brazil.

THE MODERN FARMER

Official organ of the National Federation of Colored Farmers, Inc.

Leon R. Harris - - Editor

Published monthly by the Modern Farmer at Nashville, Tennessee.

Office, 447 4th Avenue, North.

Devoted to the interests of the Farmer, Truck Gardener, Livestock and Poultry Breeder, the Home and the People.

Entered as Second Class Matter, April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 447 4th Avenue, North, Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, 75c for six months, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT.

OUR PLATFORM

1. **A Unit of the National Federation of Colored Farmers in every community. of colored farmers.**
2. **Co-operative buying, producing and marketing.**
3. **Every colored farmer a farm owner.**
4. **Abolition of debt-slavery, injustice and persecution.**
5. **A written contract for every colored farm tenant and sharecropper.**
6. **Better rural churches, schools and homes.**

FROM THE BIBLE:—

"O give thanks unto the Lord; for he is good: for his mercy endureth forever." Psalm 106:1.

November! We are thankful.
For rain and sun and fertile loam,
For planting time and Hravest Home;
For strength and will to do our part
Courageously, with honest heart;
Nor criticise His all-wise plans,
Who holds the seasons in his hands;
November, we are thankful!

A GOOD BEGINNING

When the annual convention of the National Federation of Colored Farmers adjourned the other afternoon a New Year dawned for organized colored farmers of the nation. For three busy days we had discussed what had been. Numerous speakers had analyzed our mistakes and successes. We listened to words of encouragement and received some fine advice.

Organized Farmers, what now? First, let us resolve to start our New Year right. All must labor to build up our organization. Every unit should hold a public meeting. Invite to the meeting all neighbor farmers who are not members of your unit. Persuade them to join. It might be a good idea too, to do a little house cleaning. Get rid of the unfaithful,—those who will not follow the plans of the majority,—those who are for self only,—those ..who will not pay their dues—those who tell your business to outsiders, —those who cause trouble,— those who are no good. Better have ten or fifteen true-blue, loyal members than fifty who are not loyal. Some of our local units are top-heavy. We mean by this that they are too large to progress as they should. If such is the case, divide. But continue to cooperate.

Next, make a program for the New Year. Let cooperation COME FIRST. Get ready to purchase cooperatively,—family supplies, farm supplies, seed, fertilizer, everything you can buy together at a saving. Do this so you can save money. Stop wasting. Plan on cooperative production. Your community can surely produce some one crop so you can sell together in carlots. Plan for this and write to our national office for advice and assistance.

Next, wake up the women's club. Let the women meet and sew and talk about their common problems. Get the boys and girls organized. The national office is planning to start a movement especially for the benefit of our farm boys and girls.

Next, make a survey of your community. How many are owners? How many are not owners? What opportunity have you to purchase farms in your community? What terms can you get? What can you do to bring other progressive farmers into your community? Let your national office know about your community problems.

Be active, ever active. Don't go to sleep. This is a new day,—a New Year. "Start right, keep right, and you'll end right."

THANKFUL FOR WHAT WE STILL HAVE

On Thanksgiving Day, don t think about what you have lost. Think about what you still have, and be thankful. Most of our southern farmers have good crops this year. They have plenty of simple foods. Heaven sent bountiful rains. Their fields were not baked and parched as were the fields of our western farmers.

We should be especially thankful for our opportunities Race farmers have better opportunities today to make a success of farming, and of life, than they have ever had. We are gaining more friends every day. We are able to do our own thinking. We are able to work, for there is no unemployment on the farm. We should be thankful for the future, for the unknown, and be glad we have the chance to venture into the future with nerve and a smile.

THE N. F. C. F. HAS HELPED

Recently the secretary of the National Federation of Colored Farmers, Inc., "counted up" the names of those whom our organization had aided in the matter of holding on to farms they had purchased. These members, and some not members, had been given instruction and advice, letters to proper government officials had been written for them or about their difficulties, and, in many instances, they had been able to hold their farms after all hope had been lost. For this service, not one penny other than regular membership dues has been received or accepted.

We are glad the N.F.C.F. has been able to help so many. Those aided are now seeing the light where all was darkness before. They are boosting the N.F.C.F. in the fourteen states in which they live. Some forgot the organization the moment they were able to hold up their heads again, but such ungrateful people exist and are to be pitied.

The National Federation of Colored Farmer is a cooperative organization. It is a YOU—HELP—ME—AND—I—HELP—YOU organization. It is doing some mighty good work and merits the support of all who are trying to make our nation a better community and our people a better people.

BUILDERS OF GOOD COMMUNITIES

We have often said that the most important jobs held by individuals of our group are held by our teachers. They are the character builders of the Race. Their work must bear fruit or they are failures. They are the builders of good communities. When you find a community making progress, going forward, reaching after what makes life worth living, you will invariably discover a good teacher at work in that community.

Such a community is southeastern Missouri, the garden spot of the state, a community fortunate in having Miss Myrtle G. Pettigrew. Jeanes Supervisor, and Miss Emma Louise White, CWA teacher, at work therein. These teachers have ability, tact and sincere love for the people they are serving. They are putting forth every effort to lead the people to a higher plain of living. The rural people are following their leadership to a large degree and because this leadership is so good is a big reason why this community is progressing and developing as it is. May they long be able to continue the good work they are doing now.

There is no place like home. Many of your neighbors are repairing and remodeling now. It is a good time for you to begin. If it is only a cabin, there is something you can do to beautify it. Don't let the children grow up surrounded by dirt and ugliness. Repair and beautify your home.

Eat or sell the fat old hens. Don't board them this winter

Keep the idea of owning a home and farm of your own ever before you. The homeowner is independent. The renter or sharecropper is not. If you are chained to the sharecropping system of farming make every effort to get loose now. There is no time like today.

Don't expect to have good luck all the time. Misfortune comes to everyone. It usually comes suddenly Prepare for the rainy day.

He is less than half-a-man who mistreats his wife.

Keep the children in school. Education is the chief defense of nations and of races. It will soon be a disgrace to be illiterate.

Interesting Letters About The National Federation of Colored Farmers

A LETTER FROM SCHLOTER, MISS.

Schloter, Miss. —(Special) — November 12, 1934— Dear Sir:— Just a few lines to let you hear from me. I am thanking God and the officers of the National Federation of Colored Farmers for what my eyes saw and my ears heard at the recent convention at Charleston, Mo. I was glad to meet our Treasurer, Miss S. B. Wilson. Her kindness will never be forgotten . I hope to meet my many friends next year in Little Rock.

With all good wishes,
I am yours truly,
John Bennett.

MR. SAM DIGGS' LETTER

Cruger. Miss.— (To Modern Farmer)—Dear Editor:— This letter comes to let you know that our recent convention held in Charleston was the best we have ever had and I sure did enjoy it. We have previously been running our organization by faith but now it seems that we are running by sight and the most of all I was glad to meet Miss Wilson, our treasurer and I am going to renew my subscription to the Modern Farmer in short as it is the only paper that is any help to the Negro farmer in this Southland.

Yours very truly,
Sam Diggs.

GARDNER-THOMPSON NUPTIALS

Colny Town, Miss. — (Special to Modern Farmer) — Mr. and Mrs. Percy Thompson wish to announce the engagement of their daughter, Miss Viola Thompson to Mr. Jas. Gardner. The wedding will take place sometime in this month. The exact date and plans for the wedding will be announced later. The groom is the son of Mrs. Pearl Collins of Morgan City and the grand son of Mr. and Mrs. Alford Booker of Bourbon, Miss.

MR. STEWART OF MILESTON SENDS MESSAGE

Mileston, Miss, Nov. 11, 1934.— Miss Sadie Wilson, Nashville, Tennessee, —Dear Treasurer:— I was very proud to see you at the recent convention and to meet and know you personally. We had a great convention and I can frankly say it was the best one I have attended so far. I am state secretary of the Mississippi Unit and one of the first members of the Federation and an assistant National secretary. I trust the 1535 session of the convention will be bigger and better. Our recent convention was very helpful and instructive. We heard many good things,

Yours respectfully,
T. S. Stewart.

REV. B. J. FRANKLIN WRITES

Potageville, Mo., Nov. 10, 1934.— Miss S. B. Wilson. Nashville, Tenn.,— Dear Friend: This is to let you hear from me. This leaves me well and I hope you reached home safely. We are more than proud to have had you at our National convention held recently in Charleston, Mo. Your talk was full of inspiration. We are looking for you to be present at our next annual convention in Little Rock in 1935. We are looking forward to this next meeting.

Yours truly,
Rev. B. J. Franklin, of the Little River Unit.

Shaw, Miss., Nov. 15, 1934.— Modern Farmer, Nashville, Tenn., Dear Editor: —Please allow me space in your paper to speak a word for the conventon that has just closed in Charleston, Mo., a few days ago. The convention was the best we have had yet. Everything was in order. The point I enjoyed was the purchasing of Farm land. I pray that the day will soon come when all Negro farmers will realize that they must own the soil they till and farm the land they own.

Cooperative selling was another feature I was interested in. I pray to see the day when the colored farmer in my home state will start cooperative selling and gardening, when the Negro farmer will learn to live at home, till his soil, market his produce and the depression will be over.

Fred Williams,
Market Agent, Choctow Unit.

NICE LETTER FROM REV. ED. CAIN

Tylertown, Miss., Nov. 14, 1934. —Editor Modern Farmer, Nashville, Tenn.— Dear Sir:— I feel that the Modern Farmer is well worth the subscription price and I was glad to subscribe for it and since my return from the convention and reported to my unit the good news it has rendered the spirit of our unit and I think you will be getting other subscribers from this section. I enjoy reading the paper.

Yours as ever,
(Rev.) Ed. Cain.

REV. JOSEPH B. SMITH MEMBERSHIP

Among the new members enrolled in the National Federation of Colored Farmers and who desire to become a reader of The Modern Farmer is Rev. Joseph B. Smith, who is a member of the Choctaw Unit at Shaw, Miss. He expressed himself as being highly pleased with the work of this Association, and with the splendid way that The Modern Farmer is being published, containing as it woes healthful information for all phases of farm life.

Mr. Fred Williams of Shaw, Miss, sent in a post office money order with a letter expressing these sentiments, and nominating Rev. Mr. Smith as a member of this Federation.

THIN PULLETS ARE APT TO MOLT DURING FALL

A fall or winter molt in a flock of early hatched pullets can be prevented, in most cases, by good management. Good management means strong, healthy pullets that start to lay at an average of from 4 to 5 months. It includes having the birds in good flesh when they start to lay and keeping them in this condition. Thin birds usually molt. The pullets should be housed when the first one starts to lay. The houses should be cool in summer and moderately warm in winter.

INTERESTING NEWS AND NOTES

Farmers of the middle west are urged to save seed corn this year to assure an ample supply of the variety adaptable to each locality's growing conditions. In many instances 1933 corn will be used for seeding the 1935 crop.

The poorest price crop this fall is Irish potatoes. Prices have dropped 35 per cent during the year. Corn prices have advanced 98 per cent, tobacco 97 and oats 81 per cent.

Farmers of the drouth district have been warned by geologists that normal ground water conditions may not return for two years. There may be short crops in these districts next year.

The Texas prison system's cotton crop will exceed last year's crop in spite of the drouth and reduced acreage.

A four month's old Bloomington, Ind. farmer's child was strangled to death when a pumpkin seed became lodged in his throat.

When a large gorilla in the Berlin zoo attacked his keeper a chimpanzee grabbed a whip and beat off the much larger animal, saving the keeper's life.

An old Nevada "drunk driving" statue was invoked by an Elko Justice who fined a man fifty dollars for riding a horse on the city streets while intoxicated.

New York's Negro population is now placed at 204,000.

There are 11,010 Negro farm operators in the state of Florida. Near-il half are full owners. Acreage owned is 281,287 and value of land and buildings is $8,407,507. In this state the land farmed by owners is more valuable than the land farmed by tenants and sharecroppers.

Two Chicago white men went in for chicken stealing on a large scale and admitted to police who arrested them that they had stolen over 9000 chickens from 350 farmers since last spring. Evidently another Race loves its chicken too.

MISSOURI REPRESENTATIVE GIVES FINE ADDRESS

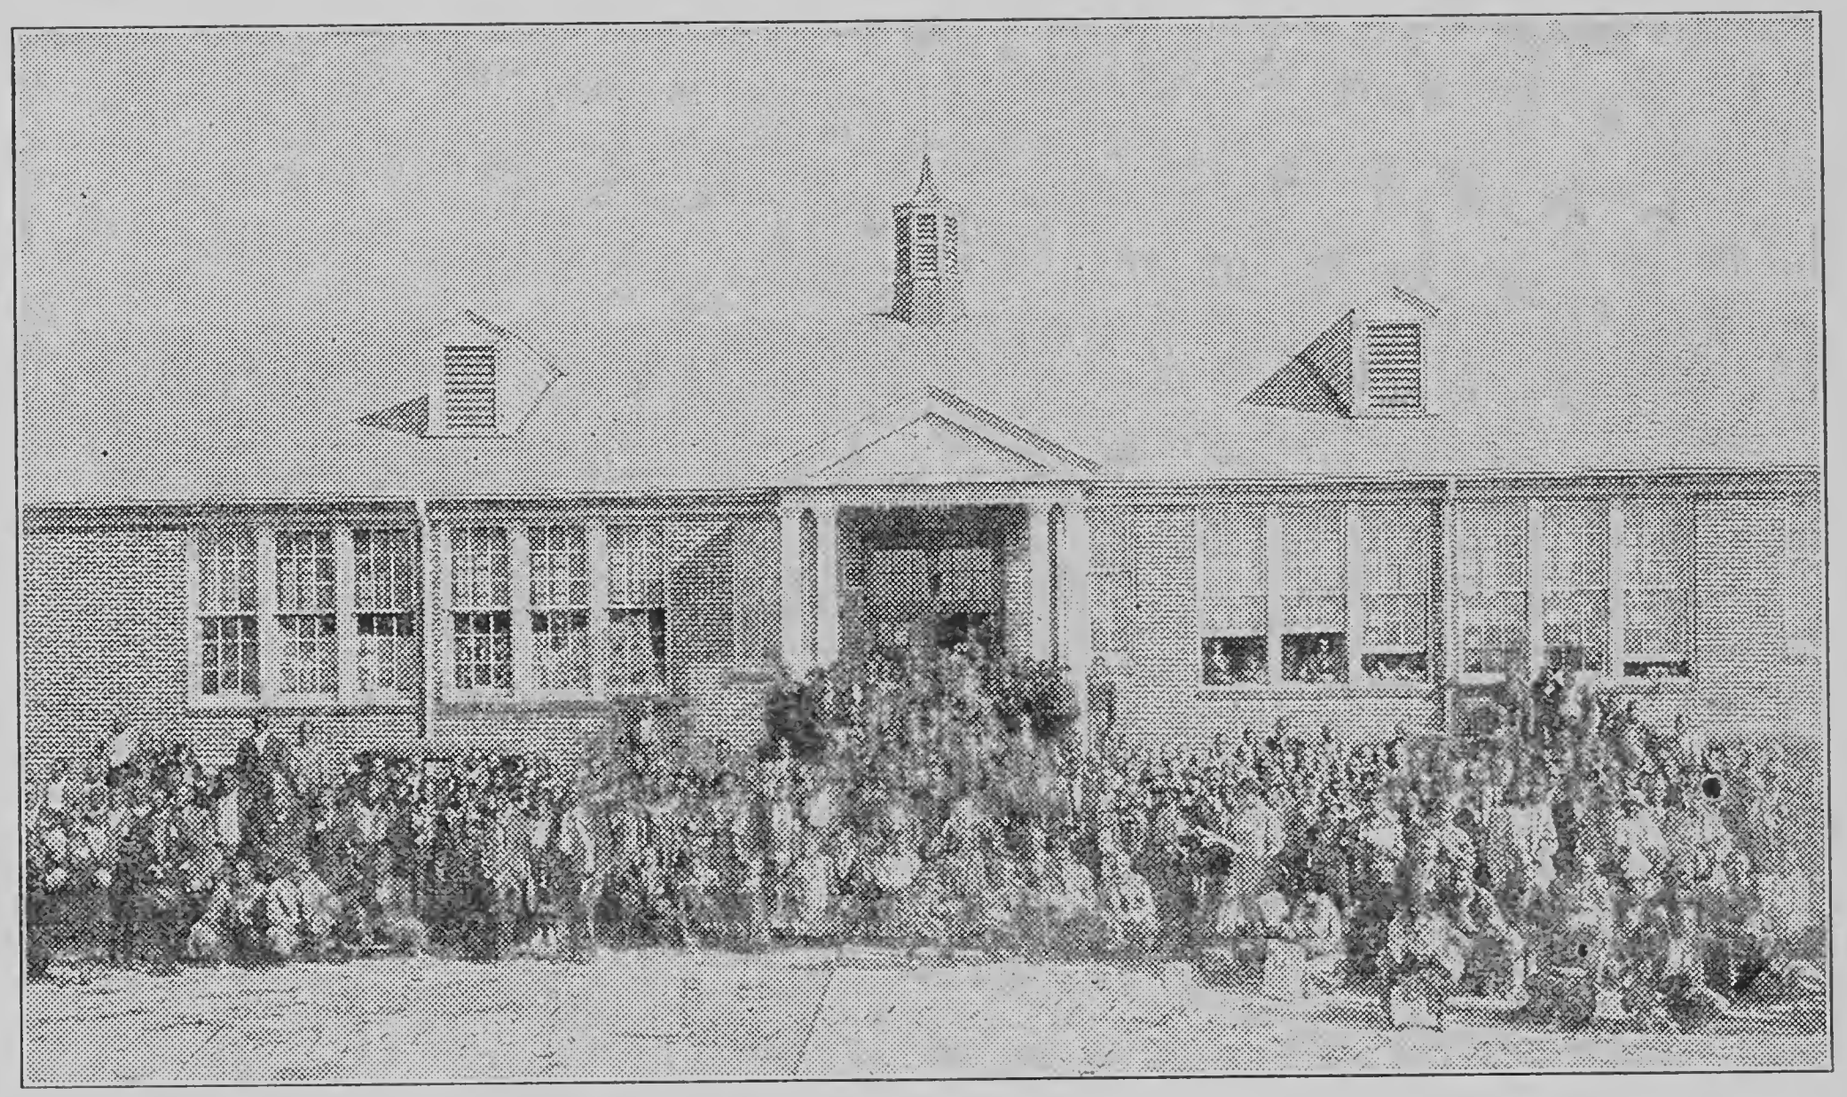
When Gov. Parks, of Missouri, designated Prof. H. L. Drew, of Bounceton, to attend the annual convention of the National Federation of Colored Farmers, Inc., as his special representative, he bestowed upon the organized farmers and visitors present a favor they will long remember.

Prof. Drew delivered a stirring and instructive address. He is a man who understands agriculture and race Farmers. He is one himself. Prof. Drew was accompanied by his wife and daughter. The Modern Farmer is seeking Prof. Drew's consent to publish his address in a later issue.

The Currins Deserve a Banquet

No one in the little city of Charleston worked more faithfully during the annual N. F. C. F. convention to make things go just right, than did the Currin family. Modest, but extremely industrious and efficient, delegates and visitors certainly owe a debt of gratitude to Mr. and Mrs. Marshall Currin and son. They acquited themselves nobly and well.

Mr. Currin owns a 240 acre farm near Deering, Mo. He is a good business man, proprietor of the Creola Cafe in Charleston. Mrs. Currin is assistant manager and the very "power behind the throne" for in a large measure she is responsible for his success. Son Currin is a hustling agent for the Chicago Defender and that paper could not have a better one in Charleston. The Currins believe in organization. He is president of Lincoln Unit, N.F.C.F., the largest in Missouri, nad one of the largest locals of the organization.



Annual Convention National Federation of Colored Farmers in session at Charleston, Mo., Oct. 19-30, 1934. 17 States were represented.

News Notes of Nat'l F.C.F. Convention

Seventeen States Represented—2000 Registered Delegates and Friends

The old reliable Tom Stewart of Mileston, Miss., assistant Secretary of the State of Mississippi Unit and also assistant National Secretary was on hand as usual. Tom Stewart has never missed a convention and is one of the oldest members of the N.F.C.F.

W. H. Henry of Sikeston, Mo., was on hand early with his usual smile. Brother Henry should wake up his members around Sikeston and put some life into his unit.

Mrs. Laura Burnett, the attractive wife of Dave Burnett of Wyatt, Mo., was in attendance at most all of the sessions. She had on display some prize winning exhibits. Mr. Burnett is the capable Market Agent of Lincoln Unit, Charleston, Mo.

The scholarly and aristocratic Dr. B. W. Byram of Mound Bayou, was on hand as usual. He looks well. Rev. Byram is one of the most influential men of the race in Bolivar County and we are hoping that he will be able to get his members lined up at once and not lose their charter.

Pat Williams of Leflore, Miss., Unit was on hand and it seemed that he was determined to know personally every delegate at the session. Pat believes in his good eats. He says he is going to double his unit membership before Christmas.

J. L. Jenkins of Olsted, Ill., head of Alexander-Pulaski, Ill., unit at Mound City, came in early. He had lunch with Dr. H. A. Hunt of the Federal Credit Administration, Bro. Jenkins says crops in his section are only fair this year.

Elder E. D. Cain of Tylertown Miss., was on the go during the entire session. He saw everything and we know he was able to give his members back home a true and correct account of all that happened. Bro. Cain secured the consent of President Davis to visit southern Mississippi in December and hold a big get-together meeting.

There were so many of the Hunter family of Hickman county, Ky., at the convention it was not difficult to find one. Sam and a few of the others are moving into southeast Missouri where they have contracted for some fine farm land.

Mrs. Tillie E. Lewis from Michigan was on hand and rendered valuable assistance to the reception committee in handling the large crowd. She also stood squarely behind the Modern Farmer and was instrumental in securing a heavy subscription list.

Nathan London of Cache, Ill., one hundred and seven years of age, well and hearty, was on hand. He is the oldest active farmer in the United States. Bro. London made a good crop this year. He says organization is the only salvation for the Negro farmer.

Virgil Sutton of Elko, Georgia was flirting with every good looking school girl on the grounds. There were a good many of them. Virgil says it was hard for him to decide.

That hustling J. M. Thomas of Coahoma was there brim-full of business. If the N.F.C.F. had moer officers like Bro. Thomas we would move ahead with more speed.

Matthew Hinton of Widener, Ark., just could not stand the pressure any longer and signed up for his membership in the federation. Mr. Widener is a hustler and we predict in a year or two he will be getting some where.

R. C. Dorrity of Earle, Arkansas, made arrangements to revive and reorganize the Brotherhood unit at Earle. Mr. Dorrity says in a few weeks the national office will be surprised with a great big report.

Sam Diggs of Cruger was about three hours late in arriving, but he made up for lost time. Brother Diggs has been one of the assistant National Secretaries for several years. He has never missed a convention. Sam says he is getting ready now for Little Rock in 1935.

Miss S. B. Wilson of Nashville, Tenn., our national treasurer, made quite a hit with her first appearance. She made a most interesting address and the ladies on the reception committee had planned to give a reception in her honor, but she was leaving before they could notify her.

W. H. Harrison, Dundee, Miss., better known as the "hustler" was there early. He came in with a rush and stood squarely behind the officers in handling the big crowd. Mr. Harrison is one of our best officers.

The very attractive Mrs. Ida M. Woods of Edwardsville, Kansas, represented the Sunflower State in a very able way. Her address captured the entire audience.

Jesse McGrew and Fred Williams of Shaw, Miss., say, "Face to face in Little Rock, Arkansas, next October." When it comes to organization and setting up units they are leaders.

William Jones held up the state of Alabama in a grand way. He says at Little Rock next year he will bring a very large representation. Bro. Jones says the exhibits were the best he has ever seen.

Henry Jackson held up the state of Louisiana. He says the cane crop is fine this year. He promises to send us a gallon of his ribbon cane syrup.

Mrs. Anna Chambers, representing the Dubois unit at Sandusky, Ill., was a most interesting delegate. She and her husband were one of the first settlers in southern Illinois over thirty years ago.

Lewis Beeks of Egypt, Miss., says don't forget western Mississippi. He promises to wake them up before Christmas and have them all back in harness by the first of January. Officer Beeks looks well. Lots of the members said Mrs. E. A. Thompson of Marks, Miss., was his daughter. This was her first visit to a convention. We hope to see her at Little Rock next October.

Daniel Givens, Evan Smith and W. G. Woodard, of Holly Grove, Miss., unit came in with smiles. They had a good time. We hope Mrs. Givens will not hear of Dan flirting with the girls and telling them he was not married.

Prof. V. W. Booth of Bassfield, Miss., Deputy for the southern part of that state says conditions in his section are improving and he believes all the members will soon catch up their back membership. We hope so.

E. Fortenbury of Knoxo, Miss., unit attended his first convention. He seemed amazed at the large crowd.

Richard Hall of Bethel unit near Tchula did not miss anything. He saw it all.

THE ROOSEVELT NEW DEAL

(Continued from Page 1)

The Roosevelt New Deal has been taking us places since last we met and, of course,— we have had plenty to think about and talk about. Many of the New Deal plans effecting agriculture have been called 'experiments.' They have been called experiments by their authors,—and by both friends and enemies. I rather like experiments. I certainly have more faith in an administration,—national or state,— experiments,— than I have in one that does not. A government that experiments is either going forward or backward. Like the wind, "IT IS GOING SOMEWHERE." Either way, my friend, is better than standing still.

Without experiment there can be little progress. So often we "adviser our members:" Change sometime. Get out of the old rut. Try something new! A new way of doing things,— of working of living. A change,— an experiment,— is often beneficial. But sometimes they are not. Experiments must prove their worth as they are being carried on. If found to be worthless,— no good,—then they should be stopped. Many of the New Deal,— the Agricultural Adjustment Administration,— which I shall hereafter call the AAA.— many of the New Deal and AAA experiments have or will be found to be good Many of them also will be found to be bad. I am in favor of supporting,— of whooping it up for the the Federal Government,—because it is experimenting and trying to discover just what is best for the farmer's welfare. But I am not in favor of and I will not support, any governmental experiment that bids fair to do the farmer more harm than good,— especially the small farmer, or the Race Farmer. Take for instance,— the Bankhead Law,— which compels farmers to limit their cotton acreage. This experiment has not been a blessing to the poorer cotton farmers,— colored or white. Reports are now current that the very ones who wrote it and sponsored it are going to request its repeal. It should be repealed. I cite it as one AAA experiment that has failed in a hurry.

The New Deal,— the AAA, — has had much trouble carrying out some of its experiments in sections of our country where the sharecropping system of farming is generally practiced,— and where most of the farmers are colored farmers. I am certain that in these sections, most government officials have tried to be fair, — it is not their fault that they have gotten into trouble. The big reason is,—the experiments were not started right in these sections. It's a hard job to do something for a person who is intelligent enough to do mostly for himself if he has the opportunity to do that something he wants to do. That is right where the AAA made one big mistake. It wanted to do something particularly for the farmers of the South. Well and good. It was absolutely necessary for the government to assist southern farmers. The question then arose— "In what way?" Who answered that question? Not the real farmers of the south, —the farmers who do the farm work,— who raise the cotton,— the peanuts, the tobacco,— the rice,— the corn. These farmers never auswered that question. The question was answered by the owuers and the managers of the South's biggest farms,— by absentee landlords,— by the financiers,— by the cotton dealers and speculators. The small farmers,— the tenants and sharecroppers,— were not consulted. As usual,— they were considered to be too ignorant to know just what was good for them.

The small farmers of the South, tenants and sharecroppers, were not represented on any of the AAA boards, bureaus or committees,—neither in Washington,—in any of the Southern States,— in any counties or local communities. Such representation was recommended and requested, especially by Race organizations, but it was never granted. Last December the Negro Advisory Committee of the Advisory and Planning Council of the Department of Commerce said in its report,— (I quote), "In certain sections of the far South Negroes form the major part of the farming population. From this consideration it seems obvious that this large group of the population should have substantial representation in all planning for the improvement of the business of farming, and should share fully representation on all boards, bureaus and committees that effect directly the communities in which Negro farmers live and work." (End of quotation). My friends, you know and I know that colored farmers are not represented on these AAA boards, bureaus and committees. Why are we not represented? There is one big reason. That reason is the prevailing sharecropping system of farming in these sections. It is still considered to be an indisputable fact that a sharecropper needs no one to represent him anywhere or in any manner except the landlord for whom he crops. This cannot be just representation. It is the same as the master representing the slave.— the employer representing the employee, — the banker representing his clerks,— the railroad management representing the conductors, firemen and engineers. The real cure,— the real remedy,— is the organization of all Farmers in these sections,— especially the Race tenants and sharecroppers. I fear however, that such organization will require too long a time. If there where no Race or social problems involved, it would be different. In northern and western farming sections,— where tenants, sharecroppers and landlords are all of the same Race. — all are together admitted into their local farm organizations. All get EQUAL representations.

I suggest as a trial remedy that in each county having an appreciable Negro farm population, a committee composed of two colored farm owners and three tenants or sharecroppers be appointed by the AAA to work with and advise all the AAA boards, bureaus and committees functioning in the particular county. This would be better than what we have now, for now, we have no close representation. In counties where the N. F. C. F. has units, — these committees should be chosen from our membership. We deserve, and should have, the same recognition and consideration that units of the American Farm Bureau Federation receive from federal authorities.

Such committees could find plenty to do. I will suggest two big jobs right here. First,— we all know how impossible it is for any colored farmer,— no matter how competent,— to become an officer of any production credit association. Even though Race farmers may be the largest borrowers and pay the most interest, —these associations are sure to be managed and dominated entirely by large landowners. The AAA Committee of Race farmers I suggested could be of much service to their brother-farmers in seeiug that applications for crop production loans received careful and just consideration.

Secondly,—another big job for this committee,— they might examine every contract made by tenant and landlord in their county, and test the legality and fairness of these contracts.

While he was Chief of the AAA, Mr. George N. Peek,—said that in order to make any progress and get real, permanent relief,— "Farmers must work with each other and with the government." The N. F. C. F. wants its members to work together in peace and harmony. We also want to work with our neighbor farmers,—if they will let us work with them. We also want to work with the government, as Mr. Peek suggests. We cannot do this however, as long as the government recognizes us as farmers only,—NOT AS A SPECIAL GROUP OF FARMERS WITH PROBLEMS VASTLY DIFFERENT THAN THE PROBLEMS OF OTHER AMERICAN FARMERS."

Just so long as we are considered by our fellow-citizens as being a special group, — just so long will we demand special consideration. We have a right to demand such, and will have that right as long as there is a colored school, segregated theatre, hotel or restaurant, —or a Jim Crow railroad coach in the United States.

Purchase and Ownership of Farms

The first special help colored farmers should want from the government is help that will enable them to purchase and own farms. Industrious and relable colored farmers should be able to secure loans to purchase farms in, or adjacent to colored farm communities. These loans should be made either direct to individual farmers or to cooperative organizations in the several communities. Personally, I would rather see these loans come from private interests, from people who have money to loan,—from financial institutions, —land or insurance campanies,— than to see it come direct from the U. S. Treasury It is pretty clear to all who have eyes to see, —that when a farmer secures a government loan he loses a certain degree of his independence. There is a tendency on the part of the government and government officials, to manage him and his business. He becomes, to a certain extent,— a government ward. He becomes a sort of a "relief case." Colored farmers should not want to be put in such a position. Advice? yes,— we can accept advice or let it alone. Cooperation, Yes. We cannot succeed at all today unless we folllow the principles of co-operation. But management we don't want,—we don't need and WE ARE NOT GOING TO HAVE. We may as well stay where we are now,— and keep what we have now,— and be managed by the landlord, the merchant, the planter and the banker, — as to managed by the government and by selfish jobholders and politicians. A lawyer in Chicago advertised for a butler and a young fellow of our group answered the ad. The lawyer was questioning him. See here George, he said,—how about you? Are you married?" "No sah, Boss," George replied. "I makes mah own living." We farmers want perfect freedom to make our own living.

Last spring our national office was informed by high government officials that the government had no money to loan direct to units of our organization for the purpose of building up their communities and providing conveniences and facilities all modern and progressive farm communities need. Money was available to establish and experiment with a few model farm communities,— and the fifty or hundred farmers who might be persuaded to live in them and be experimented with. But there was no money for groups of farmers,— organized cooperatively— who wanted to build their own communities as they desired. As a secret between you and me,— I am glad nothing was available. But I am ready to announce here and now,— that your organization,— the National Federation of Colored Farmers,—will strive to obtain financial assistance for any local unit of our organization,— which will as a unit, make sound plans for its community development. What do call sound plans? Here are some of them. A seventy-per cent memmbership Cooperative buying, production and marketing. Facilities necessary for this practice. Opportunity for other reliable farmers to purchase farm homes in your community. A community industrial plant. A community recreation center if you have none. A spirit of cooperation, —judged by deeds,— not by words or promises. This is a hint to all our loyal units and to all communities of colored farmers. Let's get busy. We can get anything we want and need if we want it bad enough.

The N. F. C. F. has much faith in the Colored farm community. But we want these communities to be independent. We are certainly not in favor of any of the Utopian schemes such as the one advanced by our friends in Ar-Kansas, who, according to reports, have orgauized the National Farm Ownersship Association The success of such schemes depends on changing human nature —and that just can't be done. It reminds me of a story I heard. One of our ministers was preaching a rousing sermon mainly for the purpose of getting a big collection, — and he cried out, "Brethren,— this old church has got to walk." "Let her walk."— "Let her walk," came the words in loud tones from the Amen corner. This encouraged the minister so he said still more loudly, "Brethren, this old church has got to run." And the Amen corner responded,—"Let her run, —Let her run." This encouraged the minister still more so he said,— "Brethren, this old church has got to fly." "Let her fly, let her fly," came from the Amen corner "And," said the minister," "It's going to take a lot of money to make this old church fly." And then the words came from the Amen corner,—"Just let her walk, Brother, just let her walk." I favor the kind of a colored farm community that is possible to have, —not the impossible.

Our bread and meat, —our economic future, — yes, the future of our race here in America depends upon what advantage we take of opportunities to build farm communities of our own,— where we will have our own schools,— our own churches, our own trading centers. In such commmnities wo will find material sustenance and also the social satisfactions of life. We may as well take it for granted, here and now,—that the white man's prejudices will remain as they are for many years to come. A despised and rejected group will find no place in a world ruled by the machine Our only hope is to stay in the country in our own communities,— settle in them,— build them up,— and abide our time.

This question of farm ownership is vital to us today and should interest all of us, —our leaders, — our ministers, —the teachers of our schools,—our business and professional men. During the past ten years,— our ownership of land has decreased. We must lose no more. Our nation is sure to become a land of small farms,— well tilled,— and our people, colored farmers, will make the best small farmers in the world. Governor Olson of North Dakota said recently that only operators of farms in this country should be allowed to own farms. That is sound doctrine, —and should be the doctrine of the New Deal. He says too, that the small farm should pay a small tax,— a larger farm,—such as a half-section, — a higher tax,— and a large farm, —a section or more, —should be required to pay such a big tax that no one person would be able to own so much land. You can see which way the wind is blowing.

Large land owners whose lands are mortgaged,— who know they have too much land,— and will never be able to pay off the mortgages— should be willing to subdivide and sell portions of their holdings. Sec. of Agriculture, Henry A. Wallace,— who by virtue of his office is the leader of all farmers of the Nation, — said in an address delivered last July, that one of the precepts of the New Deal was to "place human rights above property rights." If such is the case, — then we must remind Mr. Wallace that colored farmers of America are also human beings. Their chance to live, —aye,—their right to live as human beings in America, —must not be jeopardized by the so-called "right" a favored tenth of as many as they number may have to own and control the land whereon these Negro farmers toil.

If Negro farmers are not given a chance in the Southland,— in the land which they love,— in the land sacred to them by the sweat and blood of their fathers and mothers,— if Negro farmers are not given the chance to own the land they till and till the land they own in the Southland,— then they will leave the Southland and find that chance elsewhere,—for

(Continued on Page 7)

THE ROOSEVELT NEW DEAL

(Continued from Page 6)

that chanee they must, — they shall and they will have.

Colored Farm Tenancy

It is my honest belief that as long as we have so much Negro farm tenancy in this nation we are going to have a lot of Negro farm poverty and misery. It is almost an unwritten law,— that the average colored small renter and sharecropper must buy and sell as the landlord directs. If such is the law,— then this small renter or sharecropper is not a man. He is a peon,— a slave. He is worse off than the laborer or the farm hand. And too, —when landlords claim,— as they generally do,— that supervision of Negro tenancy is as imperative as supervision of hired wage labor,— then I say, there simply should be no tenancy to supervise. Let all the labor be hired wage labor. The planter who has to depend on that kind of labor for awhile will soon decide it is better to sell off his large holdings and keep only what he can manage judiciously.

The furnishing system is a curse to both the good landlord and the good tenant. This system should be done away with in a year's time. I am glad to see it going. No tenant or sharecropper should agree to work for a landlord who will not allow him opportunity to raise his bread and meat. If this opportunity is given and the tenant is treated justly,—he will soon need no furnish. If he needs no furnish, — and neither asks or receives such from his landlord, —then no one can possibly have any strings tied to him. He has gained his freedom and should use it and enjoy it.

Distribution and The Farm Market

We have been told that much of our farm trouble are caused by overprodnetion If we would pay as much attention to distribution as we do to production there would be no surplus. We are constantly looking for new markets. If leaders of government, business and finance would open their eyes wide enough, they would see half of the farm market they are looking for on the other side of the world, right in front of their own doors. What would they see? For one thing they would see a Negro rural population right here in the United States, of six and three quarter millions of people. They would see 883,000,— nearly a million colored farm operators. But of this number— only 181,000 are owners. Then we have over 700,000 Negro farmers right here in the United States, who should buy farms. And each of these farmers should be able to buy an auto,— and a radio, —and a gas engine, and— a washing machine, —and a dozen and one other things every modern farmer and the American farm home should have. And this Negro rural population of seven millions wants and needs better clothing, and food, and house furnishing.— More and better of everything the average American citizen wants. Yes, there is a big market here, American business men don't have to LOOK FOR IT. What they need do is to LOOK AT IT AND TAKE IT. And just as soon as leaders of American industry realize that this great domestic Negro farm market is closed,— closed because a facored few are getting and getting dishonestly, the earnings of many thousands,—when this fact is realized,— there is going to be a big change made. The American white man's insatiable desire for the Almighty dollar is going to prove to be a big blessing to Negro farmers. The white man wants to sell, and you can rest assured he is going to fix it so the fellow he wants to sell to will be able to buy.

The Farmer's Duty

Production of the American cotton crop is the biggest part of the colored farmer's business. In spite of all you hear,— American cotton producers need never fear foreign competition . We may not always raise eighty per cent of the world's needed cotton,—but for many years to come, we will raise at least sixty per cent of it We will be able to sell this much at a profit . But the man who really produces the cotton must get more out of it That man is the colored farmer.

It is partly the fault of tenant farmers themselves that they do not get what they should get for their cotton. Sometimes cotton is only five cents a pound, —and we grumble and squawk. But every tenant or sharecropper who raises enough food to keep his stomach full is really getting fifteen cents for his five cent-cotton. Suppose you have five in your family. The food your family could easily produce in spare time on any ordinary cotton farm, is worth at least $500. In solid cash,— this is the same as twelve bales of five cent cotton And when you raise your foodstuffs and your cotton. Suppose you have five in your more, you are really getting twice that for it. One of our big faults is, that we do not look far enough ahead . We should make a program,— and plan for the coming year in advance. Unless we plan we cannot succeed.

Organization Necessary

The organization of American colored farmers is absolutely necessary. If we can get only one-tenth of our farmers organized, our future is secure. Only about one-twentieth of American white farmers are organized. But this one--twentieth, who belong to the three big national farm organizations,— are doing all the thinking,— planning and acting for the rest of us. All that farmers have gotten in benefits, and in relief so far, is the result of the work and plans of the one-twentieth who are organized. And I want to tell you this —just about all worthwhile,— just about all the permanent good Colored farmers will get in this country,— will be the result of the work of the National Federation of Colored Farmers.

Colored farmers who have no thought for their future or for the future of their children, will never make good organization farmers. We must organize more farm boys' and girls' clubs this year , in connection with our units. We must begin to teach our children the principles of co-operation,— and it is not too early to begin with them in the cradle.

Let's get together and stay together. Build up the units of the N. F. C. F. in your community, and if you have no unit, then organize one.

The prosperity and the stability of the Negro farmer is the hope of our Race here in America. If the farmer prospers,— all will prosper. If the farmer fails,— all will fail. It is he who will become the father of Negro statesmen,— Negro philosophers,— Negro orators and poets. It is he who will establish his Race— will guide his Race,— will uphold his Race in America, as long as the Stars and Stripes remain the symbol of liberty,—freedom and opportunity for all Americans.

MISSOURI BAPTISTS BANQUET

Pastors and Wives Give Dinner to Secretary Boyd

Charleston, Mo.—(Special to the Union-Review)—Twenty-six pastors with their wives were hosts and hostesses at a special dinner and banquet tendered to Henry Allen Boyd on his visit to this city last week. He was here attending the National Federation of Colored Farmers in session at the high school, but they took occasion, since he heads up the Sunday School work of the nation and is well known in Baptist affairs, to tender him this honor and give him this reception.

The spacious auditorium and convention hall in connection with the cafe of Mr. and Mrs. M. C. Curtin was secured for the occasion. The dinner and reception was pulled off promptly at 2:00 P. M. These ministers and divines mostly migrated to this section from Mississippi, Alabama, Arkansas, Kentucky and West Tennessee. The proprietor of the cafe being a native Tennessean, joined in with the religious forces in putting his elaborate institution at the disposal of these Baptist divines.

Although the Baptists were taking the lead, other denominations lent their presence, influence and support. It was a four-course menu served by volunteer women and the employees of the cafe who were anxious to see that the banquet reception and dinner were in keeping with the reputation of the distinguished visitor. The tables were decorated in Hallowe'en colors and autumn flowers. The Hallowe'en idea was carried out even in the ice course. At the conclusion of the menu those present demanded that an address be given to them by the head of the National Baptist Publishing Board's Plant at Nashville. Yielding to their invitation and their demands he brought them a message on denominational opportunities and achievements.

The entertainment committee for this occasion was as follows: Rev. B. J. Franklin, chairman; Rev. W. T. Ghess, secretary; Rev. S. D. Sloane, treasurer, and Rev. I. H. Moore, master of ceremonies.

Those seated at the banquet table were: Rev. B. J. Franklin, Portageville, Mo.; Rev. W. T. Ghess, Lilburn, Mo.; Rev. J. O. Pennman, Morley, Mo.; Rev. O. J. Whitfield, Charleston, Mo.; Rev. J. H. Horton, Wyatt, Mo.; Rev. G. W. Harris, Morley, Mo.; Rev. J. G. Livas, Charleston, Mo.; Rev. J. P. Emanuel, Henson, Mo.; Rev. S. D. Sloane, Charleston, Mo.; Mrs. S. M. Gayles, Charleston, Mo.; Rev. I. H. Moore, Charleston, Mo.; Rev. Wm. Moody, Charleston, Mo.; Rev. W. J. Jordan, Essex, Mo.; Rev. A. W. Scott, East Prairie, Mo.; Rev. G. A. Taylor, Charleston, Mo.; Rev. K. Y. Putman, Gray Ridge, Mo.; Rev. Nathan London, Cash, Ill.; Rev. Thos. Corson, Charleston, Mo.; Mrs. J. P. Emanuel, Henson, Mo.; Mrs. G. A. Taylor, Charleston, Mo.; Mrs. O. H. Whitfield, Charleston, Mo.; Rev. H. H. Ingram, Cruyer, Miss.; Rev. Henry Allen Boyd, Nashville, Tenn.; Mr. Leon Harris, Moline, Ill.; Mrs. Leon Harris, Moline, Ill.; Miss Sadie Wilson, Nashville, Tenn.

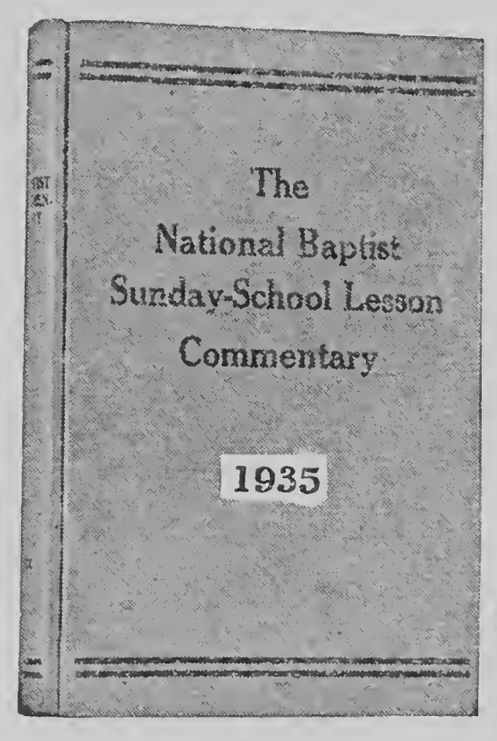
Sunday School Lesson Commentary

1935



Every Sunday School Teacher Should Have One

Six Reasons Why You Should Use It:

First: It is the production of your own National Baptist Publishing Board which gives employment to more of our people than any similar concern in the United States.

Second: It is purely baptistic and orthodox in every particular.

Third: Its doctrines are unquestioned, and the Biblical requirements are stressed in a manner to make it absolutely dependable.

Fourth: None of the modern theories leading to skepticism are admitted.

Fifth: It aims to be true to the teachings of Jesus and whatever there is presented which has not the "Thus saith the Lord" is discarded as unsafe and destructive of the best interests of mankind.

Sixth: Thoroughly adapted to the uses of our Sunday school constituency, it stands as a beacon light to all those who would like to rise in the scale of intelligence and demonstrate the qualification necessary for the accomplishment of the "Great Work" devolving upon us as a people.

REGIONAL MEET

(Continued from Page 1)

the market and for obtaining seed and clothing at a much lower cost, by buying in a group instead of individually. Many persons of note will be present at this meeting who are thoroughly familiar with just such problems as these farmers are facing. A number of governmental heads will be present to give out this much desired information.

Members and units in Pembscott, Madrid, Mississippi, Scott, Dunklin, Stoddard, Cape and Butler Counties compose this southeastern territory and these members and units are urged to attend. From these eight counties a large portion of the population is the colored farmer and it is this group President Davis hopes to reach and help. At this meeting a site will be decided upon for a warehouse where potatoes, turnips, cabbage, beans, peas and other vegetables will be assembled, graded and shipped out of Southeast Missouri to the large consuming markets in the spring and summer. Instructions will be given the farmers at this meeting how to plan and plant their acreage so that vegetables can be shipped to the larger markets in sufficiently large quantities to make carload lots. Don't forget the date, December 10th and 11th, at Charleston, Mo. You will be benefited by attending this meeting. Information that you would have to pay for, will be given by Mr. Davis free of charge. Begin your plans now to attend.

SIXTEEN STATES

(Continued from Page 1)

sioned by governors of various states.

One of the important features of the meeting was three-minute talks by the delegates relative to the trials and difficulties experienced by sharecroppers and tenant farmers and efforts being made to meet these troubles. The effect of the New Deal on the situation and prospects of colored farmers was also discussed.

Reports by national officers stated that many units of the organization are buying home and farm supplies cooperatively and the practice is saving members thirty per cent of the cost of supplies. Members are also purchasing farms in numerous localities. A cooperative production program, which will lead to an increase in cooperative marketing, was outlined for next year.

Resolution adopted by the convention urged support of the national government in its efforts to assist farmers; condemned the sharecropping system of farming in southern cotton, peanut and tobacco belts; requested repeal, or important revision of the Bankhead Act; urged units to continue the practice of co-operative purchasing, production and marketing; protested the action of those planters and landlords who refuse to give sharecroppers and tenants legal written contracts and settlement statements; advocated establishment of at least one model community of colored farmers in each southern and border state by the federal government; expressed gratitude to those responsible for the appointment of Dr. Henry A. Hunt and other able Race leaders to important government positions effecting agriculture; requested the AAA to appoint county committees composed of two colored farm owners and three tenant farmers or sharecroppers in each country having an appreciable Race farm population, to co-operate with AAA county committee, boards, bureaus, local credit corporations and other bodies, that colored farmers may have direct representation; advocated appointment of colored extension agents and home demonstration agents in every county having an appreciable Race farm population; requested increased appropriations for our agricultural institutions; requested that every effort be made by the government to widen land ownership by Race farmers; and advocated observance of Farmers' Sunday in all farm communities.

National officers for the ensuing year are James P. Davis, president, Maj. R. L. Byrd, vice-president, Leon R. Harris, secretary, S. B. Wilson, treasurer and Cornelius R. Richardson, chairman board of directors.

BEAUTIFUL COLORED DOLLS

LOWEST PRICES—BETTER GRADE

Why Give Other Race Dolls to Your Children When Beautiful Colored Dolls Can Be Obtained at These Low Prices?

NEW FARM

(Continued from Page 1)

Viewed by nearly two thousand farmers here to attend the convention of the National Federation of Colored Farmers, Inc., it created quite a sensation. Mr. Sutton stated that it caused much interest to farmers all along the way. He had driven from Elko, approximately a thousand miles.

The purpose of bringing the implement to the convention was to demonstrate its usefulness to farmers and representatives of farm implement companies who were present. Unfortunately, a sudden rain storm halted the try-out before it could be finished, but all who saw the machine work praised it highly. Designed primarily to eliminate cotton chopping, which, next to picking is the most arduous task connected with cotton culture, the machine also will list and bunch cotton and peanuts, and as a cultivator can be used to tend most any farm crop.

The inventor and his representatives have refused several flattering offers for control of the patent. It is his earnest desire, he says to see his machine manufactured and distributed by young people of his own group. And even if the manufacturing must be done by others, he says that colored boys and girls shall certainly get the first opportunity to go on the road as its salesmen. The National Federation of Colored Farmers, Inc., has been chosen his agent to negotiate with various manufacturers. This organization has so much faith in the usefulness of the machine that it is guaranteeing a sale of ten thousand units the first two years.

To those who have told Mr. Sutton that his machine will further eliminate hand labor and create unemployment, he has replied that this is his one big desire. "I want to help colored farm women and children to get out of cotton patches and away from the hoe." He said. "With my machine, a farmer can do the work of at least four hoe-hands. If his wife and two of his little children are the other three, I know he will soon discover just what a blessing the machine really is."

37 CLOSE DEAL

(Continued from Page 1)

ter their crops were harvested. Our organization found the land for them and secured favorable terms. No help was requested from the federal government except that a few applications were made for small crop production loans. The farmers went to work like pioneers,— clearing, grubbing and building cabins. The spirit of cooperation exhibited was truly remarkable. Those who had stock and tools loaned to those who had none and all came along together. They aided each other during planting and harvesting. What they have done others can do and we have here a shining example of how the National Federation of Colored Farmers is assisting its members everywhere. Before the organization of this Unit there were only nine Race farm owners in the community. There are now 46 and the number will increase. Their unit has around 200 members."

Marshall Currin is president of this progressive group and Prof. L. B. Boler is general manager.

ARK. CAPITAL

(Continued from Page 1)

er of the farmers of the nation who make up this national organization. One spokesman went so far as to guarantee that if the convention was awarded to Little Rock, his organization, through their affiliation with others, would see to it that at least $2,000.00 in cash was put at the disposal of the Association to be awarded to live stock exhibits, farm products, home economics, canning, preserving, needle work and other features that the Federation has shown from year to year, sent or brought up to remain on exhibit throughout the three days.

President James P. Davis and Secretary Leon Harris told the assembled tillers of the soil, live stock raisers, fruit growers, truck growers and poultry raisers as well as others, that the invitation was in their hands, and it would be up to them to decide upon where is the best place, the most logical location and the most accessible city, town and community to call the next session. They have never held a meeting in Arkansas, he declared, but they have met in Mississippi, Tennessee, Missouri and several other towns within the years of its existence.

It was said that in and around Little Rock, which is located in Pulaski County, and which is the capital city of the state, there is a rich farming section and an unusual number of farmers; and then due to the fact that it is too close to Oklahoma, Mississippi, Tennessee and Missouri and not a long distance from Kentucky, there would be a likelihood of its drawing a large attendance. While Charleston, Mo., which had all records for the Association delegation, even exceeding the session at Mound Bayon and the one at Memphis, those who are advocating Little Rock are of the opinion that all things being equal, and if conditions do not grow worse the banner would have to go to Little Rock.

The officers of the executive committee, it was said by Secretary Harris, would in all probability reach a decision time enough to give wide publicity to whatever city was to be selected in 1935 so that the farmers themselves through their various Units could line up their delegation, prepare their exhibits, and that the manufacturers of farm products too might have an opportunity of sending by freight or express such as they want to display during the next session.

ABE AND DAVID HUNTER JOIN FEDERATION

Among the members who took advantage of the offer to come into the National Federation of Colored Farmers and to become readers of The Modern Farmer were Mr. Abe Hunter and Mr. David Hunter, both residing in Clinton, Ky. Their membership application was presented to the National Federation in its session held down at Charleston, Mo., October 29, 30, 31.

When the names were presented by the treasurer of the Association, Miss S. B. Wilson, to whom they had sent their enrollment fee, 1500 farmers applauded, because they now have these two members from Clinton, which is the Blue Grass state. Kentucky is mostly known as the blue grass section.

They are also now readers of this one year's subscription because they took advantage of the dispensation put on by the Federation for increased membership.

WHO KNOWS JOHNNIE ALGE BUFORD?

A father looking for a lost son will appreciate any information that can be given to him. The father's name is James Buford. He resides at Wyatt, Missouri, and gets his mail at P. O. Box 328. The lost son is Johnnie Alge Buford. He is about seventeen years of age, medium height and when last seen was at Mobile, Ala.

The young man was born in Zona, La., but was taken to Cleveland, Ohio, when he was very small. The parents then moved from Cleveland back to the south. The father then left Mobile and located in southern Missouri, but the young man left his mother while the father was in Missouri and has not been heard of or seen since.

Anybody knowing the whereabouts of this young man will please write to James Buford, Box 328, Wyatt, Mo.

AGENT OF MT. OLIVE UNIT SENDS NICE LETTER

Slaw, Miss. — Miss S. B. Wilson, Nashville, Tenn., —Dear Miss Wilson:— This letter is being sent to you to congratulate you on being present at our recent convention held in Charleston, Mo. We were very pleased to welcome you as our Treasurer and pray the blessings of God upon you, honing to meet you again with words of joy and happiness. May all of our leaders live long and be happy that they may be able to help us on to success.

I close this message saying, May God bless and keep you in His faith.

Yours in Christ,
Jesse McGruen, Market Agent,
Mt. Olive Unit.

EX-SLAVE, AGE 103, DIES IN ROBERTSON

Springfield, Tenn. — (Spl) — "Uncle" Manuel Douglas, Negro, former slave, and believed to have been Robertson County's oldest resident, died Saturday at his home here after two years of declining health. He had stated his age as 103.

Coming to Springfield from Davidson County, where he was a slave prior to the Civil War, "Uncle" Manuel resided here for nearly a half century.

Survivors are seven daughters, and twenty-five grandchildren. A brother, "Uncle" Alfred Douglas, died a few years ago at the age of 90. —Nashville Banner.

PRESIDENT DAVIS YIELDS TO DEMANDS

South Missouri Units Held Two Days Extra Session

So great is the interest manifested in the Farmers in and around Charleston, Missouri, and so many benefits were derived from the National Convention of Colored Farmers recently held in this city until President James P. Davis was prevailed upon to hold a two-day regional meeting here opening December 10th and continuing through December 11th. All units and members located in the southeastern part of the state were asked to attend this session. Plans were outlined by the President for co-operative acreage of melons and vegetables and for the purchase of seed, overalls and in fact all farm supplies through one purchase and to arrange for all the units to apply for their production credit through one application. This meeting promised much to those who were interested in putting their goods on the market and for obtaining seed and clothing at a much lower cost, by buying in a group instead of individually. Many persons of note were present at this meeting who were thoroughly familiar with just such problems as these farmers were facing. A number of government heads were present to give out this much desired information.

Members and units in Pembscott, Madrid, Mississippi, Scott, Dunklin, Stoddard, Cape and Butler Counties composed this southeastern territory and these members and units were urged to attend. From these eight counties a large

MILK INDUSTRY GROWING

Farmers Supply America With Product

A butter churn attached to grandma's rocking chair was one of the first dairy patents granted by the United States patent office.

Early American investiveness was always suggesting improvements in handling milk. After the war of independence, the United States patent office reports an average of a new dairy machine every two weeks. In the early villages the methods of milk distribution were primitive. the neighboring farmers supplied milk to those who did not own cows. At first they delivered it by hand, then by push carts, and later by horse. The housewife made butter at home, pounding a dasher in a wooden churn.

The growth and concentration of population turned the villages into cities, and the industrial development brought hundreds and then thousands of workers from the farm to the factory. The milk company appeared, organized exclusively to deliver milk. Cheese factories and creameries had to make the cheese and the butter. Finally ice cream, a product long made only in the home, began to be manufactured commercially in Baltimore in 1851.

Today the milk industry, including all its products, represents one of the largest of the

PREVENT FOOD SPOILAGE

Expert Tells Pitfalls In Keeping Things Fresh

When a housewife saves some of the Sunday roast to use for Monday hash, and then finds the micro organisms responsible for spoilage have had a fine feast "on the house," it is disconcerting. Even though cold weather is approaching, there is still need to exercise a great deal of care in handling foods in the home, warns Miss Gertrude E. Conant, extension nutritionist, University of Arkansas.

Yeasts, molds, and bacteria are the organisms that spoil food. Yeast grows in a sweetened medium of low density, and can be kept from growing or fermenting at a temperature of 45 to 48 degrees Fahrenheit. Molds grow best in the dark on moist surfaces, and can withstand quite low temperatures. Neither of these organisms produce harmful substances, although they spoil the appearance and flavor of foods.

But Some Are Poisonous

Some kinds of bacteria, however, produce poisonous substances in food and are actually a menace to life. All of the organisms require a warm temperature and moisture in order to grow, and consequently refrigeration is not a luxury but a necessity, says Miss Conant.

The refrigerator requires the best of care and should be cleaned thoroughly once a week, rinsed with boiling water, and left open to air for an hour or two. If any food is spoiled it should be cleaned up immediately, leaving no particles on which bacteria can grow. When the ice chamber is refilled after cleaning, the temperature of the box should fall to 50 degrees at least before replacing the food. A thermometer is necessary to test the temperature to see that it is always 45 to 48 degrees, the temperature required safely to keep milk, butter and meats. If an automatic refrigerator is used it also should be tested regularly as to temperature.

Put Them in Container

Crisp salad materials, such as lettuce, celery, parsley and water cress, should be put in a tight container before placing in the refrigerator. To keep things from tasting like cheese, the cheese or other food with a strong odor should be tightly covered. All food should be cooled to room temperature before going into the refrigerator.

FARM PROGRAM PRESENTED

Latest Rules for Corn and Hay Production

The speed with which the U. S. is moving in its efforts to bring prosperity to the farmers of the nation deserves the serious study of all persons interested in agriculture and the welfare of the tillers of the soil. One of the careful students of government activities has contributed to his paper the following statement on the program for Mid-western corn and hog farmers:

New program for Mid-western corn and hog farmers: ,

Mid-western farmers next year will be asked to keep corn acreage and hog numbers 10 per cent below their 1932-1933 average production.

The reduction required for 1934 was 20 to 30 per cent cut in corn and 25 per cent in hog numbers.

The maximum corn acreage the new signers may plant is 90 per cent of their average during 1932-1933 base period. Farmers have the option of making 30 per cent cut in acreage growing a minimum of 70 per cent of their base period and receiving benefit payments for additional 20 per cent reduction.

Only farmers who sign acreage adjustment contracts will be eligible for loans on corn they store and keep off the market.

The maximum of 90 per cent on hogs will apply only to those produced for the market from the 1935 litters.

Pigs purchased from non-signers will be limited to the average num-

PLAN BETTERMENT FOR AMERICAN PEOPLE

Department of Commerce Rang Nearly Three Million Door Bells

Making the American home a better place in which to live, is one of the outstanding aims of the federal housing administration, in fostering the better homes program.

The housing administration, created by the last congress, is making it possible through federal guarantee of private loans to do just that— in addition to furnishing employment for thousands of workers.

While the physical home may technically be termed "living quarters occupied by a family," President Roosevelt and congress are attempting, through the housing administration, to make the home mean more.

Uncle Sam's plan for home owners, simply stated, is to make remodeling, upkeep, painting and home improvement possible for anyone and everyone who has a real desire to better the surroundings of his family.

The department of commerce rang nearly three million American doorbells recently and discovered that more than 62 per cent of the homes in America need major repairs. Is your home a real home, a well-protected, well-maintained investment, and a source of everyday com-

VETERAN COLORED LEGISLATOR OF LOS ANGELES BOWS TO YOUNG NEGRO DEMOCRAT

Hon. Frederick M. Roberts Had Been a California Assemblyman Continuously for Sixteen Years

Los Angeles, Calif., Nov.—(ANP)—Frederick M. Roberts, veteran Assemblyman of the 62nd District, whose 16 years of continuous service had made him the ranking member of the California Assembly, has congratulated Augustus F. Hawkins, youthful democrat, and is making plans to return to the management of his newspaper. Roberts lost by over 1500 votes.

Friends of Hawkins, among whom are young voters of all parties are planning a huge victory ball in his honor.

The following statement was issued by Hawkins shortly after his election was assured:

"The people have actually won this campaign. Now that we have won the way is clear for action. Let us fight together in a spirit of cooperation.

"I am your servant and you have the right to see that I discharge the duties for which I was elected. Our fight is just beginning. There is no limit to which we can and shall go."

Chief among the charges against Roberts during the campaign was that he was the tool of the Power Trust and other interest inimical to the average tax payer.

Colored Men of North Carolina Turn To Democratic Party, Make Races As Magistrates and Break "Solid South."

Durham, N. C., Nov.—(By John A. Fouchee for ANP)—For the first time in the history of the South, two colored men were elected to office on the Democratic ticket when L. E. Austin, publisher of the Carolina Times, and Frederick K. Watkins, were elected magistrates of Durham last week by an overwhelming majority.

The newspaper man and theater owner will be sworn in office on December 3. Their election marks the beginning of the "New Deal" in the South.

A colored candidate running for the same office in Raleigh, Capital of the state, was defeated, whites piling up enough votes against him to overwhelmingly put him out of the running.

Both of the newly elected magistrates have been active in politics in the city and state for a number of years. Mr. Austin, 36, has been actively engaged in the newspaper business for the past ten years. He is a graduate of North Carolina College for Negroes, is married and the father of one child.

Mr. Watkins is national official of the Elks' fraternity, has been engaged in the motion picture business in this city for the past twenty years. Before selling his interests, he operated a string of motion picture theaters in the Carolinas and Virginia.

FIRST NEGRO SYMPHONY RECEIVES OVATION IN PHILADELPHIA TEMPLE OF MUSIC WHEN PLAYED BY THE NOTED STOKOWSKI

William L. Dawson's Masterpiece Rated High by Leading Critic.—And Young Composer is Showered With Congratulations

By James Edmund Boyack
(For ANP)

Philadelphia, Pa., Nov.—Before a vast audience which packed the Academy of Music here, "Negro Folk Symphony, No. 1," swelled to its magnificent climax last Wednesday evening to be greeted by a roar of applause seldom heard in Philadelphia's renowned temple of music. The enthusiastic audience had already crashed a rarely broken precedent when, at the close of both the first and second movements of the symphony by William L. Dawson, director, school of music, Tuskegee Institute and conductor of the famous Tuskegee choir—it twice stopped the concert to applaud while Leopold Stokowski graciously bowed his acknowledgments.

At the close of the symphony, the noted Philadelphia maestro took repeated bows before he hurried from the stage only to return leading the Negro composer who was greeted by the thunderous plaudits of the entire audience. In contrast to the brilliant assemblage and the sea of black-and-white evening clothes which was the orchestral background, Dawson was dressed in a simple dark lounge suit. Of medium but athletic build; wearing rimless glasses on his pale, aesthetic, but beaming face, the noted musician was obliged to bow again and again, after Stokowski's cordial handshake were echoed by the uproar of the audience. Though Dawson shook hands with the famous orchestra's first violinist and suitably acknowledged the fine performance of his work, he was recalled on the stage three times, by the continual applause before it broke up for the intermission of the concert.

Backstage the 35-year-old composer was overwhelmed by the congratulations of the orchestra's musicians, several of them composers in their own right, who virtually surrounded him. Praise which was the highest he could receive. They were shortly joined by several Negro musicians, former students of the composer, who now occupy important posts in the music departments of schools throughout the East.

So important did Stokowski think the first symphony ever written by a Negro writing Negro music that it was broadcast by the nationwide facilities of the Columbia Broadcasting System during the regular Friday afternoon concert of the Philadelphia Orchestra, repeated on Saturday evening, and received its first New York performance on Tuesday evening, November 20th, at Carnegie Hall.

In introducing the new composition Stokowski told the audience that, "a wonderful development was taking place in American music. The seeds of a great music were already seen in jazz. He said that a great freedom was brought over from Africa by the Negro and altho it was thwarted by the days of slavery it was now again to manifest itself in a new Negro music." He explained that Dawson was surrounded by his people's folk music during the most of his life and that he had endeavored to express the spirit of his race "with our kind of orchestra."

Hailing the new Negro composition, Samuel L. Laciar in the Philadelphia Public Ledger says: "The work is exactly what its title claims to be and the themes are manifestly Negro in character and developed and orchestrated with skill and discretion."

"The symphony makes much use of Negro rhythms and shows a thorough knowledge of the music of the American Negro, both melogically and rhythmically, and persents some delightful moments. Commenting on the Friday performance of the work, the writer said that 'the idea of great length apparent in Wednesday's concert largely disappeared today although the Negro characteristics of the melody and rhythm still prevailed strongly as the composer intended they should."

"The middle parts of the harmony contain much chromatic writing, and the beauty of the slow movement, with its highly original and effective close was greatly enhanced over the earlier performance. This movement was so favorably received that the audience broke into sponstaneous applause which Mr. Stokowski allowed to go unchecked."

The Philadelphia Inquirer's critic also confirmed his first impression of Dawson's symphony saying that "a rehearing of the work confirms its claim to a high degree of musical excellence. Dawson's composition is melodious and scored with full and flexible use of the orchestra." This writer called the premiere "an ambitiously and artfully scored symphony." The Evening Bulletin said that the work "was symbolic and of imposing dimensions on the Negro in America which the orchestra under Leopold Stokowski gave a brilliant performance."

The young Alabaman received an avalanche of telegrams and messages of congratulation which poured into the Philadelphia Orchestra's offices from all over the country from prominent Negro composers, musicians, educators and others. In addition came congratulatory messages from Tuskegee Institute's board of trustees, including its chairman, William Jay Schieffelin, of New York.

A telegram from Dr. Robert R. Moton, Tuskegee's president to Leopol Stokowski, expressed "deep and heartfelt thanks from Tuskegee Institute for the recognition you have given to the work of Mr. Dawson, the director of our choir and School of Music, by the presentation of his Negro Folk Symphony on your program today. Not only have you conferred honor and distinction on Mr. Dawson but you have given encouragement and inspiration to all the aspiring youth of our race by stimulating their appreciation of the music of their own people as worthy of their best endeavors. Tuskegee is proud of Mr. Dawson as one of her own graduates and grateful to you for the recognition thus bestowed on him and the institution he represents."

In his composition Mr. Dawson has employed three themes taken from typical Negro melodies over which he has brooded since childhood, having learned them, literally, at his mother's knee. In fact from his mother he received an early and reverent appreciation of the music of his people. The new work is composed entirely of Negro folk music. The themes are taken from spirituals and the practiced ear will recognize the resources of characteristic themes throughout the composition.

This music springs spontaneously from the life of the Negro people as freely today as at any time in the past, though the mode and form of the present day sometimes are vastly different from older airs, more widely known.

First movement: "The Bond of Africa."

The introduction to his symphony opens with a "leading motive" played by the first horn which is symbolic of the link which unites Africa and her rich heritage with her descendants in America. The second theme is taken by the first oboe, and is based on the Negro melody:

"Oh, M, Lit'l' soul gwine-a shine, shine"

"Oh, M' Lit'l' soul gwine-a shine lik'a star

After the woodwinds have sung this theme, a new idea jumps to the fore in the strings. It is in the style of the rhythmical clapping of hands and patting of feet; and is immediately taken up by the full orchestra.

MINISTERIAL ALLIANCE OF INDIANAPOLIS

Indianapolis, Ind.—(Special) The Ministerial Alliance met at the Second Baptist Church, Rev. J. W. Hall, pastor. Devotions were conducted by Revs. Richie and Turner. Song and Scripture, John 10:1-0. Song, "Savior More Than Life To Me." Rev. R. H. Nole, the pastor of the First Baptist Church of Irvington was asked to take the chair and preside temporarily. He called for the minutes of the previous meeting, which were read and adopted. There were 14 churches that reported on time. At this time Dr. F. F. Young was asked to give the Sunday School lesson for December 2nd. He responded in his usual way with Bible facts and practical illustrations that fitted us all. Our conference topic was a sermon by Rev. C. C. Crocker whose subject was "The Necessary Reforms in Church Devotions." Text. Matt. 7:24. This was a splendid sermon; after which an appeal was made for charity; $2.00 was taken. The following visitors were introduced: Mrs. N. Milder. Rev. Smith, an evangelist of New York, Rev. W. D. Ramey, D. D., recently of Alabama who has been called to the Corinthian Baptist Church of this city and Rev. Sandy Gaston, a new minister in the city who has joined the First Baptist Church of North Indianapolis. There were several important announcements, among which was the coming of Dr. Henry Allen Boyd of Nashville on December 6th, of which we all are very proud and will receive him with open arms. Critic's report and benediction.

R. M. Dahoney, Reporter.

MAN SUBJECT TO TEMPTATION

You cannot be a man and live man's life without coming into this world where sin is and where you must be tried. That great temptation that comes swaggering up and frightening you so, has got the best part of your character held under his brawny arm. You cannot get it without wrestling with him and forcing it away from him. That mountain that towers up and defies you has got your spiritual health away up on its snowy summit. That is what shines there in the sun. You cannot reach it except by the terrbile climb. Ask yourself what you would have been if you had never been tempted, and own what a blessed thing the educating power of temptation is. —Phillips Brooks.

"When obstacles and trials seem
Like prison walls to be,
I do the little I can do,
And leave the rest to Thee."
—Streams in the Desert

AUSTIN, TEX. GREETS HENRY ALLEN BOYD AND WIFE

Capital City of the Lone Star State Honors Former Citizen With Big Ovation

Austin, Texas, (Special to The Union-Review)—Rev. Henry Allen Boyd and his wife have visited this city, and have gone to other parts in the Lone Star State and from there to their home in Nashville. During their day and night's sojourn in this city they were constantly on the go.

Your correspondent has jotted down the following facts relating to their visit here on Nov. 19:

Arriving at 5:35 p. m., on the Sunshine Special, crack train of the Missouri Pacific Railroad. He was met at the station by a crowd of hundreds of Austin citizens of both races, and of all walks of life. Business men, professionals, laborers and a large group of women who formed the committee to greet and entertain Mrs. Boyd while in the city.

The Anderson High school, Prof. W. B. Campbell, principal, was there with their band, under the efficient leadership of Prof. B. L. Joyce. The crowd was vociferous and enthusiastic, together with the blast of trumpets of the band, giving Dr. Boyd a rousing reception. Fully thirty minutes the crowd rushed Dr. Boyd to shake hands. The city had detailed two of our race police to escort Dr. Boyd through the streets, and they were kept busy opening up a lane through the vast crowd so that Dr. Boyd could get to the waiting automobile. Policeman W. A. James and Charley Welch handled the crowds as only seasoned officers can.

Following this was the long motorcade and parade through the principal streets of the "Friendly City." Dr. Boyd was loudly applauded all along the line of march and he gracefuly bowing, and with that famous "Boyd Smile," accepted these extra-ordinary attentions from an admiring populace. After the parade, Dr. and Mrs. Boyd were whisked away to the palatial residence of Prof. and Mrs. W. B. Campbell, where they rested a few minutes.

Dr. E. H. Givens, chairman of the reception committee, Col. L. D. Lyons, a boyhood friend, Prof. W. B. Campbell, and Pastor J. C. Lott escorted Dr. Boyd to the Anderson high school where a sumptuous five course dinner was served by the Home Economic Department of Anderson High school, prepared by Mrs. Fisher, head of the Domestic Science Department, and served by a class in this department, under Mrs. Fisher's supervision. Dr. Yerwood was toast-master, and toasts to Dr. Boyd were given by Drs. C. H. Christian and Stanley E. Grannum, president of Sam Houston College, and E. H. Givens. These were responded to appropriately and briefly by the guest of honor, Dr. Boyd.

At the same hour, Mrs. Boyd was being entertained in the beautiful residence of Mr. and Mrs. W. H. Fuller, on Angelina St. Mrs. C. H. Christian, president of the Women's State Federated Clubs, assisted by Mesdames Fuller, Campbell and Lott arranged this very unique and pleasant affair.

From here Dr. and Mrs. Boyd were escorted to the Ebenezer Baptist Tabernacle, J. C. Lott, pastor, where a crowd of more than fifteen hundred of Austin's citizens awaited the hour for Dr. Boyd's speech. Captain Harry Lott, with his boy Cadet Division, formed an escort of honor, from the automobiles to the platform. The Anderson High School band played a stirring march, the crowd stood, shouted, Boyd, Boyd, waved handkerchiefs, yelled, and clapped their hands for fully fifteen minutes. In fact, the crowd virtually went wild as soon as they caught a glimpse of Dr. Boyd gracefully stepping to the tuneful melody of the band.

When the crowd was finally quieted, Rev. J. C. Lott, the pastor, made a brief survey, and presented Mr. W. H. Fuller, one of our popular and successful business men, who was Master of Ceremonies. The famous Ebenezer choir, directed by Mrs. V. M. DeWitty, gave the opening number. Scripture read by Rev. R. Q. Allen. Prayer by Dr. J. V. B. Goins, presiding elder of the A. M. E. church. A musical number by each of the following schools: Tillotson College, Miss Mary E. Branch, Pres., Deaf, Dumb, and Blind Institute, Prof. J. D. Martin, Supt. Anderson High School band, Prof. B. L. Joyce, director. Prof. W. B. Campbell, principal.

Mayor Tom Miller, a truly great mayor, we think the greatest mayor of any city, in a few well chosen words extended welcome on behalf of the city of Austin.

Col. L. D. Lyons, the veteran business man in these parts, the distinguished citizen, then presented Dr. Boyd to the mammoth crowd. and again there was applause and cries, Boyd, Boyd. Dr. Boyd, in his usual pleasing manner, spoke for an hour, and his crowd was with him all the way. His speech was interrupted by loud and long applause many times. Austin has had many very prominent race leaders to speak here, but it is the consensus of opinion among the citizens, that few have equaled and none excelled this dean of Negro business in America.

Mrs. Boyd was presented a large bouquet of "Roses and Ferns" by the committee of ladies, and in a brief way, she expressed her gratitude for the fine reception extended to her and her distinguished husband.

The reception committee presented to Dr. Boyd, an "Ink-well."

The pastors and ministers of all denominations in and about Austin were present and sat on the platform.

Tuesday morning, Dr. E. H. Givens, Mr. W. H. Fuller, Mrs. W. B. Campbell and pastor, J. C. Lott carried the guest to the following schools: Anderson High, where Dr. Boyd sat in the principal's office and spoke to the teachers and students in each of their respective rooms, through the recently installed Public Address System. From here they were taken to the D. D. and B. Institute, Prof. J. D. Martin, Supt., where Dr. Boyd addressed the faculty and student body. After looking this wonderful plant over a little, where the State of Texas has invested more than two million dollars for these children, within the last ten years, under this fine superintendent, Prof. Martin and wife. From there we visited Tillotson College, Miss Mary E. Branch, Pres. Tillotson has grown steadily and permanently under her wise management The student body had been assembled by Dean Jones and was awaiting the coming of Dr. Boyd. Here, the doctor delivered a most helpful and practical talk. One of the interesting things here was a visit through the girls Practice Home. Then to Sam Houston College for a brief stay.

Dr. and Mrs. Boyd left us at 1:40 p. m., for San Antonio. This ended a great occasion for Austin.

Too much cannot be said of the fine cooperation by the ministers, business men, teachers, laborers and in fact, everybody gave upon the visit of Dr. Boyd. Dr. E. H. Givens led the reception committee, and every one of them to a man carried his corner.

The following were members of the reception committee: Drs. E. H. Givens, C. R. Yerwood, C. H. Christian, Messrs. A. W. Herbert, W. B. Campbell, L. D. Lyons, W. H. Fuller, Wm. M. Tears, H. Lott, O. R. Lott, and pastor J. C. Lott. Ladies Committee: Mesdames C. H. Christian, M. A. B. Fuller, M. B. Campbell and J. B. Lott.

New Congressman Is Self-Made Man

Chicago, Nov.—(ANP)—Chicagoans who learned Wednesday afternoon that they were to be represented Washington by a new man, took renewed inspiration out of the fact that their second Congressman, like their first, is a self-made man and demonstrates in his advancement the possibilities for members of his race, no matter how lowly their origin.

Mr. Mitchell was born in Alabama on a farm, labored until he was fourteen and then walked 65 miles to win his admission to Tuskegee Institute.

After leaving Tuskegee, where he had been officeboy to Booker T. Washington, inspired by the precepts of that sacred leader, Mr. Mitchell went back to the people of the rural districts and founded the Armstrong Agricultural college. His labors there preceded his moving to Washington where he apprenticed himself, read law and passed the bar examination.

He was admitted to the practice of law in Illinois on the basis of reciprocity, admitting in his application that he had never finished a law school.

Although Mr. Mitchel made a vigorous, educational campaign to win his seat in Congress and is identified with the intellectuals, he is not backed with a string of degrees. Representations made by friends that he has attended Howard University, Columbia and Harvard are denied. No record of him as a law student or undergraduate at Howard University or at Harvard is available. He did, however, spend six weeks at Columbia.

Thus, in spite of the lack of scholastic background, Mr. Mitchell has pushed forward to recognition as one of the able thinkers of the race. With scarcely more, if as much, scholastic background as Mr. DePriest, he has made himself felt as a scholar whereas even Mr. DePriest's friends had to admit that Mr. DePriest tripped on his verbs occasionally.

ON HIS COMING

When often I think how my days go by
Bound each to each in swift moving chain,
And all my wondrous dreams seem dreamed in vain,
Though cherishing them still, I'm moved to cry
The futility of mundane things, and die.
And then I know He promised right and true
Who said, "I come again, and those of you
Whose lamps I find a burning bright, will then
Serve God released from curse or weight of sin."
So all the perfect, holy things I meant
Will spring to lasting life; the weak intent,
At sight of Him, in strength and power will grow.
For these eternal things of God I know,
I now with patient hopes await the Day.

The Chief Executive And His Distinguished Party Thrill Over Singing of Fisk and State College Choirs

(Nashville Globe and Independent)

The greatest crowd that ever assembled in Nashville was here last Saturday to greet President Franklin D. Roosevelt on his "good will" visit to the city. It was an historic event which will long be remembered by the great throngs who turned out along every inch of the route that had been mapped out for the Chief Executive of the nation to travel while in this vicinity.

According to the announced schedule, the President, Mrs. Roosevelt, Secretary of Interior Harold Ickes and others of his party arrived at Union Station around 8:15 Saturday morning. From there the trip was made through several of the principal streets of the city to the State Capitol grounds, where a wreath was laid on the grave of former President James K. Polk, one of the three Presidents which Tennessee has furnished to the nation. From the tomb of President Polk the journey was made to the Hermitage, home of former President Andrew Jackson. There the president and party was served a delightful "Southern breakfast" which was cooked by Mrs. Julia Hill, one of the most expert cooks of the South.

Wherever the President went along his journey he was greeted by a really democratic assemblage, in which both races mingled, and without stint, cheered the distinguished man, who enjoys a degree of personal popularity unsurpassed by any men who have held the office of Chief Executive.

One of the longest stops the Presidential party made while in Nashville was at Fisk University. There on the campus, and on the streets around the famed institution of learning was gathered a crowd estimated at 25,000, and for the most part they were colored Americans. The president had directed, it is learned, that in making out the schedule for his visit in Nashville that a part of the time be given him for a visit to Fisk University, and particularly he desired the Jubilee singers to render, one of his favorites, "Hand Me Down My Silver Trumpet, Gabriel."

When the President reached the Fisk Campus, instead of only the Jubilee Singers of Fisk he was greeted by the Fisk choir, the A. and I. State College singers and singers from Meharry Medical College. Bleacher seats had been constructed to hold all of the singers. Jubilee Hall was decorated with flags, bunting, and a large picture of President Roosevelt. An amplifying system also had been installed. Previous to the arrival of the Presidential party, Rabbi Julius Mark delivered an eloquent address dealing with the life and achievements of the President, and referred to the universal esteem the President enjoys among all of the people of his country, regardless of race, creed or political references.

In a brief address President Thomas Elsa Jones of Fisk University, welcomed President Roosevelt. Prof. S. L. Smith, of the Rosenwald Fund of Tennessee, and a personal friend of President Roosevelt, presented to the President, President W. J. Hale of State College, and Dr. J. J. Mullowney, President of Meharry. Many beautiful flowers were presented to Mrs. Roosevelt.

Several songs were splendidly rendered by the Fisk choir, including "Done Made My Vow" and "Study War No More." Then came the rendition of the "President's favorite" "Hand Me Down My Silver Trumpet, Gabriel," which was assigned to the singers from Tennessee State College. The broad smile with which the President greeted the singing of this song, and the applause given it by his party indicated that they were extremely delighted.

The closing song was "Lift Every Voice and Sing," which was rendered by the college singers and the congregation. The words of this song rang in the ears of the nation's President and his distinguished party as they departed from the environs of the Athens of the South, and a people who were thrilled beyond their ability to express in words their pride in having been hosts to President Franklin D. Roosevelt and the "First Lady."

ISRAEL'S PRAYER AND ITS ANSWER

I. The Prayer

Awake! Awake! O Mighty Arm.
In power as in the days of old!
For angry hosts assail Thy fold.
And press Thy flock with threat'ning harm.
Was it not Thou didnst dry the sea,
And led'st Thine own through opened way?
Now hear Thy people as they pray;
Their needed help and succor be.

II. The Answer

Awake, awake, thou trembling One,
And grid thee with accorded strength!
See'st not thy night comes near its length?
Rise from the dust! Sit on thy throne!
Know thou art held by Arm Divine!
Know thou the Eternal God thy shield!
What foe is there can make thee yield.

III Penitence

Lord, teach the power of Sovereign Will!
Forgive weak faith in time of stress.
Teach us that Thou art near to bless.
Help us to hear Thy "Peace, be still!"

—Clipped.

FACTORS INDICATE BRIGHTER OUTLOOK IN POULTRY FIELD

URBANA, ILL.,—Four important factors indicate that Illinois poultrymen may find themselves in a more favorable position financially during the coming months than they were at the same time last year, says H. H. Alp, poultry extension specialist of the college of agriculture, University of Illinois.

Egg prices have had the habit of going into the "doldrums" during the late spring and early summer during the last two years, explains Alp. "Whether this year they will reach the low of 1933 remains to be seen, but there are some indications that they will not.

"Storage holdings of shell eggs, generally considered to have a distinct bearing on the fresh egg market, contain a note of improvement. On March 24, of this year there were in storage in twenty-six cities a total of 478,000 cases of eggs as compared with 688,000 on the same date in 1933. This is a decrease of 30 percent and the movement of eggs into storage is reported to be slower than the five-year average.

"Last fall there were many flocks of pullets that were below normal in development and vigor. Consequently production has been unsteady and this has resulted in many hens, being marketed. Thus there is some question as to whether the spring flush of production will reach its usual volume of past years.

"To date the prevailing egg prices have encouraged rather free selling which has resulted in a fairly good consummer demand being established. Eventually egg prices should reflect any general increase in factory wages, provided there is not too rapid an increase in prices of other things the wage earners must buy.

"Although the prices of grains needed to feed poultry have advanced materially since this time last year, a flock of good hens will return a greater income above feed cost than they would have last year. So much so, in fact, that it appears that the good poultryman is probably a little better off than a year ago and is justified in taking the best of care of his producing hens this spring."

TO AN OLD DOG

You seem content, these dragging days to be
Alone and let the world go on ahead.
Or do you spend your time in wond'ring why
Along with ebbing strength and unknown dread
Should terrorize your clouded creature's mind,
Which, lacking hope of immortality
Or clearer thot of death, thus may not find
A stilling of the fear of what may be.
A harder thing for you whose life is made
Of finite things than we can understand.
And so we wonder whether heaven's aid
Helps your dumb heart its lonely life to bear;
In what way can God's quiet whisper tell
A dying, frightened dog that all is well? —Anonymous.

HERE'S A WAY TO TEST YOUR GARDEN SEEDS

Other Hints for Home Vegetable Grower.

Poor seeds, poor soil, bad weather conditions, plant diseases and insect pests are reasons why some vegetables fail in the home garden, according to Arthur J. Pratt of the New York state college of agriculture.

If seeds are too old, he says, they will not develop and grow. A good test to discover if they are too old is to take about 100 seeds, lay them on a piece of cotton cloth or muslin, roll the cloth up, tie it, and stand it in a glass containing about an inch of water. Keep the glass in a warm room and examine the seeds at the end of five, seven, and ten days. If after this time at least three-quarters of the seeds have not sprouted, the seeds from which they were taken should not be planted. Ninety-five per cent fermination is not uncommon.

Soil may be poor either because it lacks humus which retains moisture or because it is too sweet or too sour, Mr. Pratt says. If the soil is too sour, lime ro wood ash should be added. If it is too sweet, sulphur is advised. This should be determined from a soil test.

Many vegetables fail also because they are planted too early or too late. In times of drouth the garden should be soaked until the moisture reaches into the soil from six to eight inches.

SACRIFICIAL GIVING GOLDEN RULE WEEK

By John A. Ingham
Chairman, United Stewardship Council

The Golden Rule existed in memories and in manuscripts for 1,400 years before it was printed. Since Gutenberg's day it has been in print millions of times. Whosoever will may follow it. There is a widespread impression that its fuller adoption by men and nations would help in solving the world's problems.

Golden Rule Week is strictly modern, dating from 1923. Tragic conditions in western Asia gave it birth. Christian men and women in the Occident undertook to do for the homeless, starving children of the Near East what the Golden Rule requires. Today thousands of those rescued children, now men and women, are scattered over at least three continents. Golden Rule Week had a part in saving them.

Changing conditions call for new manifestations of the Spirit of Christian Stewardship, of sacrificial giving. Depression has been with us for half a decade. The message of Golden Rule Week is that spiritual interests are fundamental, that the things unseen and eternal are after all the basic factors in civic, commercial, industrial, political progress and recovery. Spiritual gains are costly, demanding time and thought and effort. The Gospel is free, but the task of making and keeping America Christian involves machinery and personnel, pains and toil and expense.

The United Stewardship Council joins with the National Committee for Religion and Welfare Recovery in urging a review and re-application of Golden Rule ideals during Golden Rule Week, December 9-16. It asks us to decide definitely and concretely to do our share—and perhaps a little more—in helping all the agencies which aim to bind our whole beloved America with gold chains about the feet of God.

Literature and suggestions for observing Golden Rule Week may be had by addressing Religion and Welfare Recovery, Lincoln Building 60 East 42 Street, New York City.

REV. E. L. HARVELL BANQUETED

Atmore, Ala.—(Special)—Rev. E. L. Harvell, pastor of the Tabernacle Baptist Church, Ensley Station, Birmingham, Alabama, was in this city attending the musical association at the Pleasant Hill Baptist Church five days' session of which he was the principal speaker each day. While here he was the house guest of Mr. and Mrs. P. J. Singleton. On Wednesday evening at the said house a banquet was given in his honor. Those who were present and shared in the celebration were Prof. and Mrs. E. S. Booker, Miss Annie Mac Scott, Mr. Charlie Willis, Miss Addie C. Singleton, Mr. Willie Lee Scott, Miss Annie Mae Singleton, Miss Earnestine Scoot, Mr. James Singleton, Miss Ethel M. Singleton, Master Crimpton Singleton, little Misses Myrtle Marie and Geraldine Singleton, Mr. and Mrs. P. J. Singleton and Miss Mennie Kate Singleton. We were entermined highly with music played by Rev. Harvell and Mrs. L. J. Booker. Several interesting games were played, and then we were served with four courses. The banquet seemed to be enjoyed by all.

Mennie Kate Singleton, Reporter
Rev. E. D. Womack, Pastor.

EVANGELISM, HASTENING THE SECOND COMING OF CHRIST

T. W. Callaway, Pastor St. Elmo Church, Chattanooga, Tenn

The Doctrine of the Second Coming of Christ should not be a divisive question, regardless of what particular theory is held. Surely those who know and believe the Word expect the coming of the Lord at any moment.. His coming should not only be the "blessed hope" set before us, but evangelism as a method of hastening that glorious event should be the chief endeavor of the church.

The theme of the Bible is CHRIST; "the Lord, which is, and which was, and which is to come the Almighty." Hence, the next step in Bible prophecy for which the church should be looking is "that blessed hope and the glorious appearing of the great God and our Saviour, Jesus Christ" (Titus 2:13).

To hasten this desired consummation, evangelism is necessary for the—

Evangelism of the nations, a sign of His coming (Matt. 24:3, 14).

Completing the body—the church—of which Christ is the Head (Eph. 5:23-24).

Sharing His glory with the Church (Matt. 13:43).

Making ready the Bride for the coming Bridegroom (Isa. 62:5-7; Matt. 25:1-6).

Gathering His 'elect' from the nations of earth (Acts 15:14-17).

Enthroning the King, Whose right it is to reign (Rem. 15:10-12).

Dethroning satan, "the god of this age" (Rev. 20:1-3,10).

Crowning Him, Who wore the Crown of Thorns (Jno. 19:2-6: Heb. 2:9).

Seeing, and becoming like Him, for we shall see Him as He is (1 Jno. 3:2).

Receiving our glorified bodies (Phil. 3:20).

Receiving us into the Mansion prepared by Him (Jno. 14:3).

Meeting the loved ones dead in Christ (1 Thess. 4:14).

Rewarded with the "crown of rejoicing" for soul-winning (1 Thess. 2:19).

Perfection of spiritual knowledge (1 Cor. 13:12).

Receiving the "crown of righteousness" for loving His appearing (2 Tim. 4:8).

Rewarding for faithful service (1 Cor. 3:11).

Fulfilling the prophecy, Seed of the woman to bruise the serpent's head (Gen. 3:15).

Restoration of Israel's national glory (Ezl. 37:11-14).)

Ushering in the "Golden Age"—millennial reign of Christ (Isa. 65:17-25; Rev. 20:4-6.)

—Western Recorder

Bennett College

Greensboro, N. C., Nov 18—The new dormitory, Pfeiffer Hall and the heating plant, gifts of Mrs. Henry Pfeiffer of New York City to Bennett College were dedicated with appropriate ceremonies on November 17, and 18. Mrs. Pfeiffer the donor of the building was on hand to formally present the build ings to the trustees of the college. There were leaders in every walk of life present for the occasion—educators, church leaders and business men of both races. They came to pay homage to the good woman, Mrs. Pfeiffer who had given Bennett $150,000.00 for plant expansion. At the afternoon meeting, Dr. Carl Eislen, Chairman of the Board of Education of the M. E. Church spoke on "The place of the Church-related college in our educational system." He said that if such a school was to live, it must formulate and promulgate a sound theory of education which will develop a strong, noble, well-developed personality and character. It should move on a high Christian level. Words of greeting and appreciation were spoken by Mrs. Mary McLeod Bethume, president of Bethume Cookman Institute at Daytona Beach, Florida, Dr. H. L. McCrorey, president of Johnson C. Smith University and Dr. N. C. Newbold of the North Carolina State Departement of Education. At the conclusion of this program, the corner stone laying took place with Bishop Robert E. Jones and Mrs. Millard Robinson, an official of the Woman's Home Missionary Society, one of the sponsoring agencies of Bennett College, performing the rites.

In the evening, the Glee Club under the direction of Marylou Jackson rendered a musical of a half an hour after which two more addresses were delivered. The first address was delivered by Dr. James Hardy Dillard, of the Negro college to the new development of the democratic principle in education. He had warm words of praise for the school teacher who is attempting to broaden the vision of the pupils. Mrs. Mary McLeod Bethume delivered a masterful address on the wonderful opportunities that the new buildings at the college would present to the students and what a contribution such a builing would make toward enriching their lives. Mrs. Charlotte Wallace Murray concert soprano of New York City sang several selections between the addreses.

Sunday morning, part of the dedicatory services were held in church in the basement of which Bennett College was founded in 1874. The sermon for the occasion was preached by Rev. R. N. Brooks of Gammon Theological Seminary, Atlanta, Geergia.

On Sunday afternoon, two outstanding figures in American life—one a churchman and the other an educator—spoke. The first address was delivered by Prsident Frank Graham of the University of North Carolina and the second by Bishop W. F. McDowell, senior Bishop of the M. E. Church. Before the addresses, Dr. Arthur Wright of the Slater Foundation brought greetings and extended the best wishes of the organization that he represents. He said that Bennett College was one of the few remaining women's college and he hoped that it would remain so for some time to come. Mrs. R. R. Moton, wife of the president of Tuskegee spoke on behalf of the friends of the college throughout the country. The occasion, she said was one of great import since it was joining the two races and the north and south together in a large project for the development of Negro womenhood in America. President Graham prefaced his remarks with the statement that the race problem is one of those three problems of life packed with dynamite. The other two were international relations and relations between capital and labor.

Worker Murdered

Chicago, Nov. (ANP)—During a quarrel over payment of taxicab fare, Lorenza Grant, 32 years old, 5400 Michigan avenue, a postal employe was fatally stabbed here early Friday morning. He died en route to a hospital. The postoffice worker told a white gas station attendant at 31st street and South Parkway that the driver of the cab had attacked him. This story was told to police by Frank Cottiere, the attendant.

Full Helps to Bible Study mentioned below and including

A BIBLE STUDY COURSE

It is highly desirable to read the Bible through from Genesis to Revelation.

A cumulative knowledge of the Scriptures, so valuable in education, is secured and a true perspective of religious history and truth is obtained.

The portions that consist entirely of names and subject matter, wholly devoid of interest to the average reader, are omitted from the Study Course.

The Course is divided into thirty-six lessons and gives both the beginning and ending of each lesson; also the beginning and ending of passages or portions to be read.

Best Quality Thin Bible PAPER *Clear Black Superior* PRINTING *Durable Flexible* BINDING

THIS COMPLETE TEACHER'S BIBLE

Also contains the following 400 pages of New Copyrighted Helps by the most reliable Authorities.

Treasury of Biblical Information

The latest compendium of essential things which every reader of the Bible needs to know, such as the Chronology of the Old and New Testaments, Tables of Money, Weights and Measures, Jewish Calendar, Table of Easter Days, etc., etc., all arranged in the most usable and attractive forms.

New Comparative Concordance

With nearly Fifty Thousand References.

New Illustrated Bible Dictionary

Self-Pronouncing, with nearly One Hundred and Fifty Pictures, containing more subjects than are given in the bulky Dictionaries.

Four Thousand Questions and Answers on the Bible A valuable help to all Bible readers.

New Biblical Atlas with Index

THE JUDAS TREES IN FLOWER

Native Here, Purple-Blossomed Trees Are Envy of Other Cities

Despite the exotic name, the Judas (red bud) trees now blooming in Omaha parks and in many yards are natives of this territory.

For the two or three weeks of the year when they are in bloom, the trees might well bear the name given to a less gorgeous tree, the Tree of Heaven.

Miller park now a blaze of purplish pink blossoms, has the finest grove of Judas trees in Omaha. There, 30 years or more ago, W. R. Adams, then park superintendent, planted them. He got them from the banks of the Missouri river.

Ours Are Finest

So striking were the trees that they were soon planted in all the other parks, and many Omahans got them for their yards. Now Omaha is reputed to have more and finer Judas trees than any other city in the country. Park experts have often come from far away to see them.

The trees grow wild along the Missouri river valley. There is a magnificent grove on the river bank at Child's Point, south of Omaha. A few are found as far north as the Canadian border and as far south as Texas.

Where Judas Hung

A related variety grows in south Europe and in northern Africa and Asia Minor. From this tree the name was derived, for there is a legend that Judas hanged himself to one of them.

The trees grow slowly and can be transplanted only when small. This has halted their spread to other parts of the country, according to Maurice N. Marshall, a nurseryman, but people in the east are now beginning to cast longing eyes upon them. Nurserymen now handle them generally.

The Encyclopedia Brittanica says that the blossoms have an "agreeable acid flavor" and must be used in salads or fritters, but only a color-blind person could eat them.

The President Listens To Fisk Jubilee Singers

Here is President Roosevelt in person listening to the famous Fisk Jubilee Singers on Fisk Campus, Saturday, November 17th. It was one of the most delightful events of his visit to Nashville.
(Nashville Banner Photo)

WEIGHT OF FARM PRODUCTS

The law of the state of Illinois relative to the weight of various farm products reads as follows:

"Whenever any of the following articles shall be contracted for, or sold or delivered and when no special contract or agreement has been made to the contrary, the weight per bushel shall be as follows:

Green apples, weight per bushel —47 pounds.

Dried apples, weight per bushel —24 pounds.

Green or string beans, weight per bushel— 24 pounds.

Wax beans weight per bushel-24 pounds.

Beets, weight per pushel— 60 pounds.

Carrots, weight per bushel— 50 pounds.

Corn in ear, weight per bushel— 70 pounds.

Cucumbers, weight per bushel— 48 pounds.

Malt, per bushel— 38 pounds.

Onions, per bushel— 57 pounds.

Parsnips, per bushel—50 pounds.

Peaches, green, per bushel — 48 pounds.

Peas, green, per bushel — 32 pounds.

Irish potatoes, per bushel — 60 pounds.

Sweet potatoes, per bushel—50 pounds.

CONCRETE FLOOR BEST FOR BARNES

Rat-Proof and Sanitary, It Is Worthwhile Farm Improvement

A concrete barn floor adds to the efficiency and value of the modern farm. Ratproof and sanitary, it is a desirable improvement.

The area to be concreted should first be freed of all rubbish and the surface filled in and tamped to the required level, allowing for a 5-inch thickness of concrete. The concrete may then be laid directly on the earth if the building is located on high ground or if the drainage under the floor is good Otherwise a 6-inch fill of cinders, clean gravel or crushed stone tamped in place and drained with several lines of tile is recommended.

Drainage Important

In order to assure proper drainage, levels should be located so that litter alleys will be practically on a level with the doorsills, with a slope of 1 inch toward the gutter so that water will not stand on them. Stall platforms should also have a fall of one inch from manger to gutter. A lengthwise slope in mangers and gutters equivalent to two inches in 50 feet is desirable so that these may be flushed out.

For convenience in placing the concrete and finishing the surface, the floor is usually built in strips or sections, with forms made of 2 by 4's or 2 by 6's set on edge and held firmly in place by stakes. Care must be taken in setting the forms so that their top edges can be used as guides in striking off the concrete and bringing the surface to the proper level or slope. Forms for curbs and gutters should be of smooth lumber carefully set to the correct grade.

The entire floor should be made with a dense workable mixture containing sufficient portland cement and sand mortar to finish well and provide a watertight surface.

Like many others, this improvement may be made with one of the Federal Housing administration loans available to farmers on a seasonal repayment plan at authorized lending agencies.

HOW TO GET REPAIR LOANS

Here, in a nutshell, is the plan for borrowing modernization funds under the Federal Housing program.

1. A modernization loan is solely for the purpose of repairing, altering or improving your home, shop, store or other building. Diversion of the money to any other purpose is strictly prohibited.

2. It cannot be for less than $100 or for more than $2,000. The borrower must have a bona fide source of income equal to at least five times the annual payments.

3. It ca nbe made for terms up to three years, but may be paid in full earlier than the maturity date if the borrower desires.

4. Maximum charges, including interest and fees, cannot exceed an amount equivalent to $5 discount per year per $100 original face amount of the note.

5. To get a modernization loan the property owner must present to the bank or other lending institution a precise estimate of the cost of the improvements and should be able to prove that they are necessary or advisable.

6. In addition the property owner must file a property owner's credit statement, showing his financial condition, sources and amount of income and other information necessary to determine his ability to repay the loan.

If the bank considers the improvements advisable, and the property owner able to meet the payments when due, it can advance the money on the personal note of the property owner. The note must be signed by both husband and wife, if the property owner is married. No mortgage or collateral security is necessary, unless state laws or the financial institution's officials demand it.

A WISH

Mine be a cot beside the hill;
A bee-hive's hum shall soothe my ear:
A willowy brook that turns a mill,
With many a fall shall linger near,

The swallow, oft, beneath my thatch
Shall twitter from the clay-built nest;
Oft shall the pilgrim lift the latch,
And share my meal, a welcome guest.

Around my live porch shall spring
Each fragrant flower that drinks the dew;
And Lucy, at her wheel, shall sing
In russet-gown and apron blue.

The village church among the trees,
Where first our marriage vows were given,
With merry peals shall swell the breeze
And point with taper spire to heaven.

Samuel Rogers

AGRICULTURE'S VITAL STAKE IN FOREIGN TRADE

Atlanta Journal: The emphasis lately given, both in Official Washington and among business leaders, to plan for recouping our losses in foreign trade should be welcomed by every field of the country's economic interests, and especially by agriculture. The falling off in American exports was at once a cause and an effect of the great depression, but in either case the condition must be changed before recovery can be complete. We must sell abroad if we are to prosper at home.

The saying that the exports of our country in normal times average only about 10 percent of its total production is gravely misleading, because for many important commodities the average is far higher. For cotton, it is around 56 percent; for lard, 36 percent; for tobacco, 35 percent; for wheat, 32 percent; for copper, 38 percent, and numerous articles of manufacture come within these higher ranges. The south, with its great money crops of cotton and tobacco, is vitally concerned in the restoration of foreign trade. The efforts of the government and of private interests to start the channels of international commerce flowing freely again should be encouraged by every good means.

TERRAPIN STAGES COMEBACK

Raliegh, N. C. — (UP) Diamond-back terrapin meat — a delicacy much in demand during pre-prohibition days — is again becoming a "best seller" among sea foods. Terrapin meat, served especially at beer parties, was nearly forgotten during the years when prohibition sent alcoholic beverages into back alleys. With the advent of prohibition repeal, however, according to the state Division of Commercial Fisheries, terrapins have "come into their own once more."

HOPKINS' BUREAU PLANS COMFORTS FOR SOUTHERNERS

Fair Treatment To Pupils and Professions Promised In Health Aid Set-up

By Edgar G. Brown

Jacob Baker, assistant administrator and director of the FERA Work-Relief Program, reported to Administrator Harry L. Hopkins this week that 1,000,000 unemployed and needy families throughout the United States would receive mattresses, comforters, sheets, pillow cases and towels for the winter.

Many people in the rural South and other areas of the country will enjoy their first sleep on a cotton mattress with clean sheets and pillow cases. The story is told of an elderly colored woman who, having been taught to sew on one of these work projects in Mississippi, and after making several dozen pillow cases, remarked:

"Auntie won't never lay her head on one of these nice white pillows until she sees the pearly gates."

In that little Mississippi town today, 20 Negro families on relief are the proud possessors of not only pillow slips, but sheet and mattresses, too.

The nearly 100,000 colored persons on relief in Mississippi have felt the beneficence of the Federal Surplus Relief Corporation which during the month of October shipped in 48,002 yards of ticking; 52,200 yards of towelling; 167,087 yards of sheeting; and 445,600 yards of printed cotton material.

Mr. Baker says: "We who are in a position to replace our household equipment from time to time have scarcely an idea of what five years of destitution can do to household goods. A broken glass in such a household is an irreparable loss. Any number of people in the country are sleeping on bare slats or bed springs. To fill this almost bottomless need, household goods are being turned out by the unemployed on a limited scale for distribution among the unemployed.

"Thus far, many of the goods and wares have been hand-made. Hand-woven rugs, furniture worked by hand, hand-modeled pottery—these are some of the products which are turned out in relief work-shops. The workers seem, certainly, to get more creative enjoyment out of this sort of production than from operating machines. Since our object is not save labor, but to create it, their preferences can easily be indulged.

"There is really no ground for the concern expressed in some quarters that we are going in for wholesale manufacturing. A relatively small percentage of the 1,500,000 individuals on relief work are actually engaged in production and distribution. Most of them are still employed either in construction or in the cultural education and service fields. Moreover, we have no equipment in our workrooms for high-speed mass production. In order to create jobs, the work is done as far as possible by hand or with very simple machines.

Washington, D. C.

Four hundred colored women on work relief in the nation's Capital, in the last two months have been real Santa Clauses to about ten thousand little boys and girls of Washington. These unemployed mothers have made shirts and dresses for their own and needy neighbors' children in FERA sewing centers. No one can ever identify these garments as those made at any of the six District of Columbia work shops. Under the wise supervision of Mrs. Gertrude Van Hoesen and her colored forewomen, the patterns are all different and the color of the goods equally assorted. The spontaneity of interest and pride reflected in the faces of these women of middle age as they beamed over the products of their machines observed on our inspection trip to Banneker Sewing Center, bore out the oft repeated statement of Administrator Hopkins, that unemployed women, like the men seen working assiduously about the premises on a grading project, prefer work to the dole every time.

Mrs. B. E. Powell, the colored forewoman, whispered to Miss Margaret Wadsworth, the district supervisor:

"All the e this morning." She pointed to ten foot stacks of little girls' dresses. There was no question that the work of the sixty-odd women was being done, not cheerfully, but with genuine application and inspiring earnestness.

Miss Wadsworth explained the philosophy back of the whole program. The relief organization, with its trained case workers, guides the needy in making the adjustments to the problems created by lack of employment along normal lines, and to do it with courage and confidence.

The mutual respect and harmonious working together of clerks, case-workers and aides of both races give evidence of the new spirit back of the rehabilitation program.

Sixty-seven mothers on the FERA rolls were in attendance at the weekly instruction class. A chart in A B C" language headed "Nutrition" and listing cod-liver oil, milk, green vegetables and how to prepare foods hangs in front of them. They are given an oral and visual demonstration of how to make the grocery order within the budgetary allowance do the job.

Latern slides are shown and the cooking technique of a gas stove demonstrated. Mimeographed sheets of each lecture are given to the clients for home use.

The relief service includes first. an understanding of the needs of these unemployed families; then, the lesson is taught of how they can best help themselves.

THE DA'S SHOULD LOOK OUT

Kansas City Star: Federal employes operating under the insignia of the alphabetieal groups had better be eautious and have their eredentials at hand in the event that curiosity gets the better of some people, operating on a private basis. The Associated Press relates that a young TVA engineer was driving in a remote area of the Tennessee mountains, with the letters USDA on his lieense tag. Suddenly he was confronted by a man on horseback, with a gun in one hand, with the other pointing to the tag and with the query, "What's them letters stand for?" Flustered, but truthful, the young engineer replied. "Why, the United States department of agrieulture." The native seemed vastly relieved "Sorry I bothered you, mister, but I thought them letters stood for United States dry agent." And that, after all the months of the new dispensation!

CRESCENT CITY VISITED

New Orleans, La., Opened Its Doors to the Secretary of the National Baptist Publishing Board

Three Churches Visited Last Sunday and a Civic Mass Meeting Address In the Afternoon at Freedmen's Auditorium

New Orlcans, La.—(Special to The Union-Review)—Once more Henry Allen Boyd invaded the city of New Orleans. He arrived here on Friday morning over the Missouri Pacific train from Houston, Texas. He was met at the station by Rev. J. L. Burrell, D. D., pastor of the Progressive Baptist Church, and he and his wife were taken directly to the Burrell home at 2809 Milan Strcet. They hardly had time to finish an especially prepared breakfast by Mrs. Burrell, who represented the Progressive Sunday School, and which school sponsored the breakfast, before the Rev. Mr. Boyd was taken at once to the St. Mark Fourth Baptist Church.

The following ministers from the Freedmen's Association, some from the first district and some from the Southern Association, met him at the church, and from two in the afternoon until five-thirty they were dealing with matters of the moment, discussing the denominational problems, outlining Baptist program and going over possibilities that the denomination faces even during these times of depression: Revs. Wm. Jackson, J. Sypion, J. Morehead, Jos. Granderson, Wm. Clark, J. L. Burrell, A. Hubbs, Walter Willaims, . A. Francis, H. J. Gooden, James Benjamin, Paul Jackson, S. Royal, R. Porter, Thos. Clark, J. H. Williams, J. E. Pondexter, R. D. Wright, O. Landry, L. Riley, A. J. Gaskin, D. Granderson, L. Braxton, L. D. Bowie, C. Black, Morris and Garrison, Mrs. J. L. Burrell, Mrs. M. M. Fortier and Mrs. E. Moore.

The meeting was opened by the Rev. Wm. Clark, who led the devotions. He was followed by a prayer offered by the Rev. A. Hubbs, a pastor of years of experience. Opening remarks and short addresses were made by the Rev. J. L. Burrell, who for forty-nine successive years has pastored in this city. Then the Rev. Dr. Morehead, who is ninety years of age, brought greetings to the visitor. Short talks were made by the Rev. Dr. Harrison, Rev. Wm. Jackson, president of the Freedmen's Associaiton, Dr. Francis, Rev. Granderson of the Austerlitz Church and others. The Rev. Mr. Boyd was then presented to these leaders, these pastors, these heralds of the cross. It was he who brought facts and figures in a convincing and persuasive argument on what the Baptists could do at this particular time, to lift themselves out of the quagmire, to encourage church attendance, to build Sunday schools and to work carrying out the great commission. At the conclusion of his address it was the concensus of opinion and the unanimous agreement that The Henry Allen Boyd Plan of Denominationai Advancement, is the solution to the problems facing the denomination financially.

Following the ministers' meeting the Sunday School forces gathered in the same auditorium at eight o'clock. Mr. Morris Burrell, president of the Freedmen's Sunday School Convention, presided. He presented Mr. Jamcs E. Gayles, the president of thc First District B. Y. P. U. Convention, and the president of thc State Convention. Mr. Gaylcs brought a welcome to the visitor. He told the audience of his worth to thc Ncgro Baptists. Hc praised the accomplishments of this Sunday School worker, and assurcd his hcarcrs that there would always be forthcoming a message from this messenger.

Throughout the evening these ministers, these B. Y. P. U. workers, thcse Sunday School officers listened attentively and accepted joyfully his recipe for reviving and rehabilitating the schools that need such building, other front line organizations. This meeting was held in a church that in its eighty-four years of existence has had but five pastors. The history of it as a religious organization dates back to a date prior to the Emancipation Proclamation. It once occupied an cdifice and was domiciled in a building located on the grounds that is now partially occupied by a charity hospital. This was long bcfore it moved to its present location.

Following the Sunday School addrcss and the B. Y. P. U. affair the executive committee of the Crescent City Boosters tendered the Rev. Mr. Boyd a reception in the basement of the church. Refreshmcnts were prepared by the men and women who are members of the club and whose goal for the next Congress is "Seventy-five messengers to the next meeting."

TODAY OR TOMORROW

"Today if ye will hear His voeie harden not your hearts." Heb. 3:15

God has only one time, that is, today. I read of tomorrow in the Bible. Pharaoh wished the frogs taken from him, but tomorrow. Tomarrow is man's time. Now, today, is God's. If you eame to a stream would you sit down and say "I will wait till it flows past, and when it is dry then I will eross?" Men are not such fools. God is waiting on you. He is calling you. He is beseeching you, and this is His one request: Take My Son whom I have given. He cries to every aecountable and rational soul in this world. Will you have Him? —W. P. Mackay.

Negroes Feed North Carolina's Electric Chair

Greensboro, N. C., Nov., (By D. J. Gilmer for ANP)—Three Negro men were put to death Friday in the electric chair one after the other at Raleigh in the Statc's penitentiary This runs the numbcr of Negroes executed in the electric chair in this state in the twenty-five years of its use, in place of the gallows, up to 123; including 22 white men the total is 145 men.

Why so many Negroes—123—and so few white men, only 22, have been cxecutcd in this State, may be a debatablc question, on Negro crime or on the lack of equal justice. Gentlemen of the Jury, you may take the case. I pass, for I do not know, all I can say is I was not in that number.

However, it is something to think about when there are twice as many white people as Negro people in North Carolina, yet 123 Negroes have been electrocuted in 25 years and only 22 white men.

One of the Negroes in his statement just before the fatal hour said that he got only a cake out of the whole tragedy and now, he said, "look what I am to pay for it," What does it profit a man to get a cracker and lose his soul?

But even at that one cake for a hungry man is more than John Dillinger and many others got as a price they paid for a mad-dog-like death.

ARKANSAS' CAPITAL MAKES IMPRESSIVE BID

Two Thousand Dollars Promised for Prizes And Exhibits by Friends

Invitations were pressed upon the messengers at the last session of the National Federation of Colored Farmers by those who were pulling for Little Rock, Ark. Throughout the session after many leaders had spoken, Little Rock loomed as a possible candidate for the 1935 eoming together of the farmers of the nation who make up this national organization. One spokesman went so far as to guarantee that if the eonvention was awarded to Little Rock, his organization, through their affiliation with others, would see to it that at least $2,000.00 in eash was put at the disposal of the Association to be awarded to live stock exhibits, farm products, home economics, eanning, preserving, needle work and other features that the Federation has shown from year to year, sent or brought up to remain on exhibit throughout the three days.

President James P. Davis and Secretary Leon Harris told the assembled tillers of the soil, live stoek raisers, fruit growers, truck growers and poultry raisers as well as others, that the invitation was in their hands, and it would be up to them to decide upon where is the best place, the most logical location and the most aeeessible city, town and community to call the next session. They have never held a meeting in Arkansas he declared, but they have met in Mississippi, Tennessee, Missouri and several other towns with in the years of its existenee.

It was said that in and around Little Rock, which is located in Pulaski County, and which is the capital city of the state, there is a rich farming section and an unusual number of farmers; and then duc to the fact that it is too elose to Oklahoma, Mississippi Tennessee and Missouri and not a long distanee from Kentucky, there would be a likelihood of its drawing a large attendanee. While Charleston, Mo., which had all reeords for the Association delegation, even exceeding the session at Mound Bayou and the one at Memphis, those who are advocating Little Rock are of the opinion that all things being equal, and if conditions do not grow worse the banner would have to go to Little Rock.

The officers of the executive committee, it was said by Secretary Harris, would in all probability reach a deeision time enough to give wide publicity to whatever city was to be selected in 1935 so that the farmers themselves through their various Units could line up their delegation, prepare their exhibits, and that the manufacturers of farm products too might have an opportunity of sending by freight or express such as they want to display during the next session.

KNOXVILLE STUDENT AT HOWARD AWARDED MUSIC FELLOWSHIP

Juillard Graduate School of Music, New York City, recently awarded Miss Louise Burge, a graduate of Howard Univcrsity, a fellowship in its Department of Voice for the year 1934-35.

The fellowship entitles the holder to frce membership in the student body of the school, which is designed solely for the preparation of young musicians of outstanding training and promise for the concert stage and which accepts only those students who have been awarded its fellowships.

The award of the fellowship is one of 60 made on the basis of competitive examinations in voice, piano harmony, counterpoint, sightsinging, and languages. Among the 300 competing applicants were graduates of many of the outstanding conservatories of music in this country. To Miss Burge comes not only the rare distinction of winning a much coveted fellowship in one of the most exclusive schools of its kind, but also the distinction of being the first and only colored person to receive this particular award.

To Auction Treasures of Father of Slave Amendment

Washington, Nov. (ANP)—The valuable furnishings of the luxurious home of the late Mrs. John B. Henderson are to be sold at auction to satisfy claims against the estatc once valued at $30,000,000.

Mrs. Henderson's husband, Senator John B. Henderson, was the author of the 13th amendment to the federal constitution, abolishing slavery.

FERA—The Social Emancipation—Administrator Applies Golden Rule

FEDERAL EMERGENCY RELIEF ADMINISTRATION
1734 New York Avenue
WASHINGTON

By Edgar G. Brown

President Roosevelt's social rehabilitation and economic emancipation for millions now unemployed has made genuine progress, under Administrator Harry L. Hopkins of the FERA during the past eighteen months. The Negro workers in particular, have actually experienced what is appearing as a higher standard of living through the policies of the Federal Emergency Relief Administration, more steady employment generally, and at uniformly better wages than ever before throughout the whole country. On first thought this may strike one not only as a paradox, but bordering on the preposterous.

First, let me recite this incident of a year ago which will speak volumes to every student of social conditions in America.

The scene is the Grand Ballroom of the exclusive Mayflower Hotel, Washington, D. C.

Harry L. Hopkins, FERA administrator has just outlined before the assembled governors, mayors, and relief administrators of the country his plans under the CWA for putting four million men and women to work in thirty days on socially useful projects throughout the United States. He pauses for questions from the floor, there are a few as to detailed procedure, with obvious answers.

Then, a mayor from Florida arises and asks if there will be a difference in the wages of Negroes and whites.

In the twinkling of an eye he was completely disillusioned by the loud, distinct, unhesitating declaration, "NO."

Equally spontaneous applause, followed this pronouncement of Administrator Hopkins.

A new emancipation of the economic slave had been sanctioned by the Federal government in 1933; no less far-reaching than the stroke of Abraham Lincoln's pen in 1865; and, moreover, it had been immediately ratified by the States in general convention assembled right there and then. On this historic incident hangs the glorious future of a larger cultural life and economic security for the breadwinner regardless of race or color born out of a greater spirit of patriotism and universal democracy among the American people.

What has happened?

Four million were put to work under CWA last winter.

Most of these were Negroes.

Why?

Fifty percent of those on the relief roll were given first preference—then veterans and skilled workers.

While the colored people are only ten percent of the population, they are nearly twenty per cent of the whole unemployed load.

This FERA work program which has carried on, since the abandonment of the CWA still guarantees the Negro worker a minimum of thirty cents an hour, and an average of almost fifty, in most parts of the country. This sets a precedent in wages throughout the major Southern states affecting two thirds of the colored population.

For purposes of illustration, in Chicago there were 100,000 employed on CWA. Between eighteen and twenty thousand of these were colored. It is interesting to note also they had their proportionate number of foremen, time keepers, clerical, and other positions in the higher brackets.

Under the present work relief plan they fared equally well. I have in mind a family of two whose budget is set close to forty dollars a month. The husband is unable to work, the wife a stenographer has been given employment of this character on a Federal project under the supervision of the county treasurer. For the benefit of those who are not informed as to how the amount of work is allotted and the amount of wages allowed each unemployed family, may I cite the following item in particular from one of the many bulletins issued to work relief administrators in every state and county in the United States by the FERA from the Wahington office.

"Budgets determined for these county wage-rate committees shall provide for health, decency, and comfort commensurate with the previous standard of living of the family and shall be such that no supplementary relief shall be necessary."

It is obvious, therefore, under this policy that colored or white professional workers might secure more man hours of work at more per hour to maintain the standard of living to which they have been accustomed than perhaps some unno person white or colored is perskilled and seasonal workers, still mitted to fall below a recognized minimum, monthly man hours of work in order to maintain the traditional American standard of decency and comfort.

No doubt, the fine sense of judgment as well as the broad and liberal interpretations of this spirit and intent of the FERA, has necessitated much readjustment in action and thought in different localities. But the studies of the research and statistics division in the rural South and the industrial centers of the North under Assistant Administrator Corrington Gill bear out very conclusively that great progress is being made all along the line with very heartening results in the fairness and impartiality of the administration and its benefits.

Let me cite a few things which may have been passed over lightly affecting the primary needs of these nearly three million families on direct relief and forego for a moment the other million and a half on work relief of whom I have just spoken. Of these three million families are Negroes, involving some four million persons.

The children of these parents, in many instances, for the first time have been provided with a nutritious milk diet on orders of the case worker, fully complied with by the relief organization.

The Federal Surplus Corporation of which Administrator Hopkins is presedent his recently let contracts for 5 million pounds of fresh or storage butter to be distributed again this year at regular intervals to the needy unemployed.

"Specifications require that the butter be of light to medium salt and shall contain less than 80 per cent by weight of milk fat; all tolerances having been allowed. Inspection of the commodity and the printing will be made by inspectors of the Bureau of Agricultural Economics, Department of Agriculture, United States government.

"It is specified that each roll or print be wrapped in genuine pound base parchment paper and packed 30 to a box".

This is like giving an added health certificate to those who have long been denied this vital food element.

Canned beef, mutton, and other foodstuff in million lots are to be regularly distributed by the Surplus Relief Corporation as has been done for the past year augmenting the supplies of the local relief agencies to the country's destitute.

The very beneficial service of the relief administration which has resulted from the plan enabling every unemployed family to call its own physician, as well as immediate advantages of the local hospitals has materially lowered the infant death rate and the generally high mortality of the underprivileged. The colored people are certainly no exception to this rule, by any means.

Special nursery schools for children up to five years throughout the country with trained physicians, nurses and others specialists in child care under the educational program of the FERA in constant attendance have not only afforded generous employment for these professional persons but has given the advantages of the tutor to the children of the humblest American parent—some four million at present unemployed.

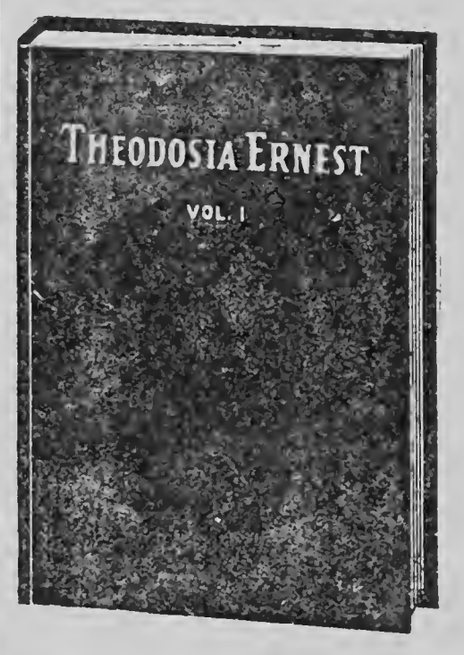
Seven million dollars were spent last year to pay unemployed teachers, in addition to those already employed in the public school systems throughout the country, to teach adults how to read and write-at last enable them to read a newspaper and sign their CWA and work relief checks. Three million or more will go toward student-aid work scholarships averaging fifteen dollars a month for college students in every non-profit-making college and university in the United States. It should be set down for the benefit of the record that nearly a half million went directly to Negro teachers and two thousand Negro students at Negro colleges and hundreds of Negro registrants at the Northern universities.

An average of ninety-one dollars was expended on each of the 80,000 families under the FERA rural rehabilitation program last year. Twenty thousand Negro farmers and share-croppers who were destitute a year ago have staged a comeback through this stake on the land provided by the Federal Government.

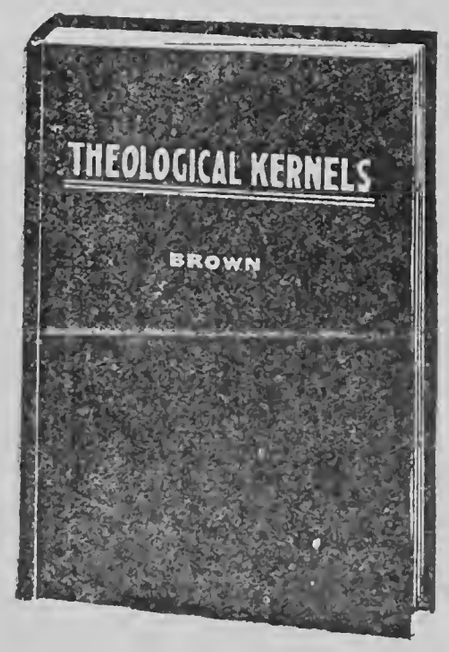
Thousands of modern, up-to-date, rural school houses, athletic fields, sanitary systems, playgrounds, parks, recreational centers, sidewalks, and water mains for long-neglected, poor neighborhoods have been developed in nearly every community in America as a result of the State and Federal CWA and work relief programs.

Life has become sweeter in the dreams of millions as they slumber peacefully in the tens of thousands of new cotton mattresses made by the unemployed for their own rest and comfort.

Ministers and Laymen Should Seek Every Opportunity to Improve Their Minds.



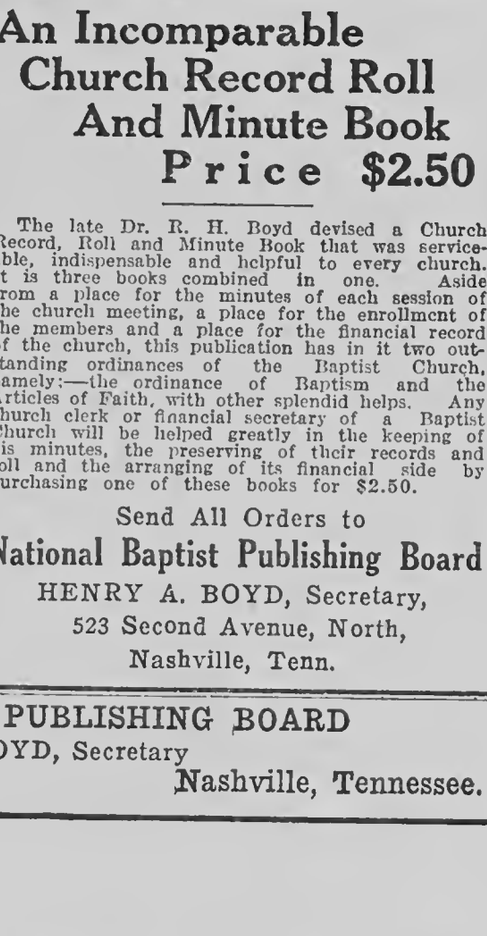
A religious Novel in most intriguing language. Price $1.00



Theological Kernels, the ministers best book of Helps.
Price $1.00

There is but One Old HISCOX Church Directory.

The Great Work of the late



REV. EDWARD T. HISCOX, D.D.

The Hiscox Church Directory has been used for years as a guide for Baptists everywhere.
Price $1.25

An Incomparable Church Record Roll And Minute Book
Price $2.50

The late Dr. R. H. Boyd devised a Church Record, Roll and Minute Book that was serviceable, indispensable and helpful to every church. It is three books combined in one. Aside from a place for the minutes of each session of the church meeting, a place for the enrollment of the members and a place for the financial record of the church, this publication has in it two outstanding ordinances of the Baptist Church, namely:—the ordinance of Baptism and the Articles of Faith, with other splendid helps. Any church clerk or financial secretary of a Baptist Church will be helped greatly in the keeping of his minutes, the preserving of their records and roll and the arranging of its financial side by purchasing one of these books for $2.50.

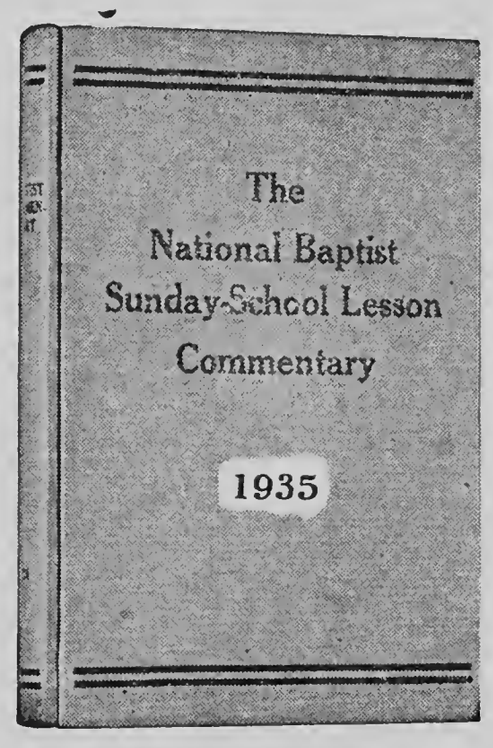
Sunday School Lesson Commentary

1935



Every Sunday School Teacher Should Have One

Six Reasons Why You Should Use It:

First: It is the production of your own National Baptist Publishing Board which gives employment to more of our people than any similar concern in the United States.

Second: It is purely baptistic and orthodox in every particular.

Third: Its doctrines are unquestioned, and the Biblical requirements are stressed in a manner to make it absolutely dependable.

Fourth: None of the modern theorics leading to skepticism arc admitted.

Fifth: It aims to be true to the teachings of Jesus and whatever there is presented which has not the "Thus saith the Lord" is discarded as unsafe and destructive of the best interests of mankind.

Sixth: Thoroughly adapted to the uses of our Sunday school constituency, it stands as a beacon light to all those who would like to rise in the scale of intelligence and demonstrate the qualification necessary for the accomplishment of the "Great Work" devolving upon us as a people.

BLACK AND WHITE IN THE BRITISH EMPIRE

By Thyra Edwards

(For A. N. P.)

In the House of Lords recently Lord Snell wanted to know what the government proposed to do about the development and "better government" of Bechuannaland. He was told that the government proposed to exactly nothing.

The government's Commission of Inquiry, headed by Sir Alan Pim, had pointed out the economic stagnation accompanied by dis integration of tribal life, to which the introduction of the European wake system had reduced the native. That is the European wage system together with the European system of especially taxing African native.

This is all particularly interesting following so close on the incident of a few months ago when a paramount chief tried and flogged a white man in a native court. For which the British Government with an elaborate military display costing $5,000 (more than one fifth the sum which Lord Pim's commission recommended for the economic revival of Bechunaland) deposed the Chief.

The incident is a pertinent commentary on the status of black men in the lands traditionally ascribed to them.

The white man is Phineas Mac Intosh, a degenerate Scottsman "gone native." He lived in the native quarter; took a native woman to wife; beat her publicly; cohabited with other native women whom he beat and brutally abused. At the same time he presisted in annoying the young girls of the Bamangwato tribe.

When summoned to appear before a trial assembly he came willingly, submitted himself to trial, accepted the sentence as a just one and yielded himself to punishment. He had cast his lot with the natives and accepted native administration without questioning the fine points of "white supremacy" and of "dominant race."

The black man who ordered the trial is Tshekedi Khama, Chief Regent of Bechuanaland, youngest son of the great Khama and the Lady Semane. At the death of his brother, Chief Segama, in 1925, Tshekedi, a cultured, educated man, relingished a college career and came home to act as Regent to his young nephew, Sertse. The 10 year old Sertse is now being educated at a missionary school at Lovedale. Tsheked administers the tribe and the realm pending his majority. This he has done wisely and well, according to the whites in his domain. And such is the opinion of the Vice-Admiral Evans, who supported by military contingent, deposed the Chief.

While he has sought to maintain harmonious relations with the local British authorities he has been unwilling to sacrifice the moral well being and the traditions of the tribe to this end. Repeatedly Chief Tshekedi had complained to the Government representative urging that MacIntosh and other whites who were introducing whiskey into the native section and molesting native women, be expelled from the land.

In response the British Administrator had, on one occasion, imposed upon McIntosh a fine of 10 shillings ($2.50); The fine awarded by the Magistrate for the offense of smoking on Tyne Docks recently contrary to regulation was ten shillings: This then is the worth of an American woman's honor in the esthnation of the British Government which has undertaken the enlightenment of backward peoples.

Concerned for the moral welfare of his tribe Chief Tshekedi tried, sentenced and punished the offender in the land according to the law of that land.

And the British Government straightway dispatched a Vice-Admiral in full uniform, supported by a detachment of 200 marines, 3 howitzers, Lewis guns, airplants and a 21 gun salute, across the trackless waste to Palapye Road and Serowe to block this challenge to white inviolability by bringing the Paramount Chief of the land to trial. For which trial with all its military trappings, the British taxpayer will be called upon to pay L 5000 (about $25,000) or thereabouts.

It is significant that the British Press emphasizes with Bourbon directness that the issue being tried was the inviolability of white supremacy; that punishment of offenses against the tribal canons or against members of the tribe belongs exclusively to the dominant race; that a white man, however degenerated and degraded, must not be subject to the administration of a black man, however just and admirable, lest it threaten the dominance and the claim to superiority of white men in black men's lands. A superiority of guns and machines and sheer brute force, as evidenced here at Bechaunaland.

For the actual issue screened by all this noise of racial superiority is the ruthless determination of a powerful Government to plunder unmined gold fields and to exploit native labor, and to uproot and destroy any man, black, brown or white, who resists. The trial —or inquiry, as the British Press refers to it— was not concerned with the right or justice of MacIntosh's sentence. Mac Intosh had submitted without complaint. And Vice-Admiral Evans confirmed Tshekedi's judgment by ordering MacIntosh's immediate deportation. At the same time, dressed in full military regalia, surrounded by a detachment of marines with fixed bayonets, and Lewis guns pointing at the bewildered natives, he desposed the Chief, Tshekedi Karma, expelled him from Bechanaland and ordered him exiled to Francistown, Tati Territory.

The Chief was denied the right of counsel to argue the legal point, although Mr. Douglas Buchanan, brilliant King's Counsel, Master of Roman, Dutch and English Law, and Reverend A. E. Jennings of the London Missionary Society, an authority on native law and custom and European treaties, appeared with him and sought to be recognized as counsel.

He was forbidden to call witnesses. Yet the white Africans whom the Government purported to protect from black domination, openly sympathized with Tshekedi. The white women shook hands with him at the trial expressing their regret at his expulsion.

Chief Tshekedi and the brilliant counsel who would have supported him contend that he is a treaty chief not an appointed chief and so not subject to the same limitations. Bechuanaland, in its Charter a selfgoverning state, is a Dominion rather than a Crown Colony as the Bamangwato were conquered by British or Boer. Their Chief is therefore under the protection of but not subject to the British Crown.

Back of all this is a century of white penetration into black lands, to plunder their undeveloped resources— and people. A century ago the Missionaries introduced Christianity into Bechaunaland The Great Khama, Chief Tshekedi's father, was a Christian though he did not impose Christianity upon the tribe. His ancestor, Shehele, was a close friend of Livingstone's and as a lad Khama met Livingstone. Khama tribe, the Bamangwato, contributed 150 to the restoration of the Livingstone Museum, erecting a tablet. "The Last Journey" which depicts Livingstone's body being carried by natives over 1500 miles of dangerous jungle.

In 1885, backed by the missionary, Reverend J. McKenzie, Khama of Bechuanaland with the chiefs of the adjoining Swaziland and Basueloland, obtained the protection of Great Brittian in warding of the encroachments of the Boers. The three tribes are related and speak the same language. Ten years later Khama and these two neighboring chiefs went to London to secure from Queen Victoria and her Minister of Colonies. Mr. Joseph Chamberlain, certain assurances regarding their tribal rights and their power as chiefs. Thus they retained their independence against the claims of the Cape Colony and of the Chartered Company, then pushing railway construction and seeking to incorporate Bechaunaland in what is now South Rhodesia.

The Lady Semane, Chief Tshekedi's mother, educated, cultured, refined who, menaced by machine guns and howitzers now cries out, 'O king, my Master, release to me the boy." is the same who, in the life of Khama, when presented, addressed the Queen Victoria as "Sister Queen, We two Queens."

Khama, still referred to as the greatest man Africa ever produced, was a great chief, a leader and a reformer. When degenerate whites sold whiskey to the natives he expelled them from the land. He stood up to and forced Cecil Rhodes' respect. On the maps of a decade ago all this territory was marked "Khama's Land." Khama's action in 1895 has delayed the prospecting for gold in Bechuanaland His son, Chief Segama, whom Tshekedi succeeded, was unwillingly persuaded to grant mining concessions. But Chief Tshekedi fearing the social degeneration attendant upon rapid industrialization of the country by whites has reverted to his father's policy tenaciously refusing to sanction mining concessions. On his return from London in 1930 he issued a decree annulling all concessions to prospect and mine for gold in the Protectorate. Recently after long resistance, he was induced to grant another. But he understands too well that the inroads of Western industry rest upon the disintegration of tribal life and the degradation and poverty of the native population who are subjected to special laws restricting the freedom of their movements, excluded from skilled trades, specially taxed and wholly exploited.

Thus Tshekedi, striving to preserve the rights and privileges of his tribe and to safeguard them from further exploitation has come into conflict with the Chartered Company. This is the real offense back of the Mac Intosh Inquiry. Tshekedi's spirit must be chastened to make way for the advance of Western Civilization.

British protection in the case of the Bamangwato has meant stagnation. The Protectorate has continued in an anamulous position economically squeezed between the Union of South Africa and Rhodesia. While there is no tribal fighting neither is there any

As State College Singers Rendered His Favorite

Singers of A. & I. State College "scored here" when they rendered, "Hand Me Down My Silver Trumpet, Gabriel" on Fisk Campus, Saturday, November 17th. Was the President pleased?
(Nashville Banner Photo)

compensating outlet for manly energy.

Bechuanaland, the Protectorate, is administratively more directly dependent than any colony since the Crown Administration is free to do as it thinks fitting. While in a colony the people and chiefs are British subjects with certain definite legal rights.

Economic and social deterioration marks Bechuanaland. Trade is restricted owing to tariffs imposed by the Union and Rhodesia. Excessive hunting has exhausted the wild game. Export of hides and skins is prohibited because of hoof and mouth disease. And a drought ridden land of hungry, workless men and women must somehow pay two sets of taxes, to the Chief and to the Crown. This year one third of the taxpayers are expected to default because they will be unable to raise 28 shillings (about seven dollars).

There is progressive deterioration in the physique of the 150,000 Bamangwato natives (less than 2,000 whites live in the land). Few children of school age get milk for nine months of the year and the average weight for tested children is 17 per cent below the average for European children. This year 100 (less than $500) will be expended out of the general revenue for native education. Chief Tshekedi maintains a school for 700 children at his capital.

This is the stage that was set for the $5,000 melodramatic display of British power. (Lord Pim's report had recommended only $24, 500 for the economic rehabilitation of Bechuanaland). Two weeks after Tshekedis expulsion the High Commissioner Sir Herbert Stanley, ordered his reinstatement, to follow an acknowledgement from the Chief that he exceeded his legal authority in trying a white man. The High Commissioner was on leave in England and when the Mac Intosh incident occurred and remained there throughout the ensuing trial, deposition, expulsion and reinstatement.

Following Sir Herbert Stanley's order Vice-Admiral Evans met Tshekedi at Cape Town and returned with him to Cerowe— the Vice Admiral traveling in the High Commissioner coach while Chief Tshekedi occupied a second class compartment. At Serowe the Vice-Admiral presided over a formal ceremony reinstating Tshekedi before the tribe, following an apology in which the chief conceded that technically he exceeded his authority but maintaining that morally he was right.

Immediately following his reinstatement Chief Tshekedi proceeded arranging a journey to London to present his case to the Secretary of Dominions, Mr. J. H. Thomas. On the eve of his journey he was forbidden to leave his own territory.

And so the British military display and inquiry in Bechuanaland decided nothing. These questions obtrude themselves however: (1) What, if any is the legal status of a Protectorate? (2) By what legal right can a paramount Chief of a protectorate not subject to the Crown be restrained from travel abroad? (3) What will be the reverberations when, according to the report in a Johnannesburg paper, Bechuanaland is anexed to the Union of South Africa? This was scheduled to occur about the time the Mac Intosh affair arose and the opinion in many quarters is that all this fuss has been to get Tshekedi out of the way and by this threat weaken the opposition of his neighboring chief against absorption of the Protectorates into the Union of South Africa.

Finally, in regard to Lord Pim's recommendations for the rehabilitation of Bechuanaland, The British Government proposes to do exactly nothing.

Footnote: The proposals of the Government's Commission of Inquiry under Lord Pim were: For carrying on a survey of the possibilities of improving the water supply, L10, 000; for a stud farm for breeding African cattle L7,000; for practical experimental work on the grasses of the Protectorate L4, 750; for clearing the river channels of the Okawango Delta L, 000; for instrution in methods of preparing hides and skins L1, for compiling a record of native customary law L250. All at a total enormous cost of L24,500.

WE'LL BITE! WHY?

Anna Carlson in McPherson (Kans.) Republican: And now a warning has gone out to beware of the powder puff. It may give a woman the lumbago, appendicitis, pip and a number of other more highfalutin diseases. Inasmuch as the average woman would rather risk any of 'em than part with her trusted puff the warning will do no good. Speaking of powder puffs, here's one thing we don't understand: Why do women, at the end of an evening's entertainment, haul out their compacts and powder their noses just before leaving the hall or theatre for a ride home in the dark?

FARMERS ARE ADVISED TO RAISE SOME COLTS

Farmers who have been buying western or other horses would do well to raise some colts on their own farms, says A. B. Cain of Iowa State college.

Horses are steadily becoming more expensive so that a farmer can profitably raise a few colts, even if he dosen't need them on his own farm for replacement purposes. Home-grown colts do not have to be given a rest period while they are becoming acclimated.

There is a shortage of good work horses all over the country, and farmers will find it difficult to obtain good animals. Colts utilize cornstalks and other materials that might otherwise go to waste around the farm and, in most cases, are able to earn their keep after they are 2-year olds.

SAN ANTONIO OPENS HER ARMS

Alamo City of Texas Received Baptist Couple—Henry Allen Boyd and Wife

Rev. W. S. Brent, Pastor Of Second Baptist With Citizens and Friends Extended Hearty Welcome

San Antonic, Texas—(Special)—Henry Allen Boyd and his wife have been to this city, received a hearty welcome, got a big ovation, met old and new friends and have gone on to other parts. Their coming was announced several weeks ago by the Rev. W. S. Brent, D. D., pastor of the Second Baptist Church, who managed the coming of this couple and who with others helped to arrange a royal reception and stage a big mass meeting here at the Douglas High School, where the distinguished Baptist leader delivered an inspiring address. The Rev. Mr. Boyd came back to his home town, he returned to the city of his early youth. He came not as a conquering hero as some would think, but as an humble servant of his denomination, making the pilgrimage to his former home to recite, explain and deliver a message of racial and denominational information. While here they were the guests of Mr. and Mrs. J. O. Robinson, because the two families have been friends for more than forty years. They were the recipients of social courtesies from Dr. and Mrs. Heard, Mr. and Mrs. Dawson, who served a Mexican dinner, and others. The whole two days spent here were filled with activities along religious and social lines, but the big occasion was the mass meeting at Douglas High School. The Rev. Mr. Brent served as Master of Ceremonies, Rev. Mr. Wilkins read the Scripture, and the Rev. Mr. Byrd offered invocation. The mammoth Second Baptist Church choir rendered five selections in which was included three spirituals and folk songs such as the National Jubilee Melody song book contains. In presenting this former Texan to the audience the Rev. Dr. Brent had it to be distinctly understood that he was the son of a former Texan and that his father was active in Baptist affairs of this State in the early Re-construction Period, rising from the position of a cow-boy on the plains of Texas to a gospel preacher and leader. At the conclusion of his introduction and presentation the speaker was given a Chautauqua salute and a "Texas handshake". It was a mixed audience, members of both races being present. Denominational lines as well as racial lines broke down in this service of receiving and acknowledging the presence of the secretary of the National Baptist Publishing Board. Business and professional men laid aside their other business engagements to make the occasion a memorable one. It was in this city forty-one years ago last September that the distinguished guest delivered the Welcome Address to the Baptists of the Lone Star State when there was no division, when they were working as one body. A that time his father pastored the Mt. Zion Baptist Church, known now as First Church and located on Santos St. Although in his early teens he was active in affairs of this city religiously, politically, socially and along business lines. His address was well received and throughout his discourse it was punctured with applause. They left the city Wednesday night over the Missouri Pacific to spend one day in Houston, thence to New Orleans and on to their home in Nashville.

WANTA LAY MY HEAD

Wanta lay my head on the ground and howl
When the wind blows in this fall time!

Spring is gone and summer's over,
Nothin' on the pantry shelf to show,
Nothin' to put in the jars and glasses,
Wasn't no rain and the garden grow.

Empty spring and empty summer,
Hard old winter starin' me in face,
And here in the fall time the wind comes swoopin'
Screechin' and mourning 'round the place.

Calls up all them worryin' troubles
Thought I'd buried good and deep;
Ain't no bother fer them to find me,
Ruin my day and ha'nt my sleep.

Wanta lay my head on the ground and howl
When the wind blows in this fall time!

—Kate Haworth.
Jr. Chicago Tribune.

IDOLATRY

Not if I bow before his trees and flowers,
Or worship Beauty in these golden hours
Of autumn sunlight and the busy drone
Of harvest insects. Not when He alone
Has given this Beauty that we worship here
On hill and vale, this gladness to see clear,
The ripe occasion of his splendid gift
That can so heal the heart, and so uplift!

Not if I make the waysides of His dream
An altar of devotion to the grace
That turns each murmur of the babbling stream
And haunted forest to a sacred place
Of gradual contact with the meanings hid
Deep in old Nature's rugged heart amid;
Not if I choose His birds and fields of light
As solace for my spirit in its plight!

Not if I find in all that Beauty gives
A law of worship through whose rules I guide
My way unto the reverence that lives
Above the sweep and thunder of the tide
Of earthly being; not if in each star
Of twinkling splendor, and the magic moon
I find Him lurking, and am never far
From harps of love's perpetual over-tune! Star of Zion.

NEGRO IS LEADING THEME IN HISTORY SAYS STUDY GROUP

Prize Essay on "Slavery" Read by Lawrence D. Reddick at Texas Meeting of Scholars

Houston, Texas—The Nineteenth Annual Session of the Association for the Study of Negro Life and History came to a close in this city with a final gathering of enthusiastic supporters of this program. The Wednesday evening session which closed the convention was featured by two brilliant papers on slavery delivered by Professor Lawrence D. Reddick, Kentucky State College and President J. J. Rhoades of Bishop.

In the course of his discussion of "The Ex-Slave and the Plantation Tradition" Professor Reddick declared that there are only three themes in American history which may be termed distinctive and persistently determining historical forces. These three are: First, the frontier; the issue of industrialism, and the implication of the Negro in America. President Rhoades made it unmistakably clear that the true picture of slavery is blacker than that painted by white historians.

Doctor Woodson in closing the session commended the brilliant array of young men represented. He indicated that the Findings Committee will reveal most interesting materials as to the study of the Negro. $225 were awarded in prize money. Only one prize was presented to the winner personally: Professor Reddick received the award for the best book review appearing in The Journal of Negro History.

The Nineteenth Session ended with the announcement that Chicago, September 9, will mark the Twentieth Anniversary Celebration. The audience stood while singing "Lift Every Voice and Sing."

CLEVELAND WAS RIGHT

Detroit Free Press: With the exception of Washington and Lincoln, Grover Cleveland embodied in his public life to a greater degree than probably any other chief magistrate of the United States, a selfless devotion to the public interest that amply justifies the honor of having his acts and principles kept fresh in the minds of his countrymen.

At a time when many people are trying to get something for nothing it is useful to recall his vigorous assertion:

"A truly American sentiment recognizes the dignity of labor and the fact that honor lies in honest toil."

When millions are being encouraged to lean on the government it is well to remember Cleveland's famous dictum:

"Though the people support the government, the government should not support the people."

The Presbyterian manse at Caldwell, N. J., where Grover Cleveland was born, should become a shrine, where Americans may repair and renew their faith in America by coming with the spirit of one of the greatest of all Americans, who never feared for the future of his country so long as his countrymen should display the rugged virtues which he preached and exemplified.

ECONOMIC HIGHLIGHTS

TWO KINDS OF FARM RELIEF

All governmental farm relief measures, regardless of politics or backing, must fall within two distinct classifications.

One attempts to solve the farmer's problems by legislative edict—by giving the conduct of his affairs into bureaucratic hands, and tending to make the individual farmer a ward of the state.

The other attempts to help the farmer help himself to get movements started whereby his own abilities, efforts **and** aggressiveness will pull him out **of** his difficulties.

The second **kind** of farm relief has been much the more successful. And the reason is that it rests upon a sound basis—upon the fact that self-reliance is the greatest essential of progress. It would be possible, carrying the first kind of farm relief to the extreme, for government bureaus to take over the operation of every farm in the land, making the original owners hired hands at good salaries. The farmer then would not have to worry about taxes and poor prices and chaotic markets any longer—but he would have ceased to exist as a free agent.

For many years under various government measures excellent work has been done in forwarding the development and growth of farmer-owned and controlled cooperative organizations—a work that has produced more genuinely worth while results than all the farm relief schemes ever tried. The farmer who joins a co-op feels and rightly, that he and his fellows are working toward their own salvation, and that the future is up to them. That is the spirit the country needs in every branch of human endeavor.

—O—

FIX CARS— NOT TICKETS

"With much fixing of automobiles and no fixing of tickets, there should be a material reduction in Chicago's motor vehicle death rate," said Mayor Kelly in opening a new "safety lane" in which automobiles are given tests to determine mechanical safety.

Chicago's experience with the lane bears that out. During the first week of its operation, 73 per cent of all cars passing through it failed to earn the safety "O.K." The bulk of them had defective brakes, many had wheels out of alignment, while lack of proper lights, mirrors, windshield swipes and horns caused the failure of the rest.

It was then complained that the tests were too stringent, and that only cars in firstclass condition were able to pass. The tests were then modified to give automobiles in only fair shape a chance. Even when this was done, 40 per cent of the cars going through the tests failed to meet specifications. It is probable that the percentage of Chicago cars which are unsafe mechanically is higher than this, insomuch as the owner of a machine whose condition is obviously bad would not subject his car to the tests.

Portland, Oregon, has recently carried on similar examinations, under direction of the state police. The experience has been about like that of Chicago, around half of the cars examined proving to be unsafe in one or more fundamentals.

The unsafe automobile is almost as great a hazard to the public as the reckless driver. Every city interested in reducing the horrible toil of street and highway fatalities should carry on automobile inspections—and then see to it that defects are corrected. In these days of high speed and super-highways, there is no room for the car with brakes that won t hold, lights that won't illuminate, and horns that won't sound.

—O—

JUSTICE— NOT FAVORITISM

"The request of the railroads for slightly increased rates on some commodities, now being considered by the Interstate Commerce Commission, is nothing more than a demand on the part of the railroads that they be classified with other industries, which are permitted to advance the price of their products when production costs, over which they have no control, render such a course imperative," said C. D. Morris recently.

During the past two years an intensive movement has been underway to lift the commodity price level. As a result, everything industry, as well as individuals, must buy, now costs more than it did a comparatively short time ago. In addition, wages and taxes have also risen, and in the case of the railroads, the new pension law, passed by the last Congress, has added many more millions to the cost of operating the lines.

It is estimated that the increased rates, if granted, will bring in an additional $172,000,000 a year. The yearly increase in railroad operating cost is estimated at $300,000,000. As a result, allowance of the petition would give the railroads new revenue equaling a little more than half of new expenses.

Mr. Morris pointed out that things must be done if the railroads are to be saved from ruin. First, they must be allowed to earn more revenue. Second, legislation must be passed whereby all common carriers will be regulated, on an equitable basis, by a central agency. The railroads do not expect any favors—they only ask for justice.

—O—

SHALL SOCIALISM RULE UNITED STATES?

Speaking before the American Gas Association at its recent convention in Atlantic City, Managing Director Alexander Forward and H. O. Caster, president of the Association, courageously criticized the revolutionary program of the Tennessee Valley Authority and the electric Farm and Home Authority as examples of a Federal attempt to cripple public utilities with funds raised partly from the utilities' own taxes.

Mr. Forward charged that "public revenues are being used to foster competition and to sell domestic services in no way superior, and in most cases inferior and more expensive. Governmental agencies with unlimited machinery for propaganda are employed. Those in charge of the experiment to transform human nature are planning to extend their program all over the United States.

"Under threat of direct government competition, the TVA and E FHA have forced reductions of electric rates; have by fear forced the manufacturers of electric appliances to reduce prices and bring out new models and have sponsored deferred payment plans for the sale of appliances which it is difficult for any competition to meet."

Mr. Caster asserted that "state regulation may not be perfect, but it is better than any Federal regulation can be," and that "if privately owned and operated utilities are destroyed, progress in the industry will cease."

He pointed out that the program also includes machinery for loaning public money, 'of which 30 per cent is a donation, to any municipality to construct a utility plant. Many such loans have been approved by

When ordering Badges give name of your Church, state how many Officers' Badges are wanted and number of Members' Badges needed.

cities already adequately served by private plants, and in such cases cause an unwarranted destruction of private investments.

"The Federal government denies that the Tennessee Valley Authority is subject to state control. This means that regardless of the desire of any community or state and in violation of state laws the TVA can build and furnish service at whatever price it chooses. It can crush out its competitors and destroy millions of dollars of private capital. It can sell electricity below cost of production or even give it away, ruining not only the electric but the gas companies in that area. This it is now threatening to do.

"Yet every single piece of machinery or equipment that will be used in the so-called governmental experimental projects has been developed and invented by private initiative and private capital. Destroy the privately-owned utility and progress in industry will cease.

"The private utility also carries a heavy tax burden, unlike the municipal plant."

It is high time that taxpayers and investors began studying the many plans now under way to socialize industry. Strip the issues of their political camouflage and get down to their constitutional significance as they actually affect your own property rights and tax bills.

Miss Nannie H. Burroughs Delivers Founder's Day Address at N. C. College and Says, Liberty, Work and Education Are Aims of Democracy.

Greensboro, N. C., Nov.—(ANP)—The first program to be broadcast from the A. and T. College auditorium was on Founder's Day, November 2, when Miss Nannie H. Burroughs, president of the National Training School, Washington, delivered the Founder's Day Address before an audience far exceeding the capacity of the Dudley auditorium. Her subject was "The Three Aims of Democracy."

Rev. R. T. Weatherby, pastor of the St. Matthews M. E. Church of Greensboro, gave the invocation and special music was rendered by the Department of Music. President F. D. Bluford, presided.

"Nowhere in the world is there as much attention paid to, and attempts made to understand democracy as in America. The purpose of founding America," she said, "was to promote the three most essential things in a democracy, which are Liberty, Work and the right to learn."

How To Protect Negro Institutions

By Drusilla Dunjee Houston
(For A. N. P.)

Can we protect our Negro institutions from the salary-seeking type? It can be done by placing at the head honorable men who will select people under them of like caliber. The fact that these people do not think in DETAIL as we do; that they differ in denomination or politics should have nothing to do with our selection. Character and education should be the qualification that we require.

If the man's ideals are right; if he has a vision and a program of the work that will win from legislators the things that colored people need, that is all that should concern us. When we secure such a man— and his kind is rare— then we must learn how to protect him. There ought to be a reward for the kind of service that he can give. He should not be shunted off in a night by political trick because he had the courage to do right things.

How can we protect such race leaders? Through our religious, fraternal, social and civic bodies standing as a unit behind them. In our capital city, the young men of the Business League are great admirers of Inman E. Page the supervising principal of the city system. One of their leaders says: "To have a man like Dr. Page walking around among white folks means very much for the Negro race." Such is the strength of CHARACTER. This League sends into the whit school board a strong endorsement each year of Dr. Page.

Everywhere in our states our Federal women, our ministerial and fraternal leaders should be visiting race institutions to see if the inmates have stamped upon their countenances SODOMY, INSUBORDINATION, and UNHAPPINESS, or is there the growing demanor of SELF-CONTROL.

When we have thus decided that our children are in the care of those true to the trust, then we ought as ministerial, social, and civic bodies to give these people our full endorsement.

We are careless too as to training and educational qualification. We place people in our institutions who can wreck closely equipment through their ignorance as well as wreck boys and girls. The cook of an institution must be trained. She must know how to balance foods in her menu; she must know how to build the body in avoiding passion-arousing condiments. She must have knowledge of how to feed the sick.

Incompetent people can ru'n the school linens, rotting and discoloring valuable materials. Such people have no comprehension of sanitation or true tidiness. Instead of doing their own work the incompetent are usually busy meddling in other departments headed by prepared folk. Waste and destruction will d scourage boards as to giving fine equipment to colored institutions. We must press forward in respect for economy and efficiency. All of the machinery of the school should be a challenge to the faculty for intelligent care.

OKLAHOMANS SHUN GOVERNMENT CCC CAMPS

Youth Not Showing Enthusiasm For Enlistment As Elsewhere

New York, Nov. (ANP)—The enthusiasm of Negro youth for enrollment in the Government's CCC Camps which has been shown in most parts of the country evidently does not extend to the young Negroes of Coal County, Oklahoma. According to a statement from the Social Service Division of the FERA of that county, only one colored man up to the present time has asked to register for the CCC camp. This information was forthcoming from Miss Margurete McGuire, Director of Social Service, Coal County FERA, in a letter written on October 27 to D. L. Boyd, Chairman of the National Urban Leagues Emergency Advisory Council for Negroes in that county.

Mr. Boyd, who is a resident of Coalgate, Okla., had inquired regarding persistent rumors that Negro men were being excluded from entrance in the CCC Camps of Oklahoma. Miss McGuire's answer emphatically denies that any refusal had been made to register Negro applicants and states that the handbook of her division on rules and regulations specifically says that there shall be no discrimination against any race.

WILL ADDRESS VETERANS OF FOREIGN WARS

New Orleans, La., (Special)—By unanimous vote of the officers and members of the Veterans of Foreign Wars at a meeting held in this city last week Rev. Henry Allen Boyd of Nashville, Tenn., was selected as the principal speaker for a community mass meeting that is to be held at 2 p. m., Sunday, Nov. 25 in the Louisiana Freedman's auditorium.

Following the action of the Association Lt. A. A. B. Chatters, the service officer, got in touch with the Rev. Mr. Boyd and he wired his acceptance from Nashville. The movement is being sponsored for this mass meeting by Rev. Wm. Jackson, D. D., president of the Freedmen's Baptist Association, representing more than one hundred churches, and Rev. G. H. Hendricks, D. D., president of the First District Baptist Association, with a membership of approximately seventy-five churches. They are working with the Veterans of Foreign Wars Organization to bring about better conditions not only for the former soldiers but the citizens as a whole.

Dr. G. W. Booker is the Commander, Mr. N. Grayson is Senior Vice Commander, Mr. W. Willis, Junior Vice Commander, Mr. A. N. Scott, Adjutant, Mr. C. Clark the Quarter Master. The headquarters of this Post is 1310 La Salle street and Lieut. Chatters is the Service Officer.

The Freedman's auditorium is the largest building of its kind located in New Orleans, and it is expected that six or seven thousand people will be out to hear this distinguished Nashville divine.

THE BIRD'S CONCERT

Elizabeth Goggins

Last night the birds had a concert
In the russet apple tree,
I opened the window and saw them
As plainly as could be.
The orchestra was assembled
On a gently swinging bough
And kept the time with a musical chime
While a cardinal showed them how.

The woodpecker beat on a big bass drum
And the wood thrush played the flute,
The goldfinch blew on the piccolo,
And the bunting strummed the lute:
They played till the stars shone one by one
Above in the darkening dome—
And sadly flew from the apple tree
When the nighthawk called them home

DISCRIMINATIONS NOT ALLOWED IN NEW GOV'T RULES

Unemployed of Rural Areas to Get the Humane Treatment Which "Old Order" Denied Them

Harry L. Hopkins, Administrator of the FERA has made an appropriation of $1,000,000 for public health service and appointed Dr. C. E. Waller, Assistant Surgeon-General in charge of State Relations of the United States Public Health Service, as medical director of the Federal Emergency Relief Administration.

The funds will be used to augment the work of established health services of counties co-operating with the United States Public Health Service.

In states where no county unit health service has been set up a State director will be approved by Dr. Waller. His job will be to organize and aid local health officials in promoting health programs in every county. The states will be expected to do their share in carrying on this work.

In many states much has been done in public health and medical service, though limited by lack of funds. Trained personnel and supervision are generally available.

"The foundation is well laid," said Dr. Waller, "we must continue to build a public health service to meet every American's medical needs regardless of race, creed, color or financial condition."

Dr. Waller is now on a tour of the country visiting State Relief Administrators. He also will contact leaders in the medical profession, health officials and heads of hospitals in his official capacity in order to discuss problems which have arisen during the past few years. Dr. Waller commented upon the successful post-graduate arrangement recently effected through Edwin R. Embree, director of the Rosenwald Fund; Doctors Davis, Roran and Bousfield, with whom he conferred during the national conference called by Dr. Roscoe Brown at the United States Health Service in Washington. At that time it was brought out that much has been done to make available hospital facilities for post-graduate work and care of Negro patients by their own family doctors in Carolina, Georgia and Louisiana.

Dr. Waller cited the FERA rules and regulations No. 7, governing medical care provided in the home to recipients of unemployment relief. These assure equal consideration for all members of the medical profession. Paragraph "b" reads:

"Licensed practitioners of medicine and related professions.—When a program of medical care in the home for indigent persons has been officially adopted, participation shall be open to all physicians licensed to practice medicine in the State, subject to local statutory limitations and the general policy outlined in regulation 1, above. Physicians uathorized by relief officials to give medical care under this program shall have accepted, or shall be willing to accept, the regulations and restrictions inherent in such a program. In order to provide adequate medical care it may be desirable for local relief officials to maintain on a district basis a list or file of physicians in the community who have agreed in writing to comply with the officially adopted program. Such a list of physicians should also facilitate a more equitable distribution of orders for medical services.

"A similar policy and procedure shall be followed in the preparation of approved lists of nurses, dentists and pharmacists. Licensure and or registration to practice their respective professions in the State shall be a prerequisite to approval of graduate nurses, dentists, and pharmacists for authorized participation in the officially approved State program for the provision of medical care for indigent persons in their homes."

STATE PRESIDENTS, MODERATORS AND PASTORS

Large Attendance at Executive Board in New Orleans, Expected

Galveston, Tex., Nov. 9, 1934—Two months have passed since we met in Muskogee. We have had time enough to take a perspective view of the convention to enable us to think of it from the accomplishments of permanent value. I was greatly encouraged by the favorable response given to the innovations in the program carried out at Muskogee. What was accomplished there should help us to see what is still to be done that we might make the convention a great and serviceable organization. It means that we have undertaken to make it a representative organization. Let us not be satisfied with he accomplishment along this line, but let each president, moderator and pastor continue to help to get more churches, district associations and state conventions to represent. Our success depends upon this line of endeavor more than any other. Let us not stop until we have gotten the majority of the 10,000 or more churches to represent in the National Convention. Let every moderator of a district or general association see to it that his organization represents.

My annual message to the Convention at Muskogee has been published in the Union-Review. I hope that it has been read, that the suggestions contained in it may be accepted. The suggestions were made for the purpose to bring about greater harmony of action among the Baptist organizations belonging to the National Baptist Convention of America. Many or our state conventions and district associations are trying to carry on Home Missionary work and other denominational institutions within their territory. This independent method is very expensive. Since we are associated together in this great organization it seems to me that it is possible for us to work out a cooperative system of missionary and educational work. It may be helpful if we would study the systems of Northern and Southern Baptist Conventions.

I have instructed Corresponding Secretary, Dr. W. M. Grimble, to call the Executive Board of the National Baptist Convention of America to meet in New Orleans on the 27th and 28th of December. I very much desire a full attendance of the members of the Board. There is some unfinished business to be transacted. The work of the boards and the Woman's Auxiliary Convention must be considered with a view of planning their work for more efficient service.

G. L. PRINCE, Pres.

DR. A. LAFAYETTE WASHINGTON ACCEPTS CALL

Bartow, Fla., (Special)—The Mt. Gilboa Baptist Church of this city, recently by a unanimous vote elected the Rev. A. Lafayette Washington, D. D., to the pastorate of this church. The acceptance of the call by this distinguished minister, is hailed by the membership and friends with delight.

Dr. Washington, former associate of Bethel Baptist Church, Jacksonville, Florida, is now pastor of the Mt. Gilboa Baptist Church.

Sunday, Nov. 25, last was Homecoming Day, and every member was expected to answer to the roll call; also a Thanksgiving offering was given. At 11:00 A. M., the pastor spoke on "The Book of Romans" and at 7:00 P. M., "Love" was the theme of his discourse. (Correction; in a recent mention of the above fact, inadvertently the name Williams, was used instead of Washington, please note. M. Ed.)

UNION SPRINGS CHURCH NEWS

Sunday school was opened on time at 9:30 with all teachers present and ready for service. Deacon C. J. Hoocks is a wonder in his school work, it is inspiring to talk with him, and hear him talk about his joy in church work. Mrs. Classie Collen is president of the B. Y. P. U., and she is a live wire, it is a treat to meet with them at 5 P. M. every Sunday.

At 7:30 P. M. a large audience listened to the Rev. F. D. Oaties the Evangelist preach a great sermon. Miss L. M. Griff is training our choir with a view of having the best in the city. Come and worship with us when you will.

SOUTHEAST MISSOURI TEACHERS

Charleston, Mo.—(Special) After deliberating here for two days the Southeast Missouri Association of Colored Teachers closed their session in this city on the evening of November 16th. The two days' meeting was held at Lincoln High School. It was the largest attendance in the history of the organization, and this city, according to the older members, gave it what was considered the most royal reception.

The principal address on the opening day, November 15th, was made by Prof. J. L. Short from the subject, "What the school should do for the child." They were welcomed to the city by Mrs. Ruby Thompson, county superintendent. At the close of the meeting the following officers were elected for the ensuing year: Prof. E. W. Emory, Charleston, president; Prof. L. H. Mills, Poplar Bluff, first vice president; Miss Margaret Carven of Cape Girardeau, secretary; Mrs. A. L. Troupe of Poplar Bluff, assistant secretary; Mrs. M. D. Brooks, treasurer and Miss L. A. Myers of Sikeston, statistician.

The next session to be held in 1935 was awarded ot Poplar Bluff, Mo.

FEDERAL HOUSING PROGRAM TO HAVE AID OF LEADERS

C. C. Spaulding of EAC and Aides Seek To Acquaint Their Race With Home Betterment

New York, Nov. (ANP)—The Federal government will use the National Urban League's Emergency Advisory Councils for Negroes to help its efforts in spreading information about the Better Housing Program among colored home owners of the country.

This cooperation was assured during the past week when a letter came to T. Arnold Hill, Acting executive secretary, from W. D. Flanders, director of the field division of the Federal Housing Administration.

Mr. Hill had previously queried Mr. Flanders' department about the possibility of using the chairmen of of the EAC's in 201 cities of the country as liaison officers to acquaint colored home owners with the advantages of the government's home improvement program and to prevent any possible discrimination in the services which Negroes receive.

C. C. Spaulding, head of the North Carolina Mutual Life Insurance Company, is national chairman of the EAC's and this organization formed a little over a year ago, has spread a net work of committees throughout every state and large city in the country where there are any considerable number of Negro residents.

PRESIDENT DAVIS

(Continued from Page 1')

portion of the population is the colored farmer and it was this group President Davis hoped to reach and help. At this meeting a site was decided upon for a warehouse where potatoes, turnips, cabbage, beans, peas and other vegetables were to be assembled, graded and shipped out of Southeast Missouri to the large consuming markets in the spring and summer. Instructions were given the farmers at this meeting how to plan and plant their acreage so that vegetables could be shipped to the larger markets in sufficiently large quantities to make carload lots. Information that one would have had to pay for, was given by Mr. Davis free of charge.

HAITIANS LAUNCH POWER COMPANY AT PORT AU PRINCE

Omnibus Transportation System Is Ambition of Newly Formed Corporation.

New York, Nov., (ANP)—Under the leadership of Eustace Dixon and Joseph G. Bruney, the Utilities D'-Haiti, Inc., has been recently organized in this city for the purpose of operating an omnibus transportation system in the city of Port au Prince, Haiti, and a cross-country bus system between the principal cities of Haiti.

The corporation is organized under the laws of the State of New York and has an exclusive franchise in Haiti.

New York officers are at 2143 Seventh avenue and the Port au Prince office at 1512 Rue du Peuple.

Conforming to the rules of the National Security Act, the directors of the corporation purpose to market 100,000 shares of preferred stock and $50,0000 shares of common stock at a par value of $1.00 each. From such sales it is hoped to realize $120,000, $80.000 of which will be used to purchase operating equipment and $40,000 of which will be held for reserve and working capital.

Metheun A. Gibson is president of the corporation; Eustace Dixon, vice president; Joseph G. Bruney, secretary; Henry Phillips, treasurer and Leon F. Des Portes, general manager.

Other directors are Ivy M. Braxton, Henri Rosemond, Clifton Cook. Lysford Williams, Alvin Gary, Claude DeM. Lewis, and Robert Robertson.

HOW TO KEEP CUT FLOWERS PRETTY

Cut flowers last longer when the water in the vase is changed frequently and when they are placed in the coolest part of the rooms they decorate. At night they should be put out on the porch in the night air or floated in a tub of fresh water.

Farm Program

(Continued from Page 1)

ber bought during the base period.

Adjustment payments for corn reductions will be made at the rate of 35c per bushel of yield estimated for the acres taken out of production. Payments for 1934 were at the rate of thirty cents per bushel and the first payment of sheet number two.

15 cents per bushel will be made as soon as the signers' contracts are approved and the remainder on or about the first of January, 1936.

Hog payments will be made at the rate of 15 dollars per head for the number of head that were reduced. This compares with 5 dollars per head for those raised under the 25 per cent reduction this year. For instance, a farmer whose base period production was 20 hogs but who raised only 15 this year was paid 5 dollars for each hog raised or a total of 75 dollars. Under the new 1935 contracts this same farmer will be paid 15 dollars for each of the five hogs that he did not raise.

As soon as the producer's hog contracts are signed they will receive $7.50 per head of the 715 dollars due, and the remaining $7.50 about the first of January 1st, 1936.

MILK INDUSTRY NOW ONE OF THE LARGEST IN U. S.

(Continued from Page 1)

nation with an output of nearly three and a half billion dollars a year Inspected, tested, and pasteurized, the bottled milk goes out in thousands of wagons and automobiles to towns and cities all over the country, to be left at the doorsteps of American homes every morning. The daily distribution of these millions of bottles of a perishable product represents the greatest package delivery system in the world.

NEED TO WATCH FOOD SPOILAGE EVEN IN WINTER

(Continued from Page 1)

There also are insects which destroy food or make it unfit for human consumption. Cereals bought in bulk are much cheaper than when purchased in small packages, but are subject to weevil invasion. If the cereals are heated to 300 degrees in a pan in the oven and kept at that temperature for about 30 minutes, cooled, and placed in clean sterilized cans with tight covers, they will keep indefinitely and will not be molested by weevils, says Miss Conant.

Protein foods are the most readily spoiled, and are most dangerous, as bacteria may develop and cause poisoning. Meats or fish cannot be kept too long, and if there is any doubt about their freshness they should not be used.

IMPROVING OF HOMES

(Continued from Page 1)

fort and pride to your family? That's what the government is asking. If it isn't all of these things, it's actually no more than "living quarters."

Take a good, hard look at that place you call home— inside and out. Is it convenient and livable? Wouldn't a bit of new plumbing, more modern heating facilities, a few up-to-date lighting fixtures, a fresh coat or color here and there make all the difference in both appearance and comfort? Frequently, a new round of shelves for the kitchen, an extra cabinet for the bathroom, or a remodeled porch, pay for themselves ten times over in convenience and livability.

J. FINLEY WILSON CALLS OFF ANNUAL GRAND LODGE SESSION IN WASHINGTON

Washington, Nov.—(By Edward Lawson for ANP)—In an autocratic move that many believed might spell the beginning of his downfall, J. Finley Wilson, Grand Exalted Ruler of the Elks, this week called off the grand convention of that body, scheduled to meet here in August, upon the failure of the two local lodges to accept the appointment of Dr. Charles B. Fisher, of his city, as chairman of the committee on arrangements for the convention.

Mr. Wilson had appointed Dr. Fisher on his authority as Grand Exalted Ruler when it appeared that there might be dissention among the lodges as to which one should chose the committee chairman. The two lodges, however, got together and unanimously endorsed a candidate of their own whom Wilson refused to accept.

The Grand Exalted Ruler's contention is that under the constitution and by-laws of the lodge he has authority to appoint the chairman of the committee on arrangements and all other committees of the grand lodge when the lodge is not in session. The two local lodges, however, say that as hosts to the grand lodge convention they have the sole right to select their own chairman.

THE MODERN FARMER

Vol. VII. NASHVILLE, TENN., JANUARY 15, 1935 No. 12

TALKS TO COLORED FARMERS

Secretary Leon Harris' Advice to Federation

First of all, a Merry Christmas, Brother Farmers, and a Happy New Year. I have just been thinking of that wonderful song the shepherds heard that night some 1930 years ago. The Shepherds were also farmers. Wasn't it a grand thing that the farmers were picked out to be especially blessed and glorified that night? It was their happy privilege to go and tell the wonderful story of the birth of Jesus to others. Perhaps they were the first who looked upon the infant Lord. The Christ, I believe, has always been especially interested in farmers. We receive so many blessings. The way is hard for many of us, but the sun rises every morning and the rain falls on our growing crops and if we do our part we can always be well fed. We don't get many of the luxuries we should have but the day is coming when we will have these also. Our children will be able to enjoy life and living much better than we have enjoyed it. We should make our homes as pleasant for our children as we can. Teach them to love the farm and the country. The farm can be made the healthiest and the happiest place on earth. We should be proud of our vocation and should always be able and willing to boost it.

That word "GOODWILL" in the angel's song brings to my mind this thought. Many of us will want the goodwill of our neighbors and of our fellowmen this year. Especially is this true of those who have recently purchased farms and homes in new neighborhoods and communities. I am sorry some have already shown that they do not like their new neighbors. I have a letter at hand from a farmer who left Mississippi a few weeks ago and bought a farm in Missouri. He has an opportunity where he is now, to provide a decent home for his family. He is industrious and honest, is a good follower of the Christ whose

Mr. A. G. Simmons Pays Up Subscription

As evidence of his high appreciation for the Modern Farmer, of which he has been a reader for some time, Mr. A. G. Simmons, a planter who resides in Mound Bayou, Miss., sent a Post Office money order to pay two years' subscription. It arrived last month too late to appear in the December issue. Mr. Simmons' record as a successful and progressive farmer, stretching over a period of a number of years, was not attained by leaps and bounds. He has struggled constantly, worked faithfully and performed under the stress and strain and has survived even these depressing

(Continued on Page 8)

TO EMANCIPATE FARMERS

Belief That Pres. Roosevelt Will Urge Congress to Act

President Roosevelt announced early this month that he will ask Congress to lift the restrictions of the Bankhead cotton control act for the small farmers of the country. He pledged relief for those farmers who have a base production of not more than two bales. This announcement by the President it is believed will silence the objections many had against the Bankhead Law. The only objection made against the law by many who desired a cotton acreage reduction program, including the Modern Farmers, was the fact that the law as written worked undue hardship on the small farmer, especially the colored tenant farmer. Although we still believe the restriction of the act should be lifted for those who have a three bale production base at least, nevertheless thousands of small farmers will be benefitted.

In announcing the President's pledge the Chicago Tribune said:

At the same time the President declared himself as favoring the Bankhead bill. He held it to be far and away the best instrument by which to continue the plan of curtailment production until the surplus can be controled. He predicted that such control will come within three years —at the close of the 1937 season. To substantiate his prediction, he cited figures showing the crop surplus has been reduced from 13,250,000 bales in 1933 to about 10,500,000 bales in 1934. The normal surplus for which the act is aiming was set at about 4,000,000 bales.

Exemptions Will Raise Output

It was estimated that exemption to the 600,000 farmers, largely tenant farmers on small plots of land, will increase production by from 200,000 to 300,000 bales in 1935.

The president explained that his move was dictated by the conviction that persons most needing help are the small farmers, and also that the regulatory provisions of the Bankhead act are most difficult to enforce in detail on small producers.

The administration's cotton program, according to White House informants, has been to bring crop prices back as far as possible to parity. In 1932 the parity price was about 13 cents and the actual price 5 1-2 cents. At present the parity price is 15 1-2 cents and the actual price 12 1-2 cents.

The President has no intention, according to administration spokesmen, of attempting to bring the price of cotton to 20 or 25 cents a pound, but to strive for parity. This is also the administration aim toward corn, hogs, and wheat, it is said.

Big Exports Not Expected

The administration has abandoned, according to observers, any hope of recapturing the foreign

(Continued on Page 8)

REDUCES CORN-HOG LIMIT

Secretary Wallace Believes Benefit Will Reach Millions

(Chicago Tribune Press Service)

Washington, D. C.,— A sharply reduced corn-hog production control program for 1935 was announced today by Secretary of Agriculture Henry A. Wallace.

Compared with the production control plan in effect this year, the 1935 program shows a curtailment in every detail. Corn acreage is to be cut only 10 per cent next year as against 20 per cent this year. Hog production will be cut 10 instead of 25 per cent.

Plan in Other Benefits

Farmers will be paid only 150 or 165 million dollars in corn-hog benefit payments next year, compared with approximately 306 millions this year. This reduction results from the curtailment in the program. The corn and hog processing taxes, however, will continue at their present rates.

A 1935 corn crop of roughly 2 billion 357 million bushels is probable under the reduction ordered by the AAA. The AAA plan calls for raising both corn and hog production to 90 per cent of the 1932-'33 average production. An actual surplus of 250 million bushels of

Missouri Farmers Subscribers

Modern Farmer Mailing List Increased as Result of Last Two Sessions in Charleston.

Twenty additional subscribers were sent to the National Federation of Colored Farmers last month after the extra session of the National Federation held at Charleston. This was in addition to the large number of subscribers secured at the National Convention held in the same city. The increased list was sent in by president James P. Davis at the conclusion of the extra session which was made necessary because of the many matters of moment that had to be considered, for which there was not sufficient tie at the last convention. Every one of the increased subscribers resided in Southern Mississippi and they are engaged in some phase of farming. For the benefit of the large number of readers of this publication scattered throughout the nation the Modern Farmer thought best to give the names of the new readers and subscribers. The secretary of the Modern Farmer and the treasurer of the same publication have sent a letter of acknowledgement to these readers. They are Messrs. Eddie Mosley, Elzora Bynum, T. H. Love, Soi Kirkwood, Varnell Purnell, James Rice, Walker Merriwether, Elmore Church, Mr. Alexander Lee, T. H. Adams, M. J. Jordon, Mamon Ford, Eddie Lucas, A. A. Allen, George Washington, Shed Miller, M. B. Barnes, J. W. Davis, Mesdames Susie Stucker and Alice McGee.

CORN STALKS NOT SAFE

Heavy Deaths Result of Pasturing Horses Claimed

Urbana.—Heavy death losses among horses and mules threaten the farmer who tries to save feed this winter by turning work stock out on cornstalk fields, according to a warning by Dr. Robert Graham, chief in animal pathology and hygiene at the College of Agriculture, University of Illinois.

It is true that feed supplies are the shortest on record. Unfortunately, however, it will be especially dangerous this year to try to get horses and mules through the winter by pasturing them on stalk fields. Some of the worst corn-earworn damage that the state has ever had, coupled with heavy rains, has caused much rotting and molding of the ears.

Already reports are reaching the University of Illinois animal pathology laboratory of the widespread occurrence of a disease resembling the old-fashioned cornstalk disease so prevalent about fifteen years ago. The malady, however, is not caused by eating the cornstalks but by consuming the low-quality corn. Cattle also seem to be susceptible to the disease, although not so much so as horses and mules. Even horses pulling husking wagons have been known to develop the malady, points out Dr. Graham. Thus, Illinois farmers might well play safe by using nose baskets on the horses while they are being used in cornfields this fall.

If cornstalks are used for feed, as they must be on many farms this year, hogs and cattle can be pastured in stalk fields with less danger than any other farm animals, it is said. Even then, the cattle should be pastured only a part of each day and thoroughly inspected each night for possible symptoms of the disease. When feeding this year's low-quality corn, farmers should hand-select the ears for horses, mules and cattle.

The first symptoms of the disease are likely to be nervousness, sluggishness or sleepiness on the part of the horses, although the symptoms are not easily detected without careful observation. When these mild symptoms do appear, however, a veterinarian should be called immediately, for only by prompt treatment in the early stages of the disease can the affected animals be saved. As the disease develops, the horses begin to walk in circles, stagger and press against their mangers or fences. These symptoms indicate brain disturbance that is much easier to prevent than to cure.

This disease should not be confused with hydrocyanic acid poisoning which some farmers feared might develop from feeding drouth-damaged cornstalks this fall or, from feeding fosted millet, sorghum or sudan grasses.

FARMERS SHOULD OWN LAND

Landlord Could Then Boss and Operate

Many of the policies and purposes of the American Farm Bureau Federation, the largest of the White national farm organizations, were found to be similar to those of the National Federation of Colored Farmers, when brought up and discussed on the floor of the convention of that organization which met here December 12-14. The convention was attended by delegates from every state in the union and was addressed by Henry A. Wallace, Sec. of Agriculture and other noted leaders of farmers.

One striking instance of the similiarity of the policies of these two leading farm organizations, the one white and the other colored, was given when Donald Kirkpatrick, general council of the Farm Bureau declared that the "America farmer should and will continue to own and control his instrumentalities of production and directly so, as the personal proprietor and master of his unit, obtaining a fair return on his investment and adequate compensation for his management and labor, and a reasonable profit for his enterprise." This policy of the farmer owning and bossing his own farm has always been one of the chief interests of the National Federation of Colored Farmers.

It was also stated that cooperative services should include marketing, mutual insurance, pooled purchases and others through which farmers could effect savings through co-operative action. The National Federation of Colored Farmers has always urged cooperative buying producing and marketing. Again it can be plainly seen that what is good for the American white farmer is also good for the American colored farmer.

The Farm Bureau Federation outlined a ten-point program for the organization. Some of these points should be of interest to colored farmers who are members

(Continued on Page 8)

Mrs. Ada Perryman Renews Subscription

Readers of the Modern Farmer scattered throughout the nation are evidencing their interest in the paper by renewing their subscription. Notable among these is Mrs. Ada Perryman who lives in Clarksdale, Miss. While it is not unusual for subscriptions to be renewed the Modern Farmer feels that it is an interesting news item when women take the lead and demonstrate their desire for information in a paper of this kind to renew their subscription. Mrs. Perryman is located in a section of Mississippi that is noted for its agricultural advantages. She is interested in the National Federation of Colored Farmers and holds membership in the Unit of Clarksdale.

AMERICANS FAIL TO MAKE USE OF CHEESE AS FOOD

Consumption Fraction of That Abroad

Americans have never taken full opportunity to improve their diet by use of cheese, averaging only about four and one-fourth pounds annually for each person in this country. In Switzerland the average individual yearly consumption of cheese is approximately twenty-six pounds, while in other European countries it will vary from eight to fourteen pounds.

Of the long list of cheeses which may be purchased for holiday meals, a few of the more common include:

Cheddar, or American, which originated in Cheddar, England.

Swiss, or Emmenthal, originated in Switzerland, but also made in this country.

Edam, a Holland cheese, recognized by its spherical shape and a red jacket.

Bergquara, a Swedish variety, similar to Gouda cheese, which is made both in Holland and in this country.

Pineapple cheese, originated in Connecticut.

Limburger, developed in Belgium, but now made in the United States. The characteristic flavor is caused by bacterial fermentation of the protein.

Brick cheese, an American product with a flavor midway between Limburger and Cheddar.

Roquefort, developed in France and originally made from sheep's milk.

Stilton, an English cheese with a piquant flavor caused by a green mold which develops in the cheese during curing.

Isigny, the result of an American attempt to reproduce the French Camembert. It is a few degrees stronger than Limburger in flavor.

In addition there are many kinds of processed cheese sold under various trade names. Most of them are made by grinding ripened cheese, adding a small amount of moisture and pasteurizing to produce a smooth, pastic mass.

TOSSES DATE SEED ASIDE; SEEDLESS FRUIT RESULTS

New Orleans.—A date seed carelessly tossed to the ground by P. A. Chopin, president of the New Orleans Horitcultural society, has produced a miracle. From that seed has sprung a mighty date palm tree which bears 300 pounds of luscious, seedless dates each year. This is the only known seedless date palm in the world, Chopin says. Experiments conducted by Chopin has convinced him that it is impossible to graft or propagate this date in any way save through "suckers" that grow from the roots. In the "sucker" transplanting is successful, the entire date industry may be revolutionized, Chopin claims.

MR. MILUS SUTTON WRITES MODERN FARMER

Elko, Ga., Dec., 1934—Modern Farmer, Nashville, Tenn.—Dear Sirs: Referring to the N. F. of C. F. Convention which was at Charleston, Mo., 28, 29, 30 day of October, 1934 was grand indeed. I feel that everyone who was present at the meeting was benefited from what was seen and heard. The Federation is just what the black man needs. What it has done showed there in Charleston what it means to our people. The record showed in the last twelve months there have been 2100 acres of farm land bought by its members. Some of these people have never thought of buying land before.

The gentle head leaders of the Federation stand upon a square foundation that gives light that makes it possible for all who desire to buy a home.

Every farmer from the Gulf of Mexico to the Dominion of Canada and from the Atlantic to the Pacific should be a member of the Federation of Colored Farmers. All farmers should be organized. I esteem it highly.

MILUS SUTTON.

GROWERS FAVOR COTTON CONTROL

Landslide Vote for Continuance of Bankhead Act for Another Year

A landslide for compulsory control of cotton led to speculation today as to whether the future might see such curbs extended to some other major crops.

Growers of the south voted yesterday on the question whether to continue the Bankhead act next year and incomplete returns today showed:

Yea—896,233.

Nay—91,280.

This was a proportion of more than 9 to 1. A two-thirds vote was necessary for continuance. About 2,600,000 producers were eligible to vote, and Secretary Wallace had estimated beforehand that about half that number actually would ballot.

Out of seventeen states voting, the returns showed four—Arizona, California, New Mexico and Oklahoma—failing to roll up two-thirds for the act, which imposes high taxes on cotton sold in excess of quotas. The national average is the deciding figure.

Obeservers felt only the future could tell what effect the vote may have on other adjustment plans. Secretary Wallace has not favored compulsory control for other major crops, though some other officials expressed the belief economic nationalism abroad might lead to drastic restraints on production in this country.

Cotton handlers, exporters and others, waged a vigorous campaign against the act. The farm administration attempted a neutral attitude but abandoned it after President Roosevelt said he believed the measure was the best method available to meet the situation.

Secretary Wallace, who objected to the act last spring, said the vote showed farmers want the legislation. He said efforts toward greater efficiency of administration would be made.

A KING ABDICATES

Detroit Free Press: The production of cotton, abroad this season is expected to exceed our domestic output for the first time since the Civil War.

The consumption of American cotton in 1933-34 fell 996,000 bales to 13,539,000, while the consumption of foregin cotton increased 1,228,000 bales to 11,555,000.

Apparently King Cotton is being forced to abdicate.

Cotton was for many years the most important item in American exports and still remains a principal factor in our foreign trade. The decline in foreign consumption of American cotton and the increase in the production and consumption of foreign cotton date from the 1929-30 crop, when the farm board started its price-fixing.

The combination of artificial price raising and Secretary Wallace's plow-up campaign has made it possible for other cotton-producing countries, which are not similarly hampered, to reach out for a larger share of the world's raw cotton business.

The head of one of the largest spot houses in the United States recently declared:

"Any device which we may adopt with the intent and effect of artificially supporting the price of American cotton in the world markets can have only one result—and that is the gradual abandonment of a part of our world markets for cotton, until in the end we will have surrendered all such foreign outlets, leaving only the American market, using normally about 6,000,000 bales annually."

The destruction of cotton exportation would necessitate finding new occupation of 1,500,000 families in the cotton states and would also involve the loss of hundreds of millions of dollars invested in cotton gins, cotton seed oil mills, cotton compresses, cotton warehouses and docks.

Yet that is apparently what the cotton states are headed for, as a result of the administration's attempt to repeal the law of supply and demand.

CLOTHES FROM PINE TREES COMING NEXT

Southern farmers who are afraid they may have to find something to take place of cotton as the chief money crop will be interested to know that recently a yarn similar to the best rayon has been made from Georgia slash pine and Georgia loblolly. This yarn was exhibited at a meeting of famous chemists in New York. It was discovered by Dr. Chas. H. Herty of Savannah, Ga.

The yarn was silky and white and it is asserted that it can be produced at half the cost of northern spruce and pulp now being imported from Europe. If the experiment is followed to the point of manufacture in quantity of this clothing crop of southern pine may be sufficient to provide clothing for the entire human race. It is estimated that a good crop of southern pine trees can be raised in ten years.

Colored farmers who are sick of cotton and hard times may find a new kind of refuge behind the common pine tree. At least it will pay us to buy farms now for we may be buying gold mines even though the color is green.

VALUE OF PEANUT AS AID TO MENU TOLD BY EXPERT

Quality of Protein Is Superior to Wheat

Pointing out that peanuts, of which there were 1,050,000,000 pounds produced in the United States this year, are legumes like peas and beans, Miss Aneta Beadle, Purdue university nutritionist, recommends that they be included in menus.

"The quality of the protein in peanuts is superior to that of wheat and when used to supplement wheat protein, it makes a particularly nutritious combination, says Miss Beadle. "The peanut also has other food values such as fat, is a rich source of vitamin B, and will also supply phosphorus and iron."

Two Types in U. S.

Two types, the Virginia and Spanish, are grown in this country. The Spanish peanut is much smaller and more oily than the Virginia, with a kernel more nearly round. The best peanut butter is made up of a mixture of the two types. The nuts are roasted, blanched to remove the skins, and the "heart" or germ is removed to prevent the butter from becoming rancid too easily. They are put through the grinder and about 3 per cent of salt is added. That is the only ingredient, other than the nuts themselves, in peanut butter.

INTERESTING NEWS AND NOTES

Sauerkraut will be served to the needy of America this winter. It is reported that federal officials have contracted for 238 car loads of cabbage to be converted into canned sauerkraut.

A whole pack of timber wolves have invaded the Fox lake district in Illinois which is close to the city of Chicago. The wolves have killed more than fifty sheep during the last month. One farmer who lost some valuable Shorpshire sheep has shipped the rest of his flock away.

William D. Stitzel of Nebraska, is still wondering what made a ten-gallon can of sour cream explode. Results were evident, however, as the explosion tore ligaments loose in his wrist, fractured his arm and blew a hole in the ceiling.

A communication from Mr. A. R. Reece of Prentiss, Miss., advises all race citizens to appeal to the President and Congressmen to grant constitutional rights to Mississippi's colored citizens. If Mississippi will not grant her own citizens these rights it is quite probable there is little the President or congress can do about it.

An Illinois farmer harvested a second crop of oats from the same field. Due to the drought, and short straw, the binder left enough of the first crop to re-seed the field and the second cutting was much better than the first.

Fifty thousand persons swarmed into corn fields near Fairmont, Minn., and saw Ted Balko of that state win the national corn husking championship. Balko had a net of 25.78 bushels for the 80 minutes of husking.

A fine yarn fabric from flax waste is being spun in Argentina. Fabrics woven from the yarn will soon be exhibited. It is believed the new industry will provide work for forty thousand persons.

Peter J. Lux, farmer of Shelbyville, Ind, won the corn championship of the world at the recent International Livestock Exposition. Lux won with Johnson County White, a dent corn.

There are 9,104 colored farmers in the state of Kentucky, 4,175 or about one-half are full owners. This is a decrease of nearly a thousand owners during the past ten years. Acreage owned is 183,148, about 25,000 more acres than are tilled by tenant farmers. Value of land and buildings owned is $7,348,683.

The first estimates of this year's winter wheat crop estimate that around 43 and a half million acres have been sown, an increase of six per cent over last year. Production indicated will be 460,000,000 bushels.

SHOW GREEN BOTTLES AID IN KEEPING FRUIT JUICES

Experiments have shown that fruit juices stored in green glass bottles keep their color and improve in flavor Grass-green bottles also help to keep milk sweet. A particular shade of green, the grass-green, and black are the only colors so far discovered that keep out the light rays which promote spoilage in food.

Educator Says Race Must Use Ballot

THE AGRICULTURAL CRISIS IN THE U. S.

"If the farm people of America do not reshape their own destiny, it will be reshaped for them by other people," Clarence Poe, editor of Progressive Farmer and Southern Ruralist, recently. "A crisis is on for agriculture, and there is need as perhaps never before that each man (1) inform himself, think seriously, and try to reach sound conclusions, and (2) join with other farmers and farm women in farm organizations so as to put the power of organized effort behind whatever policies the 'common sense of most' indicates are wise.

"The humblest man in this way can make his influence count for good."

In that statement, Mr. Poe has caught the spirit that underlies farm cooperative organizations. They are, primarily, dealers in agricultural products. They are likewise great educational agencies. They disseminate knowledge. They cause farmers to think and ponder the problems of the hour. They are not satisfied with having problems settled by outside agencies—they know that, in the long view, real farm progress must come from the farmer himself, from cooperation and unceasing work designed to forward the best interests of all concerned.

The farmer of today has, in cooperative action, a great opportunity—an opportunity that has already achieved much, and that offers much more. That is why more and more of them are working together to solve their common problems.

—O—

WHO OWES WHO A LIVING

After it is all said and done, any recovery program depends upon business, industry or agriculture.

Every government expenditure is financed by money that is taken from the earnings or reserves of business, industry or agriculture. With no earnings to be taxed, government must go bankrupt.

It is useless to blind ourselves to the fact that today industry is afraid of radical legislation, radical labor policies and radio taxation.

Under the guise of "social service" plans a lot of people are being made to think that somebody owes them a living. That's the "grasshopper theory." It works fine until winter comes.

The fad of social service can live on exising "crops" (productive wealth) until it has eaten it all up like the grasshopper did the seasonal crops and then the beneficiaries of the "service" plans die like the grasshoppers unless they rustle some food. It's just the law of nature.

IMPORTANT NOTICE!!

The National Federation of Colored Farmers, Inc., is receiving letters from Arkansas and Mississippi and Tennessee farmers requesting information about the National Rural Industrial Association and other "supposed to be" farm organizations. It appears that some so-called organizers are informing Race farmers that the N.F.C.F. is affiliated with these organizations.

Colored farmers are warned to beware of these dollar a year organizations and to have nothing to do with them. If you are not acquainted with these "organizers" or if they cannot prove to be our representatives better notify our national office about them and we will find out who they are and what they represent. If they are not what they should be and are working a "racket" as many of them are, the place for them is in jail and we will help put them there. Organizations sponsored by a Prof. Chas. Stone and a Rev. J. M. Williamson, who are apparently fooling colored farmers in the three states mentioned, are not connected in any manner with the National Federation of Colored Farmers, Inc. The Prof. Stone was at one time an organizer for the N.F.C.F. but was separated from it by request several years ago...We don't know the Rev. Williamson, but have been informed that he is representing himself as being in some way connected with the N.F.C.F. He is not and has never been so connected. The National Federation of Colored Farmers is the only national organization of colored farmers in existence. It is not a secret society and has nothing to hide. It is legally organized and is recognized as the Farm Bureau and other national farm organizations are recognized. All Race farmers are urged to join the N.F.C.F. and are warned to beware of the "toadstool" organizations which promise them nearly everything under the sun for a dollar a year.

THE NATIONAL FEDERATION OF COLORED FARMERS, INC., Chicago, Illinois.

Disfranchisement Unjust And a Handicap

In an address before the Triennial Pre-convention conference of church workers of the Protestant Episcopal church held in St. James church, New York City, Dr. Wallace A. Battle, field secretary of the American Church Institute Board, asserted that the Negroes' greatest handicap and injustice is disfranchisement. Dr. Battle is a graduate of Berea College, Ky., and was formerly president of Okolona Institute, Miss. Member of the N. F. C. F. in the Okolona community will remember Dr. Battle and realize why he is so insistent for political and economic justice for his race.

Dr. Battle said, "In the South the Negro is disfranchised; in the North he disfranchises himself by his indifferent frolicsome life—a life too busy in pleasure to register and vote, so that in centers like Cincinnati, Baltimore and New York, less than one-third of those eligible actually exercise the sacred duty of registering and voting.

On Mercy of Others

"The set-up of this government is political. When the Federal government undertakes to send help to the poor and needy of our land, it must largely operate through its organized political agencies, such as the state, county, and town. But as the Negro is almost wholly without status in these government branches, all he can expect is whatever mercy and kindness bestow upon him, and often this is too small to build his mind or maintain his body.

"We must begin in earnest to teach and preach from every schoolroom, North and South, East and West, the sacred duty of the franchise. No one can register for us; our friends may help us and wish us well, but they cannot vote for us. Our friends, North and South, may try to protect us but in this sort of government they cannot save us; we must save ourselves by simple Jeffersonian democracy—the ballot. We cannot, we must not neglect so great a temporal salvation—we, men and women, must vote to save ourselves, our neighbors, our state. All men and women of sound mind should vote. An educational test is unjust unless the state has made it possible for every child and adult to acquire the elements of education. The laborer is worthy of his hire; the laborer pays the tax, and taxation without representation is tyranny! In other words, people who cannot vote should not be required to pay tax.

Cites Wilson's Stand

"In one of his happiest moments, Woodrow Wilson declared that civilized people move, live and have their earthly being in politics. One rainy day the greatest socialist, except Jesus and Karl Marx, sat in his study meditating. A visitor entered and said, 'Plato, what is man?' After a moment his powerful cerebrum was in action, and he answered, 'Man is a political animal.' So here is agreement from widest divergent sources that we are born in politics. If we escape this bounden duty, we shall be committing a crime against ourselves, our children, our community.

"And now comes our great church, soon to meet in general convention at Atlantic City. There is not a single vote from a group of 41,000 Negro communicants. It, of course, can be shown that there is no ill purpose in this abridgement. But even though the canons regulate equitably the matter of electing delegates, nevertheless, we are impotent as voters, which fact paralyzes the spirit and detards the growth of the church in our group.

"Our interest and our support will be multiplied in both church and state in proportion as we exercise the sacred right of the franchise. A voteless people is a voiceless people. Where the vote leaves off, the limb and the fagot begin."

TREES

I think that I shall never see
A poem lovely as a tree.

A tree whose hungry mouth is pressed
Against the earth's sweet flowing breast;

A tree that looks at God all day
And lifts her leafy arms to pray;

A tree that may in summer wear
A nest of robins in her hair;

Upon whose bosom snow has lain;
Who intimately lives with rain.

Poems are made by fools like me,
But only God can make a tree.

—Joyce Kilmer.

$2,500 IS DONATED TO NEGRO SCHOOL IN WARM SPRINGS

The Julius Rosenwald fund through its president, Edwin R. Embree, announced yesterday an appropriation of $2,500 to build a public school building for Negroes in Warm Springs, Ga., where President Roosevelt has his "Southern White House."

Mr. Embree said the executive committee explained in a letter to President Roosevelt that despite its withdrawal from general contributions to school buildings, the fund had voted the appropriation because "of the great asset to Negro education in the personal attention of such men as you who have interested themselves in the school."

LIFE INSURANCE FOR HUMAN WELFARE

Life insurance, as Francis V. Keesling, President of the American Life Convention, recently observed, has proven itself to be one of the agencies which make vital contributions to human welfare. It is a cooperative enterprise, sustained by individual initiative and inspired by thrift. It is based on the age-old instincts that causes us to prepare for a rainy day. It is vital to the maintenance of human independence.

It is not by chance that the nation which was founded upon the principle of individualism, the United States, is the most thoroughly insured nation in the world. The average American wants to provide for himself and his dependents. He wants to be a free-agent. He wants to make money and save it, to create an estate, and finally to provide adequately for those he will leave behind him.

THE MODERN FARMER

Official organ of the National Federation of Colored Farmers, Inc.

Leon R. Harris - - Editor

Published monthly by the Modern Farmer at Nashville, Tennessee.

Office, 447 4th Avenue, North.

Devoted to the interests of the Farmer, Truck Gardener, Livestock and Poultry Breeder, the Home and the People.

Entered as Second Class Matter, April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 447 4th Avenue, North, Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, 75c for six months, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT.

OUR PLATFORM

1. A Unit of the National Federation of Colored Farmers in every community. of colored farmers.
2. Co-operative buying, producing and marketing.
3. Every colored farmer a farm owner.
4. Abolition of debt-slavery, injustice and persecution.
5. A written contract for every colored farm tenant and sharecropper.
6. Better rural churches, schools and homes.

From the Bible:—

"The shepherds said one to another, " "Let us now go even unto Bethlehem and see this thing which is come to pass, which the Lord has made known unto us. And they came with haste, and found Mary, and Joseph, and the babe lying in a manger." Luke 2:15-16.

OUR GREETINGS:

May you hear the song the Farmer-Shepherds heard. May Peace be yours. May the Goodwill of your fellowmen encourage you. For you may the New Year be crowned with His Goodness.

The MODERN FARMER

ON PIONEERING

Reports from Minnesota inform us that a white man, Ethan Allen, a descendant of the Gen. Ethan Allen of Revolutionary War fame, has headed a little band of 49 adults and 55 children from the city of Minneapolis into the snowbound northwoods of Minnesota, where they will spend the winter in a community house on 640 acres of land. During the winter the men will saw logs for 20 small houses and the women will cook and sew. In the spring, the houses will be built and a cooperative homestead project will start.

Each family will be provided by the government with two cows, two pigs, a hive of bees and 100 chickens and farm machinery. All work will be done on a cooperative basis.

Each family will draw on a central store of supplies and each man or woman will be paid in cash for the hours worked over what he is charged for supplies furnished.

This project, though perhaps only an experiment, shows how far some people will go in an attempt to better their condition. These hardy and industrious pioneers are not begging for relief and don't want to live off the government. What they want is a chance to earn their living and the federal government is making it possible for them to have this opportunity.

There are thousands of colored tenant farmers in the southern and border states who should be given the opportunity to do just what these white Minnesota farmers are doing. Many of these colored farmers are in the cities living off "relief." They have no business where they are. They don't want to be in the condition they are in now and it is not their fault that they are in such shape. There is plenty of idle land close by,— plenty of pines for logs for buildings. One-third the cost of one Norris Dam would make life more pleasant and profitable for at least fifty thousand colored farmers. We make this suggestion hoping that those responsible for the success of the New Deal will be less niggard in their relations with proverty-stricken colored farmers,—will stop talking, promising and planning so much and begin doing more.

DON'T GIVE FEED AWAY

Farmers in some sections of the country who have soybean hay to sell, are receiving $15 a ton for it delivered to railroad yards. All hay, fodder and stock feed is bringing good prices. Colored farmers who have feed to sell at this time should demand the market price and should not let it go for less. If you are not sure you are getting as much as you should get for it, communicate with the national office of the National Federation of Colored Farmers.

PRESIDENT O'NEAL'S MONEY SHARKS

Mr. Edward A. O'Neal, president of the American Farm Bureau Federation, in his opening address before the annual convention of his organization, criticised the lack of adequate credit rates and terms for farmers. He declared "the farmers must be freed from the money sharks."

A few months ago we mentioned the fact that loan sharks were victimizing Negro farmers, especially tenants and sharecroppers, out of thousands of dollars every year, and had been doing so since the days of slavery. Because we said that some of these sharks were landlords who (1) loan their croppers money and charge as high as 25 per cent interest on the dollar, (2) compel croppers to trade at their commissaries and charge them two prices for their meat and bread. (3) refuse to give their sharecroppers settlement statements, (4) take from the croppers the production loan money furnished by the government and issue it back to them as they think they need it, and make them pay interest on it to themselves as well as to the government,—because among other things said this,— several friends and members of the Farm Bureau Federation criticised us and said we were stiring up trouble.

We wonder what Mr. O'Neal is stirring up when he calls the Bankers and high financiers of the country "money sharks?" We pray that Mr. O'Neal and other officials and friends of the American Farm Bureau Federation at last realize that the bite of a money shark who happens to belong to the Farm Bureau, hurts a colored sharecropper just as bad as the bite of a money shark, who happens to be a big banker or financier, hurts a member of the Farm Bureau.

WE CAN'T BELIEVE THIS

With all apologies to the honorable Secretary of Commerce, Mr. Daniel C. Roper, who has always been a good friend of colored farmers and of the National Federation of Colored Farmers, we must say that we cannot help but doubt the varacity of the story attributed to him by a Chicago Tribune reporter recently. Quoting the Tribune, "In Cincinnati a Negro was offered a job at $18 a week and refused it becuase he was getting $15 on relief and on acceptance of the job would be working for $3 a week."

That story does not sound right. If the colored brother in Cincinnati refused such a job it must have been either a very bad and unhealthy job or else, there is something wrong with the brother's head. Eighteen dollars a week jobs have always been scarce in Cincinnati for our folks, except during war time, and this is the first one we have heard of since the depression. The job may have been a "position" and was refused by some "professional" but it surely was not just an ordinary job." And another thing about this story,— why was not such a job offered to some white person on "relief." If it was a good job it simply is not "human nature" in Cincinnati to offer such a job to a Negro.

We agree with Mr. Roper when he states that "relief is encouraging unemployment" and we go farther and say it is encouraging laziness. It is one of the blessings that are "curses in disguise." Those on relief are living off other people's money and are being supported by other people's work. This relief business is little good for any of us. Ours has never been a begging Race, as far as bread and meat is concerned,— and no one and no government is being good to us by feeding us without demanding pay for the feed. What a vast majority of the thousands of our group now on relief want is an opportunity to work. Poverty-stricken farmers want opportunity to plow, hoe, milk cows and kill hogs again. Get us off the pavements and onto the dirt again. Get us out of the transient shelters and into the cabins again. The farmer, no matter how poor, who gazes through his cabin windows across the open fields, can see a ray of hope. The farmer who is forced to gaze through the windows of a transient shelter or government relief camp sees nothing but blackness and despair.

MORE TRUTH THAN POETRY

Col. Edward F. Younger, Mississippi planter-poet, tells us in one of his poems about Zeke, Zeke wanted to vote but couldn't qualify. He went to the polls and was asked questions which even his questioners could not answer. According to Col. Younger, Zeke scratched his head and walked away mighty spry with all the white men laughing "fit to bust."

Thousands of colored farmers voted on the cotton question the other day. Few questions were asked them because it was understood that they were going to vote "right." We wonder why so many funny questions must be asked colored American citizens in the cotton country when they want to vote for candidates for Governor, Congress, or even for a justice of peace?

NEGRO SCHOOLS ENJOY NOTABLE ART EXHIBIT

Invited by White Institution to Enjoy Million Dollar Kress Display

Macon, Ga.—An interesting manifestation of interracial courtesy and good will was evidenced here last week when Wesleyan College, exclusive school for young Southern white women, opened to the colored people of Central Georgia the million dollar Kress exhibit of Italian art, which had been placed temporarily in the halls of the college.

The white populace having shown so great an interest in the exhibit, Dr. Dyce R. Anderson, president of the institution, felt that the Negroes also, particularly those connected with the schools and colleges, should have an opportunity to see it. Accordingly he issued a general invitation to the colored people of the section and special invitations to the heads of the Negro schools. The response was very gratifying. Some 1500 persons accepted the invitation and enjoyed the exhibit. Delegations came from Fort Valley School, State College at Forsyth, Central City College, Ballard Institute, and numbers of the public schools.

The visitors were met by members of the college staff, guided through the exhibit and shown every courtesy on the campus. The incident, it is stated, is characteristic of Wesleyan's progressive attitude in regard to interracial matters.

U. S. RECORDER OF DEEDS POINTS TO PROGRESS IN 1934

Washington (ANP)—Business is improving in Washington according to Dr. William J. Thompkins, Recorder of Deeds for the District of Columbia.

"The records of this office" said Recorder Thompkins,

"Show an increase of 37 1-2 per cent in business and finance over the same period of last year. For the first five months last year 23,563 documents were received for recordation, and for the same period this year 30,311 were received, showing an increase of 6,748 papers. This increase is not seasonal—rather is it the general trend of the office as shown by comparison with other years. This office has cleared up 2,000 deeds which would have been current under my predecessor.

"The Recorder's office was founded in the year 1792, the date of the beginning of the old land records, which have accummulated through the years and are now five years behind in the copying of the same. These records, which are written by the old quill system, have now become almost illegible, but they are being copied by the most modern method, which will last through the years. It was estimated that it would take five years to bring these records up-to-date, but already we have accomplished one third of the work, and another third we expect to have completed by the beginning of the next fiscal year."

ATTORNEY GENERAL OF ALABAMA MAKES AMAZING STATEMENT

Hon. Mr. Knight Says His State Welcomes Colored Jurors. Can You Beat It?

Washington, D. C.—(CNA)—"Negroes are not barred from Alabama juries because of their race," was the amazing contention made by Attorney-General Thomas E. Knight in his brief opposing the review by the U. S. Supreme Court of the cases of Haywood Patterson and Clarence Norris, two of the Scottsboro boys. Knight filed his brief on December 10, in answer to the brief filed by the attorneys of the International Labor Defense.

Knight conceded that the systematic exclusion of Negroes from juries would violate the 14th Amendment to the Constitution, but denied that they had been excluded because of their race or color.

In the Decatur trial of Patterson and Norris, the attorneys for the I. L. D. fought the issue of exclusion of Negroes from juries. The state contended that no Negroes in the locality were qualified to serve as jurors. The defense then produced many local Negroes, all of them tax-payers, all of them known to be of good character, and many of them college graduates. Some of these had served on federal juries.

"The jury commissioners," said Knight, "will have to be branded as liars and presumptions will have to take precedence over positive statements of fact in order to reach the conclusion that Negroes were excluded from the jury rolls of Jackson County because of race or color." This is a typical argument of the Southern ruling-class, asking that the plain truth be ignored rather than that Southern gentlemen be called liars, as in this case they so clearly are.

The execution of Patterson and Norris has been stayed till February 8, upon application of the I. L. D.

GEORGIAN HOLDS OFF MOB FOR NEARLY FOUR HOURS, LATER SLAIN

Nichols, Ga. (ANP)—For more than three hours and a half here last Tuesday, Lije Walker held off the sheriff and a mob of whites who sought to take him into custody after he had whipped a white man.

Walker barricaded himself in a smokehouse before the mob, led by Sheriff Courson, could get to him. After that, bullets, tear gas and dynamite were used to try to force Walker out. But he held his ground and shot the sheriff in the meantime.

Finally, he smokehouse was set on fire from the rear. Walker ran out, shooting as he ran, and kept on until he was brought down by the guns of the mobbists.

LEAVES FOR HAITI

New York, (ANP)—Among those invited to attend the Inauguration of Governor Herbert H. Lehman, at Lehman at Albany, N. Y., on January the first, is William Pickens, Contributing Editor of A.N.P.

Mr. Pickens has written Governor Lehman expressing regret that he can not attend the inauguration because he will be in Haiti on January 1st, sailing away from New York City, December 27th and returning January 14th. He congratulates the Governor on the unprecedented majority by which he was re-elected.

VETERAN, 104, CUTS GOV'T "RED TAPE"-- GETS HIS PENSION

Warrenton, Ga. (ANP)—Eli Jones, 104 years old, had to wait 70 years, until last week, before his application for a pension was approved. He claimed to have been "enlisted" in Sherman's army when the latter marched to the sea in the Civil war, but he had lost his papers so that he could not get his application approved. He will receive $75 a month for the rest of his life.

Memphis Real Estate Man Turns Out to be A Real "Santa Claus"

Small Home Buyers of "Bluff City" Made Happy Over Reduced Notes and Cancellation of Back Bills

Memphis, Tenn. (By T. O. Fuller for ANP)—W. J. Curry and Sons, real estate dealers on a large scale exhibited an unusual spirit of generosity toward debtors according to an announcement made at a public meeting of these clients Christmas eve night. The crowd had gathered for the annual distribution of food, fruit, candies and toys which the firm is accustomed to make to the families dealing with them at this season.

A member of the firm astounded the group of enthusiastic colored people by announcing that all interest on notes accrued from 1929 to 1935, would be charged off. That all delinquent notes would be marked paid up to date. That all monthly payments on three room houses would be cut from $15.00 to $10.00. That $12.50 payments on two room houses would be cut to $8.00 per month. The only condition was that the reduced payments must be kept up promptly for at least twelve months.

These concessions involve a reduction in accounts to about $50,000, and is a real blessing to the small home owners who are hardest hit by the industrial unemployment. A happier group of working people has seldom been seen. They seemed determined to start life anew full of inspiration and encouragement.

These people live in Bungalow Subdivision, a suburb of Memphis.

A widow 85 years old who lives on a farm three miles from Wilmington, Ill., won the $3,000 "cake naming prize" given by the Pillsbury Flour Co.

NATIONAL FEDERATION OF COLORED FARMERS, INC.

3827 S. Michigan, Ave., Chicago, Ill., to be read to members in meeting: Our recent annual convention at Charleston, Mo., was the most successful and interesting session we have ever held. We had representatives from 17 states. It was decided to hold our next annual session in Little Rock, Ark. A prominent railroad official has pledged two thousand dollars in cash to be given away as prizes for best display of various farm products.

Cotton:

The market is steady and in good position. Basis New York. December cotton is now around 12.65 for ordinary middling. Spot cotton is 12.85. The longest long staple is worth around 18c. The Department of Agriculture has announced its cotton control program for next year which as we understand is as follows:

Landowners complying with the new plan will be paid for retiring 25 percent of their acres on the basis of 3 1-2 cents per pound on the past average yield of the land taken out of cultivation, or about 6.30 per acre.

In some sections where the land is very favorable to the production of cotton, the amount allowed will be much more per acre. The maximum rental payment is fixed at 18.00 per acre. This year there was a 40 percent reduction in the cotton acreage, or in other words cotton farmers can be allowed to plant at least 15 percent more cotton the coming year than this season.

This year there is a parity payment of one cent per pound due on that part of the base production which went into domestic consumption. We understand that it will be paid during December. Next year the parity or benefit payment will be 1 1-4 cents per pound.

On any matters which are not clear to our members and which they do not fully understand, write this office for further information.

Corn:

The market is very strong and prices are advancing every week. In some sections cash corn is now bringing 1.25 to 1.35 per bushel, and we are looking for higher prices. Save your corn. Don't sell unless you have a large surplus.

Hay:

The smallest crop in 60 years and we urge our members to save all their forage.

Hogs:

Since the corn market is in such strong position, it stands to reason that hogs will advance in price and we again predict high meat after the New Year.

Save your food and feed. Grow your living. Don't buy it. Many of our members have fallen into the habit of eating their crops before they are made. Human nature is such that a family living on credit buys more. It is easy to get in debt. Difficult to get out.

Membership Campaign

During December we will have on a campaign for new members and each unit and every member is asked and expected to send in their quota. Please send in your reports early in order that we may get the new members listed on the roll of organized farmers before the beginning of 1935.

Cancelling Charters

There are units who have made no reports in the past year or more, and we are being forced to erase from the roll of organized farmers and withdraw the charters.

Regional Meetings

We plan to hold regional meetings in all states where we have membership. Dec. 10 and 11 we will hold a two day meeting in Charleston, Mo., for all of the Missouri members. Dec. 12, we will hold in Mound City, Ill., a meeting of the Illinois units. Our next bulletin will give dates and place of meeting for the other states.

Be careful what you sign. Copy of the new 1935 cotton contracts as sent ont by the government have been sent to all units and the officers are urged to read and explain to the members in meeting.

BETHLEHEM, A ONE-STREET TOWN OF 3,000 SOULS

Natives Call it Beit-lahm, which Means Land of Plenty. Spot where Tradition says Jesus was Born, Is Now Twenty Feet Underground.

Bethlehem, (beth'le-em). "House of Bread," or "Home of Plenty," because nearby fields are fertile, is often mentioned in the Old Testament. It was originally called Ephrath or Ephratah (Gen. 35:19; 48:7). Whence it derived its later name is not known.

Bethlehem lies a little east of the road from Jerusalem to Hebron, about six miles from the former.

There is a long limestone hill running east and west, with deep valleys to the north and south. The east end of the hill is bold; on the west, it slopes gradually to the valley. On the sides of the hill are terraced gardens, with olive trees, fig trees and vines; and on the top to the east and northeast lies the village, now called "Beit-lahm," with a population of about three thousand, with one street.

In the most easterly part is the celebrated Church of the Nativity, which owes its foundation to Empress Helena, mother of Constantine the Great. It is enclosed within the walls of a convent, which is now parceled out among the Greek Latin and Armenian monks.

Two spiral staircases, each of fifteen steps, lead down to the cave or grotto of the nativity, thirty-nine feet broad, eleven feet long and nine feet high, hewen out of the rock. In a small semi-circular niche, the exact spot marked by a star inlaid in the marble, corresponding to the point in the heavens where the star appeared to the magi, is a Latin inscription stating that Jesus was born "here."

Lamps Burn

A row of lamps is always burning. Opposite is a large irregular cavity, where it is said the manger stood, a block of white marble being hollowed out in it, like a manger.

Here, too, is the altar of the magi. And other lamps are suspended. There are also shown the Sepulchre of the Innocents, also the grotto or crypt where Jerome lived and studied and chapels dedicated to Joseph and other saints.

Born In A Cave

The probability of our Lord's having been born in a cave need not here be discussed. A long current of tradition is in favor of it; and it is possible that the place where Mary took shelter, there being "no room in the inn," might be one of the caverns in the limestone rock. But certainly the place where the eastern sages visited the Saviour was a "house" (Matt. 2:11).

The traditional scene of the angels' appearance to the shepherds is a plain about a mile away, where is a miserable village called "Beit-Sahur"; while the traditional Well of David is half a mile to the north of the town; but, according to Dr. Robinson, there is "no well of living water" near.

Not Much of a Town

There is little note of Bethlehem in the early Israelitish history; it is not even numbered in the list of the towns belonging to Judah. But Salam or Salmon, and Hur, both of the tribe of Judar, are said to have been each "the father of Bethlehem"—that is, to have colonized it.

Here was born King David and here he was anointed king by Samuel, and it was in consequence called "the City of David." Here, too, was born Jesus, the Christ.

Indeed, it was in New Testament times that Bethlehem had its highest honor. Thither Joseph and Mary had to repair as descendants of David, to David's city. There, in the adjoining fields, the angelic host announced the glad tidings of a Saviour's birth; and there was that wonderful event consummated, when the child Jesus was born of a mortal mother.

Thither also came the Eastern sages to present their offerings; and there was the cruel slaughter of the little ones by Herod, awakening, as it were, again Rachel's lamentation.

Modern Town

Bethlehem today stands in the midst of a district which produces in abundance wheat, barley, olives, vegetables and grapes. Its market is always well supplied.

Since 1834, when the entire Moslem colony was destroyed by Ibrahm Pasha after an insurrection, there have been comparatively few Moslems among the inhabitants.

CHRISTMAS ALONE CAN DO THIS

By Charles Dickens

And numerous indeed are the hearts to which Christmas brings a brief season of happiness and enjoyment. How many families whose members have been dispersed and scattered far and wide, in the restless struggle of life, are then reunited, and meet once again in that happy state of companionship and mutual good will, which is a source of such pure and unalloyed delight, and one so incompatible with the cares and sorrows of the world, that the religious belief of the most civilized nations, and the rude traditions of the roughest savages, alike number it among the first days of a future state of existence provided for the blest and happy!

Now many old recollections, and how many dormant sympathies, Christmas-time awakens!

We write these words now, many miles distant from the spot at which year after year, we met on that day, a merry and joyous circle.

Many of the hearts that throbbed so gaily then, have ceased to beat; many of the looks that shone so brightly then, have ceased to glow; the hands we grasped, have grown cold; the eyes we sought, have hid their luster in the grave; and yet the old house, the room, the merry voices and smiling faces, the jest, the laugh, the most minute and trival circumstance connected with those happy meetings crowd upon our mind at each recurrence of the season, as if the last assemblage had been but yesterday.

Happy, happy Christmas, that can win us back to the delusions of our childish days, recall to the old man the pleasures of his youth, and transport the traveler back to his own fireside and quiet home!

BARONA INDIANS IN CALIFORNIA PROUDLY HANDLE FARM VENTURE

Work Together Amicably on Little Reservation, and the Government's Only Action is in Checking Requisitions for Funds

(Special to The Christian Science Monitor)

San Diego, Calif.—In a picturesque mountain valley, 20 miles east of here, a tribe of Mission Indians has worked out a model farming venture on the Barona ranch.

The tribal committee, elected by ballot nearly a year ago, settles all the petty disputes between the neighbors without the aid of white men.

In contrast to many of their race throughout southern California whose affairs are administered solely by government agents, the Barona Indians have asked no aid from the superintendent of the Mission agency, Mr. John Dady.

The Government holds only a single restraint on these self-governing wards. The superintendent checks and double-checks every requisition for federal funds.

"We find that we can handle our own affairs as well as our white friends handle theirs," proudly declared Capt. Ramon Ames, tall chairman of the tribal committee.

Government records corroborate Captain Ames's claims. About three years ago the city of San Diego paid $386,000 for the land in the Captain Grande Indian Reservation because it was necessary to the construction of El Capitan Dam.

Each Indian was credited with about $2520. Of the original tribe of 153 Indians, 57 asked the Government to buy Barona ranch. After paying $75,000 for the 5000-acre ranch, the Government erected 17 modern homes out of concrete blocks, a church and clubhouse.

Modern plumbing facilities and running water were provided the Indians. Two pumping plants were built.

Wiping his hands, "Uncle Sam" then stepped out of the picture.

"There is your model village. Now you operate it," he said to the Barona tribe. And they did.

The 90 acres under irrigation were apportioned out on the basis of about 1 1-2 acres to each Indian. The crops consisted of corn, beans, squash, watermelon and vegetables.

About 600 acres of grain land are devoted to grain and is worked on a community basis. The Indians have plans to sell future crops and thus make themselves at least partly self-supporting.

The tribal committee will finish its single-year terms in December, and its successors will be elected in full accord with the provision of the Wheeler-Howard bill.

The tribesmen have petitioned the Department of the Interior to purchase the Viejas ranch above Alpine, which once was the property of their ancestors, but the federal agents claim the price asked is excessive. Other reservations are being inspected by the Government.

WHAT OTHERS SAY

(About the N. F. C. F. and Modern Farmer)

"The letters I receive from our national office are always full of information and inspiration. As race farmers, we have never before had a representative to tell our troubles to or to open our eyes until the Lord sent you."—H. H. Ingram, Miss.

"We want to know where we can get some pure, certified Nancy Hall sweet potatoes. We plan to ship a few carloads if you can get us a market this fall. We will want some 20 or 25 bushels for seed purposes."—Joe Byrd, Mississippi.

"We thank you for the kind information you are always giving us. We save from $2.50 to $4.00 on every ten dollar order members of our unit send in and we save 500 per cent on our feed bills. It all seems like a dream to me. It certainly pays to buy cooperatively."—Robt. Booker, Miss.

"What you tell us to do is just fine. I am glad we have leaders to go before us and send us such information for if we didn't we would be in a much worse fix than we are in now."—Frank Allen, Miss.

DISEASE LURKS IN UNDERCOOKED AND RAW PORK

To eat raw or undercooked pork is to run the risk of a dangerous and sometimes fatal disease known as trichinosis. Cases of this disease have been rather frequent in recent years, yet it is easily avoided by strictly avoiding pork in all forms that has not been thoroughly cooked.

Trichinosis is caused by a tiny worm, too small to be seen without a microscope, which lives in the flesh of infected hogs, and if not killed by cooking infects the person eating the meat from these animals. Trichinosis affects persons of either sex and all ages, regardless of nationality. Recent studies by the University of Minnesota show that the infection is much more common than has been supposed.

While a light infestation is often manifested merely by intestinal pains and diarrhea, with a light fever, heavier infestation results in serious and long continued illness and not infrequently in death.

Most cases of trichinosis seem to result from the eating of uncooked summer sausages and raw or imperfectly cooked smoked meats, though any part of an infested animal is equally dangerous. Ham should be cooked the equivalent of at least an hour in boiling water for each four pounds. Other cuts should be given an equally thorough cooking.

FIZZING CIDER EASY TO MAKE ON THE FARMS

Geneva, N. Y.—"Apple cider with a zest," is the way Prof. W. F. Walsh, chemist at the state experiment station here, describes cider that has been crabonated by the addition of a small piece of solid carbon dioxide, otherwise known as "dry ice," to each bottle just before capping. In his opinion, cider has a promising future in competition with other carbonated beverages.

"Carbonated clarified sweet cider is a beverage which appeals to the majority of people who have tried it," Prof. Walsh says. "The increased sharpness and tingle imparted to the cider by the addition of carbonic acid gas gives added zest and is especially pleasing in very sweet ciders high in sugar and low in acid content. When this beverage is better known and generally available it should become very popular and should compete successfully with ginger ale and other carbonated beverages of high quality.

"Commercially, beverages are carbonated by machines which charge the beverage with gas at the desired pressure and bottle and seal it in one continuous operation. This equipment is rather expensive and not ordinarily available on the farm.

"However, it is possible to carbonate cider and other beverages by a simple procedure which does not necessitate the purchase of any costly equipment. This novel method simply requires the addition of a weighed quantity of solid carbon dioxide, or "dry ice," to the cold clarified juice, capping and sealing the bottle immediately, and shaking to absorb the gas in the cider."

TOM BASS IS DEAD

Tom Bass, Negro farmer and horseman, known everywhere as the best trainer of saddle horses in the world, died at his home near Mexico, Mo., Nov. 20. He was 73 years old.

Mr. Bass was visited in his home by three presidents, McKinley, Theodore Roosevelt and Taft. He also rode in President Cleveland's inaugural parade. His home was full of trophies he had won at exhibits and he was the only Negro ever to exhibit at the American Royal Horse show. He performed before Pres. Coolidge twice. Many famous saddle horses received all or part of their training from Tom Bass.

These included Rex McDonald, Miss Rex, Forest King and Black Diamond.

GET ROGERS' PAMPHLET

Mr. J. A. Rogers, author of that meaty and likable book, "From Superman to Man," has recently published a pamphlet entitled "100 Amazing Facts About The Negro." This pamphlet should be in the home of every Negro farmer. It should be in every Negro school library. The reading of it will certainly make you more proud of your race than you have ever been and will not only be good for your mind, it will also be good for your soul. It only costs ten cents and a three cent stamp and you can get it by addressing the author at 2293 7th Ave., New York City.

N. F. C. F. WOMENS' CLUB SETS RECORD

The N. F. C. F. Womens' club of Good Hope Unit, Mileston, Miss., under the efficient leadership of Mrs. Alice Lake, president, has set a record this year that any group could be proud to have. This club was organized by Tom Stewart, secretary of Good Hope Unit and Asst. National Secretary. The club has only sixteen members but has purchased a modern canning outfit and this year canned several hundred jars of fruit and vegetables. It is also interested in other activities.

BAKED BAT AS MEDICINE

Baked bat, toasted hawk and monkey head are among the ancient "medicines" being sold in drugstores of Tokio, Japan, to those who still believe in old-time recipes. For high temperature powdered dragon fly or gold fish are prescribed, while baked sparrow is said to be especially good for rheumatism.

IOWA FARMERS HOLD POPCORN 6 YEARS FOR FAIR PRICE AND GET IT

Spencer, Ia.—Two Spencer farmers cashed in on half a million pounds of popcorn which they have been holding six years for a fair price. They made the sale through the Albert Dickinson company of Chicago at $6 per hundred pounds.

In some of the years the corn was worth only a few cents a hundred, or nothing at all. The farmers were holding for a price of $5, but finally obtained $6.

The rise in the price of the popcorn during the last two years was due partly to the drouth and partly to the fact at the price few would bother to raise it. A Century of Progress helped boost the price.

REDUCES CORN-HOG LIMIT

(Continued from Page 1)

corn is contemplated by the AAA next year.

The corn-hog program brought one drastic innovation in AAA control practices in that it stipulated that aeerage retired from corn production may be used for other erops. In the past aeerage retired by the AAA had to be left idle.

This change, however, is another move to rebuild the supply of forage which this year's drouth depleted.

See Test of Theory

AAA officials expect the 1935 program to bring one of the first real tests of the erop eurtailment theory. Farmers, attracted by high prices, may refuse to sign the AAA contracts.

"In deciding whether to sign the new contract, corn-hob farmers will be meeting their first real test of voluntary crop control," Dr. A. C. Black of the AAA corn-hog section said, "A year ago, a surplns was at hand; prices were low; the need for production control was obvious. This year, prices are improved; the effect of a prospective surplns is not so apparent. Plans now must be based on the future outlook, not on the situation at the moment. Full success of the 1935 program will depend upon the volnntary cooperation of a elear majority of producers. Continued group action is essential."

TALKS TO COLORED FARMERS

(Continued from Page 1)

birthday we will soon celebrate. He writes and tells me that some of his neighbors, who are white farmers, are mad because he has moved on the place and are doing all they can to make it hard for him. They want to run him away. He has nothing against the and wonders what they have against him.

Christ told us to love our enemies but He never told us to let them run us off the face of the earth. I am advising this farmer to stay where he is,— to stick and tough it out. I am sure his neighbors will learn to like him when better acquainted. If they are so mean,— so evil that they just won't like him, well it is up to him to keep his grit and nerve and not be bull-dozed and frightened. Some things are worth fighting for and sometimes dying for and a HOME IS ONE OF THESE THINGS. Colored farmers must have an opportunity in this country to own the land they till and till land they own. We are going to have that opportunity and our friends and our enemies may as well get it into their heads now that we are going to purchase small farms wherever we can and are determined to live on them and keep the right all Americans have to "life, liberty and pursuit of happiness." Enmity and Race prejudice are slowly dying. They will never die though, if we run away and hide our heads every time some one tells us we are not wanted in a certain place. There are other colored farm owners in this particular Missouri farm community and if the number increases so much the better. A community of farm owners is certainly a better community than a community of a few owners and many tenants.

TO EMANCIPATE FARMERS

(Continued from Page 1)

trade level of predepression years, because other countries have taken to raising their own eotton and are seeking to manufacture eotton substitutes which employ a small percentage of eotton and wood pulp.

At the same time the administration is said to be convineed that cheap eotton will not recapture foreign trade. That eheap eotton means only starvation for the cotton grower is said to be the White House position.

The Administration has a selfish motive in dedicating itself to strive for parity, in the opinion of critics. The government has advaneed loans on 9,000,000 bales. Should the price fall the government would lose money as the previous administration did in its program of purchasing surplus cotton and wheat.

MR. A. G. SIMMONS

(Continued from Page 1)

times that have effeeted a number of farmers. He is one of the sympathizers, eo-workers and supporters of the Unit in his section that holds membership in the National Federation of Colored Farmers. He deelared in his recent letter sent to the Modern Farmer "that it is a good paper and I find no fault with it, and it should be in the home of every farmer." When the National Federation convened the last time in Mound Bayou Mr. Simmons was one of the active men on the committee of arrangement and reception committee. He is personally acquainted with the president, Mr. James P. Davis and other members of the National Federation.

FARMERS SHOULD OWN LAND

(Continued from Page 1)

of the N. F. C. F. The last point of the ten, which emphasizes a more complete organization of farmers, should be considered by colored farmers as meaning them also. White farmers of the nation have gained all they have worthwhile through organization and colored farmers will continue feeding in the basis unless they organize too. The ten-point program follows:

1. We must have an honest medium of exchange for goods and services— an honest dollar— a eommodity dollar in order to get rid of the inequality in our financial system.

2 We must take effective steps to reduce the too high eost of distribution so as to give a fair share of the consumer's dollar to the farmer and to protect the consumers.

3. We must attain equally between farm prices with industrial prices and industrial wages.

4. We must correct the inequalities in our tariff structure so that agriculture will enjoy equal benefits with industry and so that our foreign outlets will be restored.

5. We must develop eommodity storage on the farm as sound public policy.

6. We must strengthen and develop our eredit facilities for agriculture with lower interest rates, in order to correct the inequalities between agriculture and industry.

7. We must correct the inequitable tax burden borne by agriculture.

8. We must formulate and apply a national program of land use to correct the unsound policies of the past and protect our greatest natural resourees—land.

9. We must correct inequality, in social and edueational opportunities in rural life as compared to urban life.

10. We must strengthen the voice of agriculture through a more complete organization of farmers.

Gossiping women are awful but gossiping men are worse. Keep the Modern Farmer coming into your home every month.

FOUR THOUSAND TEXAS WOMEN FIGHTING MOBS

Fort Worth, Texas, December 22:—That 22,000 Southern white women have joined the Association of Southern Women for the Prevention of Lynching, and that more than two hundred sheriffs in Southern states have pledged their efforts to the same end, were stated at the meeting here of the State Interracial Commission and the Texas branch of the women's anti-lynching association. It was reported that the Association has more than 4,000 signed members in the state and that 38 Texas sheriffs and other officers have personally signed the Association's pledge.

Reports as to interracial conditions were made from various sections of the state, and Dr. Channing H. Tobias, of New York, national secretary of the Y. M. C. A., delivered an address upon the general situation. Another speaker was Mrs. Jessie Daniel Ames, director of Woman's Work of the Commission on Interracial Cooperation and organizer of the Association of Women. Mrs. Ames told of the rapid growth of this association from its organization in Atlanta in 1930 to its present proportions of 22,000 signed members in 961 counties and 2,537 communities throughout the Southern states.

It was shown that there has been a reduction of eighty per cent in the lynching record of Texas in the past twenty years, from thirty-one for the five years beginning in 1915 to six for the five-year period beginning in 1930. The Association set for its goal a lynchless year in Texas in 1935, and will seek to sign up the sheriff of every county and two thousand additional men and women. It was reported that every candidate for governor in the recent democratic primary had been interrogated by the Association as to whether, if elected, he would do everything in his power to prevent mob violence, and that all had answered satisfactorily.

The State Interracial Commission, meeting at the same time, announced that it would seek legislative appropriations to maintain the state tuberculosis hospital for Negroes, which may otherwise be closed, and to establish and put into operation a training school for delinquent colored girls. This school was authorized in 1929, but no appropriation has ever been made.

Mrs. J. L. Brock of Bryan, was elected chairman of the Commission for the coming year and President W. R. Banks of the State College for Negroes, was re-elected secretary. Dr. M. W. Dogan, president of Wiley College, was elected vice president.

REPUBLICANS OF BOSTON ORGANIZE

Boston, Jan.—(ANP)—Stirred by the increasing activity on the part of Democrats here a group of Negro Republicans have organized the Frederick Douglass Club which they plan to make a state-wide organization. Atty. Irvin Dorch is temporary chairman, Dr. Washington, of Lynn, secretary and Harry C. Holt, treasurer. Permanent officers are to be elected on January 8.

FORTY THOUSAND DOLLARS TO STUDY SCHOOLS

APPROPRIATION VOTED BY ROSENWALD BOARD

Rural Education Will Be Studied With a View Of Improving Work

Trustees of the Julius Rosenwald fund have appropriated $40,000 for a study of rural education in an effort to improve small country schools and to bring schools' work closer to rural life, according to an announcement yesterday.

The Institute of Psychoanalysis of Chicago was voted $10,000 for research into the influence of the unconscious on human behavior. Another $4,000 was appropriated to the National Municipal League for efforts toward improving administration aspects of government with special emphasis on simplification of county government, and extension of business principles of the city manager plan among cities. Survey Graphic was $3,000 for the program informing the public about the social problems and interpreting social change.

Edwin R. Embree, president of the fund, in commenting on the exploration into rural education, said that the small rural school has been neglected during the rapid development of high schools and colleges. The rural teachers are the lowest paid of all educational employes. Mr. Embree said, and the courses of study have almost no relation to farm communities which they are supposed to serve.

"The fund has sent 14 young explorers into rural schools of three states, Georgia, Arkansas and Louisiana," Mr. Embree said.

Mr. Embree said the present tendency is to urbanize rural children as though they were to spend their lives in the city, instead of inspiring them to become good farmers.

Among those in charge of the work are Mr. and Mrs. James F. Simon of Chicago; Charles H. Judd of the University of Chicago; John J. Coss of Columbia University; Burton Fowler of the Progressive Education Association; Lloyd Warner of Harvard University; Leo M. Favrot of the General Education Board; Charles S. Johnson of Fisk University; W. W. Alexander of Atlanta, Ga., and Arthur D. Wright of the Jeanes and Slater funds.

Srb—Did you work up a good appetite while you were on the farm?

Ajo—Did I? I ate green corn until a growth of cornstalk came out and covered my bald spot.

SOY BEAN IN DROUGHT YEAR

Yield Breaks All Crop Records in Past 10 Yrs.

While other grain, seed and forage crops were setting all-time low crop records, the soybean in 1934 set new high records in acres planted, in acreage cut for hay, and in bushels of beans harvested. In the last 10 years the harvested production of soybeans has more than tripled, jumping from 5,000,000 bushels in 1925 to more than 15,000,000 bushels in 1931 and up to nearly 18,000,000 bushels in 1934.

Reports of the United States Department of Agriculture set the estimate for the 1934 crop at 17,762,000 bushels as compared with 11,670,000 bushels in 1933 and 13,121,000 bushels in 1932. The 1934 gain over 1933 amounted to more than 5,000,000 bushels in Illinois, about 700,000 bushels in Indiana, 600,000 bushels in Iowa, and 300,000 bushels in the Southern States.

In addition to the great increase in bushels of soybeans harvested, more than 3,000,000 acres were cut green for hay, compared with approximately 2,000,000 acres in both 1932 and 1933. Of the 1934 total, 2,272,000 acres were cut in the North Sentral States—where all the increase was made—to supplement the shortage of other hays.

The soybean acreage for 1934 was 4,107,000 acres planted alone and 686,000 acres planted between corn rows in the Southern States, as compared with 2,742,000 acres planted alone and 628,000 acres in the

MRS. ANNA CHAMBERS' LETTER

Farmms, Ill.,
Jan. 16, 1935

Miss Wilson,
Nashville, Tenn.
Dear Miss Wilson:

Will you kindly send me some extra copies of the Modern Farmer? Will do my best to sell them; possibly in the near future will send some subscribers to the paper. I think it is well worth the price. I really enjoy reading it myself. The Dubois Unit is moving up a little. Mr. Davis, our national president, was in Cairo last week on some very particular business, working for our race group. A delegation from the Unit has left for Urbana, Ill., to register in the home week program. We think Mr. Davis is a wonderful man and in the right place. We need more men like him. He is doing a wonderful work. Should the project fail it will not be on his account. You may print this if you wish.

Anna Chambers.

CORN PLUS BUTTERMILK

Poultrymen Have Long Known Dietz for Chickens

Poultrymen have long known that yellow corn makes an excellent basis for the diet of chickens. A long series of feeding experiments at the Beltsville Research Center of the United States Department of Agriculture has confirmed this opinion and has emphasized the point that poultrymen can hardly do better than to feed yellow corn to growing chicks. Yellow corn requires a protein supplement, and after trying a wide variety of sources of protein the poultry specialists came to the conclusion that nothing answers the purpose better than dried buttermilk except that when it is relatively high in price part of the dried buttermilk might well be replaced by good quality meat scraps or similar products.

Some very simple rations such as the one composed of five-eighths corn and three-eighths dried buttermilk permitted excellent growth and very good egg production when fed to birds with access to a grass range. Such a ration is practically balanced as regards protein but requires vitamin D as supplied by 2 per cent of cod-liver oil when fed to birds confined without access to direct sunlight. Also for chicks reared without outdoor range, the ration is greatly improved by the addition of 10 per cent of rice bean.

Addition of meat scraps or fish meal increased the protein in the feed, and young chickens made slightly greater gains, but did not make more efficient use of the feed. The buttermilk provides a high-quality protein, and these 6 years of feeding tests showed that when a reasonable per cent of protein was fed the quality was more important than the quantity.

For farm flocks it would be possible to feed nothing but yellow corn and all the liquid buttermilk or skim milk the birds would drink and still expect very good results in growth and egg production.

FARMER TRADES PROPERTY FOR INSURANCE

Barron, Wis.—A novel contract with Barron County places Alex Bauer, a 74-year-old farmer, in a carefree position. In exchange for his forty-acre farm he will receive $25 a month as long as he lives, medical care for the rest of his life and a "decent Christian burial."

Some members of the county board doubted the wisdom and legality of the action, but backers of the plan said that if the county refused the offer Bauer would probably sell the land, spend the money and soon be a county charge.

"Did you make any money on your tobacco crop this year?" a neighbor asked.

"Yes," replied Farmer Cutcrop, "I made just enough to keep my boy Josh in cigarettes.

REPORT OF RESOLUTION COMMITTEE ADOPTED

HIGHER CORN IN MID-WEST

Eastern States Lag Behind in Price Raising

For the first time in the history of the Nation, corn is higher in price in the Corn Belt than in the Eastern States. Plentiful rains throughout the East last summer literally moved the Corn Belt of the Nation to the Southeastern States while hot winds and drought were ruining vegetation in the Central Sattes.

Nebraska, third as a maize producer by a long-time records, was pushed into eighteenth place for the season. Figures collected by the United States Department of Agriculture show that every Southern State east of the Mississippi except Florida nad South Carolina, ranked above the Cornhusker State in total bushels of corn produced. Missouri, fourth in production in 1932, was seventeenth in 1934. Kansas, seventh in 1932, was twenty-sixth in 1934. Iowa, while retaining leadership in production in 1934, had its usual crop cut more than one-half.

The corn-crop failure in the Central States resulted in a national shortage of concentrated feeds. Many substitutions for corn have been made, one of the latest being molasses from the Philippines, Hawaii, and Puerto Rico. It is expected that upwards of 200,000,000 gallons of blackstrap molasses which the Government has on hand in these islands will be imported for feed in the United States.

BREEDING WILD DUCKS

Almost all species of North American ducks have been reared in captivity, either from captive parents or from eggs or young taken in the wild, but for most if these species attempts to breed these birds have been far from satisfactory, says Frederick C. Lincoln of the Federal Bureau of Biological Survey. Usually it is necessary to stimulate natural conditions on so large a scale that the quantity production required for restocking purposes has been impracticable.

Mallards breed freely in captivity, but the captive-bred birds usually degenerate into the "puddle-duck" type of bird, and banding records have shown that hand-reared mallards after being released are seldom taken by hunters. Black ducks, much more wary, make better sporting birds when raised in captivity, and the banding data show a much better return record. The recovery percentage for the home-bred mallards has been about 0.9, while for the black ducks it has been nearly 15—as compared with the 20-per-

(Continued on Page 8.)

FARM TENANCY AND SHARE-CROPPING STRESSED

These Evils Responsible For Debt Slavery, Says Maker of Document

Farm tenancy and the share-cropping system of farming are evils retarding the prosperity and development of many sections of our country. These evils are responsible for debt-slavery, peonage, poor housing and living conditions and a major portion of all misfortunes suffered by colored farmers and their families. As long as these evils exist so long will colored farmers be deprived of equal opportunities with other American farmers to enjoy the privileges of American citizenship and the rewards of their labor. We shall continue to combat these evils by assisting tenant farmers, share-croppers and farm hands of our Race to become farm owners. We request our national officers to continue giving prospective buyers of farm homes all assistance and information available.

ACREAGE REDUCTION PROGRAMS

We favor a continuation of the federal government's plan to reduce cotton acreage. We favor, however revision of the Bankhead cotton control act that small farmers, tenants and share-croppers, who have a base production of three bales or less, be exempted from the restrictions of the act. We favor continuation of the corn-hog reduction program.

(Continued on Page 8, Col 1)

IMPORTANT NOTICE!

March 31st, the fifth Sunday in the month has been proclaimed FARMERS SUNDAY and will be observed this year by all local units of the National Federation of Colored Farmers, Inc., and by many churches and communities both rural and urban. The proclamation and instructions on observing the day, together with a complete program, will appear only once in the Modern Farmer, in the March issue. Order your copy early that you may have the program in readiness for the day which should be the greatest day for all farmers and for all who are interested in the welfare of the farmer.

The National Federation of Colored Farmers, Inc., Chicago, Ill.

ROSENWALD FUND SUFFERS BIG DECREASE DURING DEPRESSION

INACTIVITY CAUSES FUND TO DROP FROM PUBLIC EYE

President Outlines Expenditures In Statement to Press

Chicago,—Julius Rosenwald was so lovable and picturesque a personality that everything he touched attracted attention. During his lifetime the activities of the Rosenwald Fund received a good deal of notice partly as a reflection of public interest in its founder. Since Mr. Rosenwald's death not so much has been heard of the Fund. There are reasons for this aside from the absence of a spectacular personality."

The statement above was made by Edwin R. Embree, president of the Rosenwald Fund.

What has become of the millions left by Julius Rosenwald for the welfare of humanity? Differing from most pilanthropists, Mr. Rosenwald stipulated that his fortune should be used and aided in the creation of an expert board whose duty it was to be to find the best ways in which this money might be employed. Recently, two new trustees were elected to the board of the Rosenwald Fund, Robert M. Hutchins, president of the University of Chicago, and Charles S. Johnson, director of the social sciences department of Fisk University. Dr. Johnson, the first colored man to be elevated to such a position, represents the interest of the Fund in the welfare of the Negro.

Last week, The Associated Negro Press asked Edwin R. Embree, president of the Fund, to undertake to describe through the Negro press, some of the activities of the Fund and the manner in which the money entrusted to it has been disposed of so far.

"In the first place," Mr. Embree continued, "we have much less money than we had in the earlier years. The depression slashed all endowments, including that created by Mr. Rosenwald. In 1929 the principal of the Rosenwald Fund was well over thirty million dollars; now it is less than five million dollars. The shrinkage is caused chiefly by the collapse of securities, but in part by the fact that we have followed Mr. Rosenwald's instructions to spend principal as well as income on the pressing needs of today. During recent years, even when income has ceased entirely, we have continued to pay out nearly one million dollars a year chiefly to Negro schools and other aspects of Negro welfare and race relations.

"There is another good reason why the Fund does not appear more conspiciously in the papers. We are interested of course not in publicity for ourselves but solely in getting things done and in changing attitudes. Therefore, wherever possible, credit for action goes to the institutions and individuals doing the specific tasks, not to the foundation which contributes to them. It is much more important that the country should appreciate the scholarly achievements of Fisk or Howard or Atlanta than that it should know of gifts to these colleges by any Fund It is desirable that southern states and countries assume full responsibilty for changed attitudes toward Negro schools and health than that they share the credit with a northern foundation. We deliberately minimize our part in order that the people directly responsible may have full credit and take full responsibility.

"From time to time we give a public accounting of our stewardship through annual reports and other publications. I am glad to give now a brief summary of the Fund's activities since Mr. Rosenwald's death nearly three years ago.

"For the past three fiscal years, from July 1931 to June 1934, the Fund paid out on its various philanthropic programs a total of $2,467,375. Of this total, approximately $800,000 went into Negro schools. A council of distinguished $450,00 into health and other aspects of Negro welfare. While the remainder of the gifts was not directly to Negro institutions, it has gone into medical services, social studies, and general education which effect all groups of the population. Certain items deserve special mention:

"The school building program, which helped to erect 5,357 Negro public schools in 883 counties of 15 southern states, has now moved over to an interest in what goes on inside the schools. Fourteen young people both white and colored, are working this year in rural communities of Georgia, Arkansas and Louisiana, to find out what should be done and can be done to improve the actual work of rural schools. A coucil of distinguished educators and public officials is directing the work. After two or three years of intensive observation and of trial and error the Fund hopes to have plans for important reorganization of rural education applicable equally to Negro and white schools. This is not so spectacular a program as the building of thousands of schools, but it is much more difficult. And if improvements can be made in education itself, that is more important than buildings.

"In eleven southern counties the Fund is demonstrating the possibiliaties of county-wide library service, rural and urban, colored and white. Book trucks and branch libraries in schools and churches and homes are making books as freely available to all the people as air and water. Through these library demonstrations southern officials are learning how public services can be furnished without discrimination to all the people, regardless of race. As a part of the library program, small working libraries for children have been placed in 1,300 Negro rural schools and contributions have been made to the building up of excellent libraries at 30 of the most important Negro colleges. During the past three years the Fund has put $300,000 in these library programs.

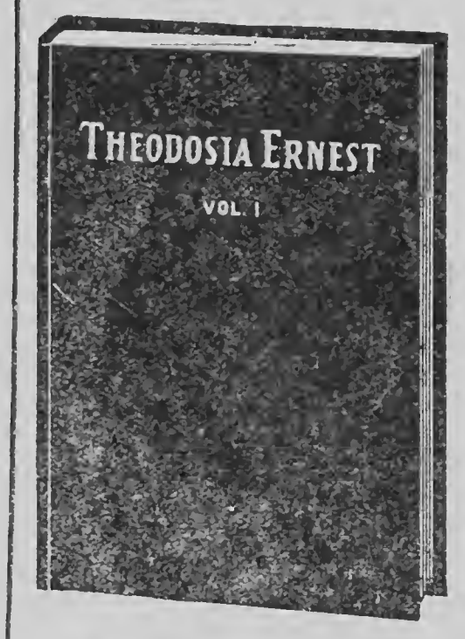
"The Fund is continuing its fellowship for Negroes. Through these fellowships 365 of the most promising younger members of the race have been given opportunities for advanced study in preparation for teaching or for careers in music, the fine arts, business, and the professions. Of the gronp, 273 fellows have studied at 68 of the leading universities, hospitals, and special institutes in the North; 38 studied at the five leading Negro colleges of the South; 35 engaged mal institution; and 19 studied in special activities outside any forabroad in various countries of Europe: England, Denmark, Germany, Austria, Italy and France. Many of the most distinguished of the younger Negroes owe a part of their present eminence to the unusual opportunities provided by these Rosenwald fellowships. Even on a greatly reduced budget the Fund has put $168,000 into Negro fellowships during the past three years.

"In public health, the Fund has given approximately one million dollars to build up a dozen important hospitals throughout the country so that they might be not only excellent service institutions to colored patients but also centers of training to the medical and nursing professions. These include such notable institutions as Provident hospital in affiliation with the University of Chicago, Meharry Medical school of Nashville, and the Flint-Goodridge hospital of Dillard university in New Orleans. We have helped place 50 colored nurses as regular county officers in 11 southern states and have conducted special programs in the control of tuberculosis and the venereal diseases. Today with our smaller funds we cannot continue the large gifts of earlier years but we are carrying on equally active programs of consultation and simulation. We have aroused interest in Negro health among southern health officers and the U. S. Public Health Service has for some years delegated one of its senior officers to direct government activities with special reference to curbing disease and promoting health among Negroes. At the last meeting of the Fund trustees, Dr. M. O. Bousfield, former president of the National Nedical Association, was appointed to active charge of our work in Negro health.

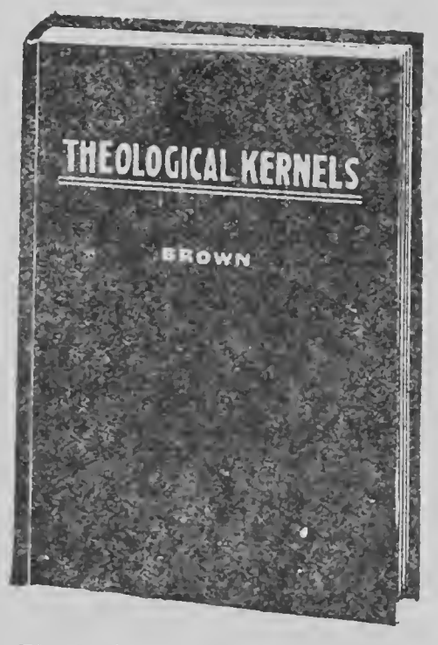
"During the depression years the Fund has given special attention to the Negro's economic status. We called a conference in Washington in the spring of 1933, where the situation was thoroughly canvassed by government officials, economists and business men of both races, and plans were made for active campaigns to see that the Negro was given consideration in all the proposals for relief and recovery. We lent one of our officers, Clark Foreman, to serve as special adviser to the Secretary of the Interior and to act as liaison officer to keep Negro welfare before the attention of all government departments. Partly through Mr. Foreman's efforts Negroes have since been appointed as advisers and officers in the more important departments of the recovery administration. the latest development being the appointment of Dr. Robert C. Weaver, to succeed Mr. Foreman in the strategic post in the Department of the Interior. The officers of the Fund are this year administering a special fund of $50,000 for the emergency in Negro economic status. This Fund is directed (1) to keeping all of the federal departments acquainted with exactly what is happening to Negroes in the application of the various recovery and relief measures thruout the country; (2) to an effort to take advantage of the reorganization of industry and labor to help Negroes get a better status in organized labor; (3) to a study of the ranking position of Negroes in agriculture, with view to finding ways by which the Negroes, who are being thrown out of employment by the sweeping reorganizations in farming, may find a new place in rural economy.

"In addition to general, nonracial activities in social studies and general education and in medical services, the Fund is inrreasingly active in race relations thrcughout the world. During the past two years we have given special attention to the position of primitive people under the rule of Western industrial nations and have issued reports on conditions especially with respect to education in American Samoa and the Dutch East Indies. This year Frank Tannenbaum is studying for the Fund the interesting rural school system of Mexico. The Fund believes that at-

Ministers and Laymen Should Seek Every Opportunity to Improve Their Minds.



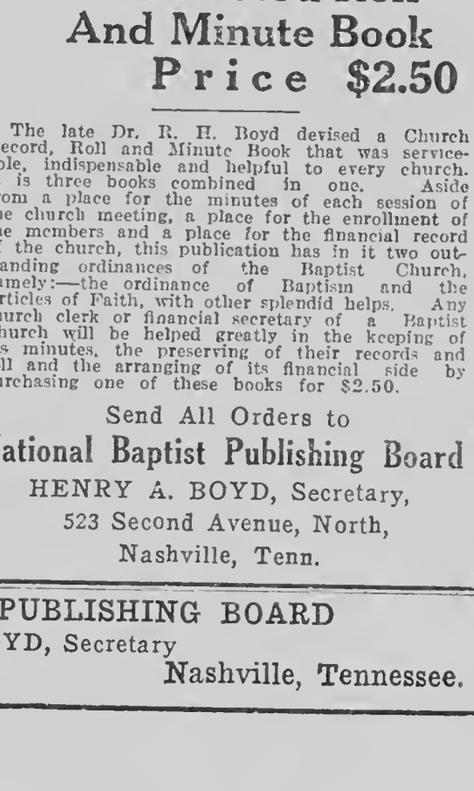
A religious Novel in most intriguing language. Price $1.00



Theological Kernels, the ministers best book of Helps.
Price $1.00

There is but One Old HISCOX Church Directory.

The Great Work of the late



REV. EDWARD T. HISCOX, D.D.

The Hiscox Church Directory has been used for years as a guide for Baptists everywhere.
Price $1.25

An Incomparable Church Record Roll And Minute Book
Price $2.50

The late Dr. R. H. Boyd devised a Church Record, Roll and Minute Book that was serviceable, indispensable and helpful to every church. It is three books combined in one. Aside from a place for the minutes of each session of the church meeting, a place for the enrollment of the members and a place for the financial record of the church, this publication has in it two outstanding ordinances of the Baptist Church, namely:—the ordinance of Baptism and the Articles of Faith, with other splendid helps. Any church clerk or financial secretary of a Baptist Church will be helped greatly in the keeping of his minutes, the preserving of their records and roll and the arranging of its financial side by purchasing one of these books for $2.50.

titudes toward races throughout the world have a direct bearing on the special Negro-white relations in Ameria.

"These are a few of the many activities which the Rosenwald Fund is carrying on in spite of the loss of its great founder and in spite of the slashing reduction in both the principal and income of our endownment. We in this office sadly miss Julius Rosenwald both personally and officially. It is the inspiration of his personality, quite as much as the endowment he created, which makes us eager to carry on the work in which he was so vitally interested. We cannot fill his place, but we hope our activities are in some degree a worthy expression of his continuing influence."

COLORED TRAINMAN FALLS 25 FEET INTO N. CAROLINA CREEK

Train Section Crews and Farmers Search for Body of Accident Victim

Wilson, N. C., Feb.—(ANP)—Section crews and farmers were searching the Contentnea Creek, four miles south of here, this week, for the body of Ed Howell of Rocky Mount, a fireman on the Atlantic Coast Line Passenger train no. 83 who fell into the creek and was drowned Saturday morning.

Howell had stepped from the engine cab to release a signal lever, the train, which was running from New York to Savannah, having just pulled into a side track south of Contentnea trestle junction, so that the Florida Special could pass.

The engineer, in backing onto the main line, evidently forgot to release the train control on the engine as he backed, and the automatic apparatus locked his brakes, causing the locomotive to stop on the trestle.

It may never be determined whether Howell, in descending from the cab to release the set brakes and signal lever, slipped on the ice-coated ties, or whether he took it for granted that he would hit the ground when he jumped and jumped into the creek instead. At this point the creek is 12 feet deep and 25 feet below the trestle.

The stream along its course all the way into the neighborhood of Stantonsburg was searched by volunteers and trainmen, but no trace of Howell's body was found.

In the thought that the body may have been caught in below the surface weeks, grapping irons were brought into play.

At different points along the bank, guns were fired into the water, it being believed that this might be effective in causing the body to rise to the surface. After dark the search was kept up with the aid of railroad flares and automobile headlights.

Later the water was cut off at the power plant and it was reported that the creek will fall enough to reveal the body.

WHAT SHAKESPEARE SAID

Neither a borrower or a lender be:
For loan oft loses both itself and friend,
And borrowing dulls the edge of husbandry.
This above all: to thine own self be true,
And it must follow as the night the day,
Thou canst not then be false to any man.

—Hamlet, Act I, Scene 3.

Farmer (to the new hired hand)—Where's that mule I told you to take out and have shod?

New Hand—Did you say "shod?" I thought you said "shot". I've just been buryin' her.

URBAN LEAGUE TO HOLD CONFERENCE IN PITTSBURG

New York, Feb.—(ANP)—The National Urban League, eastern and middle western division, will hold a regional conference February 15-16 in Pittsburgh in order to plan for a new attack on the forces which are depriving the Negro workers of opportunity under the New Deal.

The following secretaries have signified their intention of being present: George W. Thompson, Akron, Ohio; Reginald A. Johnson, Atlanta, Ga.; Edward S. Lewis, Baltimore, Md.; Robert J. Elzy, Brooklyn, New York; John W. Crawford, Canton, Ohio; Lee Morgan, Cincinnati, Ohio (representing the Negro Civic Welfare Association); William R. Conners, Cleveand, Ohio; John T. Clark, St. Louis, Mo.; William M. Ashby, Springfield, Ill.; John C. Dancy, Detroit, Mich.; E. J. Unthank, Ft. Wayne, Ind.; J. A. Thomas, Lonisville, Ky.; James H. Hubert, New York City; Harold A. Lett, Newark, N. J.; Wiley A. Hall, Richmond, Va.; and N. B. Allen, Columbus, Ohio.

The conference will examine the objectives and the program and tech- and the program and technique of the local organizations in the light of the present economic and social conditions and will formulate plans to enlarge the opportunity of Negro workers in the Public Works program of the Administration.

Other questions dealing with the organization of Negro Workers' Councils, relief, and the inclusion of Negroes in relief programs will be taken up by the assembled delegates who will present the experiences of Negroes under the New Deal in a score of cities.

Duke Kwesi Kuntu Returns To Africa

Chicago, Feb.—(ANP)—Duke Kwesi Kuntu, noted African tribal chieftain, educated at Oxford, left this city Friday night for Washington, D. C., his first stop on the long journey home to Ashantiland after a visit of more than two years in the United States.

Duke Kuntu was invited to bring a troupe of Ashanti ceremonial dancers to the World Fair in 1933 for exhibition and entertainment purposes. So attractive was their work that the Duke's retinue was employed for the 1934 Fair also, working in the replica of the Kimberley diamond mines.

In addition to working at the Fair, the native brought here by the Duke were engaged for select concerts held by many special groups and particularly at the University of Chicago, where they were spoken of in the highest terms.

Only one member of the troupe, Kofi Affiah, died during the stay in the United States.

Prior to leaving Chicago, the friendly but imperial-looking African chieftain, expressed his gratitude to the people of the United States whom he has met for their uniform courtesy to him.

"My stay has been a very happy one," he said.

From Washington, the Duke will go to New York and on February 7 will board the S. S. Olympia for Southhampton, England. He is to spend 10 days visiting in the House of Lords.

HOUSTON OPENS HEADQUARTERS FOR PUBLICITY

Rev. W. A. Joshua to Give Press News of Plans For Big Religious Conclave

Houston, Texas,—(Special)—News about the Sunday School Congress coming to Houston will be sent out every week by the Publicity Committee of the Colored Baptist Ministers Association, which was recently formed here. Rev. W. A. Joshua was made chairman of the committee, and his headquarters was designated as 2017 Dowling Street. Associated with him as members are: Revs. J. R. Larkins, F. L. Woodard, A. L. Roach, C. P. Clay and J. R. Burdett. Secular as well as religious newspapers printed by both races will be offered news items each week that will show the steady development of the plans for entertaining the 1935 session of this Summer School of Methods.

The chairmanship of another committee was named, and that committee is to be headed by the Rev. A. Hubbard, D. D., and he will work with the superintendents of Sunday schools, presidents and group workers of B. Y. P. U.'s and leaders of Organized Classes.

Every church in Harris County in sympathy with or working in the interest of the coming national gathering is seleeting their workers, sending in the names of their pastors, and within the next week or ten days it is understood that every leader of an auxiliary in a Baptist Church will be lined up solidly.

The Publicity Committee as well as the superintendents and teachers committee, and the leaders in Colored Baptist Ministers Association have sent nearly three hundred names to Nashville.

COLORED ENVOY TO RUSSIA REVIEWS HIS TRIP AT CHICAGO U.

"What Has Russia Done To the Color Line" Is Text of Prof. H. M. Smith

Chicago, Feb.—(ANP)—One of the unusual meetings of this year at the University of Chicago took place Wednesday when Dean H. M. Smith spoke to a large group of university men and women on the question "What Has Russia Done to The Color Line?"

Dean Smith of the School of Religion, Bishop College, Marshall, Texas, spent last summer traveling and studying in Russia. His discussion grew out of the experiences of this visit. Some of the interesting facts brought out by Dr. Smith were:

"There are no jim-crow laws of any kind in any part of Russia. Negroes are treated just like other human beings. Many of them who belong to the communist party are holding responsible positions high in the government service. Apparently there is no limit to the promotion possibility of a Negro worker provided he is capable. In Russia his color will not serve as a badge to keep him in blind alley jobs.

"Of course it is well to remember that there are very few Negroes, whether from the U. S., the West Indies or Africa, in all of Russia. But the few who are there enjoy full and complete equality.

"If we define religion as a matter of life and action rather than an affair of belief and theory then Soviet Russia today is the most religious country in all the western world. For here for the first time in 2,000 years do we find a western European nation treating African and Asiatic people as if they were human beings. While Russia has not taken modern Christianity very seriously she has however taken Christ more seriously than all the rest of the western world—She is treating Negroes like men. She has smashed the color line.

Paul Prayer To Be League Secretary

Asbury Park, N. J., Feb.—(ANP)—Paul Prayer, former industrial secretary under John T. Clark of the Pittsburgh Urban League and later social work director of Negroes employed in the Carnegie Steel Company at Duquesne, who was responsible for the appropriation of $1,500 for Negro social work from the Morro Castle Fund benefits, has been asked to serve as executive secretary of the newly organized Urban League of Asbury Park, N. J.

Mr. Prayer has had a great deal of experience in social work and was at one time the business manager of OPPORTUNITY, the publication of the National Urban League. He is president of the Asbury Park Branch of the National Association for the Advancement of Colored People and has long been a leader in civic and social affairs of the Negroes of this city.

THE MODERN FARMER

Official organ of the National Federation of Colored Farmers, Inc.

Leon R. Harris - - Editor

Published monthly by the Modern Farmer at Nashville, Tennessee.

Office, 447 4th Avenue, North.

Devoted to the interests of the Farmer, Truck Gardener, Livestock and Poultry Breeder, the Home and the People.

EDITORIALS

FROM THE BIBLE

"But they shall sit every man under his vine and under his fig tree; and none shall make them afraid: for the mouth of the Lord of hosts has spoken it." Micah 4:4.

Watch your doings hour by hour,
Know yourself.
When you've found your range of power
Trust yourself.
If achievement you desire,
If good habits you'd acquire,
Task yourself.
When you think the whole world's wrong
It's yourself.
Change your grumbling into song—
Right yourself.—Unknown.

A BUSY LOCAL UNIT

Many of the local units of the National Federation of Colored Farmers made fine records last year. All that did so deserve praising. We don't mean to show partiality but, for example, we want to tell our readers about the wonderful work of Shaw Mt. Olive Unit, of Shaw, Miss.

This great little Union, under the presidency of Jesse McGraw, a progressive farmer and a good leader, started out with a program, followed it up, and succeeded. In spite of depression and hard times, the members of Shaw Mt. Olive are better off now than they have ever been before in their lives. Organization, cooperation and common sense have done it.

The Unit's sewing club has been active all year. Members of the canning club worked like bees in a hive. They exchanged products, and not a single member had less than 200 jars of fruits, vegetables and meats when winter came. Every member had plenty of hogs to kill, twice as many as they ever had before.

In August they did a very striking and original thing. They had a meeting and planned their fall gardens. They cultivated till frost and have fine winter gardens now to enjoy. We know of nothing in the eating line that is better for the southern farmer's family than a good winter garden.

Throughout the year, these members engaged in cooperate purchasing. All home and farm supplies were bought cooperatively when it was known that a saving could be made on articles needed. The Market Agent reported that the Unit spent OVER A THOUSAND DOLLARS buying together. Each member saved approximately twenty-five cents on the dollar. A few members will have to borrow a little to purchase livestock for this year, but, aside from this, not a member will have to borrow a dime for any other purpose.

Shaw Mt. Olive has blazed the way in big fashion for other Units to follow. What is the lesson? First, meet early in the year and plan a sensible, well-worked-out program. Let there be peace and harmony. Let the majority rule. Hold up the hands of the leaders. Do away with all little "colored folks" jealousy and meanness. Let every member take a big interest in his unit, and in the welfare of his fellow-members.

This is COOPERATION AND UNITY. They will always bring you success if you will let them.

FARM SPECIALISTS ARE COMING

We wonder how many Race farmers are studying to become SPECIALISTS. In medical circles, the doctor who knows most about the stomach is called a "stomach specialist"; the one who knows most about the brain is a "brain specialist," and so on. Henry Ford can produce a better "Ford car" than anybody else because he knows more about the "Ford" than anybody else. The FARMER-SPECIALIST is bound to come in the future, there are some of them now. Knowing as we do, that Race farmers possess traits and characteristics which make it possible for them to be THE BEST FARMERS IN THE WORLD, we are anxious for them to become the best farm specialists in the world.

In almost every community there may be found at least one colored farmer who can produce some product better than his neighbor. We are acquainted with a northern Negro farmer who, for several years, has been raising a small watermelon of the "baby" variety," which is sweeter and has fewer seeds than the average of this variety. The papers told us last summer that when President Roosevelt and his distinguished company visited the estate of Dr. Chas. Mayo near Rochester, Minn., all palates were tickled when they were served watermelon cut in half and stuffed with ice cream and various fruits. The melon was passed around the table and each guest helped himself. Had Dr. Mayo known of this colored farmer's melons and had gotten some of them, he could have put on a bigger stunt. The Baby Melons could have been cut in half and stuffed and each guest could have been given an entire half for dessert. This colored farmer is a specialist but doesn't know it. He should be making more money than he is making.

We know another North Carolina colored farmer who is really making lots of extra money because he is growing and curing sweet potatoes that are far better than the average. He is shipping some of his potatoes to distant points and is getting as much as $1.50 a peck for them. He is a specialist who knows his business.

We also know a colored farmer who specializes in raising mangoes, or sweet peppers. Not only does he raise exceedingly large ones, but he has learned how to make them look pretty. He makes them striped, spotted. red on one side and green on the other, and colors them up in such fancy shades he is able to get fine prices. We know his secret but won't tell it. It is all done naturally.

Brother Farmer, why don't you try to raise one thing better than your neighbors? Specialists earn good money.

WHERE ARE WE GOING?

We are in favor of controlled farm production not particularly because we wish to see the big farmer make less but because we want to see the small farmer make more. If controlled production does not benefit the small farmers—the millions of farmers who produce less than a thousand dollars worth of products a year—then the scheme is a failure and should be abandoned. Nearly all Race farm owners belong in the less-than-a-thousand-dollars-a-year class.

It has been suggested that thousands of farmers be removed from marginal farms and given better farms. Where are these better farms? Who owns them? If the government purchases them can it also change the customs, habits and opinions of the citizens who control the communities where the farms are located? If not, then how can the government guarantee that his new and richer and smarter neighbors will like the Negro farmer who moves in enough to treat him right?

Where are the Race farmers going? Certainly if forced to the cities they will be worse off than they are on the marginal farms. On the farms they at least can live largely on what they produce directly from the soil. What they raise affects the commercial markets very little.

Unless the government is able to make subsistence homesteaders of all Race farmers in America who are producing less than a thousand dollars worth of farm products a year, we believe it would be well to allow our farmers to remain in their communities now established, even though some of the farms are marginal land. Many of these farms can be improved anyway. They are not worthless for agricultural purposes.

Wherever possible, let Negro farmers stay where they are and seek their own salvation where they are. "Make haste slowly" is a good motto for the government to follow in its dealings with colored farmers.

FARMERS' SUNDAY

Sunday, March 31st, will be proclaimed FARMERS' SUNDAY this year and again colored farmers of the nation and their friends will be expected to observe the day by holding services in the churches, rendering thanksgiving and praise to Almighty God for blessings received and praying for patience, strength and success for the coming season.

It is especially desirable that a strong effort be made on this day to encourage those outside the ranks of organized farmers to join up with their neighbors and travel the common road in harmony and unity. The best missionary will be the farmer who has been benefited by practicing cooperation. He is able to point the way. So if your membership in the National Federation of Colored Farmers has helped you to EARN MORE, HAVE MORE, AND BE MORE, if it has caused you to have more confidence in your vocation, more love for your farm

SING A NEW SONG FROM OUR OWN SONG BOOKS

NATIONAL BAPTIST HYMNAL.—A new hymn and tune book, music edition, containing 448 pages and divided into three parts. Adopted by the National Baptist Convention. PRICE: Cloth, lettered in gold, red edges, single copy, $1.00; per doz., $11.50.

NATIONAL BAPTIST HYMN BOOK—Word Edition.—A collection of old meter songs, selected for use in homes, and prayer meetings. 532 pages, 622 hymns; cloth binding, Single copy, 70c by mail; per doz., $8.40 by express.

NATIONAL GOSPEL VOICES, No. 1.—Prepared especially for Baptist churches, Sunday-schools and Young People's meetings, with music, in round notes, 40c per copy; $4.80 per dozen.

NATIONAL GOSPEL VOICES No. 2.—Especially prepared for Baptist Meetings, Round notes. Price 40c per copy; $4.80 per dozen.

NATIONAL GOSPEL VOICES No. 1 and 2 Combined.—Published in shaped notes. Try this one and you will be satisfied. 45c per copy, prepaid; $5.40 per dozen.

NATIONAL G. V. HYMNAL.—Contains 447 songs. New and old selections. Price, muslin, 50c each; $6.00 per dozen.

NATIONAL HYMNS OF VICTORY.—Choice songs for Sunday-schools, church and prayer meetings. Price, muslin, 35c each, $4.20 per dozen.

CELESTIAL SHOWERS No. 1—40c each by mail; $4.80 per dozen by express. Round notes only.

CELESTIAL SHOWERS No. 2—A perfect gem for Sunday-schools. Price, 40c each by mail; $4.80 per dozen by express. Round notes only.

and for your Race, then you should tell others about it and persuade them to become members too. This is going to be a great organization year. White farm leaders, labor leaders, all the thinking people of the country are talking and writing about organization. The N. F. C. F. should have at least a hundred thousand members before we call our work even half finished. Let us see how greatly we can swell our ranks FARMERS' SUNDAY.

Good men can see through bad men. If you are false and a hypocrite don't think that nobody knows it.

If you have no home of your own you are living without enjoying one of the greatest blessings life gives.

You can't get much without taking some risks and getting in danger sometimes.

The world is ruled by men who THINK.

A fool can always see the faults of others but always forgets his own.

Expect to do a lot of things without even being thanked for doing them.

WILL ROGERS PAYS TRIBUTE TO TOM BASS

New York—(ANP)—Last Thursday's syndicated comment on the news of the day by Will Rogers, famous comedian, was taken up in paying tribute to the late Thomas Bass, noted horseman. Mr. Rogers wrote from Beverly Hills, Calif.

"Mexico, Mo.—Tom Bass, well known Negro horseman, aged 75, died here today."

"Don't mean much to you, does it? You have all seen society folks perform on a beautiful three or five gaited saddle horse, and said, 'My, what skill and patience they must have had to train that animal.

"Well, all they did was ride him in. All this Negro, Tom Bass, did was to train him. For over fifty years America's premier trainer, he trained thousands that others were applauded on. A remarkable man, a remarkable character.

"Many Negroes have been great horsemen. Every big ranch has its traditional stories of what its famous Negro rider used to do. Negro 'Add' of the LFD ranch, was perhaps the most famous.

"If Old St. Peter is as wise as we give him credit for being, Tom, he will let you go in horseback and give those folks up there a great show, and you will get the blue ribbon yourself."

LARRY GAINS' MOTHER PLEADS

Mrs. Alice Gains, mother of Larry Gains, the colored boxer, presided at a Salvation army concert at Wellingborough, England, recently. Apologizing for the absence of her son, she said: "Larry is a wonderfully good boy. He has not always been a boxer. He was converted and sang in the choir of our church when he was 15 years old. I want your prayers that one day he will stand in a pulpit instead of a boxing ring. All England loves my son, but they would love him much more if he stood in a pulpit. My prayer is that one day he will do so."

INTERESTING NEWS AND NOTES

The Federal Forest Service announces that four million trees will be planted this spring in the nation's vast shelter belt which will extend from Canada to the Texas Panhandle. Sufficient seed has been collected to provide about one hundred million seedlings for planting in 1936.

Experts believe that 1935 will be the brighest year for farmers since 1930.

It is believed that corn will reach a price of $1.25 a bushel this spring.

Florida and other Gulf States have suffered a freeze which has wiped out the crop of early vegetables.

Although on account of the drouth 1934 had the lowest crop yield in 16 years, farm income for the year was the highest in four years.

In 1930 there were 35,123 colored farmers in the state of Tennessee. Only about one-sixth of these were owners, 2,000 less than in 1920. Land owned was 419,069 acres and the value of land and buildings owned was $14,169,523.

Mrs. Maggie L. Walker one of the most prominent colored women of the nation, died in her Richmond, Va., home, December 15th. Mrs. Walker was Chairman of the Board of Directors of the Consolidated Bank and Trust Co., and Grand Secretary of the Order of St. Luke. She was a financial genius and was an officer in many other organizations.

It is estimated that the 1934 farm income will be approximately seven billion dollars. This is 600 million dollars more than in 1933, but the general level of farm prices is still about 20 per cent below the parity level aimed at.

Germany has entered the tobacco field. Scientists have cross-bred American and other types and produced a strain that can be grown in southern Germany.

FARM BOY BECOMES LICENSED AVIATOR

The Chicago Defender tells us about a colored farmer's son of Newport, Ark., who has become a licensed aviator. Says the Defender:

"The Southland's only licensed race aviator will be seen flying a transport plane within the next few months, if all goes well with Pickens W. Black, Jr., 30 years old of this city.

Black, who is 30 years of age, is one of the few licensed race pilots in the United States. He keeps his 80-horsepower plane in a home made hangar on his father's farm 12 miles east of this city.

A graduate of Virginia Union university at Richmond, Va., Black is quite an expert at flying. He has flown in a Memphis, Tenn, air circus, made trips to Kansas City and Florida, and has had one forced landing in his more than two years of flying.

As a boy, young Black whittled airplane model from sticks. One powered with rubber bands, sailed 100 yards, the pilot recalled proudly.

A broken propeller on a ship that came to Jackson county with an air circus gave Pickens his first chance to realize his boyhood dreams of flying. The pilot was at the Black farm while the plane was being repaired and before the ship left young Black had four hours of flying time to his credit. He soloed with two and a half hours of instruction

With the instruction he received during those few days, Black finished building an airplane he had started to convince his parents he knew something of aviation.

Reconciled to his flying, his parents bought him his present plane. He attended the Air Travel School of Flying at Little Rock and received his limited commercial pilot's license."

COOPERATIVE BUYING MAY SOLVE PROBLEM

Consumers League Should Be Organized

Mr. W. Alfred Harrison, noted writer, in a recent article belabored Mr. William Green, president of the American Federation of Labor, because his organization, while professing sympathy for Negro labor, really cannot compel its numerous locals to accept Negro workmen as members. Mr. Harrison further remarks that the Negro himself, whether farmer or workman in the industries, must study cooperation and use his purchasing power to obtain a semblance of justice.

The National Federation of Colored Farmers has long recommended Cooperative Buying as a means to enable the Negro farmer, in particular, to HAVE MORE AND TO BE MORE. We publish here what Mr. Harrison thinks about the same subject.

"To the writer the race problem is solely an economic problem and cannot be aided except by an increase in the Negro masses' purchasing power. To increase the purchasing power of the Negro mass should be the most important problem before every American Negro. It cries for solution, yet, depression or no depression, the race unheeds it. After all when we think of our daily activities we must first think of income, salary, wages versus expenses Unless the Negroes' purchasing power is increased he is destined to a lower standard; he is doomed to destitution rivaled only by the Indian Untouchables; he is damned to chattel slavery worse than that before 1861. There is no reason to believe cooperation with trade and labor unions will increase the Negroes' purchasing power. It takes two parties to cooperate.

"Remote as it seems, Consumers' Cooperation can bring a greater degree of purchasing power and consequently a greater degree of security to the black worker. This cannot be done overnight. It means years of study, work and sacrifice. But it can be done. If the Negro is sufficiently dissatisfied with existing economic ills to move him to intelligent action, it will be done. Otherwise the Negro will merely grumble. The black worker should turn a deaf ear to the jargons of Bill Green and study the history and principles of Consumers Cooperation. This can be done for a very small amount. If only small scattered groups of Negroes first study and secondly adopt Consumers' Cooperation as a going concern, and cling religiously to its fundamental principles, in time the Negro wage earners can increase their purchasing power. This will make the race prosperous. Whether or not Negro labor does this depends entirely on Negroes themselves."

FARMERS URGED TO AVOID DEPRECIATION

Those farmers who maintain their property in good condition and make an honest attempt to meet their obligation need not fear foreclosure by the Farm Credit administration, Gov. W. I. Myers has announced.

With repairs to farm buildings kept up, depreciation will be halted and the farmer will eventually work his way out of his financial difficulties, said Mr. Myers in a recent address to presidents of the 12 federal land banks.

HOUSTON, TEXAS TO ENTERTAIN MESSENGERS

Magnolia City of the Lone Star State Will Open Wide Her Gates

Religious forces of the nation have welcomed the call for the 1935 session of the Sunday School Congress to be held in Houston, Texas, June 5-10. The announcement appeared in the papers throughout the nation, both religious and secular, weekly and daily, and now thousands of Sunday schools, B. Y. P. U. organizations, Organized Class Leaders, Missionary Workers, Baptist Preachers, in fact the list runs through the whole gamut of consecrated workers who are making preparations to invate Houston.

Thirty years ago in June it will be that the late Rev. R. H. Boyd conceived the idea of holding this Religious Summer Sunday School of Methods. Not one time since the first session was held in Nashville, thirty years ago, has there been a cessation of these activities; to the contrary they have increased, interest has magnified, the attendance has been constant, work constructive, training helpful and enthusiasm kept at fever heat.

The session of 1935 will take to the city of Houston, not only the leaders, best instructors, men and women of experience, but specialists who have established their well-earned and deserved reputation in state and nation, to head up these departments, to become special workers, and to assist in leading during the five days' work.

This gathering, while not a Chautauqua, would easily remind one of it, but Henry Allen Boyd, the secretary who has served for these thirty years, and who although called to the gospel ministry, has refused steadfastly to become an active pastor, devoting his time to missionary work and training, has kept it religiously in the groove where his father placed it when it was organized and launched as a real Summer School of Methods, a Training Department, a place where ocular demonstrations are made by Sunday school and religious forces that bring them fresh from their fields of labor, the churches, schools and other organizations in which they work, where they have turned very often defeat into victory, and have built up in barren places what he has termed and often discussed as Front Line Sunday Schools.

No stone is being left unturned, no work half done, no job incomplete to make the thirtieth annual session at Houston, Texas, June 5-10, the banner year. ALL ROADS LEAD TO HOUSTON!

A thing of beauty is a joy forever. —John Keats.

NEWSPAPER WORKERS FORM ORGANIZATION IN ATLANTA, GA.

Atlanta, Ga., Feb. (ANP)—Beginning a movement long felt necessary in the ranks of Negro typographical workers, the employes in the mechanical department of the Scott Newspaper Syndicate, which publishes the only Negro daily newspaper in the world, have organized themselves into a bargaining group that in every way approximates a union.

The Scott Syndicate, the largest business of its kind in the South, has, for a number of years, maintained a company employes club, which met under the auspices of the management of the business. The mechanical workers, however, believing this club was ineffectual in furthering their interests, decided to form an organization of their own, so that they might take advantage of the opportunity offered them to collectively secure proper guarantees as skilled workers.

The movement was a direct protest against the demerit system, which ostensibly, punishes a worker for his mistakes, but which, in reality was used to lower the salary of the employes. The management has been repeatedly petitioned to abolish this system, but has maintained it despite the employes' obvious dissatisfaction. Since unorganized protests availed the men little, they have formed a pressure group which has the power to insist that its demands be heeded.

Every mechanical worker in the Scott Syndicate shop is included in the membership of the club, which comprises linotype operators, make-up men, press men, all type handlers, and proof-readers. In all, about twenty-five persons are in the organization, which marks the first effort of Negro typographical workers to obtain security on their jobs.

This group, which is known as the Gate City Typographical Association, will work with the management to raise the standards of Negro printers throughout the South. It expects, ultimately to unionize every linotype operator and printer in the country.

The officers chosen for the permanent organization are as follows: Felix Robinson, president, Savannah, Ga.; H. Powell, vice-president, Lexington, Ky.; Arthur Randall, Jr., secretary, Detroit, Mich.; Dillard Porter, asst. secretary, Tuskegee, Ala.; O. B. Stokes, treasurer, New Orleans, La.

In addition to its function of collective bargaining for necessary reforms, the organization will attempt projects for the good of its members and for the community at large. It has tentative plans for orgonizing a Federal Credit Union, and for establishing a community club house for its members, for emergency and social purposes.

White typographical workers have had an effectual organization for years, and they have attained the excellence that their training merited them. On the other hand, Negro printers have been regarded both from the standpoint of employer and public as tramps or fit-ins. The Gate City Typographical Association is attempting to elevate the standing o fthe Negro mechanical worker.

UNCONSCIOUS OF DESTRUCTION

There is on record a laboratory experiment in which a frog was placed in water heated at the rate of .0036 of a degree Fahrenheit per second and which, although it never moved, was found at the end of two and a half hours to be dead. The explanation was that at any point of time the temperature of the water showed such little contract with that of a moment before that the attention of the frog was never attracted to it. It was boiled to death without noticing it. Satan is a past master in the art of slow approach, taking his prey easily from things to those that are unfamiliar. The sin and unbelief of to day is not in marked contrast to that of yesterday. No shock is felt as men are drawn farther and farther away from God, and their attention is not permitted to rest upon it. The world will not know when it is ripe for judgment—The Institute Tie.

Webster Appointed Urban League Secretary In Kansas City, Mo.

Kansas City, Mo., Feb.—(ANP)—Thomas A. Webster, for three years industrial secretary of the Kansas City Urban League, was recently elected executive secretary by the board of directors of the League in this city.

Scottsboro Committee at Knoxville College is Securing Funds

Knoxville, Tenn.—Two hundred and fifty dollars has been set by the Knoxville branch of the American Scottsboro Committee as its goal in a campaing for funds being conducted during February.

Professor W. C. Blackburn of the Department of Sociology is general chairman. Knoxville students have pledged about one-tenth of the total goal. The remainder will be secured by a city-wide campaign.

Scottsboro Sunday will be observed in all of the churches on the fourth Sunday of February. Special collection will be received in the churches on that date.

A GREAT SOUTHERN DAILY PAPER EXTOLS A GREAT SOUTHERN COLORED WOMAN MAGGIE L. WALKER

(From Richmond Times-Dispatch)

The passing of Mrs. Maggie L. Walker removes from the scene one of the greatest Negro leaders in America, and probably the foremost member of the colored race ever born in Virginia, with the single exception of Booker T. Washington. The founder of Tuskegee was a native of Franklin county, while Mrs. Walker was born here in Richmond.

Mrs. Walker was an important influence in the upbuilding of her race, a sane consellor in time of stress, a wise and successful business executive, a generous-hearted contributor to charitable causes, and a wholesome influence in interracial relationships.

She was so quiet and unobtrusive in manner, that many Richmonders were perhaps unaware that she was a national figure, an outstanding Negro leader whose career was an inspiration to the members of her race from coast to coast.

Few representatives of any race come into the world with more native ability more sound business acumen than that with which Mrs. Walker was endowed. The child of former slaves, she began life with few advantages, but she made the most of her opportunities and her influence soon was felt in the community. Her Richmond bank successfully weathered the depression, and the Independent Order of St. Luke was brought to its present state of usefulness through her efforts.

It is doubtful if any Negro now living in the South has attained to greater eminence than Maggie L. Walker had achieved when she died on Saturday, with the possible exception of Dr. Robert R. Moton, the retiring head of Tuskegee Institute. The esteem in which she was held by Negroes throughout America is attested by the observance of "Maggie L. Walker Month" in October by Negro organizations in all parts of the country

Her death, following a protracted illness in which she bore her sufferings with notable fortitude, leaves a gap in the ranks of American Negro leadership which can be filled only with difficulty. Certainly, here in Richmond there is no one at the moment who can replace her.

SUNFLOWER SEED TAKEN FROM EAR AFTER 25 YEARS

Evansville, Ind. — Twenty-one years ago William B. Gough, Jr., then two years old, put sunflower seeds in the ears of himself and his year old sister Margaret. Recently Miss Gough was attacked with head pains and spells of fainting. Dr. Bernard Raydin, specialist, in irrigating her ear found the sunflower seed. Her brother suffered a similar experience ten years ago.

Dies From Cold

Wilson, N. C., Feb.—(ANP)—George Battle, 45, was found lying unconscious in Viola street early Monday morning, suffering from cold. Efforts to revive him were futile. He was poorly clad.

TALKS TO COLORED FARMERS

About "Back to The Cotton Fields" By Leon R. Harris, Secretary, National Federation of Colored Farmers, Inc.

Brother Farmers, I see that many of our good white friends are complaining because thousands of men and women are on relief rolls in the cotton states because their jobs were destroyed when cotton acreage reduction went into effect and the Agricultural Adjustment Administration succeeded in eliminating the cotton surplus. These friends are asking the question, "When are we going to get them off the relief rolls and back into the cotton fields?"

I think I know pretty well just why our good friends are complaining. Certainly they are not "chewing the rag" because the relief is coming from their pockets, for nearly every penny of relief spent in the cotton states has come direct from the federal government. This means that it has come from all of us—not just from the citizens of those states. And if they wish to be reasonable, they have no right to complain because they are having it much easier than thousands of citizens of other states. Millions of factory, mill, mine, shop and railroad employees in other states have been working only part time for the past five years. Incomes have been reduced from 25 to 75 per cent. The incomes of our cotton states' friends have not suffered so seriously.

I believe the big reason why our friends are complaining is because a big change has come in their way and manner of living, and they were not ready for the change. I should say IN THEIR WAY OF EARNING THEIR LIVING. The time has come when these friends of ours must think harder and work harder than ever before if they mean to keep and enjoy the comforts and luxuries they have been used to. The black boy who has been doing all the chores at the "big house" for board and around ten dollars cash, has disappeared with the coming of the CHANGE. The black girl or woman who cooked or nursed the children for seventy-five cents or a dollar a week, has also disappeared. Perhaps they are on relief. All of us know that many of these underpaid servants have left the farms and small towns. When they left it was not because they wished to. IT WAS BECAUSE THEY HAD TO. There was little for them to do on the farms. They were promised a chance to be able to raise enough to live on had they stayed, but many were so hard up and hungry they could not even wait for the food crops to mature. They walked away, anywhere, they neither knew nor cared where they were going. They believed that no matter where they went, it couldn't get any worse than it had been.

In course of time, many Negro farmers and farm laborers will return to the farms but not to the cotton fields. Our friends must realize that the cotton fields will never be as large again as they once were. The world is getting wise to cotton. Substitutes for cotton are being produced in every nation on the globe that is civilized. Markets for cotton will never be so large again unless war and waste sweep again over the world. The Negro farmer and cotton hand must find a NEW PLACE DURING THIS CHANGE. He must secure his independence, his citizenship rights, his economic freedom. He must learn to stand on his own feet and hoe his own row. He must realize that the health, welfare and happiness of his wife and children are just as important as the health, welfare and happiness of his white friend's wife and children. He must get into the thick of things during THIS CHANGE and get his rightful share of every benefit.

Brother Farmers, and you young men who desire to be farmers, don't pass by any opportunity you may meet DURING THIS GREAT CHANGE, to BECOME THE OWNER OF A FARM. The day of the big cotton field, of the big planters and many tenants, is about over. The small, independent farmer's day is dawning. Organize, cooperate, think and work.

WHAT OTHERS SAY

About the N. F. C. F. and Modern Farmer

"I am glad to know that you are in line with the sentiment expressed in my article in the Constitution relative to our people and the farm. I wish to advise that I will cooperate with you in any way I can."

Rev. D. D. Crawford, Executive Secretary-Treasurer General Missionary Baptist Convention of Ga

---

"If there is any assistance we can render you here in Arkansas in your work, we should like to have you feel at liberty in calling upon us."

W. A. Booker, Atty. at Law, Ark.

I rejoice with you in the definite achievement for the farmers of our group in Mississippi, through the National Federation of Colored Farmers, and in the hope which your organization inspires for the Colored Farmers throughout the south. The Negro Farmers of the south are facing the most crucial period in their history and it appears from present indications that your movement has been inspired for just such a time as this.

More than three-fourths of our group in the south live on the farms and are dependent either directly or indirectly upon farm labor and farm products for support. Any movement which has for its objective the organization of Negro Farmers for mutual helpfulness and protection and creating more favorable economic and social condition for them to live under, enter at once upon a field of service, the possibilities of which are unlimited. I cannot escape the conviction that this field offers one of the finest opportunities for effective leadership among our people.

Your organization is a fine indication of the awakening of the Colored Farmers to the opportunities which challenge them, and one of the most inspiring prophecies concerning the possibilities of their future. While the Colored Farmers have made progress in the past, their progress has represented the achievements of individuals, operating disconnectedly. They have not felt the throbbing impulse of the tidal wave of hopefulness and enthusiasm which springs from cooperative effort in this field of endeavor. They have not profited from the products of the farm to any large extent even when the prices were highest and when the times were most prosperous. They have been the victims of the schemes of exploitation of those who have pretended to help them under the guise of friendship. They have struggled against great odds to maintain their farms and eke out a miserable existence in many cases

It is quite clear to all who have given this question, even casual consideration, that if the Negro farmers of the south can be organized into county, state, and inter-state organizations a new day will dawn for our group in the field of agriculture It is interesting to contemplate what this will mean, not only for the farmers themselves from a social, economic and educational viewpoint, but for the struggling colored merchants and professional leaders in urban centers.

You called attention in your letter to some of the things which the Mississippi farmers are attempting to do for themselves through organization:

First, that they are buying their supplies co-operatively, and that an example of this is seen in the fact that during the first week in July of this year they bought a solid car of groceries at a saving of forty per cent.

Second, that they are shipping their products co-operatively. This implies of course, that through this method provisions are made for them to hold their products until they can sell to good advantage.

Let me say in this connection that if such a movement had accomplished nothing more for the Mississippi farmers it would have justified its existence. If the National Federation of Colored Farmers possessed the means and the facilities for organizing the Colored farmers throughout the south, they could extend the same benefits to the farmers of all the states. It is my earnest hope that the National Federation of Colored Farmers may find some way to promote effective organizations among colored farmers in other states. Speaking for my state, I will say that no state offers a more fertile field for such activities than North Carolina. There are scores of intelligent, progressive, well-to-do colored farmers, who stand ready to get behind such a movement in our state and make it go.

Here in my own state I am interested particularly in a "Back to the Farm Movement" which has as its objective:

First, to create a desire for the ownership of lands with a view of stabilizing rural life.

Second, to encourage the development of rural Negro communities for economic nad political progress.

Third, to emphasize the necessity for making rural life more attractive for Negroes.

While I have stated the objectives of this movement in a sort of off-handed way, in the working out of the details all the benefits aimed at in the Mississippi organization are provided for I think I said to you in a previous communication that I am attempting to demonstrate the nature and purpose of the Movement in Church Fork Township, Davie County, North Carolina. We are buying the land in this section and placing reliable colored farmers. Our venture is in its experimental stage however, and for practical reasons we cannot say more about it at this time.

If I have any special message for the colored farmers of Mississippi, it would be:

1. Strive for the ownership of the land and thus reduce the large number of colored tenant croppers.

2. Strive, for economic independence by continual reduction of indebtedness and cultivating the habit of living within their means.

3. Adopt the "Live at Home," policy. By this is meant the idea of varying the products of the farm and raising on our farms all the things needed for consumption in the home.

4. Finally, as soon as conditions will allow, build good homes and strive to make the surroundings beautiful and attractive for their children.

With this message, I close with the hope that you may have great success in your work.

Sincerely yours,

Rt. Rev. L. W. Kyles,

Bishop A. M. E. Z. Church, N. C.

Convicted of Murder

Whiteville, S. C., Feb.—(ANP)—A Columbus county jury Thursday found Taft Williams of Fair Bluff, guilty of first degree murder in connection with the killing of his wife last September. The verdict carries an automatic penalty of death.

FARM TENANCY

(Continued from Page 1)

COOPERATIVE BUYING

The practice of purchasing needed farm and home supplies by cooperative methods should be continued. By purchasing cooperatively, our units are able to obtain the major portion of their needs at, or near wholesale prices. Our units should patronize home merchants if given courteous and fair treatment.

COOPERATIVE PRODUCTION ANDD MARKETING

Units are urged to plant enough acreage in crops suitable to their soil and climate will enable them to sell in carlots. Green beans and other vegetables, hay, corn, watermelons, peanuts, mixed cars of vegetables and sweet potatoes can be marketed cooperatively by units through our national office.

LEGAL CONTRACTS FOR RENTERS

We should continue to protest the actions of landowners and plantation managers who refuse to give tenants and share-croppers legal written contracts, settlement statements, or privilege to raise sufficient food crops for the sustenance of their families. Members are advised to have no dealings with such landlords or plantation managers and our national officers are instructed to assist members so treated in finding favorable locations.

MODEL FARM COMMUNITIES

We suggest to the proper federal government authority that at least one model colored farm community be established in each of the southern and border states and in any other state having an appreciable Negro rural or urban population.

DR. HENRY A. HUNT

We thank those responsible for the appointment of Dr. Henry A. Hunt to his position in the Farm Credit Administration, which position he has so creditably filled, and whose service has been of incalculable benefit to American colored farmers.

DIRECT REPRESENTATION

We request the Agricultural Adjustment Administration to appoint in each county having an appreciable Negro farm population, a committee composed of two colored farm owners and three tenant farmers or share-croppers, to work and cooperate with AAA county committees, boards, bureaus, local credit corporations, or any other bodies functioning under the AAA, to the end that colored farmers may have direct representation or as close representation as is possible in these various bodies. We request that in counties having organized units of the National Federation of Colored Farmers, that these committees be chosen from our membership.

FARM AND HOME DEMONSTRATION AGENTS

We urge that a colored farm extension agent and a colored home demonstration agent be employed in every county or group of adjoining counties having an appreciable Negro farm population, the same to be wholly under the supervision of the U. S. Department of Agriculture. We also request that these agents be instructed to cooperate with our organization and with local units of our organization in counties where organized, as white extension agents cooperate with units of the American Farm Bureau Federation.

NEGRO AGRICULTURAL INSTITUTIONS

We request the federal government and all state governments to make ample appropriations for the benefit of Negro agricultural institutions.

RURAL CREDIT UNIONS

We favor organization of rural credit unions and assert that such unions should be officered and directed by colored farmers in colored farm communities.

LAND OWNERSHIP

We request the federal and state governments to make every effort to widen land ownership by Negroes, both collectively and individually.

FARMERS' SUNDAY

All units of our organization and colored rural communities should observe Farmers' Sunday. On this day every effort should be made to increase our membership, to spread the gospel of organization and cooperation.

MOB VIOLENCE

We denounce the practice of lynching and mob violence, and desire to petition members of Congress to support the Wagner-Costigan Anti-Lynching Bill.

SOY BEAN

(Continued from Page 1)

corn in 1933. Besides the harvested beans and the hay, about 300,000 acres of soybeans with an equivalent production of over 3,000,000 bushels of beans have been grazed og by livestock in the Southern States in each of the past three years.

In 1934, the total acreage of this recently Americanized Oriental bean exceeded the acreage of such long-established crops as rye, buckwheat, rice, peanuts, potatoes and tobacco. But new demands for soybeans for commercial food and food uses seem to be increasing even more rapidly than acreage. Soybean men believe the next few years will see not only an increasing acreage but a wider distribution with adapted varieties available for every section of the country.

BREEDING WILD DUCKS

(Continued From Page 1)

cent normal expectancy for wild ducks.

What becomes of the liberated hand-reared mallards, says Mr. Lincoln, is not known. Possibly, he suggests, they spend their lives in the marshes, refusing to migrate or fly for the hunter, and if this is true their progeny may be an asset to our supply of waterfowl. On the ither hand, he points out, the captive-bred birds are untrained in the rigors of natural environments, and they may be so unable to cope with living conditions that they succumb rapidly to the elements and to natural enemies. There is need for a more thorough study of the problem, both in the wild and on the game farms.

THREE STRIKES AND OUT

Chicago Tribune: Since last summer three strikes have been called at the mill of the Hamilton Woolen company in Southbridge, Mass. The directors of the company regard the outlook as hopeless and have voted in favor of liquidating the business. A special meeting of the stockholders for this purpose has been called.

Nearly 700 employes remained at their looms to the end. Theye were and are willing to work. They do not want to go on relief, but many of them will have to in consequence of the misguided activities of a minority.

Here is as clear an example as the country has had of the destructive influence of communist leadership in American industrial relations. The communists don't care how many factories they close and how many men and women are thrown out of work. Indeed, the more factories they close the better they are pleased, because they think that men and women out of work are the more readily recruited into mobs.

The agitators will pretend, of course, that the dismantling of the mill was part of a great capitalist plot to grind labor into the dust. It is difficult to believe that many oi the 670 who have been thrown ont of work will be taken in by this kind of nonsense. The plain truth is that the action of the agitators caused the factory to operate at a loss, and only because of the losses is it being closed. The dissolution of the business will save something from the wreckage for the investors, but nothing will be left for the men and women who want to work. They are the principal victims of the communist agitation which was carried on in their name. They have been betrayed, and deliberately betrayed.

BOVINE T. B. BATTLE PROGRESSING; 1893 COUNTIES CLEARED

More than 60 per cent of the counties in the United States are now practically free of bovine tuberculosis according to a mimeographed report just issued by the United Sates Department of Agriculture. The report includes a map with various degrees of shading to show the status, on Nov. 1, 1934, of bovine tuberculosis-eradication work in every county of the United States. This work, begun in 1917 by the department in cooperation with the various states, has reduced the infection ot a minimum in 1893 counties, or 61.6 per cent of the total in the United States.

Seventeen states have been officially designated as modified accredited areas, signifying that tuberculosis among cattle has been reduced to 0.5 per cent or less of the cattle population. These states are North Carolina, Maine, Michigan, Indiana, Wisconsin, Ohio, Idaho, North Dakota, Nevada, New Hampshire, Utah, Kentucky, West Virginia, Washington, Illinois, Oregon, and Virginia. The last two states qualified for accreditation on Nov. 1, 1934. Several others, it is expected, will qualify for similar recognition during the next calendar year.

KELLY MILLER SAYS, "STAY ON THE FARM"

Probably the greatest philosopher of our race in America is Prof. Kelly Miller, dean of Howard University, now retired. In a recent address he delivered some sound advice and among other good things said that "Wherever machinery has been introduced the Negroes have been shut out of employment, except on the lowest level. Wherever Negroes have left the farm for the cities, they have left their own farm business, which were operated and controlled largely by themselves, for places at the bottom of the ladder in our cities.

"Race people on the farm, when they can own and operate the land, are in a much better position to develop for themselves comfortable family lives than it is possible for them to gain for themselves in our urban centers. In order to be of greatest service to themselves and to their group, the race will need to work with the majority group in a minority group. We must learn to work wkith the mapority group in a way to command their respect and confidence. On the farms, the masses of the race have their greatest opportunity."

Killed

Jacksonville, Fla., Feb.—(ANP)—Fred Bentley was killed last Tuesday as he was riding his wheel to work. He was a skilled baker.

THE MODERN FARMER

Vol. VIII. NASHVILLE, TENN., MARCH, 15, 1935 No. 2

DR. CARVER SAYS 'NO'

Scientific Wizard of Tuskegee Declines

Was Offered One Hundred Seventy-Five Thousand Dollar Job

Tuskegee Institute (CPS)—Dr. George W. Carver, eminent scientific "wizard," who has produced in the neighborhood of 285 by-products from the peanut and more than 100 useful articles from the sweet potato and soy bean, admitted reluctantly, last week, that he had been offered sometime ago a salary in "six figures" by the Edison Foundation to carry on his experiments.

At the same time, Dr. Carver also admitted that the Russian government also offered him "a vast sum" which he could not accept. He did, however, send one of his students, John Sutton, son of S. J. Sutton, principal of the Phyllis Wheatley high school, San Antonio.

Figure Is $175,000

According to Ollie Stewart, writing in the current issue of the Southern Workman. Dr. Carver was offered $175,000 per year by the Edison Foundation. "He has refused every offer," the writer states, "though it is reported that a bank which failed during the recent crisis held on deposit a large part of his savings."

The scientist has made no attempt to commercialize any of his discoveries.

In a statement Friday, Dr. Carver declared:

"In the case of Mr. Edison, I was asked to keep all negotiations strictly confidential. I promised I would do so.

"The taxi-driver who brought Edison's representative up from Montgomery to see me was present when the offer was made. There were six figures in the offer.

"The Russian government did offer me a vast sum, but I could not accept. I sent one of my pupils John Sutton, who has been there about seven years and is doing remarkably well."

Sutton, who was an understudy in the laboratory of Dr. Carver, is now director of the Laboratory of Technology of the All-Union Rice Institute in Kransnogor, North Caucasus. He spent his first two years in Russia at the Central Selection Station, in Taskent, where he was assigned to study the dynamics of the concentration of cell sap in the cotton plant. This task he successfully completed, and the results of his experiments are to be published.

Weeds Prevent Floods

United States Forest Service has been busy for the last few months planting mustard on burned-over timber lands. Mustard is a fast-growing weed and does much toward preventing floods and soil erosion in sections where fire has killed all vegetation.

HORTICULTURAL SURVEY

Observations May Be Helpful to Growers

Southern Planters Get New Ideas On Corn, Beets, Tomatoes and Peaches

For a number of years, the Horticultural Department has been conducting systematic field tests for the purpose of comparing various new and old varieties.

Since this is the time of year when many gardeners are selecting their varieties for the coming season, a brief summary of some of the variety trials conducted at Hampton may be helpful. Summarizing a few of the 1934 results, the records read as follows:

Corn

Sure Crop Sugar, Honey June, and Golden Giant, when checked against Stowell's Evergreen, showed that Sure Crop Sugar and Honey June (Texas varieties bred for resistance to corn ear worm) harvested a week later, had fewer major worm injuries, and gave equally high production. The ears of these varieties are covered with thick, compact husks which make them difficult for worms to penetrate. Golden Giant matured a week earlier, was of higher quality, but yielded less. It is an excellent corn of the Golden Bantam type.

Beets

The Asgrow Wonder beet made a very good showing last year. It was earliest, of good quality, and yielded better than three other varieties with which it was compared.

Peaches

In a four-year old orchard containing fifteen varieties of peaches commonly grown in this section, the Cumberland and Golden Jubilee, two varieties developed recently by the New Jersey Experiment Station made a very good showing.

One Cumberland tree bore approximately four and one-half bushels. Ripening with the Carmen, the white freestone peach will soon be an important commercial variety.

The Golden Jubilee, a cross between Elberta and Greenboro, ripened about three weeks before Elberta, and yielded an average of three bushels per tree last year. The

(Continued on Page 8)

Corn Cobs For Litter

The best litter for the floor of the hen house is found right on the farm in corn cobs . When ground up they are highly absorbent and the lightness of the ground material causes all droppings to be covered. An occasional stirring will keep the floor dry and clean for a considerable length of time, dependent upon the conditions in the house. The floor should be cleaned, however, and fresh litter spread as soon as the old begins to appear damp, since dampness encourages coccidiosis.

LIBERIA A WONDER LAND

African Republic Is Rediscovered in Book

Mr. Young Devotes Considerable Portion of His Writing To Country

"The Word War put rubber upon a gold basis," is one of the striking phases from "Liberia Rediscovered," a new book just off the press, which traces in vivid outline the world importance of rubber. James C. Young, the historian, affirms that "we have only enough rubber in warehouses to operate our 24,000,000 motor vehicles three to six months," and further illustrate that in a natural emergency almost the total supply required by this country could be shut off at a moment's notice. Assuredly there is a matter deserving of national attention.

To the average man who thinks about rubber only in the terms of his own tires, it is inconceivable how great has become the importance of this essential commodity. Should war break out tomorrow, rubber as well as guns and men would go far to determine the issue. Without rubber there could be no movement of army transport in the present day sense. Among all the necessities of the modern world it is the one irreplacable commodity," concludes the author.

"Liberia Rediscovered" for the first time provides an authoritative record of the little known Negro Republic which has nestled at the western-most tip of Africa more than 100 years. From the time that it was founded by Americans for their freed slaves, it has been regarded as a moral protectorate of the United States. Liberia is the only independent country, outside of the western hemisphere, in which the American Government has taken a direct interest. By reason of the large annual contribution and the active efforts made by American religious and sociological organizations

(Continued on Page 2)

New Publication

"Goats for the Negro Farmer" is the title of an article written by K. B. Crooks, Assistant Professor of Biology, in a recent issue of the Southern Workman. This five-paged article sets forth in convincing fashion at least ten arguments why the Negro farmer should consider raising some goats. Mr. Crooks reminds his readers concerning the scarcity of milk in Negro homes, and concludes that the keeping of one or more goats is much better than one cow, and he also ventures to advocate a small herd of good goats as a substitute for the traditional family cow.

Reprints of this article are now available, and may be obtained free of charge by writing to John B. Pierce, Office of Cooperative Extension, Hampton Institute, Virginia. Be sure to send for a copy.

ENJOY SWEET POTATOES

Miss Edith Shuck Tells Of Many Ways

Declares Vegetable Is Good With Pineapple Or In Puddings at Home

By Edith Shuck

Cooking sweet potatoes on pineapple slices is a most appetizing way of serving this winter vegetable. You may like to do as I do when some one gives me a recipe, and that is change it slightly to meet your taste and requirements. This recipe originally called for a seasoning of salt and pepper. You may use this or not; I never use salt and pepper with the sweet potatoes when I use cream, butter and sugar, as it seems to me that the butter adds enough salt to make them tasty and the sugar accentuates the salt which is in the butter.

The service of sweet potatoes and pineapple may be used for the main dish on a luncheon plate, or it may be used as a meat accompaniment around a roast. The marshmallows may be omitted, but in my estimation they make the service more attractive.

Sweet Potatoes on Pineapple

For service for eight cook six medium-sized peeled sweet potatoes in boiling water until they are tender. Then drain and run the potatoes through a coarse sieve to remove all the woody pulp. This should leave about three cups of pulp. To this add three tablespoons of melted butter and two tablespoons of coffee cream. Take firm pineapple rings and place them on a shallow buttered baking pan. On each slice of pineapple put a spoon of sweet potato in a rounding mound, almost entirely covering the fruit. Over the potatoes sprinkle a little brown sugar and a few cuts of marshmallow. Put the pan in the broiler six or seven inches from the tip of a medium flame, so the pineapple ring will be heated through by the time the marshmallows and sugar are browned This is a simple and effective way of serving this popular combination of flavors.

Sweet Potato Pudding

While I am giving sweet potato dishes that I like especially, I want to give you my recipe for sweet potato pudding. First cook this sweet potatoes tender in unsalted boiling water, then drain them and run them through a coarse sieve. For three cups of pulp beat two eggs

(Continued on Page 8)

Make Legs Yellow

Broilers with bright yellow legs bring the highest prices on the market, therefore yellow legs are important to the farmer. They are produced by keeping the chickens in the sunshine as much as possible and by feeding green feeds and yellow corn.

SOY BEAN OIL COSTLY

Its Use For Motor Fuel Found Expensive

Experiment Shows It Can Be Made Into Vegetable, Milk Or Coffee

The old and odious evaluation, "not worth a hill of beans" must be revised when speaking of soybeans as a motor fuel in the opinion of O. R. Sweeney, head of the chemical engineering department at Ames, who is a pioneer in bringing the lowly soybean to respected estate in the fields of agriculture and industry.

Men who make it their business to worry about the future and wonder what we're going to do when the petroleum supply, from which our motor fuels are derived, is exhausted, have cast winsome eyes at the busy soybean, but Dr. Sweeney offers scant consolation, writes Fred Henson in the Cedar Rapids Gazette.

Too Expensive

The soybean, it seems, is something of an aristocrat, when motor fuel is mentioned, as Dr. Sweeney points out. "A pound of motor fuel from a pound of soybean oil will cost more than 6 cents. This is about three times the price of retail gasoline. Unless there are some valuable by-products, I see no hope of using soybean oil as a motor fuel."

Dr. Sweeney relates, "Studies have been made in the cracking of soybean oil. This consists in passing the soybean oil through a hot tube A reaction takes place which breaks the oil down. A liquid results, and this liquid, on refraction, gives a material that can be used as an automobile fuel very satisfactorily. The fly in the ointment is that soybean oil, to be very profitable, should sell for at least 6 cents a pound, and not infrequently reaches 11 cents in normal times."

Pictures of bean-driven motor vehicles stirred the publics' fancy

(Continued on Page 2)

IMPORTANT NOTICE!

March 31st, the fifth Sunday in the month has been proclaimed FARMERS SUNDAY and will be observed this year by all local units of the National Federation of Colored Farmers, Inc., and by many churches and communities both rural and urban. The proclamation and instructions on observing the day, together with a complete program, will appear only once in the Modern Farmer, in the March issue. Order your copy early that you may have the program in readiness for the day which should be the greatest day for all farmers and for all who are interested in the welfare of the farmer.

The National Federation of Colored Farmers, Inc., Chicago, Ill.

Soy Beans

(Continued from Page 1)

with the increased production of soybeans as an agricultural product, and the exhibit of a tractor run by soybean oil fuel at the Chicago Century of Progress exposition, brought questions from the curious on the possibiilties for general use out in the open.

Sweeney Is Doubtful

Dr. Sweeney holds no accord with plans such as alcohol - gasoline blends or soybean materials as the ultimate source of motor fuel for this country. "When the petroleum supplies disappear," observes the Ames scientist, "there are a number of ways of making a motor fuel, all of which seem to be very much cheaper than making it from a regular agricultural crop such as corn or soybeans."

But Dr. Sweeney says he has "every confidence in the soybean." He was a pioneer in the study of the soybean while he was in Fargo, N. D., and has watched the industry grow to its present robust stature. However, Dr. Sweeney feels that the soybean's roseate future lies in other fields than that of motor fuel. Based on his present information, Dr. Sweeney believes that "there is no possibility of converting soybeans into an economical fuel for motors.

Dr. Sweeney sums up the entire subject of motor fuels with the observation that "as long as it is possible to pump petroleum products directly from the ground, it would be difficult indeed to find anything to compete with them. It has been the belief of many that the petroleum supply in the world will be exhausted, and no lesser authority than the United States department of mines predicted the supply would be exhausted in 1916.

Gas Overproduction

"However," Dr. Sweeney continues, "in 1916 we had not exhausted the supply, and we found, in 1930, a great over-production. We do not know when the petroleum supply will be exhausted. When it is exhausted there is a series of possible solutions. One is the fermentation of grain into alcohol. Another is the conversion of the waste materials, such as corncobs and stalks of the grain, into wood alcohol or, by a fermentation process, into ethyl alcohol, or by destructive distillation, into a motor fuel."

The Ames scientist hails oil-shales as promising an inexhaustible supply of motor fuels in North America. He says, "Great hope is expressed for this source, but today we know there is a great amount of chemical engineering necessary if we bring this material down to a cheap enough figure. There is always the possibility of a totally different type of automotive engine, and a totally different source of motive power. Certain detonating types of materials have attractive possibilities.'

The possible uses of soybeans are legion, although in many cases, the cost of the beans or processing methods bans commercial possibilities. Soybean oil can have a place in the making of such products as gycerine, explosives, enamels, varnish, waterproof goods, paints, soap, rubber substitutes, printing inks and lubricating oils; as well as food products such as butter substitutes, lard substitutes, edible oils and salad oils.

Soybean Uses

The small starch content of soybeans allows soybean meal to be used in the making of various foods for diabetics and for infant foods, breakfast foods, macaroni and crackers. The housewife may make bread, muffins, biscuits and cakes from soybean flour, although a little wheat flour added makes for better baking.

A vegetable milk derived from soybeans offers the basic material for cheese—fresh, fermented, smoked or dried. The beans when baked, boiled or roasted with proper treatment, are suitable for human consumption. Soybeans, when roasted, may serve as a coffee substitute.

Dr. Sweeney discusses soybean oil as a lubricant. He explains, "If air is blown through soybean oil, the air-blown soybean oil can be used as a lubricant when mixed with heavy petroleum. It can be used in railroad cars and internal combustion engines. The Chinese used soybean oil for lighting for many centuries. It has been used satisfactorily as a substitute for rapeseed oil by railroads.

"In refining an oil for internal combustion engines the oil is treated with a suitable amount of milk of lime," Dr. Sweeney explains. "This gives a heavy precipitate which is dried. This dried mass is distilled, and a material comes off which is suitable for internal combustion engines. In the chemical engineering department we have succeeded in making a lubricating oil by destructively distilling soybean oil."

Corn is still the cheapest grain to feed. Rye, wheat, oats and barley rank next in cost per pound, in the order named.

Liberia A Wonder

(Continued from Page 1)

in behalf of Liberia, the fate of this country has a strong sympathetic appeal to the American people.

However, the country doubtless would have remained nothing more than a remote spot upon the map had not Liberia joined the allies in the World War, when the country came into international prominence as a strategic outpost and a valuable source of palm oil, so much needed in the manufacture of munitions. The German cable station was another prize war much to be desired. Subsequently the Stevenson Rubber Restriction Act, adopted by Great Britain in 1922, inspired Harvey S. Firestone to seek an independent source of rubber supply, free of foregn domination. The story of this search is described in "Liberia Rediscovered," reaching the first goal when choice settled upon the Negro Republic.

Outside of Monrovia, the capital, Liberia practically was an unbroken jungle. Mr. Young devotes a considerable portion of this book to a description of the trials and difficulties encountered in developing a modern industrial organization in a primitive country. When the enterprise was launched Liberia had one road, and a short one at that, for which there was one automobile belonging to the President of Liberia. Today Firestone has built more than 100 miles of good roads and traffic is so heavy the government has introduced traffic cops in the capital. More than 55,000 acres of former jungle are under cultivation, where 10,000,000 rubber trees soon will reach maturity.

The full story of the effort to grow rubber in Liberia, an effort now reaching the stage of fulfillment, in a romance of business seldom equaled. The pioneers found themselves engaged in many undertakings for which they had not bargained. "One of the abiding miracles of the rubber enterprise is the sight of a big American motor truck operated by a driver who never saw one until a few years ago," notes the author.

One of the objectives sought is the improvement of health among the natives. A limited medical department of the early days grew into a modern hospital and a program of scientific sanitation, shedding their beneficent influence into the jungle depths.

TOO MUCH SPINACH SOMETIMES

Benefits of the application of science in raising children are not to be minimized. New knowledge of foods have done much in contributing to the health of modern youngsters. According to Grace Abbott, vitamins and qualities of different for 17 years the chief of the Children's Bureau of the Labor Department, however, there is such a thing as carrying the application of this science just a bit too far. Better results will be obtained if it is diluted with a ltitle common sense. What Miss Abbott had reference to was spinach. A great many children cannot stand the mention of the name. In spite of this, however, they eat it each day after the parents have used various persuasive methods. In the more extreme cases it is more than likely that the nervous reaction removes the benefit derived from the vitamin and mineral content of the food and the mother would do well if she eliminated the spinach from the daily menu—there are other foods just as good.

PRICES OF FOUR FOOD 'NECESSITIES' RISE TO 5 YEARS' HIGHEST PEAK

The spectacnlar rise in food prices which has been under way for months reached a new peak yesterday when prices of four important commodities touched the highest levels of the past four or five years in the Chicago markets. Beef, pork, butter, and eggs are now giving the highest prices to farmers since early in the depression, while city consnmers stretch their pennies to make ends meet.

With butter extras, the principal grade which goes on the consumer's dinner table, quoted at 36 cents a pound that commodity was selling yesterday at the highest price since July, 1931. Cattle were qnoted at a top price of $14 a hundred pounds, the highest since 1930. Hogs rose to $8.30 per pounds, a price unequaled since July 1931. At yesterday's high price of 26 3-8 cents a dozen for February fntures the egg market touched the highest price level since 1930.

The advances here yesterday coincided with announcement in Washington by officials of the Agricultural Adjnstment administration that 14 basic farm commodities have advanced to prewar prices, the goal of the administration program. The list includes wheat, cotton, field corn, hogs, rye, barley, cattle, and milk and milk products.

THREE KINDS OF TEA MADE OF LEAVES FROM SAME BUSH

Three kinds of tea—green, black, and oolong—can be made from leaves picked from the same tea bush.

Next time you have occasion to use molasses in cooking, to prevent the molasses from sticking to the measuring cup, grease the cup first with butter or lard.

NEGRO FARMER BEST BUSINESS MAN

"Billboard" Jackson Gives Some Facts

J. A. Jackson, formerly of the department of commerce, Washington, and now a representative of the Standard Oil Co., in a recent address declared that the Negro farmer had more business sense than the average Negro business man and was pointing the way to success. Says Mr. Jackson:

The Negro farmer seems to proceed along the line of business sense more than any other Negroes in business. He raises his crops to sell to the world. And when he brings his commodities to town he enjoys the law of the survival of the fittest. He knows that the best farm products are what the world wants, regardless of whether the producer is a Chinaman or what not.

Whatever may be twisted about southern justice and the equality of man, there is a practical law here that there is no difference in the price of a white man's or a Negro man's products on the market. Mary Jane cotton is Mary Jane on the market, sold at a standard price, where it matters not if the producer is a Zulu of a Moro.

Department Store Owner

The same applies to Negro merchants and other business men. One of the largest department stores in a certain southern town is owned and operated by a Negro man. Some of the big planters of Dixieland are Negroes. In one country in North Carolina, 350 acres is operated by a Negro.

In Union county, North Carolina, Pleas Haigy is a farm owner of prosperous proportions. Does not owe a cent on his farm, lives on it, is a church worker and there has never appeared the slightest evidence that he is a "nigger" by his white neighbors.

As a matter of fact, there is no finer evidences of "Love thy neighbor as thyself" any where than is seen in Union County. N. C.

In one section of North Carolina the Negro and white farmers are so Christian that they visit each other's churches. I saw a white choir singing in a Negro church.

In Guilford County, N. C., at Summerfield, Matthew Pass owns and operates of farm of about 200 acres, on which is a two-story house of about 10 rooms— out houses, barns. He recently won a suit against a closed bank for $250 cash which he placed in that bank in trust and not on deposit. He got his money.

COLLEGE IN IOWA DEVELOPS NEW CHEDDAR CHEESE

Seeks to Spur State's Industry

Ames, Ia., (Special.)—"It has a delicate flavor, resembling fine butter."

That is the way Prof. M. Mortensen, head of the Iowa State College dairy industry department, describes a new cheese manufactured by the "cheddar" process, which research workers in his department are developing.

This is another step in the department's goal—"a new cheese a year"—in developing the cheese industry in Iowa, where only 15 per cent of the cheese consumed is manufactured within the state.

Result of 2 Years' Study.

The cheese is being developed to meet a demand for a more tasty cheese made from pasteurized whole milk. It is the result of two years' experimentation with various new combinations of cultures necessary to break down the protein in milk to change it into cheese. After the work has been carried on two more years, Prof. Mortensen believes the manufacture of this new cheese can be introduced into Iowa factories.

"Iowa Swiss" Developed

To the end of "a new cheese a year" research workers at Iowa State already have developed an "Iowa Swiss" and a cow's milk roquefort, "Iowa Blue Cheese."

A patented process of curing cheese in mineral oil also has been developed here. It permits putting the cheese in small packages without drying out. Cheese cured by this process cures more quickly, has a better flavor, and no rind.

AN UNPLEASANT TRUTH

(Jackson, Miss. Daily News)

Is the Negro in the South under the New Deal getting a square deal?

Let's be frank about it.

He isn't.

No use in denying the assertion, either. The evidence is too conclusive.

NRA codes don't help Sambo, and relief programs are not according him a just share of Uncle Sam's beneficence.

"Prior to depression," says Secretary C. C. Gilbert, of the Southern States Industrial Council, "the Negro had found a place in industry that he could fill very acceptably. But now thousands of instances can be given in which the Negro in the South is losing his place in industry, and the work he has been doing, and doing very well, has been taken over by white employes, or is being done by machinery to reduce labor cost."

This tells the story tersely. Sambo is being pushed aside in thousands of communities in order to give the jobs to white folks, which is perhaps natural, even if it is selfish.

However, Sambo is at least entitled to a square deal under the New Deal in connection with relief work. At least, it is senseless to let Negroes who are willing and eager to work starve while thousands of shiftless whites are living on relief funds and rations and making no effort whatever to find employment.

Before you get angry about this plain statement of fact, please bear in mind that the Negro constitutes more than 50 per cent of the population in Mississippi and we must all sink or swim together, Also, if the Negroes go under there won't be many left to work.

MODEL KITCHEN SEEN ESSENTIAL TO HAPPY HOME

A model kitchen need not look like a magazine picture nor be expensive. But the kitchen should be so planned that the work can be done easily and conveniently under pleasant conditions.

Every kitchen should help the family to develop happily, with a place where children may help with the work and where the members of the family will not feel in the way at any time.

Work is most efficient and comfortable when the working equipment, such as sink, tables, and drain boards, is at the right height; when windows can be lowered from the top to give good ventilation; when artificial lights are adequate, with drop light over the sink and stove if possible; when the amount of travel over the kitchen floor is lessened; when a kitchen is bright instead of drab; and when careful planning prevents confusion. To create such a kitchen various arrangements of equipment may have to be tried until the best is found.

THE MODERN FARMER

Official organ of the National Federation of Colored Farmers, Inc.

Leon R. Harris - - Editor

Published monthly by the Modern Farmer at Nashville, Tennessee.

Office, 447 4th Avenue, North.

Devoted to the interests of the Farmer, Truck Gardener, Livestock and Poultry Breeder, the Home and the People.

Entered as Second Class Matter, April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 447 4th Avenue, North, Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, 75c for six months, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT.

OUR PLATFORM

1. **A Unit of the National Federation of Colored Farmers in every community. of colored farmers.**
2. **Co-operative buying, producing and marketing.**
3. **Every colored farmer a farm owner.**
4. **Abolition of debt-slavery, injustice and persecution.**
5. **A written contract for every colored farm tenant and sharecropper.**
6. **Better rural churches, schools and homes.**

From the Bible

"I went by the field of the slothful, and by the vineyard of the man void of understanding; and lo, it was all grown over with thorns, and nettles had covered the face thereof, and the stone wall thereof was broken down." Prov. 24:30-31.

IF

If we noticed little pleasures as we notice little pains,
If we quite forget our losses and remembered all our gains,
If we looked for people's virtues and their faults refused to see,
What a comfortable, happy, cheerful place this world would be!
—Unknown.

DIRECT REPRESENTATION WANTED

There are no logical reasons why the Agricultural Adjustment Administration should refuse to heed the request of the National Federation of Colored Farmers relative to appointing a committee of colored farmers in each county, having an appreciable Negro farm population, to work and cooperate with AAA county committees, boards, bureaus, local credit corporations and other bodies functioning under the AAA. This request was made in a resolution adopted at the last convention of the N. F. C. F.

It will be noted that representation ON these various boards, bureaus and etc., was not requested. Colored farmers knew, only too well, that racial and social customs would bar them from direct membership, even in counties having a 75 per cent colored farm population. But, because in many instances, our farmers have not gotten just consideration and relief, it was believed that a committee of colored farmers, representing colored farmers, was necessary to advise and cooperate with the various AAA local bodies for the benefit of all concerned.

We trust the AAA will heed this request and appoint such committees as early as possible. Both colored farm owners and tenants and sharecroppers should compose the committees. They are especially needed in counties where there are no colored farm demonstration agents and counties having these agents should also have the committees to advise the agents and support them.

And last, but not least by any means,—in counties having organized units of the N. F. C. F., the committees should be chosen from the membership of this organization.

WHY WILL YOU STAY?

Sometimes we are tempted to say that many Race tenant farmers and sharecroppers deserve every bit of the injustice and persecution they receive from hard-hearted landlords and plantation managers. Consider a case like this:

Last spring some tenants on a South Carolina plantation informed us that their landlord was keeping them in debt-slavery, was persecuting them, and had told them if they didn't like the way he was doing they could get off, for he didn't care whether he raised a bale of cotton or not. We advised these tenants to move just as fast as they could, and found other locations for many of them. The funny part of it was that THEY WOULD NOT LEAVE. They agreed to try Massa John again. It was about planting time and Massa John had signed up with the government and they believed everything would be better.

Well the other day, this spring, if you please, comes to our sanctum another letter from these same 36 tenants. They say they are in worse shape than ever. All they have made this past season was taken from them for debts owed. They are due some parity payments and the money is in the home bank but Massa John won't go to town and sign for it. He is letting them wait and sweat and beg. Again they want advice. What can we do? Can't Massa John be made to sign? Who should we write to in Washington? And so on.

It may seem cruel, but we hope Massa John never signs. We hope he will take his big rawhide whip and his big number ten boot and thrash and kick everyone of them off his plantation. Tenant farmers and sharecroppers who will endure persecution and injustice year after year are not real he-men. They are children and need a good guardian like hard Massa John. For they just will stay. They just won't move.

WHY CHICAGO

The American Farm Bureau Federation, with a membership of over three hundred thousand, has its headquarters in Chicago, located on Washington street. Chicago is the agricultural capital of the nation. It will always be. No city is better located for sale and distribution of farm products and this includes products from southern as well as northern and western farms. The Farm Bureau membership know Chicago is the logical city for headquarters.

The National Federation of Colored Farmers, Inc. maintains headquarters in Chicago, too. Many have asked officials of this organization, why Chicago. The answer is simple. When the Farm Bureau can find a better city for headquarters perhaps the N. F. C. F. can discover one.

CLEAN UP AND LIVE HAPPIER

We hope all Race farmers will take a notion to clean up their homes and farm lots this spring,—clean 'em up and keep 'em clean. Filth is unhealthy and also a disgrace. It is as easy to keep clean as to stay dirty and keeping clean is far more respectable. Clean and screen the house right now and fool the flies and mosquitoes. Clean the barn and out buildings and get some whitewashing done. Fix the fences and the gates and doors. Make the flower beds. Put up some bird-boxes. Trim the trees in the orchard and get a hive of bees or two if you have none. Let's live clean like folks should live. We will live longer and be happier.

THE FARMER'S PIN MONEY

We had a talk the other day with a western farmer who earns nearly a thousand dollars extra every year "pin money." He calls this the money he earns not farming, but making little useful and ornamental things during his spare time. He has a family of seven and swears all his children who want to go to college shall go, and his "pin money" will take care of their expenses.

This farmer was reared in the Virginia mountains. He is not a northerner. He is shrewd and handy with tools. He and his family make and sell cob pipes, footstoods, with frames made of tree branches nad tops made of shucks and twisted cane tops,—little dolls made out of shucks, and many other articles. He showed us an entire family of colored dolls and we wondered just why some of our colored farmers couldn't get into such a business,—for they sold like hot cakes. Nearly every fall he goes back to his beloved mountains and returns with his truck loaded with mountain laurels. The wife and girls make artificial blossoms, attach them to the live laurel twigs, and sell the bouquets at a quarter per.

This farmer could make a fine living on ten acres. Where is the colored farm family that makes a thousand dollars a year "pin money?"

Don't forget to observe FARMERS' SUNDAY. Invite your city friends. Make it the biggest day of the year.

We can get more by working than we can by begging.

Buy the children some books. Have decent lights in the house so they can read and study. A dirty, broken lamp is your child's worst enemy.

Don't talk and think about what you are going to do next year. Do what you know should be done right now.

Learn how to speak correctly and don't talk too much. Our tongues often get us into trouble.

All sin gets punished. We reap what we sow.

Spring is the time for love. Don't object to the young folks courting.

Subscribe for the Modern Farmer and get your neighbors to do likewise.

EAST PRAIRIE, MISSOURI FARMER

East Prairie, Mo., The Modern Farmer, Nashville, Tenn., Gentlemen and Friends: Since the meeting of the Federation of Colored Farmers in Charleston, Mo., I have improved wonderfully in my location. I have purchased a forty-five acre farm and am now situated on my own land. I am trying in every way possible to make my regular payments, and I believe that with the incoming year I shall be able to develop a great holding.

The Federation has been of untold assistance to all of us, and if I can keep up the good work of educating our group to own their homes, buy land and establish themselves permanently, much good will result therefrom.

PRES. ROOSEVELT ON LYNCHING

"I ask you, therefore, to do all in your power to interpret the problem of crime to the people of this country. They must realize the many implications of that word "crime." It is not enough that they become interested in one phase only. At one moment popular resentment and anger may be roused by an outbreak of some particular form of crime such, for example, as widespread banditry; or at another moment, of appalling kidnappings; or at another of widespread drug peddling; or at another of horrifying lynchings. Lynching unfortunately is no longer confined to one section of the country."

—Address before Crime Conference, Dec. 10.

Eph Tolliver had been sentenced to be hung and the sheriff said to him: "Now Eph I'm willing to grant your last request in the way of anything you're especially fond of for your last meal. All you have to do is to name it."

"Ah'd like a big watermelon," said Eph, as his mouth watered from the very thought.

The sheriff replied: "Why, man, you know very well that you're to be hung in December and watermelons don't come till next summer."

"That's all right," Eph broke in. "Ah kin wait."

URGE ENCOURAGING LETTERS TO COSTIGAN, WAGNER

New York,—Upon the suggestion of a responsible person in Washington, D. C., the National Association for the Advancement of Colored People is urging that prominent white and colored persons send encouraging letters to Senators Edward P. Costigan and Robert E. Wagner in support of the federal anti-lynching bill being sponsored by them. This will prove encouraging and helpful to them in their efforts, it is said.

KANSAS PHILOSOPHY

Atchison Globe: Every man should lift his hat when the flag passes by. He should also do his best to get along without aid from the government that flag betokens.

ASSISTANT CHIEF COMPLIMENTS THE FARMER

One of the high tributes paid to The Modern Farmer as a worthy D. C., in a letter written on Feb. 4, publication came from Washington, It was from Mr. E. A. Miller, Asst. Chief of the Cotton Production Section in the Commodities Division of the United States Department of Agriculture, under which the Agricultural Adjustment Administration operates.

Mr. Miller said: "The specimen copy of The Modern Farmer mailed to me has been received. We are very much pleased with this magazine, and wish to subscribe for it for a period of one year. The subscription of $1 is enclosed herewith. I would appreciate it if you will address the magazine to me in care of this department."

This is not the first ringing endorsement that has come to The Modern Farmer from the department heads in Washington. Others have come from agriculture schools and educational institutions of higher learning as well as from northern schools.

CALAVO—A FRUIT THAT TAKES ROLE OF FOOD OR PLANT

Has Nutlike Flavor; Suited for Any Meal

A fruit that plays a dual role is the calavo. It's a sophisticated food with a nutlike flavor. The seed from the center, when planted in water, will grow into a strange and interesting plant. This little oval of surprises may appear at any meal and adapts itself to each of the dinner courses.

But first, there are points to be remembered when purchasing and using calavos. Unlike other fruits, they never soften on the tree and are not ready to eat when freshly picked. They may be served when the flesh has softened so that the fruit yields easily to the gentle pressure of the palm of the hands. When cut, cover any unused portions with waxed paper. Do not place calavos in the refrigerator until they are softened and ready to be served. The unused portion, left in the skin, will keep in the warmest part of the refrigerator.

A sharp thin dressing is preferable for calavos. A few drops of lemon or lime juice, plus a bit of salt, bring out the salad fruit's most distinctive flavor. Sieved calavo is an excellent spread for the morning toast or the afternoon sandwich. Cubes of the fruit atop cream soups or sea food cocktails add color and tang.

FOUR ILLINOIS COUNTIES RAISE PAY OF FARM HANDS

Allerton, Ill.,—A 25 per cent wage inerease for farm hands was announced here today by farmers from Vermillion, Champaign, Edgar, and Douglas counties. The unmarried farm hand is to receive his board, have his clothing washed, and get $29 a month. The married man farm hand who must board himself is to receive a comfortable home for his family, enough pork to last a year, a large garden, one or two milk cows, plently of feed for his chickens, and $35 per month. These figures were based on the stipulation that work be furnished from March 1, until corn husking.

Black walnuts have proved to be a good crop to raise. They resist drought well and farmers are advised to plant more walnuts.

INTERESTING NEWS & NOTES

The remains of an entire herd of wild horses that roamed the plains of the state of Idaho a million years ago, have been disovered recently by an officer of the Washington Smithsonian Institute. These horses were ancestors of the modern horse.

Rev. John Thurman, a tobacco farmer and minister of a Baptist church of Stanford, Ky., prevented the wreck of L. and N. passenger train No. 21, when he discovered a slide of rocks on the tracks in a narrow gorge, following a hard rain. The 51 passengers raised a fund for him.

The Farm Administration will continue the reduction of cotton acreage by 25 per cent.

Disbursement of cash to farmers by the Agricultural Adjustment Administration has now passed the half-billion dollars mark.

A law to wipe out all chain gangs has been introduced in Congress by Representative Matthew A. Dunn, a Democrat of Pennsylvania. This system is prevalent in all southern state and is considered to be a brutal system and a disgrace to America. It is expected the bill will pass but will have tough opposition.

A Greenville, Texas, official of the HOLC was negotiating with officials of the federal agricultural department for a federal loan to two cotton gin operators. He was informed that the goverment would not lend money on gins or any other distillery for the manufacture of intoxicating liquor. The official informed the department that cotton gins process cotton, not liquor.

The legislature of Georgia has passed a bill to create eight markets for handling farm produce. The Commissioner of Agriculture is given broad powers to establish prices, grades and market methods and to declare an embargo truck and fruits from other states if the home grown supply is able to meet the demand.

A government survey shows that big farms are assessed at only 47 per cent of their value while small farms are assessed at 68 per cent. This proves that the big farmer receives more consideration than the smaller farmer and likewise the injustice of the taxing system in many localities.

A California doctor advises people who are nervous and irritable to eat lots of spinach.

Alabama had 93,795 colored farmers in 1930 which was a decrease of less than 2 thousand in ten years. 15,920 were owners,—a decrease of a little over a thousand since 1920. The number of tenants and sharecroppers remained about the same during the ten year period. Land owned was 1,189,355 acres and the value of land and building owned was 17,391, 688. Race farmers of Alabama should purchase more small farms.

The new minister had asked Eph Brown to lead in prayer. It was Eph's first experience of this sort but he didn't want to disappoint the new pastor and so he complied. Twenty minutes later found Eph still praying. He had prayed for everybody and everything he could think of. The congregation was becoming restless. Finally from one of the deacons came a strong "Amen."

Eph looked at the deacon and said: "Thanks, deacon; that's the word I have been trying to think of ever since I started."

By crossing the usual varieties of potatoes with strange varieties found in South America Russian scientists have developed a plant which will stand sever cold and which also is good food.

APPRECIATION OF CONTRIBUTION AND CONSTITUTIONAL RIGHTS OF OTHER RACES TO BE TAUGHT IN CLEVELAND PUBLIC SCHOOLS

Cleveland, Ohio. — Development of habits of tolerance and of positive appreciation of the contributions made by the members of each group or race and an understanding and appreciation of the history, characteristics and virtues of other races and groups, and appreciation of the constitutional rights and privileges of all persons, will be among the objectives of citizenship training of which Assistant Prosecutor Perry B. Jackson, former state representative and former councilman, is secretary and the only colored member.

In the early part of 1933 the board of education appointed the above committee to make the study of and investigate citizenship training in the public schools. The columinous fact-finding report together with an elaborate statement of the scope and characteristics to be embodied in proper citizenship training has just been filed with the board of education. Definite curricula recommendations will be made in February, 1935.

Others in the committee include former Acting Mayor Harold C. Burton, chairman; H. T. McMyler and S. Burns Weston, vice chairman; Robert H. Owens, executive secretary.

CHURCH IS CHALLENGED IN MESSAGE FOR RACE RELATIONS OBSERVANCE

New York,—"The churches of America must face reality and recognize the friction, unfriendliness and race prejudice so evident in the relations between racial groups," says the Message for Race Relations Sunday, Feb. 10, 1935, issued by the Department of Race Relations, Federal Council of Churches, George E. Haynes, executive secretary.

"Our profession of ideals of justice and goodwill must be made effective by positive acts. If we talk brotherhood we must act brotherly; if we profess interracial goodwill we must live it. The fundamental changes taking place in American life make it imperative that the great and good qualities of each racial group should be recognized and that the power of Christian love and fellowship should operate to utilize these qualities of each group to enrich all.

"Moral and spiritual reconstruction is as greatly needed in relations between races in America as between economic classes. This mutual failure to recognize worth retard the exchange of values and prevents cooperation by which all would be enriched. It leads the stronger to deny a fair sharing of work with the weaker group in days of unemployment. It further restricts the awards of economic wealth in times of prosperity. It places barriers in the way of participation in the political, educational and cultural advantages which should be available to all. In the color discriminations now so evident in recovery programs..... churchmen have a clarion call to work for justice and fair play."

In addition to the Message which is a section of the literature prepared by the department for a nation-wide use on the day, suggestions for special programs and services are given for all departments of the church; women's societies, young people and students groups, children; a church service with prayers and litany; special information for speakers includes new and authoritative facts about American Negroes, American Indians, Mexicans in the United States and Orientals. The demand for this literature has increased so with the years that a larger publication than ever before is in circulation for 1935. It may be secured from the department at normal cost.

Radio stations will carry a special service with appropriate music for this observance, as well as messages from Dr. Daniel A. Polling and Dr. S. Parks Cadman. In many communities the day will usher in a week of interracial events including exhibits, pageants, mass meeting and forums.

This will mark the 13th annual observance of Race Relations Sunday, initiated by the department in 1922.

WHAT KIND OF A HOUSEWIFE ARE YOU?

Do you ever pause and check upon yourself and your methods of home engineering?

Be honest with yourself in using the following questionnaire.

Are You—

ECONOMICAL?

Do you get good values in the products you buy, food. clothing, etc? Do you shop around? Are you careful as to quality?

SAVING?

Do you use all the left-overs? Do you keep clothes in good repair? Do you know how much you spend and what you spend it for? Do you keep a budget?

HELPFUL?

Do you cooperate with your family in order that the home may best serve each individual? Are you considerate and kind in your advice and criticisms? Are you always willing to aid your children?

PUNCTUAL?

Are you always on time? Do you have your meals ready at a stated time? Do you teach punctuality to your children?

NEAT?

Do you use buttons instead of pins? Do you keep your hair tidy and wear clean aprons? Do you teach even the little tots to pick up and keep things in order?

RESOURCEFUL?

Can you sew, and mend and remodel? Can you use dyes skillfully? Are you adept at dry cleaning? Can you make curtains, rugs or fancy needlework?

AMBITIOUS?

Do you sacrifice to get ahead? Do you try to improve yourself and your children? Do you work to know more and have more?

CHEERFUL?

Do you keep your worries and complaints to yourself? Are you pleasant and agreeable? Do you always have a smile and a word of cheer for your family?

ORDERLY?

Do you set an attractive table? Do you keep everything in its place? Do you do your housework with the fewest steps and least confusion?

Now you've checked up on yourself what kind of a housewife are you?

CHICAGO WATERMELON—FRIED FISH KING DIES

Chicago—For years known as the "Watermelon King," Samuel Winningham, the man who made himself rich selling watermelons and fried fish here, passed away at his home, 3658 Giles avenue, Wednesday night after two years illness. Mr. Winningham was 60 years old.

COOPERATIVE IDEA IN USE AT SCHOOL

Japanese Woman Divides Her Classes into 'Families' to Develop Initiative.

A tiny Japanese woman has been visiting the progressive schools around Boston. Mrs. Y Hani would have more to tell our new educators than to learn from them if she could speak English. As it is, an interview with her has to strain through interpretation by her daughter, Louis M. Lyons writes in the Boston Globe.

But it is worth the struggle of such indirect discourse to discover the significance of a new educational ideal which has developed in Japan within a dozen years to such porportions that Mrs. Hani was invited half around the world this summer to describe her school at the world conference of the New Educational Fellowship held at Nice.

There she met Mme Montesorri and Miss Parkhurst from the Dalton school and Dr. Washburn of the Winnetka school. They had not even been named to her when she founded her school based on the ideal of the family as the germinating force for a new society.

Laboratory for Ideals

Mrs. Hani was not in any formal sense an educator. She was a wife and mother. Her own two girls were the focal point of her interest in education. They have both been graduated from her school.

In a world of isms— of fascism and communism and militarism and feminism— little Mrs. Hani has turned back to the family as the basis for her educational program.

"The only effective kind of education," she says, "is that which enables children to develop, through, their own actual experience, the conviction that they must create a good society and the confidence that they will succeed."

Her husband is an editor. She was on his staff. Between them they publish a woman's magazine. Her school she calls the laboratory for the practice of the ideals of the women's organization which she has founded.

As she spoke at first of the magazine and the movement, it suggested a parallel to the League of Women Voters. But Mrs. Hani, smiling shook her head.

"Mother's idea," her young daughter carefully explained, "is not a political one. But she believes we can not develop progress in family life toward a better society when we are all separated. Her idea is that through cooperation the women can build up ideal families and then build on the family ideal a Christian society of peace and service. She thinks it is of first importance that girls enter a happy married life and they should be prepared for it."

Developing Children's Dreams

Japan has compulsory education and the academic standard of the schools is high. They have fewer private schools than Americans support. Mrs. Hani's pupils come from the professional class, but not, she says, from the well-to-do.

One of her daughters had already gone to primary school when she established a secondary school with a seven-year course for girls from 12 to 19. She called it the School of Liberty. That was in 1921. Later a junior college was added to the high school. She started with twenty-six girls, one of them her younger daughter, now with her in America. They were the daughters of the subscribers to her magazine, disciples of her thought.

Mrs. Hani now has 300 girls in an elementary school. She plans to add a high school for boys.

"A school is also a little society," Mrs. Hani begins her educational experiment, "I determined to make my school a family society and to share its management with the girls. We divided our twenty-six girls into five 'families.' They soon began to take interest in actively participating in the management of their family societies. I attended weekly meetings as adviser. In these meetings the girls were trained to think on ethical, social and life problems."

The girls were influenced by the new spirit of democracy then rising in the nation. One suggested that they organize their family life without servants, and that was done. Mrs. Hani grasped the suggestion as indicating "a potential power for social reform in the new mind of the coming generation."

Shared School Labor

They thereupon shared the common labor of the school and its attendant housekeeping. The girls were taught cooking and its companion duties. "We explained to them about liberalism and rising prices," Mrs. Hani says. "Having discovered our incapacities, we faced the problem of increasing our efficiency, improving our mode of living and changing our habit of thinking."

This, then, became almost a juvenile Brook farm. "The result was soon evident. The timid girls became pleasant. Those who were slow became quick workers. The better they learned to labor the more humble and modest they became. Above all, their health improved with their responsibilities."

Mrs. Hani never heard of the project method. But she made the organization of her family within the school the springboard for plunging into education.

"Before girls study economics," she explained "they should pay attention to their own family economic life. In our school they started by keeping accounts of their personal expenses and in advanced classes they keep books on the school expenditures.

The School Budget

"For the last five years we have financed our school on a budget formulated by our advanced classes. The budget is distributed among the girls and their families, to whom they explain it in detail. This training, stimulated by economic questions of the day, afforded the girls the incentive to study economics with keen interest."

The dynamics of this education has been proved by its graduates. The graduates have formed a sort of sodality to create a ferment for their social ideals. The first graduate class in 1928 formed a cooperative society whose sales last year amounted to 100,000 yen, which equals nearly $50,000. Mrs. Hani's daughter, a member of the cooperative staff, has been sent by the society to Europe to study western cooperatives.

The next class started settlement work in a farming village near the school. "Its work," explains Mrs. Hani, "is one of open gatherings for keeping contact with classes different from ours with a view to studying how to associate with them and to assist each other."

The 1930 class organized an institute of industrial art to create an industrial art exhibit for the school. This organization has sent two girls abroad to study.

The 1931 class opened an exhibition called Rationalization of Home Life in Tokio, held there for three weeks. It met a wide response and was repeated in many cities. It was based on Mrs. Hani's ideal of increasing everyday efficiency by applying scientific knowledge.

Publishes English Paper

The school publishes a weekly in English to encourage study of that language. Last year's class plans to launch a quarterly, for exchange of views with youth of other countries.

Mrs. Hani wears the native costume, a gray grown over white, as simple as the Greek dress. Her daughter wears western dress, wrist watch and jeweled brooch.

"Our people will gradually apply their age-honored sense of art, to the newly adopted western dress," says Mrs. Hani. "In the old closed-door period of Japan many things were well cultivated. The appreciation of art was one of them.

WASHINGTON'S COLORED CITIZENS

Old Letter About Them Published

A letter some fifty years old, has just been sent to the editor of the Modern Farmer, and among other things, the writer who was a prominent northern white man, has some complimentary remarks about the colored citizens of Washington, D. C., at that time. Says the writer:

"Though through location and climate Washington is apparently, at least, more closely allied with the south than the north. it is a fact that the Afro-American makes a better showing here than in any other city. This is often matter for surprise to newcomers, especially northerners, but to the old timer and to many southerners it seems the most natural thing in the world.

Here more than anywhere else, for one thing, is official life open to men with dark skins. This is true no matter which party is in power. The Republicans began to give places to Afro-Americans first as a matter of course, but long ago the Democrats followed suit. On the same level as the Afro-American official classes are the professional folk and the more enterprising business men of the race. Many of these are in receipt of excellent incomes, living in handsome houses, keeping their servants, their horses and their coachmen, justlike white folks,' and in many instances conducting themselves without the slightest trace of self consciousness or bad taste. Among these classes are to be found numbers of men and women who are well mannered without affectation, well dressed without ostentation and of excellent mental cultivation.

The Other Extreme

But it should not be understood that all the Afro-Americans of Washington are on the high levels indicated. As a matter of fact, the larger porportion of the 70,000 or 80,000 of them are not, and the thousands belonging to the lowest strata are on about as low levels as can be found any where. They are indolent, shiftless, poverty stricken and often impudent. This characteristic seems to be more pronounced in the low grade Washington Negro than in his fellow of the same grade in almost any other city. Why it would be hard to tell. Possibly it is because, though Washington is more of a southern than a northern city, there are still none of the' southern restrictions here regarding street cars or railroad cars, Negroes riding alongside whites in all public conveyances. This is true of all northern cities, but in no strictly northern city is the colored population so large as here.

It is not true, though, that the Negro toughs of Washington are worse than white toughs elsewhere. They are a novelty in such numbers to the stranger, but otherwise they are of the normal tough type, save that they have dark skins.

The Big Middle Class

The middle class Negroes who are neither poor nor rich and who earn their living in perfectly straightforward ways are by far the most numerous and in some respects the most troublesome. This is because, knowing their civil rights perfectly, they are inclined to enforce them at all times and in all circumstances.

You will observe this particularly on the street cars. No matter how crowded they may be or how many white women are obliged to stand Negro men rarely or never give up their seats to white women. Nor can you censure this holding on to seats when you look the situation over. No one ever knew a white man to give his seat to a colored woman and the colored man cannot see why he should vacate in favor of a white woman. Sometimes curious incidents arise from the situation indicated.

This story is told of a Negro man, the only seated male occupant of a car in which the aisles were filled with white women standing. He sat stolidly reading, as though he saw nothing but his paper, until a great stout working-woman of his own race set foot on the car. Instantly his eyes pierced the sheet, and with a corteous gesture, he arose and beckoned to the massive colored woman. At the same time he said to nobody in particular and as if speaking quiet impersonally:

"Will the women in the aisle kindly move aside so that the lady over by the door can get to this seat.

Charles Goodwin.

DEVELOPS NEW STRAIN OF CABBAGE WHICH WON'T SMELL UP HOUSE

Ithaca, N. Y.,— A strain of cabbage that "won't smell up the house" is announced by Prof. C. H. Myers of the department of plant breeding at Cornell university as one of fifteen new strains developed.

The nonsmelling type is a selection from a well known European variety called the Early Savoy, and some persons claim that when it is cooked in the kitchen the order cannot be detected in the front parlor. It is also said to be a little more easily digested than other varieties. Other good points of this strain include a reasonably uniform head shape and well crinkled foliage.

Among the fifteen new strains, eight are classed as "table varieties," including the Early Savoy. Two are new strains of cabbage obtained by crossing and selecting varieties. The heads run from three to four pounds in weight, they have little waste to the core, and are of good quality either cooked or uncooked, Prof. Myers says.

POTATOES HEAD VEGETABLE LIST IN LOW COST DIET

When a low cost diet is considered, potatoes should be placed at the head of the list of vegetables. Serve them once or twice a day if you are using a limited food budget.

Henry Sherman, professor of nutrition at Columbia university, has said that the vitamin C value of potatoes, though low in weight-for-weight comparison with certain fruits, is important, especially in low cost diets, because of the relatively large quantities of potatoes eaten. Similiarly, he says, the iron content of potatoes makes them important in inexpensive meals.

Dr. Sherman also says that the food value is not the same throughout the potato, and that the part of greatest health value is likely to be nearest the skin. Many persons throw away dollars in health value because they peel potatoes instead of using the whole vegetable. Potatoes baked or boiled in their skins save money and health.

Dr. E. V. McCollum of Johns Hopkins university says the potato has achieved popularity because it has no pronounced flavor. The potato, it has been said, blends well with any meal and lends itself to many appetizing combinations.

REMOVE ONION ODOR

Many families don't have onions as often as they would like for the simple and good reason that the head of the "kitchen department doesn't like the idea of her hands giving off onion fumes for a day or two after each serving. Soap and water alone fail miserably to remove the odor, but if given the aid of a little mustard they are very effective. Dust the hands with dry mustard and then wet and rub thoroughly. Follow this with a good washing with soap and water and you will lose the reminder of yesterday's onions.

CHOOSE VIRGIN ISLANDS SITES TO GROW SEED

Washington,—(ANP— St. Croix, the southernmost of the Virgin Islands, is to have a cucumber seed growing farm covering 160 acres, Governor Paul M. Pearson announced today.

Favored with an abundance of sunshine and an ideal growing climate, the Virgin Islands have been selected by a South Dakota seed company as the location for this seed growing farm. The climate will enable the company to grow the seed during the winter season, thus allowing two crops a year. The company will send its own expert to St. Croix to tend and harvest the crop.

Negotiations are also under way for a four-acre plot in St. Croix for seed corn planting. The corn will be very carefully cultivated, to produce select seeds. The pollen will be hand distributed, and each ear will be protected by a paper bag covering.

About the N. F. C. F. and Modern Farmer

FROM A PROMINENT NEGRO MERCHANT

"I am glad to learn of your great interest in our farmers' welfare and the faith you have in organization. Not only do our farmers need it in all its meanings. Organization and cooperation must be the watchwords of the Negro and he must come into his own through his economical as well as through his religious and educational life."

W. P. EVANS, Proprietor Evans' White Frant Department Store North Carolina

FROM AN EXPERT ON COOPERATION

"I have examined the Modern Farmer carefully, column by column and page by page. I appreciate that it takes considerable effort to prepare an issue a publication such as yours."

R. H. ELLSWORTH, History and Statistics of Cooperation, Formerly with Federal Farm Board.

FROM A PROMINENT CLUB WOMAN

"When I think of the men and women of my group who have struggled so hard to help us solve our economic problems, I think first of you and of the National Federation of Colored Farmers. I believe that through this organization the markets will be opened to the Negro farmer. This will inspire the young Negro to turn back to the soil and again become a part of the backbone of the industries of the world,—the industry of farming.

Please accept my sincere congratulations and best wishes."

Yours for united action.

GRACE WILSON EVANS,
Terre Haute, Ind.

COOPERATIVE BUYING PAYS

"Since joining the National Federation of Colored Farmers I have been ordering my farm and home supplies cooperatively and we have saved from fifteen to twenty per cent on all purchases made. It gives me great pleasure to be able to say this.

E. W. WILLIAMS.
Vaughn, Miss.

HELPS GET RED CROSS RELIEF

"We have read the letter carefully. As there have been other complaints regarding distribution of relief in this country we have asked our field representative to make a special investigation and report to us.

EVERETT DIX
Assistant Manager, Eastern Area American Red Cross

HELPS HIM BUY HOME

"A little better than two years ago I joined our Unit. At that time I was a tenant on a near-by plantation. My landlord was a good white man, our state can't afford a better landlord, regardless to creed or color. But my soul's desire was to own a farm and home of my own. I couldn't see my way, so I consulted with our national officers. They advised me what to do. I accepted the advice and followed their instructions and today, I can tell all my fellow-farmers that I hold deeds to 66 acres of land, a mile and a half from the railroad station on a good road, with good house and pasture, water and a growing crop. I will always give the N. F. C. F. my support.—JOHN QUINN, Lexington, Miss.

Talks To Colored Farmers

About "My Recent Trip"

By Leon R. Harris, Secretary National Federation of Colored Farmers Inc.

Brother Farmers:—I was called east recently and decided to make a circle down through the Carolinas and Virginia, visiting some farmer friends en route.

Illinois farmers are fast signing up the corn-hog contracts. They are buying machinery also and the implement factories are running full blast. Some of our good city friends are seeing now just how much the farmer is worth to them. When the farmers stop buying the factories stop running and everyone suffers. Wheat is looking pretty good. We will have an average crop, probably somewhat larger than last year's crop.

Passing through Indiana, I was informed of the death of an old farmer friend who owned a nice little place in Randolph county. As is so often the case, the boys had forsaken the farm for the cities and the old home place has been purchased by a white man. I am always sorry to hear of a farm owned by one of our group passing into the hands of the other fellow. We need more, not fewer farms.

A southern Ohio farmer told me he had been offered $600 for his team of mules and would not accept it. Mules are selling high and the farmer who has one or two to dispose of is a lucky man. Dairy cows are also selling high in Ohio and the middle west. They are still cheap in the south.

Came down through the mountains of kentucky and West Virginia and was impressed by the many fine orchards. South of Roanoke I saw a well tended orchard of over 100 acres—all apples trees. The home place was looking spic-and-span and I know the owner has made some money the past few years. Our farmers should raise more fruit. Our orchards are usually hardly worth the name of orchards. Fruit trees need care—lots of care,—if we ex-expect to get any fruit off them.

Farmers of southern Virginia and northern North Carolina were plowing. Spring was in the air. Most of them were sewing oats which cost them from 80 cents to $1.10 per bushel. Here is a case where cooperative buying would have paid well. Had these farmers been organized and purchased their seed oats cooperatively, they could have obtained good seed for not more than 75 cents per bushel. Race farmers are losing money every day and staying in poverty simply because they will not organize and work for each others interests.

I am always glad to visit the little community in Guilford county N. C., where I farmed for five years and where I still have some of the finest friends in the world. The depression has hit these farmers hard. They are nearly all small farmers and have not yet learned to depend all together on their farms for their living. They have learned a good lesson though and are talking farming this year like they mean business. I wish them success.

My friend Wiley, a one-horse tenant farmer, frugal and industrious, has never failed to make money farming and never will. Nothing can stop his success for he knows his business and is not afraid to work.

I found Jim Williams, one of the largest owners of the community, busily engaged digging a fish-pond which the government will stock for him, and from which he will be able to derive some income in two or three years. This is what I call taking advantage of opportunity. His son Calvin, although partially made an invalid by service for his country during the war, is a good hustler and in spite of his difficulties, is taking care of his family of five children and not singing the blues. His good wife encourages him and takes care of all the details of the huckstering business in which he is engaged. I predict that this family will go over the top in a big way as the children get older and will be a credit to the community and race. You can't keep a good man down, —neither a good family. CLASSIFY APPLES TO BE USED FOR COOKING, EATING

At one time, it has been said, most of the apples were used for cider making. Now that they are appreciated as a base-forming food for their vitamin C content and mild roughage, they're used in numberless ways.

Staff members at Purdue university classify them in this manner:

For eating—Jonathan, Delicious, Grimes Golden, McIntosh, Winesap.

For baking—Home Beauty, Northern Spy, Wolf River, McIntosh, Arkansas or mammoth Black Twig.

For pie—Maiden Blush, Johathan, Northern Spy, McIntosh, Baldwin, Stayman.

For pie—Maiden Blush, Jonathan, McIntosh, Northern Spy, Stayman, Grimes Golden, Mammoth Black Twig, York.

For jelly—Baldwin, Northern Spy, Maiden Blush, Jonathan, Rome, Salome, Grimes Golden, Stayman, Winesap, Mammoth Black Twig.

Judge—So your matrimonial life has been very unhappy! What was the trouble? Was it December married to May?

Chloe Johnson—Lan' sakes, no, jedge; it was Labor day wedded to de Day of Rest.

NO STATUE COULD BEST HONOR CALVIN COOLIDGE

Philadelphia Inquirer: Mrs. Calvin Coolidge has made known to the legislative committee of Massachusetts, which is considering methods of honoring the memory of the late president, that she disapproves of a memorial in the form of a statue. As her views will probably be respected we are not likely to see a statue of Mr. Coolidge in the capital of the state of which he was governor for two terms.

The incident, however, is a reminder of the fact that the statue is no longer the most approved method of prepetuating the name and fame of one who has served his country, although, in some cases, it is peculiarly appropriate. The present disposition is to combine utility or altruism with art. Thus playgrounds have been laid out and libraries erected to the memory of men who have held high official places in the state and nation.

Calvin Coolidge was an eminently practical man with little taste for display. If he is to be memorialized it would be appropriate to adopt a plan that would help the living while honoring the dead.

Wire weeds which normally bloom in August, were found in full flowers at Nashville, Tenn., in December.

PROCLAMATION AND PROGRAM

FARMERS' SUNDAY, MARCH 31, 1935

Authorized by the Executive Board, the National Federation of Colored Farmers, Inc., Chicago, Ill.

THE PRESIDENT'S PROCLAMATION

Pursuant to the authority vested in me by the Board of Directors of the National Federation of Colored Farmers, Inc., I, James P. Davis, president of said organization, do designate Sunday, March 31, 1935, as our annual "Farmers' Sunday." All local units are hereby ordered to have appropriate religious exercises on that day.

Once more we are privileged to assemble together and render thanksgiving and praise to the God of our fathers and mothers, who has been so good to us, who has guided and helped us, whom we still know to be the farmer's "best friend."

Today, let us be thankful for life and opportunities. Let us be thankful that the shadows are disappearing, that a new day is dawning. Let us be thankful that our organization has endured throughout these trying times, and, that through it, we have a way and a chance to help others.

Let us pray today for more knowledge, for more patience, faith and love. Let us pray for our organization, for our officers and brethren, for the many thousands of our group and vocation yet not organized. Let us pray for our native land and for those in authority. Let us pray for peace and prosperity and for the coming of the day when every citizen may have an equal chance to live and prosper.

Therefore for this purpose, every Unit under the jurisdiction of the National Federation of Colored Farmers, Inc., is instructed to assemble in some church on this day to render thanks unto Almighty God for the blessings we enjoy and pray for Divine guidance and assistance. Every member is hereby instructed to take part in the exercises.

May the principles of co-operation, of service and of charity fill every mind and heart, and, united, may we go forward with renewed determination to advance the work and welfare of our organization.

Given under my hand, this, the 25th day of February, 1935.

(Signed) JAMES P. DAVIS, President.

OFFICIAL ANNIVERSARY PROGRAM

SONG—"Bringing in the Sheaves."
PRAYER.
RESPONSIVE READING—(Led by Chairman)

Chairman: "Behold how good and how pleasant it is for brethren to dwell together in unity.

Congregation: Thou visiteth the earth and waterest it; thou greatly enrichest it; with the river of God, which is full of water; thou preparest them corn, when thou hast so provided for it.

Chairman: "He causeth grass to grow for the cattle and herb for the service of man; that he may bring forth food out of the earth.

Congregation: "Trust in the Lord and do good; so shalt thou dwell in the land, and verily thou shalt be fed.

All: "O Lord, how manifold are thy works: in wisdom hast thou made them all: the earth is full of thy riches.

SONG (Selected).
Reading of President's Proclamation.
Address of Welcome—On behalf of Church.
Response.
SONG: "The Farmer's Hymn." Official Hymn, National Federation of Colored Farmers, Inc. (Tune: "My Faith Looks Up to Thee.")

God bless us, we who toil
Upon the goodly soil
Which thou hast made;
Uphold us by thy might,
Help us to know the right,
And ever, day and night,
Be thou our aid.

Send plenteous sun and rain
On mountain, hill and plain,
And valley wide;
Grant us prosperity,
Increase our faith in Thee,
O may we happy be
Whate'er betide.

Unite us heart and hand
In one fraternal band
Unto the end;
That we may praise thy name,
Of all men, Lord, the same,
Our God, whom we proclaim:
"The farmer's Friend."

—(Copyright, by Leon R. Harris.)

ADDRESS: "How Organization Helps Colored Farmers."
MUSIC: (Selected).
INTRODUCTION OF VISITORS.
THREE-MINUTE TALKS: By Officers and Agent for Modern Farmer.
SERMON. OFFERING. ANNOUNCEMENTS.
BENEDICTION.

INSTRUCTIONS

All officers and members should strive to make FARMERS' SUNDAY a great day for the cause of the organization of Colored Farmers throughout the nation. Appoint a special committee for this day. Invite the public to attend. Send notices to all churches in your community and invite your city friends. Have special music. An all-day meeting will not be out of place. Let the public know that you are proud of your organization and that the N. F. C. F. merits any assistance given it. If for any reason you are unable to hold your exercises on March 31st, be sure and hold them as soon thereafter as possible. FARMERS' SUNDAY MUST BE OBSERVED.

SPECIAL NOTICE, NUMBER ONE

Officers of local units are instructed to send one-half of general offering received on this day to National Federation of Colored Farmers, Inc., 3827 S. Michigan Ave., Chicago, Ill. This money is for the "Missionary Fund" and is used to carry the gospel of organization and cooperation to the many thousands of American Negro farmers yet not organized. Our work must be carried on. Be liberal.

SPECIAL NOTICE, NUMBER TWO

The MODERN FARMER is the official organ of the N. F. C. F. It speaks for us. It deserves our support. As customary, all local units of the N. F. C. F. and affiliated Women's Clubs are commanded to hold their annual festival for the benefit of the Modern Farmer, the day before Farmers' Sunday. Hold your festival Saturday, March 30th. All receipts from festival should be mailed promptly to Modern Farmer, 447 Fourth Avenue, North, Nashville, Tenn.

SPECIAL NOTICE, NUMBER THREE

Preserve this issue and program. If more copies of this paper are wanted you may get them for five cents per copy. Address The Modern Farmer, 447 FOURTH AVENUE, NORTH, NASHVILLE, TENN.

Horticultural Survey

(Continued from Page 1)

skin color is very beautiful, being yellow blushed with red.

Small Fruits

Several varieties of blackberries, dewberries, raspberries, and gooseberries were planted in the spring of 1933 to determine which varieties would be best suited to local conditions. All of these brambles bore their first fruit last summer.

The Young dewberry with its large good quality fruit, and high yield is a very desirable variety to have in the home garden and bramble fruit enterprise. The canes make an enormous growth, and should be planted no less than six to eight feet apart. A thornless Young dewberry was introduced in 1934.

The Potomac raspberry made the most striking yield. Sixty plants standing three feet apart yielded 110 pints, twice as much as other varieties. Care should be taken to keep this variety away from soil infested with Crown Gall.

The Glendale gooseberry was also outstanding in these trials.

Among the strawberries, the Dorsett and Southland, two varieties recommended by the United States Department of Agriculture, ripened somewhat earlier than the Premier, and had a higher quality.

Agricultural News.

1935 Version

Omaha World-Herald: A Missouri woman has amended the old prayer to read: "Give us this day our daily bread—Sliced."

If you do not want the clothes to freeze on the line during cold weather, try using a little salt in the last rinsing water.

Enjoy Sweet Potatoes

(Continued from Page 1)

and add a cup of milk to them. Add a cup of chopped pecan kernels to the warm potatoes, then add three tablespoons of butter and one-half of a cup of brown sugar. Add the eggs and milk to the potato mixture and stir the ingredients well to mix them evenly. Pour the pudding into a buttered baking casserole and bake it in a low oven, 300 degrees Fahrenheit, until it can be cut with a knife, leaving the blade clean. If you wish you may top this dish with cuts of marshmallow and melt them in the broiler before the pudding is served.

Doxey Bill Passed By Congress Calculated To Help Cotton Growers

EXEMPTION OF THREE BALES ALLOWED SMALL FARMER

Chicago Tribune Reports Favorable Passage on Legislation

Cotton prices rebounded on all markets following passage of the Doxey bill by Congress, which allows small cotton growers, tenants and sharecroppers an exemption of three bales instead of two as was at first recommended. The National Federation of Colored Farmers requested a three bale exemption in resolutions passed at the last annual convention. Relative to this and other features of the cotton program, the Chicago Tribune reports:

"Passage of the Doxey bill by the house of representatives shortly before the close of trading gave added impetus to the advancing market. The initial impulse for advancing prices came from Liverpool, where a sharp upturn proceded the opening of trading in the markets here.

In Liverpool cotton opened 31 to 37 points higher and trading was heavy throughout the day as reports were received that European traders who had sold out their holdings were reinstating their lines.

American Markets Respond.

The American markets followed the example of the English exchange and prices turned upward. In Chicago the closing range of prices on futures were 29 to 32 points, in New York gains of 29 to 35 points were chalked up, and New Orleans quotations were bid up 32 to 27 points.

As passed by the house the Doxey bill incorporates the amendment adopted by the committee yesterday which raises from two to three bales the exemption allowed by small cotton growers, tenants and share croppers under the government's production control program.

Earlier in the day Senator Smith (Dem., S. C.) one of the leaders of the cotton group, said legislation would be pushed which would provide a 1935 cotton quota for 10,000,000 bales and abolition of the cotton processing tax, and the substitution of benefit payments out of relief funds.

Urge U. S. Loans Be Continued.

Smith made his announcement after a conference with other senators from the cotton states. Under the program of this group the 12 cent a pound government loans on cotton would be continued and made applicable to the 1935 crop. No loans would be made to farmers in excess of their allotted production quota and the 50 per cent tax on the excess cotton grown would be maintained.

The committee announced it was making arrangements to confer with President Roosevelt today, at which time the program will be presented to him. The AAA has already fixed the 1935 cotton production quota at 10,500,000 bales, but the cotton senators intend to ignore this and amend the act so as to retain last year's figure of 10,000,000 bales."

Appointment Of Race Man Proposed To The Farm Board

STARTLING FACTS REVEALED

Need for Better Educational Facilities for Youths

WASHINGTON, D. C.—Fewer than 10 per cent of high-school age Negroes in 15 southern states are enrolled in public high school. This fact, revealed in the national survey of secondary education, was announced last week by the federal office of education.

In these 15 Southern states, there are slighty more than a million Negroes of high school age, and of this number only about 102,000 are enrolled in public school. In contrast, nearly four times as many white students of high school age in the same states go to public high school, the survey disclosed.

These and many more facts and statistics about Negro education at the secondary school level are included in a new Federal Office Education monograph, one of 28 reporting complete findings of the National Survey of Education available from the Government Printing Office, Washington, D. C. This particular survey monograph on secondary education for Negroes was prepared by Dr. Ambrose Caliver, Federal Office of Education specialist in Negro education.

The National Survey of Secondary Education was conducted under the auspices of the Federal Office of Education by authority of Congress. Dr. William John Cooper, former United States Commissioner of Education, was the Survey director. The major burden of the inquiry, however, was entrusted to Dr. Leonard V. Koos, professor of secondary education in the University of Chicago, the associate director of the Survey.

U. S. DIRECTS SCHOOL SURVEY

Resulting from a three-year study by a distinguished group of educators, the Survey, it is emphasized by Carl A. Jessen, Survey coordinator, aimed primarily at discovering and appraising unusual and extraordinary practices. Mr. Jessen in the Federal Office of Education specialist in secondary education.

Because of the meagerness of information on the education of Negroes, the National Survey of Secondary Education inquired into both the status and noteworthy practices in Negro education. The inquiry centered on availability of secondary education for Negroes, organization of schools, Negro high school staff, Negro high school pupils, curriculum and extra-curriculum offerings, administration

Smaller Meat Supplies Predicted

WILL BOOST CHICKEN AND EGG PRICES COMBINED

All Types of Livestock are on low Sides of Production Cycles

Record-breaking drouth of 1934 is creating conditions which promise to bring a highly prosperous period for poultrymen during the next two years. Livestock production is being sharply curtailed and the resulting decline in meat supplies will tend to lift prices for both eggs and poultry. Thus writes Gilbert Gusler in the current issue of the American Poultry Journal. He continues as follows:

Even before the 1934 drouth began, livestock production was being reduced because of the small feed crops produced in 1933 and the AAA corn-hog program. The process of curtailment, especially in cattle and sheep, was greatly accelerated by the drouth. The AAA has purchased in a program involving the purchase of about 5 million ewes.

Less Meat Animals

It is estimated that numbers of cattle on farms on Jan. 1, 1935, were only about 55 to 60 million head compared with 67 million head a year ago; hogs, 40 to 42 million head compared with 56 million a year ago, and sheep, 45 to 47 million head compared with 52 million at the start of 1934. Total number of livestock reduced to animal units is expected to be about 20 percent less than last year and the smallest in 35 years.

All three classes of meat animals will be on the low side of their production cycles and the high side of their price cycles, a situation that has rarely occurred in the past. Cattle numbers will be about as small as in 1928, the last low point in the cattle population. The 1935 lamb crop probably will be the smallest in many years. Hog supplies probably will be reduced nearly a third compared with the last two or three years.

Little Increase Likely Soon.

Following this coming period of shortage, there can be but little increase in supplies of meat animals available for slaughter before the end of 1936. Return to the high level of meat production of the last five years is unlikely for several years, aside from any curtailment program by the AAA. Hog production can be expanded most quickly when conditions are favorable, but a big pig crop appears out of the question before the spring of 1936, and it would not start to market in volume until the closing months of that year.

These conditions point to substantially higher prices for all the heavy meats. How much higher they will go will depend on the trend of the general price level and employment. This seems likely to be upward. One semi-official guess is that meat ani-

EXEMPTION FOR BUTCHER

Processing Tax on Hogs Slaughtered for Home

Farmers, in general, are exempt from the processing tax on hogs slaughtered for consumption by their own family, household or employees, it is explained by corn-hog workers in the Iowa State College Extension Service.

Numerous Iowa farmers have been inquiring as to the conditions and limits within which they are exempt from the tax on the processing of hogs, under the Agricultural Adjustment Act. Butchering is in progress of completion on many farms, and some farmers are planning a "second killing" before the beginning of warm weather.

Not only are farmers exempted from paying the tax on slaughterings for their own use and that of their households, but they are not responsible for the tax on hogs which they themselves slaughter for sale to retailers or commercial handlers. The responsibility for the tax on such slaughter was placed upon the handlers, under a regulation which took effect Nov. 5, 1934, the beginning of the current marketing year.

Requirements

Consequently, farmers are now liable for the processing tax only upon hog products which they sell directly to, or exchange directly with, the consumers, in excess of certain exemptions that apply to producers only.

Under these exemptions, the producer who slaughters his own hogs and sells to or exchanges more than 300 pounds but not more than 1,000 pounds of hog products he is liable for the tax on the amount sold or exchanged in excess of 300 pounds. But if he sells or exchanges more than 1,000 pounds or products, he is liable for the tax upon the entire amount of such sales or exchanges.

Farmers Launch Bureau To Study New Grain Uses

Bloomington, Ill., Organization of a farmers' elevator research bureau under the nonstock, nonprofit law of Illinois for the purpose of promoting new uses for agricultural products, such as alcohol motor fuel, was announced today by the Illinois Farmers Grain Dealers association.

The new bureau is to serve the national farmers' elevator movement, working whenever possible through research departments and laboratories of established agricultural colleges. The new organization announced a proposal to amend the Illinois law in respect to regulation of grain elevators used for public

N. A. A. C. P. REQUESTS THIS KIND OF RECOGNITION

Secretary of Agriculture Henry A. Wallace, Urged to Act Favorably

New York, N. Y.—The National Association for the Advancement of Colored People has urged upon Secretary of Agriculture Henry A. Wallace that "at least one member of the race of courage and expereince with agriculture conditions in the South be appointed to the contemplated Labor Board designed to provide more effective protection for the Southern sharecroppers under the cotton control program which is designed to enforce the labor provisions of the AAA crop control contracts."

"No group of farmers is more exploited than Negro farmers," the letter signed by Walter White, N. A. A. C. P. secreatry, continues, "Hundreds of thousands of Negro sharecroppers and tenant farmers have been dispossessed from the land and forced to become homeless, shelterless and foodless nomads. Only courageous and uncompromising action by the Federal government can prevent the increasing of the number of these pitiful victims of the crop reduction program. It is now imperative that at least one member of the board vested with sufficient authority be a Negro who is conversant with the plight of these Negro farmers.

President Barrett's Letter

Sandusky, Illinois, March 11th 1935—My dear Brother Harris, and Modern Farmer Readers:—Greetings and best wishes to you all for a prosperous year in your endeavors, whatever they may be.

This will inform you that the Du-Bois Unit of Sandusky, Illinois is making its way to the front. Today, two years ago we were granted a charter, known as the National Federation of Colored Farmers Inc. During the first eighteen months of our organization we were at a standstill, due to the fact there are a large number of Race people here just as they are all over the country who are too superstitious to take hold of things presented to them by one or more of our Race group even tho it's for their own individual benefit. Such persons as those I place them in the class with the other pessimists.

We have had and are having many hard knocks and criticisms coming to us from such persons, but thanks be to God we are sail-

NEW DEAL FAILS IN EFFORT TO AID PEANUT GROWER

Speculator, Not Grower, Gets Main Benefit

(Chicago Tribune)

New Deal efforts to aid southern peanut growers have largely been offered by natural influences, and the sharp increases in prices resulting from the working of natural laws have largely benefited speculators, with the farmers getting little addition to their incomes, according to brokers and others here interested in the peanut trade. These natural influences included excess demand over supply and increase in cottonseed oil prices which is influential in determining peanut prices.

The Agricultural Adjustment administration's help to peanut growers included benefits to be paid directly by the AAA or through payments by crushers who manufactured peanut oil. These payments took the form of either direct payments to the farmers or increased prices for the farmers' crops which the federal bonus permitted the crusher to allow.

How Bonus Is Paid

The crushers are paid bonuses according to the grade of peanuts that are to be converted into peanut oil. To secure these bonuses the crusher certifies that he has made a payment to a farmer or has paid in excess of the minimum prices. This section of the plan provides for a contract between the crusher and the farmer. However, the crusher, in the event that there is no contract may get the conversion bonus, the presumption being that the bonus would give him the means of paying the farmer more for his product. Brokers here assert that the loopholes in this part of the plan enable the crusher to profit at the expense of the farmer.

The funds to provide bonuses for crushers are obtained from a processing tax of 1 1-2 cents a pound on the shelled peanuts levied on consumers. The tax also provides funds to pay benefits under the previous plan which inincludes curtailment of acreage.

Believed Surplus Existed

In setting up its plan, the AAA proceeded on the basis that there was a surplus in peanuts and a good way to get rid of this oversupply would be to convert it into peanut oil, which is a perfered substitute for cottonseed oil, selling at a premium of 1-4 a cent a pound.

While the plan was being set up— the effective date was Oct. 1— cottonseed oil was selling at low prices, bringing about 7 1-4 cents a pound early in September. It now sells at just under 12 cents a pound.

With the announcement of the plan consumers rushed to make forward commitment, which helped to clear up a part of the supply. Then the price of cottonseed oil began to rise. When cottonseed oil was law it was not economic to convert the peanuts into oil, but when the prices went up it became profitable to do this.

All this time, brokers here assert, there was actually no carryover in peanuts despite the belief of the AAA that there was.

Sepeculators Get Benefits

When these various influences began to work, speculators in the south rushed to buy up peanuts. Brokers say that the crushers were most active in this connection. In the mean time the farmers had disposed of their crops at only nominal increases in selling prices. Thus the speculators have been the principal gainers in a situation which saw peanuts rise from around 4 1-2 to 5 cents a pound early in September to about 9 1-4 cents a pound at present, with some grades selling as high as 10 1-2 cents.

In the meantime, brokers say, the crushing of peanuts was reduced when the AAA saw that the supply of peanuts for edible uses was being lowered sharply.

Marvin Wood, a broker, says that the country may expect an acute shortage in peanuts in June and July before next year's crop comes in. He adds that the AAA's plan to restrict acreage will further complicate the situation in the event that the nation has another of the crop failures such as occurred last year.

A girl from the city was visiting on the farm and was watching with great interest a six-weeks-old calf that was nibbling the grass on the lawn.

"Tell me," she said, as she turned to the farmer's wife, "does it pay to keep such a small cow as that?"

The noblest motive is the public good.

SECRET OF BUTTER FLAVOR SIMPLIFIED BY DAIRY EXPERTS

Urbana,—The secret of enhancing the flavor and aroma of butter, a practice which has been in use for almost fifty years, has been worked out in the laboratories of the college of agriculture, University of Illinois, it is announced by Dr. H. A. Ruehe, head of the dairy department. The principle can now be applied in a more direct and more effective method than has heretofore been possible, he said.

Believed to have "great possibilities," the method eventually may profoundly affect the billion and a half pounds of creamery butter manufactured annually in the United States. Plans are being made to patent the method and give it to the dairy industry for whatever benefits it may bring producers and consumers in the way of a higher quality and more desirable product, Dr. Ruehe said.

Working with him in the discovery of the new method was R. J. Ramsey, a member of the college dairy manufacturers division. The process involves the distillation of the ordinary "starters" used in butter-making. Concentrated quantities of the volatile flavoring principles which impart the desirable aroma or bouquet to butter are obtained in the distillate.

Their finding is another and the latest improvement in the use of cultures, or "starters," in cream, a practice which has been employed for many years to develop flavor and aroma in butter. The Danish bacteriologist, Storch, who began his work in 1884, was the first to investigate butter cultures. Four years later the use of such cultures in cream "ripening" became a part of the commercial butter-making process.

Subsequently other investigators established the fact that two other organisms besides the one commonly present in starters were necessary for successful results. Still later it was proved that these organisms changed the citric acid of milk into acetylmethyl carbinol. This in turn was converted into the volatile chemical compounds which produced the aroma and flavor.

However, attempts to intensify the flavor of butter by the addition of synthetic compounds of this chemical have been branded an adulteration and therefore an illegal practice.

The method developed by Ruehe and Ramsey not only makes it possible to isolate the flavoring principles from a starter but also to increase the content of them in that starter.

When the distillate obtained in the process is added to cream, the flavor and aroma are greatly intensified without increasing the acidity, or citric acid content, of the cream. Sweet cream treated in this manner produced a butter that had the high aroma and flavor of that made from ripened cream, yet had low acidity. The distillate can be added directly to the butter to obtain similar results.

If you use kerosene lamps it is wise to soak the wicks in strong vinegar occasionally. This will help to keep the lamp from smoking. It also pays to boil the burners in vinegar and soda once in a while.

THE NEGRO MARKET

(In Oppurtunity Magazine)

In a revealing article recently published in Domestic Commerce, a publication of the United States Department of Commerce, Eugene Kinckle Jones, chief, Division of Negro Affairs, points out some little known and rarely considered facts anent the Negroes' purchasing power. This is a subject on which even the scientific experts of the great advertising agencies are woefully ignorant: and for the most part of the sales directors of nationally advertised products hold stubbornly to ideas of the Negroes' buying power that are a mixture of hear-say, prejudice and inaccurate estimates based on inferred social status. As a result Negro periodicals and magazines suffer and manufacturers lose millions of dollars in sales which they might reasonably hope to gain if a little more realistic intelligence were applied to the consideration of this field.

The fact that the Negro in the 17 largest cities of the South annually spends more than the nation's average export trade to Mexico and Central America or the West Indies and Bermuda, and only a little less than the combined export income from Argentina, Brazil and Chile would appear to be proof positive that the socalled Negro market is far from negligible. Mr. Jones estimates that in normal times the annual purchasing power of the Negro amounts to two billion dollars.

And what does the Negro buy? He buys food and clothing, automobiles and radios, furniture and household articles, cosmetics and tobacco, cigars, and cigarettes, and we suspect wines and beer and liquor. But whether he buys a Ford in preference to a Chevrolet, Pontiac, Plymouth or Dodge, and whether he buys Camels rather than Chesterfields, Old Golds or Lucky Strikes, and whether he buys listerine instead of Lavoris should be of some concern, so it seems to us, to those who seek to expend the market for these and similar products.

MORE TURKEYS EXPECTED TO BE RAISED THIS YEAR

The demand for turkey eggs for hatching and for baby poults is greater this spring than last. This would indicate that people who did not raise turkey poults last year are going to try raising them, and also that those that did raise some poults last year are going to raise even more this spring. Although the care and management for baby poults is similar to baby chicks there are a few things that should be considered by anyone raising young turkeys.

Do not crowd poults or brood too many in one flock. One hundred poults to a 10-12 brooder house is an ideal flock. The fire in the brooder stove should be started at least forty-eight hours before the poults are placed in the brooder. A temperature of 90 to 95 at the edge of the hover, two inches from the floor, is about right for the first week. Each week thereafter the temperature should be decreased five degrees until 70 is reached. It should then be held at this point until the poults are well feathered and have learned to roost.

Night crowding or pilling is a common complaint where turkeys are brooded artificially. The use of a dim light all night in the brooder house is probably the best method to prevent crowding during the early part of the brooding period. A low perch or roost should be placed near the brooder while the poults are young and every inducement made for early roosting. Poults on roost will not crowd.

Great care should be taken during the first few days to see that turkey poults learn to eat. Place shallow feeders or boxes filled with a reliable turkey starting mash before poults as soon as they are put in the brooder. Young turkeys do not eat mash as readily as baby chicks and must be taught to eat.

Some turkey raisers put a few older poults in the young flock for a few days as a means of teaching the little poults to eat.

Another means of teaching all the flock to eat is the use of a moist mash. A moist mash mixed with milk and composed of ground alfalfa and turkey mash should be started the first few days the poults are in the brooder. Some feeders grind green alfalfa in a food chopper and sprinkle it over the mash.

A. R. REECE'S LETTER

Prentiss, Miss., Editor of The Modern Farmer, Nashville, Tenn., Dear Sir:—There are some conditions existing among the farmers of this state that should be corrected. We admit that we live in a country styled as "The land of the free and the home of the brave," and we acknowledge the American Eagle as our symbol, and the Constitution as our bulwark, our foundation, our guiding star, but when we stop to think of how some members of this American citizenship group are mistreated, we wonder how long it will last, and who will deliver us.

For instance, the thousands of dollars appropriated by the government are not being equally distributed here in these parts. I haven't any idea how much the state adds to the government funds, but it is a known fact that hundreds who plough under their cotton have never received their checks. Scores of persons who were given definite promise of certain relief are still waiting, and a like condition obtains even in the operating of the schools.

The Negro school buildings are poorly located, miserably heated; the school term is short, the teachers are under-paid, and no effort or attempt is made to give the Negro children even half of what the white schools are receiving, in spite of the fact that the taxes are the same, and the requirements in so far as citizenship goes, and as far as law provides, must be equal.

We hope that The Modern Farmer and other publications will join in with us in pleading for equal justice and fair play.

A. R. Reece.

MOST CHARMING PERSONS IN WORLD LISTED BY LECTURER

By Associated Press.

Chicago, March 13—Miss Margery Wilson, who lectures on the gracious arts, has selected these 10 persons as the most charming in the world:

President and Mrs. Roosevelt, Amelia Earhart, Pope Pius XI, Emperor Hirohito of Japan, Princess Elizabeth of England, Bill Robinson, the Negro tap dancer; the Prince of Wales, Anne Lindbergh and Sonya Henjie, Norwegian fancy skater.

She listed these as the 10 most charming Americans:

Anne Lindbergh, Will Rogers, Jane Addams, Elsie De Wolf Mendl, Mary Pickford, Alexander Woollcott, Ernestine Schumann-Heink, the Rev. Harry Emerson Fosdick, Gutzon Borglum and Ambassador Robert North Bingham.

All can possess charm, Miss Wilson said, who "will be themselves."

HEN LAYS EGG THAT IS SHAPED LIKE HOUR GLASS

An egg shaped like an hour glass was laid Sunday by a hen owned by B. L. Moore, a deputy sheriff living on the Katy Road, about eight miles from Houston.

He said his father, B. C. Moore, who is 72, declared he never had seen such an egg.

AMATEURS FIND WHITEWASHING A SIMPLE PROCESS

Ever since the days of Tom Sawyer, and even before, whitewashing has been an effective and inexpensive method of making homes, farm buildings, fences and even trees more attractive, as well as more sanitary.

Two features which help sustain the lasting popularity of whitewash is that it is easy for amateurs to apply it to almost any surface, with white wash or paint brushes, and that it is simple to make.

A comparatively inexpensive white wash used by the government for lighthouses is excellent for use on wood, brick, and stone. It is made by the following process: Slake half a bushel of lime with boiling water, keeping it covered during the process. Strain it and add a peck of salt, dissolved in warm water; three pounds of ground rice put in boiling water and boiled to a thin paste; half a pound of powdered Spanish whiting and a pound of clear glue dissolved in warm water. Mix well together and let the mixture stand for several days. Keep the wash thus prepared in a kettle or portable furnace. Apply it as hot as possible, with paint or white wash brushes.

A simple formula for a whitewash which does not easily wash or rub off, is to take ten parts of the best freshly slaked lime add one part of the best hydraulic cement. Mix well with salt water and apply quite thin. This will not wash off or rub off easily.

SPECIALIST TELLS HOW TO PREVENT CHILD'S DISLIKES FOR FOODS

Amherst, Mass.,—The child given foods of all kinds when he is small won't have an opportunity to acquire any food dislikes as he grows up. This philosophy of child feeding is proposed by Miss May Foley, nutrition specialist of the Massachusetts State College.

The well balanced diet for the average child of pre-school age should be built around a quart of milk a day, together with a plentiful supply of fruits and vegetables. These three groups of foods, according to Miss Foley, are known as "protective foods" because the minerals and vitamines they contain are important in guarding against infections and the deficiency diseases.

The vegetables may be served raw. Miss Foley advocates giving the child at least one raw vegetable or a green one every day in one form or another. Sandwiches made of cabbage, lettuce, or spinach between thin slies of dark bread are easily handled by the 2 year old and add variety to the youngster's meals.

An egg a day is an important item in the diet of the growing child. Eggs are a concentrated source of easily digested protein and also are rich in certain minerals and vitamins.

The child who has developed his teeth can be given meat. Ground meat at first might be better than regular cuts which require considerable chewing, although the development of the child's teeth determines just how much meat he can chew successfully.

"BACK TO THE SOIL"

Editor Chicago Defender: I am sure the editorial in the recent issue of the Defender on "Returning to the Soil" brings to light the only solution to this depression—problem that has so many of our people chained down in the slimy pits of poverty.

It is encouraging that the Federal government proposes to help the people get back to the farm and so far as the Negro is concerned, it is necessary that the government help them stay there.

To send them and leave them in the hands of old time plantation bosses, and slave drivers is what the Negro resents, but he will gladly go if the land to work and other life's necessities are provided so he can eat the bread he sweats for, and own his home. Thus he will not have to run from boss to boss and from plantation to plantation again.

I am trusting that our Race publications and Congressman Mitchell will keep up with this great movement, for if carried out as specified, it will mean a re-emancipation of those of our group who are now, the victims of poor housing conditions and heartless landlord as well as real estate companies in towns and cities.

It must be remembered that there are state authorities and designing capitalists who are fighting this humane proposition of government for no other reason than that they want to see a great multitude of poor Negroes and without home. They want to live on and eat the fruits of Negroes' labor and roll in luxuries as in the past.

Self-respecting Negroes want land on which to grow their own bread and meat under the dictation of their own conscience, with the strong arm of the Federal government around them as a guarantee of security.—A. H. Williamson, Columbus, Ga.

STUFFED POTATOES

Ingenious cooks have stuffed almost everything stuffable from olives to peppers and tomatoes and now the old commonplace potato is even being given some added frills. There is room for it, of course, since when thinking of a potato you nearly always picture them as being either boiled, mashed, baked or fried. Prepared in this new way the potato is really nothing more than a baked potato to which has been added a new idea. It also means a little more work for the housewife. After the potatoes are thoroughly baked cut them in half lengthwise. Remove all the meat, mash and moisten it with milk, season and add grated cheese and butter. Return it to the skin and then fit them together and bake for about seven minutes more.

INTELLIGENCE AND RACES

In experiments extending over a period of 14 years Dr. T. R. Garth, head of the Institute of Race Psychology at the University of Denver, found evidence that the mental powers of human beings are much the same regardless of race. There was little difference in the intelligence quotient of an Indian girl and that of a white girl both reared in the same white environment; but that of an Indian child who lived in a native environment was only half as great. Thus Dr. Garth spikes the fallacy that "the Indian must have a red mind, the Negro a black mind, the white man a white mind, and so on."

Dr. Otto Klineberg, Columbia university psychologist, recently completed a study which brings a similar conclusion. After five years in New York city, he says, the southern-born Negro develops in intelligence to within 10 per cent of the white child and is equal in intelligence to the Negro born and raised in the north.

It is Dr. Klineberg's belief that the intelligence of the Negro improves in direct proportion to his environment. "As their background improves," he says, "so do the score of Negroes examined approximate more and more closely the standards set by the white."

A group of 10-year-old Negro girls born in the metropolis showed an intelligence quotient of 98.5, almost exactly at the norm for white children, Dr. Klineberg's survey of the records of some 3,500 Negro school children in Harlem suggests that most if not all of such retardation as they show "is due to the presence among them of a large number of newcomers from the south" Thus there is the same problem of dull pupils acting as a drag upon bright ones as occurs among white children.

Dr. Klineberg's findings discount, incidentally, any belief that more "intelligent, Negroes migrate north. Given the same chance, the scientific tests show, "white," 'red" or "black" minds develope equally well because, in the main, their potentialies are the same.—Dayton Daily News.

WHAT GIRLS ARE MADE OF

When a young man falls in love with a girl he is more or less inclined to believe she is so sweet that she certainly must be made of sugar. Old men in their second "boyhood" also fall the same way and believe the same thing. Without a doubt that is where they got the term "Sugar Daddy" from. But more practical minded persons look upon sweet young ladies as being made of sterner stuff than sugar. Even men like them better if they do not "melt" under the heat of a little flattery. And now science has come forward with a list of the principal chemical ingredients that nature used in constructing good-looking young women. These chemicals and their proportions follows with a little humorous comment sandwiched in between:

1. Thirty to 40 teaspoons of salt.
   To stop them from being too fresh.
2. Eight to 10 gallons of water.
   For a good supply of tears.
3. Enough lime to whitewash a big chicken coup.
   Perhaps that's what makes them so fair.
4. Glycerine enough for the bursting charge of a heavy shell.
   This is what makes them so explosive.
5. Enough glutin to make five pounds of glue.
   Apparently what makes the "clinging-vine" type.
6. Phosphorus enough to make 2,200 match heads.
   No doubt here's where we got the idea of "hot mammas".
7. Fat sufficient to make seven bars of soap.
   So they can feed "soft soap" to the boys.
8. Plenty of iron to make a six-penny nail.
   What makes them so "hard".
9. Sulphur enough to rid a dog of fleas.
   One reason cats like to be petted by girls.
10. And believe it or not, only one measly quarter of a pound of sugar, which any one not totally blinded by love or fattened on soft soap can see is insufficient to sweeten all of this water, lime, glycerine, phosphorus, iron, salt, glue, fat and sulphur.—Pathfinder.

GOATS END DEPRESSION FOR POVERTY-STRICKEN VIRGINIA COAL MINERS; DEMAND FOR MILK GREATER THAN SUPPLY

Williamson, W. Va.,—This hilly country, part of the greatest bituminous coal territory of the world, is turning its hand to a new industry these days. With employment in the mines at low ebb, heads of Mingo county families are turning to the dairy goat industry, and they say they are finding the demand for milk greater than the supply.

Goats were first suggested as the answer to Mingo County's unemployment relief problem by a man who had done relief work in China and had seen the dairy goat successfully installed there. This man, C. Ralph Stroebel, who now is employed elsewhere in government service, took one look at the Mingo county mountainsides and declared himself in favor of milk goats. The country is ideal for them, he said.

E. M. McGlothlin, Mingo county agricultural agent, and representatives of a Williamson dairy were enlisted and became enthusiastic supporters of the cause. Funds were borrowed to purchase a herd of 100 purebred and grade goats of the best dairy breeds and these were placed in a model barn and grazing area in order that prospective purchasers might receive visual as well as verbal instruction in their care.

Until arrangements were made to turn the goats over to unemployed families who will purchase them on long-time payment plans, the goats were milked in the model barn and their product turned over to the local dairy to be prepared for the market. Immediately, the goat experimenters found they had more of a demand than they could supply.

The reason for this, McGlothlin declared, is that there are few commercial dairy enterprises in the eastern part of the United States handling goat milk. He said he had difficulty in finding milk goats and finally had to go to Michigan to obtain the stock.

Goat Defended.

"No pun intended, the goat has been made the butt of the animal kingdom," the county agent declared. "For generations cartoons have shown the goat eating tin cans, chewing red flannel underwear off the line, and otherwise acting in a way not calculated to inspire serious consideration as a valuable, productive animal. Other anti-goat propaganda deals with the goats' olfactory offensiveness. None of this is true".

The country agent asserted that milk goats must be cared for as carefully as milk cows and that if this is done the goats become valuable, productive and inoffensive animals.

"The goat is much more intelligent than the cow," McGlothlin explained. "When the owner wants to milk his flock he simply calls out the name or number of the animal he wants and she comes and takes her place on the milking platform. The goats soon learn who their regular attendant is, and are restive if any one else tries to milk them."

Richer Milk

C. R. LeRoy, a Williamson dairyman who has been assisting in setting up the Mingo county goat dairy, said that goats' milk is much richer than cows' milk, and is invaluable in the treatment of certain types of stomach disorders as well as other ailments, inasmuch as it has an alkaline reaction.

Goats' milk bring from 30 to 50 cents a quart, far above the best market prices for cows' milk, LeRoy said

A stranger was talking to a farmer and said to him "This seems to be a healthy country. You say you are nearly 70 and can still do a full day's work. That's pretty good."

"Yes, but my old dad, who is 97, is even a harder worker than I am," said the farmer.

"His health must be wonderfully good," remarked the stranger.

"No, it ain't," replied the farmer. "For the last several years he ain't had quite his old-time pep. Sometimes I kinda think farmin' don't agree with him."

RETAIL FOOD PRICES INCREASE IN FEBRUARY

By Associated Press.

Washington, March 13.—An increase of retail food prices during the last two weeks of February was reported by the labor department.

The amount of food which cost $1.22 the first two weeks of the month cost $1.23 during the last two. That same amount cost $1.08 a year ago and 90 cents two years ago.

MR. M. B. BARNES CHANGES ADDRESS

Wyatt, Mo., (Special)—Dear Editor: This letter is being sent you to let you know that I have moved to the above named city and am asking that you change my paper so that it will reach me where I am now living. I miss the paper when it does not arrive each month and I am sending the correct address so there will be no delay. I am a member of the National Federation of Colored Farmers and I regret very much that I was not fortunate enough to get some of the land that our President made possible for us to get. I am hoping there will be another chance to get in on such a transaction. We feel that Mr. Jas. P. Davis, our president is another Moses, sent through the power of God to lift, lead and help the members of our race. May God bless his efforts and crown his work with much success.

Yours truly,
M. B. Barnes.

SPEAKER SAYS REPEAL HAS HELPED FARMERS

Return of Liquor Also Spurred Industry David Bunim Asserts

Repeal has not only increased the purchasing power of the American farmer, but has spurred the wheels of industry in almost every city and town in the country, David Bunim, special representative of Schenley Products Company, Inc., distillers and distributors, said in an address last night at a dinner and meeting in Hotel Mayfair.

Bunim pointed out that prior to repeal rye was selling at 35 cents a bushel and corn at 27 cents. He said the greatly increased prices of these commodities now are due to the demand created by the distilling industry.

The industry purchased much equipment in other lines, and these sales stimulated many business groups, he said.

The government certainly has been benefitted, Bunim said, in quoting figures to show that in the 10 years prior to prohibition distillers paid $1,935,390,469 in taxes, during the entire period of prohibition the authorized distillers paid $424,767,988 taxes and in 1934 they paid $374,506,233.

Lord Babbington was instructing his new colored servant in his duties, adding: "Now, Zeke, when I ring for you, you must answer me by saying, 'My Lord, what will you have'?"

A few hours afterwards, having occasion to summon the servant, his Lordship was astonished with the following: "My Gawd, what does you want now?"—Exchange.

A Pullman porter was thrown from his car when the train was derailed and flew ten feet through the air before he hit head first up against a concrete post. He lay in a daze rubbing his head, when the conductor came running up.

"Great Scott, man," cried the conductor, "aren't you killed?"

"No," said the porter, getting to his feet, that concrete post musta broke ma fall."

—Virgil.

"Old Adam was a gardner, and
God who made him see
That half a proper gardener's work
is done upon his knees.
So when your work is finished, you
can wash your hands and pray
For the Glory of the Garden that
it may not pass away."

THE MODERN FARMER

Official organ of the National Federation of Colored Farmers, Inc.

Leon R. Harris - - Editor

Published monthly by the Modern Farmer at Nashville, Tennessee.

Office, 447 4th Avenue, North.

Devoted to the interests of the Farmer, Truck Gardener, Livestock and Poultry Breeder, the Home and the People.

Entered as Second Class Matter, April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 447 4th Avenue, North, Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, 75c for six months, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT.

OUR PLATFORM

1. A Unit of the National Federation of Colored Farmers in every community. of colored farmers.
2. Co-operative buying, producing and marketing.
3. Every colored farmer a farm owner.
4. Abolition of debt-slavery, injustice and persecution.
5. A written contract for every colored farm tenant and sharecropper.
6. Better rural churches, schools and homes.

From the Bible

"While the earth remaineth, seedtime and harvest, cold and heat summer and winter, and day and night shall not cease." Gen. 8:22.

Winner

The man who wins is the man who works—
The man who toils while the next man shirks.
The man who stands in his deep distress
With head held high in the deadly press—
Yes, he is the man who wins.
—Unknown.

EASTER—NEW BEGINNINGS

Someone has called Easter "The Feast of New Beginnings." It is well that we should be reminded yearly of the opportunities provided to begin over again, to forget the past and past failures, and with a new courage, strive to be better and do better.

Have you walked through the fields in the springtime and seen the new blossoms springing up from the leaf mold of past years? Just so, a new life and a new beginning may be made from the ruins of the old. And this life may be born again, lifted up to a higher plane, and may find a new usefulness.

As we observe Easter, let us too observe a resurrection of new hope and a new life. Let us fill ourselves up with cheerfulness. Let us determine not to lose faith in ourselves or in our fellowmen. Let us feel the joy of living—the joy of doing right—the joy of rendering unselfish service to others.

WE ARE NOT ALIENS

It is time that those responsible for the administration of our government realize that the aliens in our midst are getting more than their share of privileges and opportunities and decide to do something about it. Recently a member of Congress stated that there are seven million aliens here, that half of them are here illegally, that one million are on relief and that six million of them have jobs Americans should have.

This statement is startling, if true, and should cause Congress to take action. Thousands of colored citizens need jobs and we are not aliens. Those on relief should be sent back home, those here illegally should be sent back home, and American employers should be forced to hire Americans first.

FUTURE FARMERS MUST KNOW FARMING

Our sons and daughters, whom we expect to follow in our steps, must know farming better than we know it if they become successful farmers in their day and generation. We must persuade them to study much, to observe well and think hard. Future farming will require much more than a knowledge of the art of making a living.

A bill has been introduced in the Iowa state legislature proposing a law which would require any future Iowa farmer to pass an examination in the basic agricultural sciences and obtain a license to engage in farming. If this law is passed and other states or the federal government should pass such a law, future farmers will have to know chemistry, botany and a dozen and one other sciences.

Future farmers will be expected to produce wonders compared to what we are doing now. Not only will they have to continue producing food and fibre but also, they will have to produce a great variety of raw materials for manufacture. For instance they will have to produce twice as much corn as we are producing now for this corn will be needed for alcohol to make a 50 per cent mixture of gasoline and alcohol in a super-motor fuel. Farm and forest products will be needed and used to mould automobile bodies, to build houses, to make irrigating pipe, to make paper and etc. Vegetable oils will be used for lubrication purposes. They will probably have to cultivate the milkweed for the floss for cloth, and the goldenrod for rubber.

Future farmers will not be allowed to destroy their heritage. They will be compelled by law to preserve their soil, their forest, their wild flowers, and even the life of the birds that nest on their farms. They will be compelled to make and keep their property beautiful and healthy and clean. And all this is well, for the future farmer will be the first citizen of his country, the most important citizen, the citizen, be he black or white, whom all will honor and respect.

A SAD, BLACK PICTURE

Two important Englishwomen, Mrs. Naomi Mitchison of London, and her companion, Mrs. Zita Baker, of Oxford, came to the United States "to see what they are like." Mrs. Mitchison is the author of eighteen books. She is the daughter of J. S. Haldane, noted English scientist.

These women expected to have a "vision of wealth." Instead, after a trip through the cotton-raising states, the vision changed to a picture of "the most frightful misery and starvation." Said Mrs. Mitchison:

"The share-croppers, Negro and white, are treated like animals by the land owners. We went into flimsy, leaky structures hardly more than cardboard, and found whole families living in single rooms and eating cornmeal and water.

"These people are evicted at will by the landlords, who will pull guns and shoot them when they do not move out fast enough."

Who can deny these words? Let us hope these women saw only the bad landlords. Or, are all of them bad? No, they are not. But all are tied on to a bad, evil, half-civilized system of farming, the sharecropping system, which will remain a disgrace to this nation as long as it endures.

A WORD FOR A GOOD SCHOOL

Our white friends who support our educational institutions often praise and boost them more than we do ourselves. Many of us, we "colored people," have a streak of evil in us which makes us keep our mouths shut when we should be praising our schools but enables us to loosen our tongues when we get a chance to condemn and criticise. The Fort Valley Normal and Industrial School should be praised and supported by every race man and woman in this nation and colored Georgians, in particular, should realize how much this school has done for them and should be thankful enough to speak a good word for it at every opportunity.

Under the leadership of Dr. Henry A. Hunt, this school has grown in the short period of thirty years from almost nothing into a plant worth in money more than a half million dollars. In usefulness and service to its community, its worth cannot be estimated. It stands there in the center of Georgia, teaching accuracy, thoroughness and genuineness, qualities of character so badly needed by our young people in this day and time. It is a school any state should be proud of and a school any people should be glad to honor.

YOUR LANDLORD AND YOUR FOOD

If you are one of the fifty or more tenants or sharecroppers on a large plantation, say of 1,500 or more acres in cultivation, why not attempt to persuade your landlord to allow you and the other tenants to plant enough acres in food crops this year so that none will be compelled to purchase anything except a few of the more staple groceries. On these large plantations food crops should be raised by the acre. You should not have to depend on small garden plots alone.

Food crops may be grown on land rented to the government. Sixty tenants and their families should raise for food around 10 acres of sorghum for sirup, 15 acres of sweet potatoes, 12 acres of peas and beans, 30 acres of tomatoes, 10 acres of string beans, 3 arces of okra. This acreage and your private gardens should produce plenty of food. Your landlord should be willing to cooperate with you and we believe he will. Ask him what he thinks about this.

Let us have your report from Farmers Sunday. If you did not hold your exercises March 31, do so as soon as possible. Farmers Sunday must be observed by all organized farmers.

Sometimes it pays to forget a wrong somebody has done to you. Try to forget and you may feel better than trying to get even.

Make friends, not enemies. A friend is worth more to you than a dozen enemies.

A man can be gentle as well as a woman. It does not pay to be a roughneck.

You will be compelled to work under a boss as long as you refuse to learn how to think.

Be grateful for service others may give you. Everybody likes to help the fellow who shows his appreciation.

"In every pond there are some fish and some frogs."

Love the good old earth and the Springtime. God has given us a wonderful world to live in.

Things are never as bad as they seem to be.

The lazy man never gets too tired to eat.

Read the Modern Farmer regularly. It is the mouthpiece of colored organized farmers.

Be a sure-enough farmer. Join the N. F. C. F.

THE "SELLING OF THE SOUTH"

Charleston News and Courier: The efforts of Mr. Howard F. Coffin and his associates to "sell the south to the nation' are highly commendable. Meanwhile, the government is already in the field as a buyer and is offering the south pottage in small messes compared to those it sends to the east and north. This is not saying that government would have people to migrate to the south. It is hiring the indigent and unemployed to remain in the great cities where they are. There is much more to be hoped from Mr. Coffin's plan to sell to private buyers than to government. South Carolina's need is not so much money for the needy as it is population. We have a "setup" of highways and schools, and so few people that the people are over-burdened by the task of maintaining them.

CO-OPERATIVE SOCIETY FOR WORLD SEEN

Iowa Economist Predicts Great Revolution in Social Sciences

Iowa City, Ia.—A cooperative world society in which equality of opportunity becomes a reality is the vision of the year 2050 A. D. presented by Prof. George R. Davis, University of Iowa business research expert.

The economist declares America will experience a revolution in social science even more drastic than the past century has seen in the physical sciences.

"Mentally, Americans are still living in the days of the frontier," he asserted. "Individualism in economy must disappear, and the ideal of no entangling alliances must vanish as a greater social organization emerges."

"We have violated the laws of social organizations," he continued. "In the future, men will cease to build up large fortunes and wealth will become a trust."

Professor Davis compared the present social and economic situation to the period of Cromwell in England from which the British advanced to world leadership.

"But we'll do in America in a decade what the English did in 100 years. They beheaded their king. We beheaded one, too, only our king was gold."

The economist cited developments in conservative Japan and radical Russia as examples of possibilities of government controlled societies which he expected to expand in the future. Heavy national debts, he stated, will be found to be "not such a bad burden after all."

"Property will become almost valueless under heavy taxation," he said. "Corn, hogs and even rubber may be added to gold and silver as mediums of exchange finally resolving into a system of scientific money."

PRODUCTION OF EGGS SMALLEST IN DECADE

Production of eggs on February 1 was the smallest in ten years, reports the bureau of agricultural economics. The decrease is attributed to a reduction in number of layers, higher feed prices and severe weather in late January.

The number of laying birds on February 1, was 8 percent less than on Feb. 1, 1934, and the number of eggs laid per hen was 18 percent less. January 15 farm prices of poultry feed averaged $1.61 for 100 pounds, compared with 94 cents in 1934, and with 47 cents in 1933.

GRASSHOPPER PLAGUE GROWS

Australia's grasshopper plague is growing and causing great damage. It now covers New South Wales, Queensland, South Australia and Victoria, extending at least 250 miles from Spencer's gulf. It is estimated that half the wheat crop has been destroyed and efforts to kill the hoppers by spraying poison from airplanes apparently are ineffective. The insects have invaded some villages and fires lit in the streets and near granaries do not stop their ravages. In some places stores are barricaded. Rugs and carpets in homes have been eaten. Trains are delayed because of slippery rails. Masses of dying grasshoppers are giving off fumes which are causing sickness.

RAIN CHECKS TRIP OF ITALIANS INTO ETHIOPIAN LAIR

Say Invasion of Dark Continent to be Held Up Until Next Sept.

Rome, April 18 (ANP)—Official communiques state that Il Duce does not contemplate any major military operations in East Africa until September when the rainy season, which began this month on the Dark Continent, is expected to end.

Minor operations, it is suggested in some quarters, may be permitted by the development of modern mechanized transports and it was recalled that the local government has sent to East Africa strong contingents of truck drivers, mechanics and builders of roads.

Too obvious is the difficulties large bodies of troops incur in African movements at this time, not to be taken into consideration in the event that present diplomatic negotiations with the ancient African empire of Ethiopia, fail to bring about a peaceful settlement.

Ethiopian soil is being churned up by heavy rains, and while new roads may be constructed in the Italian colonies in Africa, no such work can be carried on in Ethiopia.

INTERESTING NEWS & NOTES

Rum runners are working a new racket. They are now smuggling onions and butter. The smugglers buy onions at a cent a pound in Canada and sell them in the U. S. at 5 and 6 cents a pound. They make a profit of about 15 cents a pound on butter when they cna get it over the line and not get caught.

It has lately been discovered that a slave called "Mallacca Henry" was the first man to sail around the world.

In 1930 there were 182,578 Negro farm operators in the state of Mississippi, an increase of about 29,000 for the ten years, 22,552 were owners, a decrease of about one thousand in the ten preceding years. This state has more than twice as many race farm operators than any other state. Of this vast number however, very few are full owners of farms. Acreage owned is 6,062,490 and value of owned land and buildings is $35,988,954. It is evident that many race farmers who wish to purchase farms will have to leave this state to get the opportunity to do so.

Mary Conners Myers, an official of the AAA, who recently surveyed the cotton section of Arkansas west of Memphis, reports that planters are openly violating the cotton acreage control provisions and that conditions among sharecroppers and tenant farmers are "beyond words." The N. F. C. F. and this paper have known this for a long time and have so reported to the AAA. Probably AAA administrators and Sec. Wallace will believe now since one of their own officials has told them about these deplorable conditions.

It is reported that Mrs. Roosevelt served black eyed peas in the White House, making the dish we know as "Hopping John," and this started the Washington folks to eating blackeyed peas so much that a shortage in the supply was produced. This will be a blessing to many raisers of the peas. We are glad our good white people are learning day-by-day just what really is "good eating." Race people eat much better than white people because we are better cooks and because we have developed a taste for certain dishes they know nothing about.

It is reported that the Number racket or "Policy" in New Yorks' Harlem enjoys a turnover of around a million dollars a day. Chances against winning are 1,000 to 1 but this does not keep thousands from playing daily. It is now played by people of all races.

Candy was first manufactured two thousand years before Christ and the Egyptians of Airica were the ones who gave this great gift to the world.

Two South Dakota farm boys wrote to the U. S. artillery asking if this branch of the army had any teams of horses too old to work, and requesting one of the teams if available. Officials thought the letter was so good that a team of horses was given the boys.

The body of Rev. T. A. Allen, a Negro minister of Marks, Miss., was found in the shallow waters of Coldwater river by fishermen. He had been shot through the heart. The corpse was weighted with chains The sheriff said he thought possibly the man was killed by "planters." The dead man's pockets contained literature on the organization of sharecroppers.

Farmers who need help to grow their crops this year will be able to obtain seed loans from the government if they are cooperating with the government's crop control program and are unable to obtain advances from local banks or production credit associations. Farmers needing the loans must apply to county crop loan committees which are in existence in every county.

Dust storms spread wide destruction through eight states recently causing several deaths and much damage to farms and crops.

Hundreds of colored farm families were made homeless when a wind storm caused the St. Francis river to batter through levees near Piggott, Ark.

It is estimated that a one-half acre garden should produce $150 worth of food. Plant a garden.

This is the anniversary month of Jethro Wood, a Quaker, who became the inventor of the first cast iron plow.

A mail flyer out of Kansas City was knocked unconscious when struck in the head by a night-flying duck. He regained consciousness in time to land at Burlington, Iowa.

Illinois farmers are expected to put more than a million and a half acres in soy beans this season.

Negroes constitute more than 80 per cent of Brazil's population, according to the latest census. In this country citizens are known only as Brazilians, race is not considered.

Demands for U. S. citizenship are being increased fifty per cent by the prospect that everybody will be given pensions in the future.

The wife of an unemployed man near East St. Louis recently gave birth to triplets. They have six other children and the mother exclaimed "I hope God will take care of us."

Experts announce there is a ten million horse and mule shortage in the U. S., the lowest number in forty years.

Flowers frozen in ice cones were recently shipped 12,000 miles, from Australia to London for a flower show.

The U. S. Supreme Court reversed for the second time the sentences of two of the Scottsboro boys, holding that colored persons in Alabama are not permitted to serve on juries, therefore are denied "equal protection of the laws in violation of the 14th amendment."

President Barrett's

(Continued from Page 1)

ing smoothly over every opposing opposition. The writer and three others, Mr. York Parm, Crbry Chambers and wife, Ruth Chambers were appointed delegates to the Farm and Home Week Agriculture Convention which was held January 14-18 at the University of Illinois. The appointment was made by Mr. Paul Ritterscamp who has charge of the Rural Rehabilitation Survey of Illinois.

At that convention, there were three thousand two hundred and fifty registered delegates, and it may seem strange to say, but out of this vast number of delegates, we four were the only colored persons to attend. However, we were shown the same courtesy our white brothers and sisters and received the same information and our questions were answered with as much painstaking as theirs.

I said in the beginning "DuBois Unit was coming to the front. We hold our meetings every Saturday night, two and three times each month we have some government agency to come and address the Unit. We have such high officials as Mr. Hermon O. Duncan, the Field Representative of the Rural Rehabilitation Commission. Mr. Paul Rittercamp, Rural Rehabilitation Survey of Illinios, Miss Grace Powers County Administrator of the Illinois Emergency Relief Commission, Mr. Harold H. Gordon, County Farm Advisor and Mr. T. S. Johnson, County Supervisor Rural Rehabilitation Commission and others. And by-the-way, I must not forget to mention our National president. Mr. Jas. P. Davis, who has and still stands by us like the Rock of Gilbralter. He comes to the bat whenever called he never fans, but always makes a safe hit.

Fourteen of the officers and members accompanied him to Miller City Saturday night, March, the second where we held a very interesting meeting and eleven persons joined our Unit. The land in a radius of ten miles of Miller City is the best farming land in southern Illinois. It is situated on the banks of the Mississippi River and produces cotton and corn as well as the rich Mississippi delta in the great state of Mississippi.

This community is thickly populated with some of the best farmers among our Race group. We are scheduled to hold another meeting in this community Wednesday night, March the 13th, when we are expecting a larger number to join.

Well, things are beginning to look very bright since the clouds of doubt have vanished from our sight. It seem as tho our problems here will soon be solved and the program we have so arduously worked for during the past three months is going over in spite of the many critics and opposers. This program in my candid opinion is the biggest and best program that has ever been staged by any Unite of the N. F. C. F. any where. In fact any group of Negroes anywhere in this country. With that stanch and fearless leader, our National president, Mr. Jas. P. Davis and a number of strong henchmen by his side, we are confident day light is upon us. Will say more about the program in my next letter.

With best wishes to one and all,
We are your Friends,
DUBOIS UNIT
By M. M. Barrett, President

Group in Chicago Organizes Against Evictions For Rent

Chicago, April 18—(ANP)—A mass meeting, called in response to the activity of landlords on the Lower North Side here, backed by the North Central Real Estate Association, who are conducting a planned campaign of eviction of all colored tenants through the issuance of five day notices, was held here last week at which many outstanding citizens of both races spoke. Some 4,700 members of the race are involved in the discriminatory practices of the real estate operators and the mass protest is being launched under the supervision of Frayser T. Lane, Director of Social and Civic Improvement of the Chicago Urban League and Dr. Arthur G. Falls, chairman of the Interracial Commission.

Assembly of Rabbis Protests Against Discriminations

New York, April 12—The Rabbinical Assembly of America which represents the conservative Jewish rabbinate, in its "Pronouncement on Social Justice," just published, condemns discrimination and disfranchisement in the following language:

"We condemn all discrimination in employment whether by open or devious methods on the basis of differentiation by national origin, creed or color. We Protest against the political and social disfranchisement in America of the Negro, and the Oriental."

THE SNOW BABY

A baby boy was born on a lonely snow-covered mountainside near Muehldorf, Eastern Bavaria, and [illegible] it was bitterly cold he survived. The mother, Frau Anna Hirsch, had set out alone on her bicycle to deliver washing at a neighboring village. Half an hour after the baby's arrival she appeared at a neighbor's house with the infant in her arms, having carried it over a mile through the snow.

THREAT OF FEDERAL LAW CAUSED 43 PER CENT DECLINE IN LYNCHING IN YEAR 1934

New York—There were sixteen authenticated lynchings in 1934, or twelve less than the twenty-eight recorded in 1933, a decline of 42.85 percent, according to figures released today by the National Association for the Advancement of Colored People. All of the victims were Negroes and only two were accused of rape. Four were accused of attempted criminal assault, four accused of murder and one each was lynched for associating with a white woman, mistaken identity, knocking down a white man, writing a note to a white girl, "talking disrespectfully" to a white man and stealing. Mississippi led with six lynchings; Louisiana, Florida and Alabama followed with two each, and Texas, Kentucky, Georgia and Tennessee had one apiece. Four of the victims were hanged, six were shot to death, two were beaten to death, one was shot and hanged and one was stabbed, shot and hanged.

Lynchings were prevented at Angleton, Texas and Hernando, Miss., in January; at Ft. Collins, Colo., in February; at Shreveport, La., in April; at Greensville, S. C., in May; at Thomasville, N. C., in November at Eallaville, Ga., and at Shelbyville, Tenn., in December. The association praised Governor Hill McAlister of Tennessee and Sheriff Tom Gant of Shelbyville, Tenn., for their forthright action in preventing the lynching of E. K. Harris by calling out the militia and resisting the mob by gunfire. Eight white men were convicted for the lynching of Dick Wilkerson at Manchester, Tenn., June 24.

"The lynching record as compared with 1933 is better," declared Walter White NAACP secretary, "due primarily to the fact that the fear of federal legislation caused a complete cessation of lynching while the Costigan-Wagner bill was pending before congress. Two lynchings occurred early in January and then lynching stopped until it was seen that Congress was going to adjourn without taking action on the bill. Then there was a great outburst. The Claude Neal lynching was one of the most sadistic in the history of 5,068 lynchings since 1882, of which 45 have taken place since President Roosevelt went into the White House. This year's record, and especially the cessation, proved conclusively not only that federal legislation is the only hope but that it can stop lynching. The formation of vigilantes at Shelbyville following the destruction of the $150,000 courthouse is understandable but it is the clearest revelation yet made of how complete is the lack of respect for the state and the present local government in communities where lynchings break forth. Organizations with a total membership of 42,000,000 are therefore determined to make every effort for the passage of the Costigan-Wagner anti-lynching bill in the coming session of congress."

VAST THRONG OVERFLOWS FAMED ST. JOHN CATHEDRAL AS IMPRESSIVE FINAL RITES ARE HELD FOR "DE LAWD"

New York City, N. Y., March 18—Tremulous organ music, rich timbered Negro spirituals, the faint scent of many floral wreaths and the mystic light of breeze-blown tapers awed more than 7,000 mourners yesterday afternoon at the funeral service for Richard Berry Harrison in the Cathedral of St. John the Divine.

Bishop William T. Manning probably never before looked down from his pulpit on so mixed a throng as listened in deep silence to his solemn eulogy of the venerable who for five years had played the role of "de Lawd" in "The Green Pastures."

Every foot of space, even the area around the communion rail before the great white altar where candles flickered against a back-ground of scarlet drapery, was filled with sorrowing Negro and white admirers of the old actor. They flowed into the chapel and even into the street.

From All Walks of Life.

Negro ushers, grave and dignified in frock coats, mingled with the customary laymen who act as ushers in the cathedral. Aristocratic white men and white women, richly attired—most of them well advanced in years—sat beside shabby Negroes from Harlem.

Throughout the service the quavery pitch of emotional Negro women rose above the warmly blended notes of the choir from "The Green Pastures." Here and there one could see a gray-hailred woman swaying to the chanting of the choristers and clenching withered fingers to suppress spiritual ecstasy.

As the throngs filed silently into the pews beneath the towering arches the organ poured out a continuous flow of soft music. The thousands who had come down from Harlem sat staring at the deep shadows and the rich fittings high over their heads.

The organ music died away. A hush settled on the multitude. The procession moved past the coffin between the rows of gleaming candles; the crucifier, the black gowned choir, the clergy in white vestments tipped with purple and scarlet black; then the honorary pallbearers. Paul Laurence Harrison the son of "de Lawd," and the cast of "The Green Pastures."

They walked to their appointed places in the stalls at either side of the chancel, half the choir on one side, half on the other.

Hymn by the Choir

Dean Milo M. Gates pronounced the sentences that opened the service and the chanting of the choir lifted in the simple hymn, "The Strife is O'er, the Battle Done." A moment of silence as the echoes died away and then the chorus rose again in swelling, somber volume. in the burial chant:

"I heard the voice of Jesus say
"Come unto Me and rest."

The sun, which had struggled through the huge windows, hid behind a passing cloud and something like a chill closed down on the mourners. The candles flanking the coffin with the great basket of carnations and red roses gutted softly with every breeze.

Then the black-clad verger, with snowy head bowed, led the way to the pulpit, followed by the Bishop's chaplain holding aloft the golden pastoral staff. Bishop Manning ascended the pulpit.

"We are gathered here in this cathedral," he began, "to commit to its rest the body of Richard B. Harrison and to commend his soul to the care and the loving kindness of the God and Father of us all. And as we remember him before God and lift up our prayers for him, we give thanks for his good example and for his service here.

"Truly Remarkable Life."

"His life and example reflect honor upon his own race, and upon all of us alike, for the qualities of soul and character which he showed are the qualities which give dignity and greatness to human life everywhere. His experience of life was a truly remarkable one, reaching from the humble beginnings to a phase unique in the history of dramatic art."

Each word and syllable gave back from the far, dim corners of the cathedral. The sun broke through again and invested the stained glass with glowing blues and greens and reds.

"We think today of his simple sincerity, of his fortitude and patience under long continued trial, of his gentle strength and his failing human kindness.

"By his qualities of soul and character he helped us to see the unspoiled simplicity and dignity with which he met success and fame, when they came to him.

Great truth which Christ and His gospel teach us that whatever their race, or nation, or color, (the gray-haired woman punctuated each phrase with a solemn nod of agreement) all men are brothers, sons of one Father and Creator Who calls us to live as His children and as members of one great human family on all this earth.

"May he have blessing, and peace, and fullness of reward in those Green Pastures where he is now with Christ, the Good Shepherd, forever."

The Rev. Shelton Hale Bishop spoke next. His eulogy was a tribute to the simple old man who had been "de Lawd."

"This service," he said, "is the simple Christian tribute of an adoring populace to a man who walked upon the earth and touched men like himself in a mystic way that made them feel that they had been with God."

A momentary rustling was heard as Charles Winter Wood, the new gray-haired "Lawd" of the play, went up into the pulpit and in accents short and simple told of Harrison's death, and of his sudden attack in the dressing room of the theatre.

"Terrified, I saw him stricken," he said. "He looked up. 'Charlie, old man,' he said, 'He told me, Charlie, old man don't let me down. The world needs this play."

The simple recital evoked fresh sobbing and the speaker turned his face toward the light streaming in from the upper windows.

"We thank Thee, O God for the victories and the triumphs of Richard B. Harrison."

Hall Johnson, tall and impressive in a sweeping black gown, lifted his arms as he stood facing the white altar with his back to the candles and the coffin, and the choir from "The Green Pastures" flooded the Cathedral with spirituals.

Oh, de blin' man stood on de road
An' cried,
Oh, de blin' man stood on de road
cryin' "O Lordy," save me!

All over the cathedral men and women took up the familiar slow-rolling chant and the old woman with the cracked voice triumphantly sang high above them. It was then that the mourners began to sway.

Lord, I don, fell noways tired,
I'm seeking for a city Hallelujah.
For a city to the kingdom, Hallelujah,
For a city to the kingdom Hallelujah.

This was one of Harrison's favorites in the show, and so was the next:

I am a po' pilgrim of sorrow,
I am tossed in this wide world alone,
No hope have I got for tomorrow,
I've started to make Heaven my home.
Sometimes I am toss'ted an' driven
Lord,
Sometimes I don' know where to roam,
I've heard of a city called Heaven,
I've started to make it my Home.
My mother has reached that pure glory,
My father's still working in sin,
My brothers and sisters won't own me,
Because I am tryin' to get in.

Final Part of Service

The Rev. A. Clayton Powell of the Abyssinian Baptist church read from the Scriptures—Corinthians, Fifteenth Chapter. Again the soaring notes of the organ pealed and vibrated through the cathedral. All eyes were on the gleaming coffin and the flickering candles through the reading of the second part of the burial service.

Bishop Manning lifted his right hand and intoned the benediction. The last hymn was sung:

In heavenly love abiding,
No change my heart shall fear.

Then came the recessional, the silent departure of the Bishop and the white-surpliced priests, the lifting of the dark coffin with it cover of 1,657 blossoms (the words) "Green Pastures" done in white carnations on a bed of deep red roses, one blossom for each performance of the show, and the throngs filed out into Amsterdam avenue.

More than 100 policemen kept the crowds moving, but thousands stood fast on the cathedral steps, holding their hats against the high wind. Traffic stood still in the sunlight and the black-robed choir assembled around the hearse.

Paul Laurance Harrison and the new Lawd climbed into the motor coach, the son to accompany the body to Grand Central Station. Burial was in Chicago.

The pallbearers came slowly down the steps with the coffin on their shoulders—Frank Wilson, who is Moses in the show; Oscar Polk, who is Gabriel; Ivan Sharp, the Prophet; Reginald Fenderson, candidate magician; Daniel Haynes, who plays Adam; Morris McKenney, who plays Noah and Do Do Green, understudy of Gabriel.

A lane opened before the pallbearers on the long stone flight and the cleavage of the human tide recalled Marc Connelly's most powerful lines:

"Gangway! Gangway for de Lawd God Jehovah!"

—New York Times.

WORMS TURN SOMETIMES —AND SO DID A RABBIT

By Associated Press.

NASHVILLE, TENN.—The legendary rabbit that spit in the hound's face was timid as compared with Mrs. R. S. Reynolds' pet bunny.

Entered in a bench show of pets, it sailed into its nearest neighbor, which chanced to be an airedale, and bit the dog's legs until it howled in pain.

SENTENCE SERMONS
By Rev. Roy L. Smith

THAT ONE IS INCAPABLE

—Of greatness who cannot free himself of jealousy.
—Of success who cannot bring himself under control.
—Of a great friendship who is unable to forgive.
—Of real happiness who has not learned how to forget.
—Of real nobility who cannot get his eye off himself.
—Of goodness who cannot appreciate goodness in others.
—of finding peace who cannot find it within his own heart.

BUTTER AND EGG TRADE LARGEST IN FIVE YEARS

Sales of butter and egg futures on the Chicago Mercantile exchangs during the first quarter of this year were the largest for the period since 1930, amounting to 12,284 cars, compared wtih 8,241 cars in the corresponding period of last year, D. J. Coyne Jr., secretary, announced yesterday.

Egg sales for the three months this year were 6,291 cars, compared with 4,049 a year ago, and butter sales amounted to 5,993 cars, against 4,192. Butter and egg sales in March were 3,641 cars, against 2,598 a year ago.

Separate contracts providing for trading in egg brought into Chicago by truck have been opened on the exchange. At present, the storage packed first and fresh graded first futures contracts call for delivery in refrigerator railroad cars, on team track. Since large quantities of eggs are now trucked in, it has become necessary to open separate future delivers under both classifications. The trading unit is the same as in other deliveries, being 400 cases while margins and commissions also remain the same—Dayton Forum

SAVINGS MADE POSSIBLE WITH CONCRETE SLABS

Pre-Casts at Factory Used Recently In New Federal Building

Important savings in concrete construction are reported to have been made possible under certain conditions but using pre-cast concrete slabs which are used as forms in which the concrete is cast and at the same time become a permanent part of the structure.

By a new process, certain kinds of reinforced concrete slabs are now pre-cast under factory conditions which gives them a highly attractive surface.

This process was used recently in part of the new Department of Justice building in Washington. The slabs used in the building were pre-cast with a vivid mosaic surface design of "exposed aggregates" and then used as integral parts of the building structure by serving as forms against which concrete was cast. In this way the resulting mosaic surface was actually a part of the building structure itself.

Another important advantage of this process is reported to be that the manufacture of pre-cast slabs under factory conditions makes it possible to produce a concrete of unusual density, which increases the moisture resistance of slabs.

THE BRASS AGE

Greensboro (Ga.) Herald-Journal: This will go down as the brass age. People have brass enough to ask Uncle Sam for anything.

What Others Say

About the N. F. C. F. and Modern Farmer

Dr. Dillard Says "Support Us"

"I wish you support in your efforts."

Dr. J. H. Dillard, Charlottesville, Va.

Sen. Capper Would Be of Service

"I can appreciate that in sections where colored farmers are present in large numbers, an organization such as you own would be unusually effective in promoting their economic interests and in presenting the benefits of cooperation in the most effective manner.

As you doubtless know, there are only a few localities in Kansas where your people are very numerous as farmers. But they have done good work, especially in the rich Kaw Valley in this state. I think you can get a fine story for the Modern Farmer one of these days on the excellent job they have done in raising potatoes in the Kaw Valley, which as you may know is one of the outstanding early potato districts of the country.

It will be a pleasure for me to be of service to your organization in every possible way. I have always had a warm spot in my heart for the colored race; some of my most loyal employees are colored men, a few of whom have been with me for nearly a quarter of a century. I should be delighted to hear from you at any time with suggestions as how I can be of help."

Hon. Arthur Capper, U. S. Senator, of Kansas.

From A Hard N. F. C. F. Worker

"I have been with the N. F. C. F. more than five years, have been loyal to the cause and have travelled in most every county in the Delta. I have made a host of friends among both white and colored. I try to teach my people how to be better farmers and to help themselves more. Our people are beginning to raise most everything they use. The Federation is an eye-opener for our people. Since our meeting in Memphis we have begun to buy our supplies cooperatively and have saved twenty cents on every dollar spent. Our organization is all right."

Rev. B. W. Byram, Chm. Bolivar Unit Mound Bayou, Miss.

TALKS TO COLORED FARMERS

About "My Recent Trip"

(Continued)

By Leon R. Harris, Sec. National Federation of Colored Farmers, Incorporated

Brother Farmers: Last month I was telling you about the farmers in the small Guilford county, North Carolina community. It was my happy privilege to receive a special invitation to visit the consolidated rural school there. Prof. Walter McNair wanted Mrs. Harris and myself to hear his glee club sing. And what a group of singers! I have never in my life heard a group sing our spirituals as these young country boys and girls sang them. Little wonder they are in demand and sing regularly over a large broadcasting station in Greensboro and are rated as being even better than the college organizations of that section. Most of the credit for this achievement should go to the principal, Mr. McNair. He is a born singer. He loves music as he loves his own soul.

The influence of this school can be plainly seen in the lives of the people. They are rising. They are becoming a better people in every way. We will never be able to pay the debt we owe to these unselfish, conscientious rural teachers of our group. It is a pity we so often fail to support them and thoughtlessly make their paths much harder than necessary.

I found C. C. Charles, the rural merchant, still doing business at the old stand. The very fact that he, a country bred and reared individual, is engaged in a merchandising business out in the sticks only a few miles from where he was born, is proof that we are progressing. We should patronize the business carried on by our farmer-merchants in our farm communities. As far as possible, we should "keep the money in the race."

Leaving Guilford county, I went east to Wilson county and spent a very pleasant 24 hours with my old friend and schoolmate, Nestus Freeman, of Wilson. Although Freeman is one of the most substantial citizens of his state, right now I am particularly interested in Freeman, the Progressive Farmer. For he is certainly that. He loves his farm as he loves his children and if you want to see a farm that is constantly being improved in every way possible, then see his. His hospitable family made our visit a very pleasant one.

I left Wilson county and travelled north to Halifax county, was met at the Enfield depot by our good friend, Harrison Copeland, and driven straight to a little rural church 12 miles out where we were greeted by approximately 75 farmers and farm folks. For 55 minutes we talked organization and community building. This is a fine community. There is nothing keeping the good people back except their inability to get together for the good of all. But this is keeping us back nearly everywhere. We make good starts as individuals but not as a group. In this day, when all success depends so much on organization and team-work. it is a shame we are so slow. But we will learn. I predict that when our farmers begin organizing in earnest, in a very short time we will build the strongest and most powerful Negro organization in the nation.

In Washington I visited Mr. Hunt's office, found him out of the city, but let me mention this incident. A North Carolina farmer I was talking to the day before I got to Washington, informed me he wanted a small loan to complete his home. I told him I would speak to Mr. Hunt about it in Washington. I explained this farmer's desires to Mr. Hunt's secretary, and when I got home, two days later, I went to the post office, and there received the copy of the letter the secretary had written this farmer in N. C., telling him how to go about getting his loan, where to apply, and explaining everything to him just right. Now that is what I call excellent, prompt, courteous service. Mr. Hunt and his assistants are the best friends American colored farmers have in Washington, are the best friends we have connected with the federal government. We should appreciate the great service they are giving us and be thankful and let them know we are thankful. So Brother Farmer, if Mr. Hunt has helped you in any way, write and tell him you appreciate the help given. Let's not be so ungrateful.

Back home to a pile of correspondence and plenty of work in connection with Farmers' Sunday. I trust all of you observed the day. Write and tell me about it.

An American resident of Shanghai, China, recently drove the first Shanghai automobile for 800 miles over new roads to Changsha, in Hunan province.

A DISTURBED COTTON INDUSTRY

(Kansas City Star)

While no adequate reason has been advanced for the marked drop in cotton prices, the movement was much more than an ordinary fluctuation or market adjustment. The AAA administrator, Chester C. Davis, suggests it might have been due to misinterpretation of a proposed amendment to the Bankhead compulsory control act which would exempt small farmers and presumably bring a substantial increase in production this year. Yet this exemption was proposed months ago and the President then, while on a visit to Warm Springs, Ga., promised his support of it.

As a matter of fact, government loans on cotton at 12 cents a pound had kept the price virtually pegged at that figure for the greater part of a year. So there is more in the explanation from a market source that the break in prices grew out of a belief that these loans might be discontinued. But there is to be no change of any kind in the AAA policy on cotton, it was announced. Therefore if the price should be carried or kept substantially below the 12 cent, the AAA with its loans might find itself in the position of the former farm board when it was left with surpluses on its hand as a result of its farm price stabilizing efforts.

But the incident directs attention once more to the long prevailing and increasing uncertainty over cotton. Exports have declined heavily in the last six months and there is threatened loss of foreign markets. Yet, even under the control program of the AAA, production has been and will continue to be almost double domestic requirements. If the surplus cannot be sold abroad, what then? The growers and everybody else concerned with the crop would like to know. The unanswered question is itself enough to explain a deeply disturbed market.

Certainly the problem of the farm administration the producers, and the entire cotton industry will be to regain foreign markets by any workable methods that are available and at the same time, if possible, maintain domestic prices at remunerative levels.

VITAMINS IN EGGS

Latest of the vitamin products are eggs said to be unusually full of the "alphabet bugs" The hens are given feed supposed to be especially rich in Vitamins A, B, C, D, E, and F, and—it is said— they then transmit these vitamins to their eggs. These eggs now are being marketed, and they command a premium over ordinary eggs of corresponding grade.

PEPPERMINT FLAVORED MILK

Customers of Conrad Sinner, who lives in Berrien county, Michigan, probably are getting used to a delicate peppermint flavor in the milk they buy from him. He annually raises about 30 acres of peppermint on his 100-acre corn and dairy farm and the peppermint plants, after the oil has been extracted, supply hay for his cows. Sinner and his neighbor, Henry Busick, produce about 5000 pounds of oil a year, and are paid anywhere from $2 to $18 a pound for it.

The mint must be harrowed frequently in the spring, to kill weeds, and as harvest nears must be kept entirely free of weeds to insure pure oil. It is mown like any hay, cured like alfalfa, and then processed in a steam still which removes the oil.

To build up resistance against colds, eat such raw vegetables as celery, beets, cabbage, carrots, turnips and radishes. Use a combination of several of the above named vegetables, grate them and serve on lettuce with mayonnaise, cream cheese or peanut butter.

It is comparatively safe to pick up broken bits of glass from the floor, if you remember to use a damp woolen cloth.

THRIFTY FARMERS

A government man was recently investigating the condition of the small farmers in the hill section of one of our eastern states. He found one farmer who was willing to talk and he pumped him for information. "You can't raise anything on these stony hills, can you?' the government man ventured.

"Raise anything!" exclaimed the native with indignation. "Of course we can. We raise plenty. We raise barley. We raise a sight of barley back here. I don't know what us farmers would do if we didn't raise barley."

'What do you usually get for this stuff?" the agent asked.

"Oh, we don't sell it. We don't sell a grain of it," answered the farmer.

"Then I suppose you feed it to your stock," the inspector said.

"No, siree, you don't catch us wasting barley thataway."

"Well, what do you do with it then?" questioned the agent.

"Why, we save every grain of it for seed. That's what we do with it."

AMELIA AND HEALTH AND MILK

Burlington (Vt.) Free Press: It is interesting to note that Amelia Earhart Putnam, at the dinner given in her honor in Montpelier Thursday evening did not smoke and, except water, drank no other beverage than milk. That she is "in the pink" of physical condition is evidenced not only by the way she stood the grind of eighteen hours of flying alone across the Pacific, but also by the heavy schedule of traveling and speaking which she is carrying.

On Thursday, for instance, she came from Boston to Burlington by air, motored to Montpelier, had an audience with Governor Smith, addressed the legislature, sat in conference with the aviation committee, attended a dinner in her honor, during which she answered numerous questions about aviation, motored to Northfield where she made another address at Norwich university, then took a train back to Boston.

The next morning she was scheduled to fly to Augusta, Me., to address the Maine legislature.

If the milk industry of the United States, both producers and distributors, would spend a tenth of the money in pointing out the health value of milk, and calling attention to its continual use by people who are seeking the best possible physical condition, which has been spent in tobacco advertising campaigns in the United States in the last five years, the problem of surplus milk in this country would be just about solved.

When you buy apples, be sure to specify whether they are for eating or cooking. Two pounds of cooking apples should yield about three cups of apple sauce. The same amount also should make one nine-inch apple pie.

SPANKING BEST DISCIPLINE

While it is seldom applied any more many people and some parents still believe in the old adage about "sparing the rod and spoiling the child." Mrs. John S. Reilly, prominent author and lecturer, is of similar opinion. She says sound spankings, preferably administered during the child's burst of anger, still constitute the best form of child-training. The mother of seven children herself, she believes old-fashioned spankings (hair brush, slipper, razor strop or whatnot, should remain a vital part of parents' equipment in rearing children. There is no age limit, she says, but she does not mean brutal beatings. Her method calls for spanking "in the place the Lord meant for it," which does not harm but does lots of good to most youngsters who need it once in a while.

—Dayton Forum.

EGGS, THE ALL SEASON FOOD

While Lent and Easter time always brings about the use of more eggs than any other season of the year, we can look to eggs as a substantial food standby any season of the year.

Children love the brightly colored eggs of Easter morning and we all more or less enjoy them scrambled or "sunny side up" for breakfast. What we have overlooked is the fact that eggs have many other useful places on the housewife's calendar besides the breakfast table and the Easter basket.

They are rich in protein and a valuable and tasty substitute for meat.

When used in combination with vegetables such as spinach, tomatoes mushrooms; fish such as shrimps, salmon, tuna or crab meat; they make satisfying main dishes for luncheon or supper.

After we scramble, soft boil or hard boil eggs we are at a loss to know what else to do with them. First of all, do you really know how to hard or soft boil or scramble eggs or is it merely guess work? In truth eggs should never be boiled, the water in which eggs are cooked should be kept below the boiling point so that the egg white will not be tough.

Perfect soft boiled eggs are placed into boiling hot water, removed from the fire, covered and allowed to stand five to eight minutes according to the softness desired. Perfect hard boiled eggs are put into boiling hot water, and let stand from 20 to 30 minutes, care should be taken to see that the water is kept below the boiling point.

Porched eggs, too, are dropped into the very hot water, removed from the fire and basted frequently with the water in the pan.

DEAD CALF FOOLS HUGE WOLF; MAN COLLECTS BOUNTY

Sterling, Illinois—C. N. Long, who lives north of Sterling, appeared in the county clerk's office in Morrison Saturday to collect $5 bounty for killing one of the largest wolves ever seen in this county.

Mr. Long says he had heard a wolf howling nearby several nights, so Friday night he staked out a dead calf for bait and concealed himself near it.

The wolf came, and Mr. Long fired once, killing it. The wolf was almost black, of the type sometimes called "devil dog," and had a long bushy tail.

Startling Facts

(Continued from Page 1)

and supervision, and housing and equipment.

CITES NEED FOR SCHOOLS

There is a need for secondary school facilities for approximately 159,000 Negroes of high school age in 230 counties in 16 Southern states where there are no Negro high schools, the Survey report indicates, Facilities for education of 197,000 high school age Negroes in 195 counties where no four-year high schools exist are also urgently needed, the investigation revealed.

In 16 Southern states there is one teacher to 211 Negro children of high school age compared with one teacher to 60 white children. An increase of 12,758 Negro teachers would be necessary to equalize the ratios. To place the cost per Negro pupil on a comparable basis with the cost per white pupil would require an increase of 51 per cent over present expenditures for Negro education.

Five states expended $5,000,000 for transportation of white pupils, as compared with $30,000 expended for transportation of Negroes, although nearly one-third of the schools are far removed from the homes of Negro pupils. Nearly half of the schools for Negroes have three teachers or fewer. Of 1,140 Negro high schools in 15 states, only 506 offer four years' work.

It is not generally known that two-thirds of the secondary schools for Negroes started since the World War. Eighty-six per cent of the Negro schools accredited have been accredited since 1920. Great growth has occured in Negro education in the past 15 years. The number of public high schools has increased from 64 in 16 Southern states and the District of Columbia to 1,200 in 17 years. Schools for white pupils are superior to the Negro schools, however, in richness of curriculum and extra curriculum offerings.

TEACHERS ARE WELL TRAINED

The typical Negro high school teacher has three and one-third years of college training. Two-thirds of the teachers have bachelors' or masters' degrees. Their salaries are far below those of white teachers. The typical Negro high school principal is a married man, 42 years of age, has had 4.6 years of college training, has completed 31.-5 semester hours in the field of education, and has attended summer school during the past five years.

From a study of enrollments in 196 secondary schools for Negroes, it was discovered that 47 per cent have enrollments in excess of their rated capacities. Furnace heating and modern fire protection, handwashing and sanitary toilet facilities are lacking in a large percentage of the schools investigated. Modern lighting and drinking water facilities are possessed by a large percentage of the schools. The buildings are generally in a good state or repair.

"The Negro has shown remarkable avidity in accepting the secondary—school facilities available to him," said Dr. Ambrose Caliver, Federal Office of Education of Negroes today. "The great progress made in secondary education for the colored race has been largely the result of an increasingly sympathetic attitude toward Negro education in the states maintaining separate schools. However, in states maintaining separate schools for the two races, better facilities for white pupils are provided than for Negroes."

The National Survey of Secondary Education monograph on Secondary Education for Negroes offers nine recommendations for the improvement of Negro secondary education, including special studies of the Negro education problem, a vocational education survey, a study of curriculum, and factors affecting financial support.

The monograph appears as Federal Office of Education Bulletin 1932 No. 17, Monograph Number 7, and may be procured from the superintendent of Documents. Government Printing Office, Washington, D. C., at 15 cents per copy.

Smaller Meat

(Continued from Page 1)

mal prices this year will be the highest since 1930.

That reduced supplies and higher prices for meat will lift prices for eggs and poultry there is little room to doubt.

In the present instance, all meats will be scarce, and the entire level of food prices probably will be higher. Hence, eggs and poultry appear certain to share in the rise. Of course, it is evident that with meats less abundant, the folks who will have to do without or with less are those with the lower incomes and they can not be expected to turn in a wholesale way toward eggs and poultry. Hence, the extent to which eggs and poultry will advance will depend partly on how much the number of persons with the higher incomes is increased through improved economic conditions.

Poultry and Eggs to Benefit

Feed scarcity has been causing liquidation of poultry flocks as well as meat animals. Numbers of hens and pullets of laying age in farm flocks are 4 or 5 percent less than last year, young pullets are about 10 percent fewer and other young chickens are about 20 percent under last year. The hatch was reduced about 10 percent and young poultry has been sold earlier and at lighter weights than usual. Supplies of poultry to come to market during the rest of the winter and spring probably will be the smallest in ten years. Egg production in the first nine months of 1935 will be relatively light.

The present unfavorable relation between egg and poultry prices and feed prices may continue for a long time in 1935, but assuming that normal weather prevails, the feeding ratio probably will undergo radical improvement, and by the latter part of 1935, a period of very substantial profits probably will have started.

Besides tending to raise prices of all animal foods, the decline in numbers of meat producing anmials on farms will reduce consumption of feed grains and will make for lower feed grain prices next summer and fall, if average yields per acre are produced. Thus, it will tend to help the poultryman's margins both by lowering feed costs and raising the price of his products.

Hog slaughter has decreased marketedly recently in surplus producing countries, but has increased in deficit countries.

Farmers Launch

(Continued from Page 1)

storage. The proposal would legally request those elevators to give bond to protect the producers and also issue negotiable warehouse receipts.

The next meeting of the farmers' grain dealers' association was set for February 1936, in Chicago, marking the first time the group has met in that City.

ETHIOPIAN EMPEROR HAS BIBLE WRITTEN IN COMMON SPEECH

Haile Selassie Anxious to Build A Democracy "Under Kingdom of Jesus Christ"

New York, April, (ANP)—In an interview with Haile Selassie, emperor of Ethiopia, recently reported by Pierre Van Paassen, the imperor stated that he had personally imported a printing plant and had ordered the translation of the Bible into the everyday language of his people and that the task of translating the Gospels had been completed.

This information was given when Mr. Van Paassen expressed his regret that the language of the Coptic church, dominant in Ethoipia, is obsolete, and the emperor added:

"It is my hope with God's will to live in peace with all men and ot transform the still many backward tribes of Ethiopia into industrious Christians. It is a difficult task which requires years of patient tutoring. I am building schools and enterprises, not for personal enrichment, but to have funds to extend my educational program.

"War is the furthest thing from my thoughts, for war would interrupt my social reform. War would bring back evil days.

"We are seeking to progress gradually and peacefully in the direction of a European democracy such as England. I would have the Ethiopians a truly modern people under the kingdom of Jesus Christ.

"To this end we have changed the laws of the land, abolished old customs which were cruel. There is no torture now in Ethiopia and we will ultimately abolish the death penalty."

Find Young Man Dying On Mississippi R. R.

Jackson, Miss., April 18, (ANP)—Dying just as Clem Anderson who happened to be passing, walked up, the body of Nathaniel Martin, 16-year-old youth living on the A. C. Wilson place on the old Canton highway, was found on the Illinois Central railroad tracks at the Mayes street bridge in North Jackson, early Sunday morning.

Martin had been shot once, the bullet entering the left shoulder and ranging into his body.

No clues were found to give Hinds county officers and police an inkling as to who the murderer was.

An inquest jury returned a verdict of death at the hands of persons or person unknown.

'Springtime Varieties' At Apollo

New York, April 18—ANP)—The week beginning Friday, April 12 brought to the Apollo audiences a novel idea in stage shows with Clarence Robinson's "Springtime Varieties."

The Apollo's popular and famous emcee, Ralph Cooper, heads the stage show with his own new orchestra of eighteen ace musicians, all picked men in a new and novel musical offering that promises to be sensational from all reports to hand, and which will assure the 125th Street, Apollo audiences of satisfying music at all times since it is the intention of the Apollo management to also present every prominent name band obtainable at their successful playhouse.

The stage bill also features among many acts the Three Little Words, the last words in dancing, Three Modes of Harmony, in Harmony De Luxe, Isolla and Martin's dancing sensationists, also Pigment Markham, Jimmie Baskette, and the lovely Apollo Rockets beauty chorus.

Want "As Thousands Cheer" For Mexican Presentation

Los Angeles, Calif., April 18—(ANP)—Jack Welch, New York theatrical booking manager, recently arrived here, has conferred with Sam H. Harris, producer of "As Thousands Cheer" relatives to a change in the tour which would take the show for a four-week engagement in the City of Mexico where an offer of $100,000 awaits. Originally the famous comedy was to have jumped directly from this state to Denver for a four-night engagement then back east.

Talks To Colored Farmers About "Supporting The A A A"

SEC. LEON HARRIS GIVES INFORMATION

Editor Modern Farmer And Federation Official Presents Unanswerable Facts

BROTHER FARMERS:—Got a letter from a Texas farmer the other day and he asked me a direct, clear question. His question was, "Should colored farmers support the policies of the AAA?" (Agricultural Adjustment Administration). Said he wanted to know because a lot of Texas leaders, colored and white, were cussing the AAA, especially the cotton plan, going and coming, and they had him thinking hard but all mixed up.

I gave him a plain answer. I told him "Yes, support the AAA,—keep on supporting its policies,—and tell your brother farmers in Texas to do the same." I am certain the good brother will do this if he keeps on "thinking hard" as he says he's doing.

When President Roosevelt started the AAA to look after his Ne Deal for farmers, he told Congress that if it didn't work right he would be the first to acknowledge it and say so. He said it was an experiment. It was. To a large extent, it is still an experiment. But it has certainly done more good than harm and I believe in sticking with anything in these times of change and mixup that does more than harm. That's just plain common sense. I won't condemn anything just because its not perfect. I have an old shade tree in my back lot that's as ugly as the dickens and keeps some needed sun off my garden. I'd cut it down, but,—I need the shade for my kitchen. It does more good than harm. And some day I'm going to trim it up and make it look better.

The AAA is going to get plenty of trimming up too every now and then.

The policies of the AAA have helped landowners, tenants, sharecroppers and farm hands, who have been able to stay on the the farms, to be much better off than they were two years ago. Those who have gone back to the farms are better off. Farm products are now bringing fair prices and farmers are earning, handling and spending more money. The "normal production" plans of the AAA are mainly responsible for raising prices of farm products to where they are now and keeping them there. Two years, ago, every industry in the nation,—and all of us—were in bad shape. The farmers have benefitted most during the first two years of the New Deal and every thinking person knows it.

The "normal production" plans of the AAA, for cotton especially, provide a fair opportunity for the

RAW VEGETABLE DAY

It is the Fibrous Structure You Soften

Why do we cook vegetables? Some people say we shouldn't, and it is true that cooking takes away some food values. For this reason it is advisable to eat at least one raw vegetable or fruit each day, to get food values you might lose in cooking.

With most vegetables, it is the fibrous structure you soften when you cook them. The fibrous structure is the invisible framework that gives shape and form, and holds together the other substances of the vegetable. In scientific cookery, this material is called cellulose. It is what we commonly call "roughage." It cannot be digested in the human body and is useful for that very reason. Its job is to furnish bulk of a kind that helps to eliminate the waste products of digestion.

Cooking for Flavor

You cook vegetables to soften the cellulose just enough to make it an agreeable carrier or container of the nutritive substances and the flavor in the food. Softening the cellulose also makes it less bulky. Incidentally, if you enjoy cooked vegetables and cook them in the way to avoid unnecessary loss of food value, you are likely to eat more of them than you would want of the raw ones. Thus you get almost as much in food values, all told, as from most of the vegetables you would want to eat raw.

One important point here for the cook, of course, is to know what cooking does to minerals and vitamins, and therefore how to save all she can. So far as the minerals are concerned, they may cook out of the vegetables, but you need not lose them if you save the juice and use it, either with the vegetables, or in soup or sauce. If you "pour the water off," you pour off valuable calcium, phosphorous, iron or some other mineral, maybe all of these. If you cook the vegetable very long, you may destroy two vitamins, B and C, that do not stand much heat or water. For vitamin V, vegetables are the best source, excepting only some of the fruits. Therefore add as little water as possible in cooking vegetables, cook only until the vegetable is just tender, though still a little crisp and use all the liquid.

This is a good rule to follow even if you are thinking only of how they taste, without reference to food value. Long cooking makes the cellulose soft and mushy. And it changes, sometimes destroys, the original flavor of the vegetable. This happens with cabbage, or cauliflower, or brussels sprouts, or broccoli, or any of the cabbage family. Cabbage cooked for only five to fifteen minutes has a very delicate flavor and practically no odor. But cooked too long, a chemical substances in the cabbage decomposes into bad-smelling sulphur compounds, which go all through the house.

LEARN NEW PROFESSION

Students Given Course In Soil Erosion Control

Progress of the soil erosion control work now under way in Iowa and Missouri and slated for expansion soon is handicapped to some extent by the lack of trained personnel for this specialized type of work, sponsors of federal projects say.

"Trainees"

As soon as the college year closes next June the number of "trainees" will be increased to from 65 to 75. Most of these recruits are being drawn from the ranks of the colleges of agriculture at Columbia, Mo., and Ames, Ia.

It is probable that these men as soon as their training course is completed will be assigned to various areas in the two states where definite projects have been established with farmers agreeing to co-operate in controlling erosion and adopting a system of farming that will shift some of their farm land from cultivated crops to grass.

Demonstration Areas

It is not expected that anything of the exact nature of the federal demonstration projects now under way in northern Missouri and southern Iowa will be attempted but demonstration areas of 10,000 to 15,000 acres each will be established throughout the two states.

The soil erosion CCC camps which are to be under R. E. Uhland, regional soil erosion director for Iowa and Missouri, are being established only where farmers are expressing a willingness to co-operate. These demonstration areas will probably be set up near a CCC camp where a definite watershed control project can be worked out and where farmers are willing to agree to certain practices in return for having government help in remaking their farms.

Personnel Needed

This work must await the development of trained personnel. In Iowa State college enrollment in soils courses is said to have doubled within the last year or two and some of the agricultural colleges now offer courses in soil erosion.

This takes into consideration no one phase of the question to exclusion of all others but covers soils, crops, engineering, forestation and farm management.

Many trained men already are at work in the two federal projects with approximately 80 persons employed. This total includes stenographers, clerical help and draftsmen in addition to the men who actually take the field and contact the farmers, helping solve the problems of the farm area.

Save Food Flavors

Food flavors do not come out of spice boxes, but are brought out by

It Pays To Own Your Own Home

PROPOSED FARM TENANTS

Home Crop Is Given Endorsement by Jordan

Editor Constitution: I read with deep interest and approval the statement published in The Constitution relative to a proposed bill by Senator John H. Bankhead, of Alabama, to create and finance a Farm Tenants' Home Corporation operative by the federal government.

No greater service could be rendered to the south and nation than the establishment of a federal system by which efficient and capable tenant farmers could be encouraged and aided to become prosperous and independent small landowners.

Approximately 75 per cent of the farmers in Georgia and the other cotton states are either tenants or sharecroppers. This unfortunate system has developed a distressing condition which is leading to the ultimate decadence of our great agricultural industry.

I have for many years in published articles and in letters written to those in authority at Washington urged that plans be provided by the government to check the rapid increase in tenant farming and rebuild the ownership of small land-owning farms.

No country ever has, or ever will, prosper and forge ahead in progressive development with a majority of its farmers as tenants.

Such a system perpetuated means the gradual degradation of the country home, the impoverishment of the soils and inefficient farming methods with the loss of farm-purchasing power to the states and the nation.

I trust that Senator Bankhead will have the full support of congress in his highly commendable efforts to enact a sound and practical financial measure which will begin the establishment of a permanent system for the gradual relief of farm tenantry and provide a satisfactory and enduring system of small land-owning farmers for the rebuilding of our agricultural industry and thereby abolish the present menace of unprofitable farming.

HARVIE JORDAN,
In Atlanta Constitution.

Cows Need Plenty of Water

Many farmers who go to the expense of giving their milking herds the best feeds lose the profits they would otherwise realize by failing to give equal attention to watering. A cow in milk needs from 10 to 30 gallons of water a day, and unless she has access to the supply at least twice a day, and unless the water is kept at least 15 degrees above freezing, this amount will not be taken. Her milk production will suffer accordingly.

NATIONAL BETTER HOUSING PROGRAM WILL HELP FARMERS

Here's How You Benefit

Your Home—Repairs, alterations, and home improvements result in healthier surroundings, a lightening of every-day tasks, and a more livable environment for the entire family. New equipment and home improvements, new paint, additional plumbing and heating conveniences attract the young people in a family and give them pride and satisfaction in the farm home.

Your Farmstead—Well-maintained farm buildings permit efficiency in farming operations, more orderly marketing of products, and decreased fire hazards and insurance. Sanitary, improved buildings, well equipped and in proper condition, provide better protection for farm machinery, equipment, supplies, livestock and stored products.

Your Pocketbook—The progressive farmer who keeps abreast of modern crop production methods, realizes the necessity of well-kept buildings and attractive home surroundings. A sound building improvement plan increases the worth and value of your property. Renovation of your buildings **now**—while manufacturers, contractors, building supply dealers, and financial institutions are cooperating in the Better Housing Program, means a definite financial saving and forestalls more costly repair bills later on.

Your Country—Because of the importance of the building industry, increased building activity results in a widespread and greater industrial activity throughout the entire country—in both urban and rural sections. This new stimulation to a large and important industry means that more people are put to work, payrolls are increased, and a greater demand is made for farm products. When idle men in the cities are again employed, much of their wages will go for the purchase of food produced on farms. Making needed improvements now brings benefits that are both personal and national. Necessary repairs add to the value and usefulness of your property—and at same time benefit the entire nation by contributing to a movement which will raise the standards of living, increase employment, and raise farm prices.

Ban On Importation of Cattle Is Less Strict

Breeders of cattle, sheep and goats in the United States may now import these animals from Switzerland and the Union of South Africa, as result of a recent order of the United States department of agriculture effective April 1, 1935. The

KELLY MILLER MAKES FOUNDER'S DAY ADDRESS AT TUSKEGEE INSTITUTE

Tuskegee, Inst, Ala—Booker T. Washington who founded the far famed Tuskegee Institute and continued as its first principal for over 25 years was described as one of "nature s noblemen" by Dr. Kelly Miller professor of sociology at Howard University in the 18th Founders Day address here today.

The dignified and yet simple service of a little more than an hour was held in the Institute Chapel which seats 3,000 persons. It was filled with people from all walks of life who had come to hear again the story of the man who had become the symbol of industrial efficiency the exponent of the highest type of educational thought, adviser in a means of meeting and solving the national affairs and the deviser of practical problems of every day life

Continuing, Dr. Miller said:

"Booker T. Washington was one of the nation's noblemen. Like Benjamin Franklin and Abraham Lincoln, he knew without learning, he understood without being taught, His wisdom was intuitive. He followed the sure and certain lead of the inner light. Booker T. Washington was a moral genius. He rose above the petty exactions and distractions of race prejudice which is often extolled as a virtue but which the moral genius of mankind reprobates as a vice. When Booker Washington said "No man can be mean enough to make me hate him,' he uttered an aphorism which takes rank with the moral maxims of all times.

"Booker Washington was endowed with a sense of humor which is the saving grace of his race. The Negro laughs where others groan; he smiles where others frown. His humor disarms his enemies. The race that laughs is the race that lasts. His Atlanta speech epitomized the philosophy of the American people on race relationship. The keynote was racial peace, goodwill and mutual helpfulness. He minimized things that divide and magnified the things that unite the races in one common denominator. His hand and finger metaphor, if not the ultimate ideals, is certainly a feasible modus vivendi. Few addresses in our national history have had so great influence upon the future conduct of the American people.

"A statesman is one who possesses broad and sagacious views on national issues, with the power of statement to formulate them, and the persuasive influence to impress them upon his day and generation as a formula of action. Tuskegee Institute was but the center from which radiated Booker Washington's influence and power. He easily takes rank with America's greatest teachers in our educational history. If he placed stress upon hand training and industrial education for the Negro, it was because, under the circumstances of the lot, he stood most in need of that type of education. He was not only the school master to the Negro but to the nation.

"The coming of the World War and the necessity for mass production under machinery, seemed for a while to discount and discredit Booker Washington's industrial philosophy. But the hard industrial and economic lot which confronts the Negro in our larger cities. North and South, is causing us to look back to Booker Washington for wisdom and guidance. Booker Washington believed that the South was the Negros' destined homeland. Like Frederick Douglass, he believed that though the dust may fly, the earth will remain. He taught that the Negro should, in cooperation with his white fellow citizen, devote his best endeavor to transforming his homeland into an ideal place in which to live rather than by fleeing thither and yon in quest of a happy land far, far away. Since the World War a million Negroes have shifted to the North and West, but his present unhappy lot in the higher latitudes is causing the Negro in the South to think rather of the ills he has, than to fly to those he knows not of. A country peasant who can earn his own subsistence is far better off than the city peon in the bread line. Harlem is no longer the Negro's Heaven. After all has been said and done that we can say and do, Booker Washington's philospohy will remain—that the farm is the Negro's best chance.

"The Negro will be for a long time under the exactions of race prejudice. the marginal worker, deriving his livelihood from ten-fingured pursuits, whether in city or country. Industry, thrift, economy and good behavior constitute his salvation, whether under the Old or New Deal, just as they are in the last analysis for all other peoples.

"A great statesman must provide for his succession. Jesus said to his disciples: 'Ye shall do mightier works than I.' The mantle of Booker T. Washington fell fittingly upon the shoulders of Robert R. Moton. They are both sprouts from the same root. Dr. Moton was prepared to take up the work where Booker Washington left off and carry it out and on and up in the spirit of the Founder. What Hollis Burke Frissell was to Samuel Chapman Armstrong, R. R. Moton is to Booker T. Washington.

UNITED STATES NOT BECOMING GREAT DESERT

DUST STORMS BRING SAHARA-LIKE ATMOSPHERE BUT NO PERMANENT DANGER

MAY LAST UNTIL JUNE

U. S. D. A. PROGRAM EXPECTED TO SUBDUE WIRT GALES IN COMING YEARS

Despite the Sahara-like atmosphere they create, the spectacular dust storms of 1934 and 1935 are not a sign that part of the United States is turning into a vast permanent desert, according to Dr. J. W. Humphreys, of the weather bureau.

The appearance on this continent of an expanse of unproductive drifting sand like that on the eastern hemisphere, Dr. Humphreys says, would call for a complete change in climate on the order of the one that, centuries ago, gave northern Africa its great desert. That change occured through countless ages as the Europe of today slowly emerged from the ice cap which, for other countless ages, had covered it. With the melting of the ice beneath their northern range, the air currents that govern the earth's weather were shunted into new paths as they flowed the south, thus altering Africa's climate.

No such climatic change is imminent in North America so long as the frozen north remains frozen, Dr. Humphreys says. Probably, he adds, the ice there will melt some day, but not for 5000, possibly 10,000 years.

Dust storms in the United States are nothing new. The west has always had them. Until the last two years, however, they have been purely local disturbances. But several years of drouth, on top of the reckless denuding of thousands of acres of land where rainfall is normally relatively light, provided, in great abundance, the first ingredient fo dust storms. The high winds that blow over the plains in spring and summer brought the second ingredient. Until the season of strong gales ends—dust storms may continue, Dr. Humphreys warns.

Unfavorable conditions brought about over a long period of years can not be relieved in a single season. As the program recently adopted by the United States department of agriculture to prevent wind erosion of the soil goes into effect, however, dust storms may reasonably be expected to subside. Among other things, this program calls for putting back into grass land that never should have been plowed or overgrazed.

Look over the hoes occasionally and grease the blades if they are growing rusty. A rusty hoe is a poor tool.

Farmers of England are proposing longer hours and lower wages for workers.

LIFE OF "UNCLE TOM" RECALLED BY EXHIBIT IN N. Y. PUBLIC LIBRARY

New York—One of the more interesting recent exhibits held in the Negro division of the 135th Street Branch library is that now being shown of "Uncle Tom's Cabin" and of Josiah Henson, the escaped slave who served Harriet Beecher Stowe as a model for her most important character, Uncle Tom.

On display is a copy of "The Life of Josiah Henson, Formerly a Slave,' first published in 1849, which aroused Mrs. Stowe's interest in the author and from which she constructed in part her picture of Uncle Tom.

Henson became popularly identified as the hero of Mrs. Stowe's novel, and as English and American printings of the book, which was translated into no less than 23 languages, qucikly ran to the thousands, Henson's autobiography was swept along on this tide unprecedented popularity and enjoyed a considerable sale both here and in England. As late as 1876 he was preparing enlarged editions of the life and some of these later biographies, with prefaces by Mrs. Stowe, are displayed.

A Narrative of Slavery

Another book that interested the author of "Uncle Tom's Cabin" was Henry Bibb's "Narrative of Slavery" Opposite the title page of this little volume, with its elaborate gold-tooled binding of the period, is a portrait of Bibb by Patrick Reason, a Negro engraver, who illustrated a number of books published during the 40's and below this portrait is a tiny vignette which shows the youthful Bibb fleeing before the slave owner, with the following explanation: "David Lane after Henry Bibb in Louisville, Ky., June 1838. The object was to sell Bibb in the slave market but Bibb turned the corner too quick for him and escaped." It is very fortunate that Bibb did turn the corner "too quick for him." Otherwise we might have missed one of the most vigorous and diverting of all the slave narratives, and there is also the possibility that we might have had a different and less effective "Uncle Tom's Cabin"

No less interesting perhaps than the Rev. Mr. Henson's autobiographies are the books from his library. In 1876, he and Mrs. Henson went to England to raise money for schools and churches for the colored people in the part of Canada where they had lived since Henson's escape from slavery. They were entertained at Windsor Castle and received numerous gifts, many of which were books. Among those shown are a copy of Burns' poems presented to Mrs. Henson by Queen Victoria, "Arrows and Anecdotes," presented by Dwight L. Moody, and others from various individuals and organizations, most of them inscribed or autographed by the donors.

Another biography, less important than those of Henson, is "The autobiography of the Rev. E. Matthews, the Father Dickson of Mrs. Stowe's Dred." As Henson had served Mrs. Stowe as a model for Uncle Tom so did Mathews serve as a model for her Father Dickson, and neither later scorned to turn an honest penny by telling people about it. "Dred" of course never attained the popularity of "Uncle Tom's Cabin" and thus the business of being Father Dickson was correspondingly less important than that of being Uncle Tom. The Rev. Mr. Mathews, however, was not a man to bury his one talent. Like many of the books of the latter half of the past century, this one carries a portrait of the author, though in place of the customary engraving, we have an inserted photograph.

"Uncle Tom" in Many Languages

There are copies of "Uncle Tom's Cabin" in several languages. One, a finely bound and rather lavishly illustrated English edition, shows a picture of Eliza crossing the ice—possibly the best known incident in American fiction. We must turn to American art for an ice crossing as celebrated—Washington's comparatively safe passage of the Delaware.

So great was the controversy that arose over the truthfulness of "Uncle Tom s Cabin' 'as a picture of slavery that the author prepared a key "verifying the truth of the work,' and this key, like that for Joyce's "Ulysses," was almost as much in demand as the book it purported to explain. One of the copies is an octavo volume of over 600 pages of documentation. Several of these controversal works, some attacking and others defending "Uncle Tom's Cabin," are exhibited. "Progression; or, the South Defended," by Millie May of New Orleans, is made up of several long earnest and uninspired poems "submitted to the consideration of all believers in the monstrosities set forth in "Uncle Tom's Cabin."

There are some seven or eight portraits of Harriet Beecher Stowe and four of Josiah Henson, anti-slavery publications in which Mrs. Stowe collaborated, and biographies or appreciations of Mrs. Stowe dating from a poem written in 1854 when her novel was at the height of its popularity to the book "Saints, Sinners and Beechers" which came from the press but a few weeks ago.

Among other recent exhibits were a series of 29 lithographs printed in 1835 depicting slavery in Brazil; magazines published in New York since 1895; Haiti, in which there were over 20 portraits of Toussaint L'Ouverture alone; and of the three Dumas — Alexander Dumas, fils, Alexander Dumas, pere, and General Alexander Dumas, father and grandfather of the famous authors.

CAROLINA "CAWN"

Charleston News and Courier: Why do governors wish to be chiefs of police? They all do—all that we have known. Why are they unwilling to allow the sheriffs, policemen, magistrates' constables, in the counties and towns to enforce the law and have the responsibility for it?

In Columbia the other day some of the governor's constables seized liquor. It was stamped liquor. The federal taxes have been paid on it. Can not the muncipal government of the town protect the town?

If it is the plan of Governor Johnson to put the sellers of stamped or imported liquors out of business, his truest and most efficient allies and helpers are the South Carolina moonshiners, makers of "corn," so-called. The retail price of this corn is now $10 or $11 for six gallons, or about seventy cents a quart after it is "aged."

The imported taxed liquor costs from $2.50 a bottle to $6. Few of the South Carolina tipplers can afford to drink it and few of them will drink it as they can get "stump juice."

The governor need not worry about the "Scotch." We are the common people in South Carolina in the matter of liquor, and corn is within the limit of our budgets.

A few statesmen in Columbia and here and there a dude may buy a little Scotch and Bourbon, but they are putting on airs. They are a negligible influence on "morals," and the moonshiners, not the governor, are suppressing the trade in the fancy stuffs.

SCALLOPED POTATOES EASY TO PREPARE, BOLSTER MENU

Scalloped potatoes are used on so many company menus because they can be prepared early and require no last minute fussing. For a change, substitute cream of spinach or cream of celery soup for the milk in the recipe.

IF YOU WANT A FULL EGG BASKET —

Feed all scratch grain in deep litter, summer and winter. Keep the hens busy.

Keep a good dry mash in open hoppers every day in the year.

Always provide animal protein in some form either milk to drink or meat scrap or tankage mixed in the mash. Many flocks that are fed grains freely are starved for animal feeds.

Provide succulent feed if the hens are not on green range.

Never use musty or moldy grain.

Change wet litter at once. There is danger in damp, moldy litter.

Begin gradually any changes in the ration or the method of feeding.

Watch the appetites of the fowls so that you will know how much to feed them.

Give light feedings of scratch grain in the morning to encourage mash consumption.

Supply fresh water at least once daily; from the hen's standpoint the oftener the better.

Keep oyster shell and grit where the hens can always get them.

Feed the flock regularly. Hens will soon learn to expect the feeder at a certain time each day.

One writer has summed up good feeding practice by saying, "Feed wholesome food; feed liberally; feed regularly; feed a variety. After that, the only secret is feeding is to feed 'activity" into the hen."

Rufus—How's Lady Luck been a treatin' you-all lately?

Goofus—Not a-tall well, Rufus. Ize done wore out three foots of graveyard rabbits an' Ize almost come to de conclusion dat I'll hab to go to work.

Potatoes will bake quicker if they are allowed to stand a few minutes in very hot water after washing and before being put in the oven.

FLOWERS IN THE CRANNIED WALL

Flower in the crannied wall,
I pluck you out of the crannies;—
Hold you here, root and all, in my hand,
Little flower—but if I could understand
What you are, root and all, and all in all,
I should know what God and man is.
Alfred, Lord Tennyson.

Rub a little lard on the outside of potatoes before putting them into the oven to bake. This will help them to peel easily after they are baked. The plan is also good for sweet potatoes.

For variety's sake try cutting carrots in thin strips lengthwise. Cook as usual until tender in boiling water. Drain, and serve seasoned with butter, salt and pepper.

GROUND WHEAT CEREAL

Farm folks should never be without a breakfast cereal regardless of the other circumstances as long as there is wheat in the granary. Washed and dried and then ground coarsely in a coffee grinder the wheat can be cooked for the breakfast table in practically the same way as other grain cereals. Add one cup of the ground wheat to three cups of salted boiling water and then cook in a double boiler until it becomes mushy. Adding raisins or chopped dried apricots to the cereal about 15 minutes before it is done will make it a much more tasty dish. Serve with cream and sugar.

PIGMIES FRIENDS OF APES

Capt. C. R. Pitman, Uganda game warden, recently told the Zoological Society of London of a curious understanding which seems to exist between the African pigmies and gorillas. Neither seems to have any fear of the other and both are unconcerned when meeting in the jungles. At the sight of a full-sized black, however, a gorilla will either flee or attack, and most of the large natives have a feeling of fear and hatred for the animal.

COMPANY WITHDRAWS OFFENSIVE ADVERTISEMENT

New York.—In response to a protest from the National Association for the Advancement of Colored People, the Timken Silent Automatic company, makers of oil heaters, have withdrawn an advertisement of their product which shows a barefooted Negro with a pig under his arm being shot at by an irate farmer.

T. A. Crawford, advertising and sales promotion manager of the company, has written the NAACP.:

"Certainly we have no thought of ridiculing any race or any individual member of that race. We are consequently ordering our advertising agency to destroy this ad in the interest of giving no further offense. We sincerely regret the incident and ask you to convey our apologies to any members of your association who have taken notice of the advertisement."

INVESTIGATION SEEMS NECESSARY

An investigation, which will meet with public approval, is suggested down in North Carolina. A former convict has told a story, which is most revolting and should be thoroughly investigated. He tells of lonely plots in connection with North Carolina prison, where convicts are buried, presumably at night, men, victims of the disciplinary practices of the prison authorities. The legislative committee members were told of beatings, chained suspensions and other methods of punishment which proved fatal. After death the bodies were carted off to the lonely mountain spot burial grounds and there interred and the records of the institution "covered" up to protect the officials. A convict is in bad enough at best, without having horsewhipping and pillory methods also used.

Tri City Review Editorial.

WITNESSES TRAVEL FAR

Three witnesses in a case of alleged cruelty to a horse, which was tried in Oban, Scotland, spent three days traveling to and from the court. They covered thirty miles by road from Salen to Argour, crossed Loch Linnhe by ferry, thence by road to North Ballachulish and across the ferry there, afterward taking the train to Oban by way of Connel bridge. Walter Beattle, an Oban farmer, was found guilty of cruelty to the horse at Salen.

Keep a supply of jelly on hand for sandwiches for the children's lunch. Combined with cream cheese, it is nutritious and satisfies that craving for sweets which most children have.

The number of radio sets in London decreased 9210 in a recent month.

DOG, FERRET, SNAKE FIGHT, DIE

In a triangular battle between a dog, a ferret and a brown snake in Chewton, Australia, all three participants died. When the dog attacked the snake it was bitten, dying shortly after. Meanwhile the ferret had thrown itself at the reptile, only to come out a pionoued avenger. In a last desperate effort the determined little animal snapped at the reptile, and succeeded in biting its head off.

CROP CONTROL WORLD-WIDE

American farmers who have signed up to reduce their cotton, corn or wheat acreage or the number of pigs they raise are in the same boat with the farmers of the rest of the world. This crop control or crop curb idea is now world-wide and still spreading. According to foreign observers for the Bureau of Agricultural Economics the United States with its adjustment programs opened the way and other nations have been quick to follow suit. While the United States leads the way in the number of crops under government regulation most of the other leading nations of the world have broad powers over agriculture and some of them are seeking to extend that authority.

SPRING CARE OF BEES

Indications are that the coming season will be a good one for bees and so time spent now in preparation for that season may prove profitable later on. Winter coverings are removed as soon as the danger of killing frosts are past and then work is concentrated on building up the swarm. It is important that there be a large number of healthy workers, and, if necessary, package bees can be used to make up defieiencies with sueeess. Abundant stores and abundant space for the development of brood cells are probably the most important considerations at this season.

MUSKRAT CLIMBS UP MAN'S LEG AND BITES HIM TWICE

Newcastle, Ind—(Special.)— Albert R. Martin, on his way to work, saw a muskrat lying in the gutter. He stopped to look at it. Suddenly the muskrat darted at Martin, ran up his leg and bit him twice. Martin killed the animal.

When a swarm of locusts, 20 miles in length, settled recently near Otto's bluff, South Africa, they covered the ground up a depth of three inches and in a new moments destroyed all the crops on several farms.

RELIEF AS IS

Chicago Journal of Commerce: The following quoted letter (with some identifications removed) came to a Chicago firm in response to a solicitation to sell a North Dakota firm a carload of seed potatoes. It gives, we think an intimate view, first hand, of why some congressmen want the relief and other measures increased. The letter:

"Relative to the possibility of using a car of Prince Edward Island seed potatoes here, there is nothing doing.

"We had a meeting of the growers here Monday. We could not interest them in any certified seed, however, in fact, they are not interested in anything except government relief and old age pension.

They are leaving the farms, moving in to town, and living on relief. You can't find a vacant room, but there are certainly plenty of vacant farm buildings.

"The outlook here is pretty discouraging. No one seems to take any interest in the future. They seem to think that between Father Townsend and Brother Roosevelt they will be taken care of for the rest of their days without work or worry. No one has to pay any debts or do any work and beer parlors are doing a rushing business with the weekly pay checks that the people are getting from the relief office."

O WONDERFUL HORSE

O horse, you are a wonderful thing;
No buttons to push, no horn to honk;
You start yourself, no clutch to slip,
No spark to miss, no gears to strip;
No license-buying every year,
With plate to screw on front and rear;

No gas bills climbing up each day,
Stealing the joy of life away;
No speed cops chugging in your rear,
Yelling summons in your ear.
Your inner tubes are all O. K.
And, thank the Lord, they stay that way;
Your spark plugs never miss and fuss;
Your motor never makes us cuss.
Your frame is good for many a mile
Your body never changes style.
Your wants are few and easy met;
You've something on the auto yet.
—H. R. Elliott.

SAYS RAPE BEST SWINE PASTURE

Quaife Recommends Temporary Feed

The seeding of rape to provide hog pasture in southern Iowa was urged by E. L. Quaife, extension animal husbandman of Iowa State college.

"Pastures in southern Iowa will not be of any great value this season from the standpoint of feed for hogs," he said.

Rye to Help.

He pointed out that farmers in southern Iowa with rye will have feed until well along into May, early sown oats will help to provide green feed until early in June.

"From then on the pasture situation for swine is likely to be rather poor unless some crop like rape or sudan grass is sown," he said.

Advantages.

Advantages of rape for temporary pasture were cited as follows:

1. It grows rapidly and sown at once will furnish feed until snow flies.

2. Chinch bugs will not bother rape.

3. Cost is not great as only five to six pounds per acre are required.

Sudan grass can be sown later in the season following rye to supplement other pastures during July and August, Mr. Quaife said, emphasizing the fact that grain requirements for hogs could be reduced very materially with proper pasture.

TUSKEGEE HEAD WILL SUPERVISE SELF-HELP UNIT

93 Families to Be Settled in U. S. Financed Community in Alabama

Frederick D. Patterson, newly elected head of Tuskegee Institute, left here yesterday for Tuskegee after conferring with Government officials concerning rehabilitation of 93 families on what will be known as the "Tuskegee Self-Help Cooperative of the Alabama Industries Group, No. 8."

This cooperative has been organized on a basis different from others, in that it has been incorporated to function as a legal entity. The projeet enjoys the sponsorship of Robert Russa Moton, president emeritus of Tuskegee.

It has been financed by a grant of $68,431 made to the Alabama Relief Administration through the Federal Government, which body will loan the amount to the corporation for purchase of land and equipment covering a 35-year period, at the RFC's interest rate.

Formerly occupied by the East Alabama Lumber Co., the site 523 acres, 400 of which are produetive land, includes a sawmill, 60 houses, a commissary, superintendent's home, factory building, sheds and outbuildings. Families taken from the relief rolls will be taught to produce their food, clothing and necessities of life.

Associated with Dr. Patterson in development of the project will be T. M. Campbell, director of the Tuskegee Extension Service, and William L. Carter, institute treasurer.

God In All And Through All

God will not be confined to buildings and to one day in the week. While religion at bottom is a philosophy of life, at the highest it is life itself A God whose laws run all through the universe is not to be crowded out of the affairs or daily life. He must be reckoned with, an accounting must be rendered. If he is the God of nature and of nature's laws, then it is preposterous to think of him only an hour on Sunday, or of worship as being anything less than the whole of life—J. L. Harding.

THE SONGS MY MOTHER SANG

Clyde Edwin Tuck

I often eateh vague fragments of a true,
Or haunting airs, likes doves 'n summer croon,
Which brings baek childhood's happy time of June.
And songs my mother sang.

The melodies she loved the best to sing
Beneath the elms, at work down at the spring,
Now faintly come to me on faney's wing—
The songs my mother sang.

I hear from the old orchard, as the breeze
Wafts fragrance from the snow-white locust trees,
And round the apple-blossoms drone the bees.
The songs my mother sang.

When twilight falls and overhead rain
Is heard in cadence, softly comes a strain.
Fond memory will evermore remain

Some song my mother sang.
As pictures of the past before me throng
I see her too, when winter nights are long,
Beside the wood-fire, rocking; then a song
Again I hear her sing

Sometimes her guest was Sorrow, sometimes Pain:
She looked to Him who will the weak sustain;
Her soul triumphant rose in sweet refrain—
In songs my mother sang.

To Start Work on Detroit Housing Project

Detroit, Mich., May 30—(ANP)—Work on Detroit's $6,000,000 low-cost federal housing project for 1,032 Negro families is expected to get under way within the next month. There are 60 acres in the plot upon which modern apartment buildings and row houses will be built.

Senator Bronson Cutting Was Negro's Friend

New York, May 24—The Board of Directors of the National Association for the Advancement of Colored People adopted the following expression of regret upon announcement of the death of Senator Bronson N. Cutting of New Mexico last week:

"The Board of Directors of the National Association for the Advancement of Colored People expresses its profound regret at the untimely death of the late Senator Bronson N. Cutting of New Mexico. Throughout his career he manifested an unsurpassed interest in the well being of Negro Americans and could always be counted upon to lend his influence to the wisest and most effective means of combatting injustice based on race or color.

"It is ordered that this expression of regret be spread upon the official

THE MODERN FARMER

Official organ of the National Federation of Colored Farmers, Inc.

Leon R. Harris - - Editor

Published monthly by the Modern Farmer at Nashville, Tennessee.

Office, 447 4th Avenue, North.

Devoted to the interests of the Farmer, Truck Gardener, Livestock and Poultry Breeder, the Home and the People.

Entered as Second Class Matter, April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 447 4th Avenue, North, Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, 75c for six months, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT.

OUR PLATFORM

1. A Unit of the National Federation of Colored Farmers in every community of colored farmers.
2. Co-operative buying, producing and marketing.
3. Every colored farmer a farm owner.
4. Abolition of debt-slavery, injustice and persecution.
5. A written contract for every colored farm tenant and sharecropper.
6. Better rural churches, schools and homes.

TWO GOOD EDITORIALS

We publish below two fine editorials from the Dayton Forum, published in Dayton, Ohio by Mr. John H. Rives. They contain fine advice and information for all of us. The editorials follow:

A GEORGIA POLICEMAN FACES TWO NEGRO JURORS

The U. S. Supreme Court's decision in the Scottsboro case brought to the attention of the country that Negroes are systematically and illegally kept off of juries in the Southern states. Thus it would be interesting to know the reaction of one Louise E. Parker, a former police officer of Savannah, Ga., who was tried in Dayton and acquitted by a jury composed of two Negroes.

Parker followed his unfaith wife from Savannah to Dayton where he found her in company with her lover, Chestnut Payne. He killed Payne on sight in the Postal Telegraph office on Christmas 1934. It was a premeditated murder. He was indicted by the grand jury for murder in the first degree. As customary in Montgomery county, as well as other counties of Ohio, Negroes were placed on the jury panel. Two of them were selected for the trial jury. Speculation was rife as to Parker's attitude towards being tried by a mixed jury. He evidently was satisfied, as his attorney failed to challenge their retention. Parker was acquitted, Thus his faith in securing a square deal from Negroes was sustained.

The Savannah police owes his freedom to these Negro jurors. What will his attitude toward Negroes serving on juries and towards Negroes in general when he returns home? He should be as fair to the Negroes of his home town as these Ohio jurors were to him.

SEVENTY YEARS AGO LEE SURRENDERED TO GRANT

April 9, 1865, the great Confederate General Robert E. Lee surrendered at appomatox Court House to General U. S. Grant, head of the Union Army. This event subsequently ended the Civil war, and actualy freed the slaves. Four million Negroes were homeless and without subsistence. Most of them remained with their former masters. Eventually they began to find employment, and the young people made their way to schools opened by Northern Missionaries. And what marvelous progress they have made in 70 years! Substract from America their labor, their contributions to education, music, entertainment, and to Christianity, and what a great loss the country would sustain. The Negro has proven to be a good, generous, unselfish citizen, neglecting only his economic welfare. He has enriched the landlords of the South and the mechants throughout the country, while he, himself, remains in abject poverty. During this period of national readjustment the new Negro should give some thought of his own economic freedom. We have done well, but we must do better and more in the coming years.

WAS IT A MISTAKE?

A jury in the District Court at Linden, Tex., made a laughable mistake in returning a verdict in the case of Will Richards, Negro, charged with pig stealing. The verdict read: "We the defendant find the jury guilty of hog theft as charged in the indictment and fix the punishment at confinement in the State Penitentiary for a term of two years." The juriors quickly explained that "jury" and "defendant" had been transposed.

We expect if the truth was known the jury was correct in the first place.

EDITORIALS

From the Bible:—

"Where there is no vision the people perish: but he that keepeth the law, happy is he." Proverbs 29:18.

"That man may last, but never lives,
Who much receives, but nothing gives;
Whom none can love, whom none thank—
Creation's bolt, creation's blank.
—Gibbons.

COLORED FARMERS—BUY FARMS!

Many colored farmers neglect to purchase farms because they have the notion in their heads that buying a farm is a transaction too big for them and a responsibility too heavy for them to carry. They do not realize that buying a farm is an easy thing to do if they go about it in the right way. The responsibility of having a farm as one's own and paying for it should not scare any farmer who is industrious, progressive and who has always been able to meet his obligations when he had a fair chance to do so.

In every state, large corporations, such, as insurance companies, lumber companies, railroads, trust companies and banks, have many acres of good farming land in their possession which they will sell on liberal terms. Much of this is now being purchased by white farmers. In some cases, these farmers are moving on the land—electing cabins—clearing a certain acerage, and are not required to make any down payment at all until crops are harvested next fall. Colored farmers would be given the same oppotunity in many if they would let the owners of this land know they want to buy it and prove they are industrious enough to hold it and eventually pay for it.

The time for colored farmers to buy land and get on farms of their own is right NOW. There will never be a better time than RIGHT NOW. It is foolish for us to sit still and wait—thinking that perhaps in the near future, the government will fix it so we can buy farms. The government is "fixing" too much for us now. Depending on the government is a bad habit to get into. We are supposed to be manly enough and patriotic enough to want to support the government—not to want the government to support us. If white tenant farmers in the western states have never enough to buy farms this year— then black tenant farmers and sharecroppers in the southern states should have nerve enough to buy.

Hunt up some of this land, Brother Farmer—some of this land owned by corporations banks etc., and get a farm and home of your own. The N. F. C. F. can help you find this land and will be glad to aid you in every way possible. Remember our platform says: "EVERY COLORED FARMER A FARM OWNER." We mean it. The Negro farmer and the entire Negro group in this nation will never be independent or recognized as WE should be until WE OWN THE LAND WE PLOW AND PLOW THE LAND WE OWN.

"MOTHER TUSKEGEE"

Tuskegee Institute has a new president, Frederick Douglass Patterson, 34 years old, an agricultural expert, trained at Iowa State and Cornell. This news cannot help but be of supreme interest to the Modern Farmer and to all colored farmers. We really feel like shouting for two reasons: first—because President Patterson is a young man— second, because this young man is a farmer. In spite of that "agricultural expert stuff" we believe he would just as soon be called Farmer Patterson as Dr. F. D. Patterson A. M., Ph. D.

Under Dr. Patterson, Tuskegee is going back to her first love,—the Southern Negro Farmer. We congratulate Tuskegee. Good-luck to you. Good-luck to your new president. May "the ring of the anvil and hoe," "Which you taught us to hear and to know," again be in our ears "a music as thrilling and sweet as a harp."

GET READY TO VOTE

In 1936 next year, we will vote again for President, members of Congress, and many state, county and local political officials. But thousands of colored farmers will not vote because they cannot. Some cannot because they will not pay their poll taxes. Of course, many will be kept from voting because they are "colored" but this will not be their fault.

What we wish to make plain is the fact that all colored citizens of voting age— no matter where they live— should begin thinking about this voting business right now and resolve to prepare to do their bounden duty and VOTE. There is no longer any excuse for illiteracy Any Negro who has any get-up in him can learn to read and write. And any colored person with cannot scrape up a dollar or two a year for poll tax is not worth American citizenship and should be treated as an alien.

In southern communities where Negroes are kept from voting simply because they are not "white," the progressive white people of these communities are beginning to see the Light. They are beginning to see that what makes their communities "backwards" is because only a handful of the population have all the say-so-only a few say what shall be done and how the tax money shall be spent . More and more, they are going to began to insist that every citizen, black and white, be given a say-so-be given the opportunity to vote. If the white people of the progressive type are waking up, it is certainly time for us to wake up.

Pay your poll tax,—try to qualify, register and vote. What is needed now is a determination on our part to exercise privilege of voting. Saying "We, can't vote," or "They won't let us vote," is all bunk when we know we haven't paid poll taxes and have not qualified. Let's do our part, —then trust to the Lord and to the howling we set up, to make the other fellow do his. It will work out all right in the long run.

ABOUT REAL FARMING

We trust that all farmers — especially owners of farms— have planned to do some real farming this year. Are you rotating and diversifying right? Are you making your farm a "live at home" farm? Have you plenty of poultry and livestock for meat? Have you more than one old cow, so you can get some surplus change for dairy products? This is something to think about while you're farming. It pays to plan ahead and plan right.

Another thing to think about is that your labor and the labor of your wife and children is expensive. If possible, use modern cultivators and etc., which require only cheap horse or mule labor. Let the wife have more time to make the home comfortable — to cook better meals—more time for rest — reading and recreation Keep the children busy but allow plenty of play -time too. Many farmers make slaves of their children and then whine because the boy or girl leaves and goes to the city as soon as they become of age. Make your home life pleasant and profitable for yourself and your family. There is more to REAL FARMING than raising a good money-crop.

DUBOIS UNIT AND ITS PRESIDENT

All members of the N. F. C. F. who read the interesting and instructive letter from Pres. Barrett of Dubois Unit, Sandusky, Ill. in last month's Modern Farmer, sould feel encouraged and should have gotten out of it two very fine lessons. The loyal officers and members of this Unit have laughed at opposition and criticism and have kept right on pushing ahead until now they see victroy in sight for their program. The lesson is: "No matter what the opposition is— if you're right you're bound to win in the end."

You will remember also that Pres. Barrett said a group of his members accompanied Pres. Davis to another community near by, one night, and succeeded in getting eleven new members and more are coming. This is fine missionary work. When we know something is a good thing we should tell others about it. The N. F. C. F. has grown and is growing simply because it is rendering fine, unselfish service to its members and thousands of colored farmers who are not yet members. When all of us realize, as Pres. Barrett and his members realize, that we gain much ourselves when we cooperate with and help the other fellow, then all the colored farmers in this land of ours are going to take the place in the sun we are entitled to. Selfishness and "everybody-for-himself" will never get us anywhere or anything. We must learn to see the good in the other fellow, whether we like him or not. Unity and cooperation. It's going to take this to bring us up, financially, intellectually and spiritually. The N. F. C. F. is a YOU-HELP-ME-AND-I-HELP-YOU organization. Don't forget that. Be grateful and loyal and all of us will be better off.

TO A. R. REECE

Dear Brother:

You are doing some fine work in your community. Do not get discouraged. The earth is still the Lord's, and, in spite of injustice and persecution, we must hold up our heads and battle on. The Modern Farmer and the N. F. C. F. are constantly battling for justice and fair play for all American citizens. We will win if we tackle the many hard problems sanely and patiently, but with the determination to keep everlastingly at it. You are doing fine work simply because YOU WON'T GIVE UP!

Don't depend on the government or the other fellow for your food and clothing. You might come up missing.

Scratching is pleasant but sometimes you smart afterwards.

Keep your secrets and your business from those who don't like you. You never see a rabbit talking to a hound dog.

Have you renewed your subscription to the Modern Farmer?

PULVERIZE GARDEN SOIL

One thing of importance that the gardener should remember is that properly prepared garden soil is broken into very fine particles. When thus prepared it is able to tightly surround the tiny vegetable seeds so that the roots can establish themselves immediately after sprouting. Such things as failure to pulverize the soil are answers to many of the mysterious failures of gardens to grow.

INTERESTING NEWS & NOTES

The oldest continously occupied farm in the U. S. is the Stevens farm of 45 acres, near Clinton, Con. This farm was given to the first American Stevens by the King of England in 1675. The farm home was built in 1690 and is still standing, — although it has often been modernized and improved. The ninth generation of Stevens now occupy it

Many stamps of the Republic of Liberia.— African Negro republic. bear pictures of birds and animals. The Liberians know the birds and animals are better looking than some of their "great" men.

Texas tenement house owners asked the city council to pass a law requiring operations on roosters to prevent their crowing so his tenants could sleep. He should request a law to operate on some ralio crooners.

Two-thirds of all counties in the U. S. are now free cattle tuberculosis, says the Dept. of Agriculture.

The Cenusus Bureal reports the total 1934 cotton crop as 9,468,338 bales. This is more than three millions bales less than the 1933 crop.

The Senate has voted to slash the interest rate on land bank loans to farmers from 4 1-2 to 3 1-2 per cent.

Senator Bankhead has introduced a bill proposing a "farm tenant homes corporation." This would be under the jurisdiction of the Department of Agriculture. It would have power to issue one billion dollars in bonds and would have one million dollars government capital. It would make loans to tenants and shareeroppers for purchasing small farms and homes. The bill has been endorsed by many prominent government officials but is not liked by many southern landlords.

The 1934 total farm income was still four billion dollars less than the 1929 high of ten and a half billion dollars.

Dr. Frederick Douglas Patterson, 34 years old, — an agricultural expect,—was elected President of Tuskegee Institute. He succeeds Dr. Moton. Probably Tuskegee will now return to thinking more about farming and the welfare of the Negro farmers of the South.

France is going to submit a 15 year plan to its parliament providing for the expenditure of 67 million dollars for development of cotton raising in French West Africa. This is an attempt to make France independent of the U. S. and other countries for cotton. About the time they get loaded up on cotton they will have a war and blow it all away.

According to collection studies made by the Soil Department of the Missouri College of Agrieulture, dust storm added 100 pounds of soil per acre to lands in that state during the month of March.

One hundred million dollars damages were caused by fire on farms in the U. S. last year. Fire is a useful servant but a hard master. Farmers, look out for fires.

The CCC camps will enroll two hundred and fifty thousand sand more young woodsmen this summer. Many more young colored men will be enabled to get this good training.

The Delaware legislature ratified the thirteenth, fourteenth and fifteenth amendments to the Federal Constitution 34 years ago, but never notified Washington about it until this spring. Evidently some states, especially the lynching and disfranching states, have not notified Washington nor any one else yet.

Sam Langford, noted Negro prize-fighter, who has been blind five years , has regained the sight of one eye.

Out of every 100 bushels of corn produced in the United States, 42 are fed to hogs, 18 to cattle, 14 to horses and mules, 10 to chickens, one to sheep. Three bushels go to livestock in cities and nine bushels go for syrup and other uses.

A 16 year old Iowa farm boy used a shotgun on some burglars who broke into the house while he was alone and asleep up stairs. Hearing a noise, he loaded the gun and went down stairs just as the burglars were leaving with their loot by the front door. He blazed away and one of the robbers returned the fire. The bullet struck the but of the boy's gun. He kept on firing at them until they dropped their loot and ran. A trail of blood was found so some of the shot must have struck.

Some primitive rock paintings of hunting scenes in Kruger National Park in South Africa have been seen by only four white men.

An Indiana farmer found a Rhode Island Red hen and a wild rabbit both sitting on a nest of 22 eggs. The rabbit had half the nest. Helping the hen out.

In 1930 there were 79,556 colored farmers in the state of Arkansas,—an increase of around five thousand in ten years. A little over eleven thousand were owners, a decrease of aronnd four thousand in the ten years period. Tenants increased around twelve thousand. Arkansas colored farmers should seize every opportunity to purchase farms in the state There are too many colored tenants and sharecroppers. Land owned was 704,790 acres and value of owned land and buildings was $16.232,397.

All the leading sprinters in the United States today are colored men. That is,—all the leading ones up to a distance of 100 yards.

Federal land banks sold 3,664 farms during the six month's period ending Feb. 28, 1935. Farm ownership is increasing. We wonder how many of these farms were sold to colored famers.

Irish potatoes should be mulched to insure a better crop. Mulch your Irish potato patch.

Farm horses and farmers in the southwestern dust belt are wearing dust masks.

STEAL TWO WALNUT TREES FROM FARM IN INDIANA

Logansport, Ind., March 5—(Special).—Thieves stole two large walnut trees valued at $350 from the W. L. Fernald farm here during the night.

'SOFT' WOOD OFTEN HARD, SAYS EXPERTS

Botanical and Use Classifications May Differ in Meaning

Paradoxical as it may sound, softwood is often harder than hard wood, while on the other hand, hardwood is often softer than softwood.

In explanation, lumbermen point out that the terms hardwood and softwood, written as one word, refer to the botanical classification of trees from which wood is cut. When the terms are used as two separate words, however, they refer to the hardness or softness of the wood.

Botanically, the hardwoods are known, as deciduons trees, while the softwoods are known as conifers or evergreens.

The distinctions between the botanical and use classifications should be constantly borne in mind by the prospective home modernizer, reconditioning his home under terms of the National Housing Act.

Often a comparatively soft, easily worked wood is required for a specific construction use while a strong hard wood may be essential ,to meet requirements. Such hardwoods as yellow poplar, chestnut and basswood are softer than Southern yellow pine and Douglas fir, and compare in softness with such softwoods as white pine, pondosa pine, and spruce. In general, however, the majority of the hardwoods, like oaks, hard maples, birch, and beech, are comparatively harder than the majority of commonly used softwoods. Since both relatively hard and relatively soft woods are found in both of the bontanical classifications, the consumer has a wide choice of woods from which to make his building selections.

HORSE, HOG AILMENTS PREVALENT ON FARMS

(The Register's Iowa News Service)

Cedar Rapids, Iowa. — Digestive troubles of horses have been prevalent throughout eastern Iowa, according to the Eastern Iowa Veterinary association.

Hog cholera continues in several of the counties in the eastern half of the state and has been reported in Washington, Linn, Black Hawk, Keokuk, Buchanan, Chickasaw, Johnson, Fayette, Butler and Delaware counties.

GRANGER HOME PLAN DESCRIBED

Ligutti Tells of Life in Farm Settlement

The government subsistence homestead plan now in operation near Granger, Ia., was explained to members of the Des Moines Democratic Women's club, Tuesday by the Rev. Luigi Ligutti, founder of the settlement.

He said not only had the government's purchase of the land for the homesteads made two farmers able to pay their taxes, but the plan would sooner or later enable the subsistence farmers to become self-supporting, taxpaying citizens.

Details of choosing the settlers, interdenominational aspects of the settlement, how soil for each little "farm" is analyzed so the farmers will know what crops are most likely to survive, and activity among boys and girls and women of the homestead were detailed by Father Ligutti.

Miss Flora Dunlap spoke before the women on welfare problems. She was introduced by Mrs. Leo Wegman, wife of the state treasurer.

COLORED ATTORNEYS FEW

A recent survey in the field of law indicated that there was one white barrister to each 700 white persons in the United States as compared with one colored attorney to each 9,600 of the colored population. Although more than 80 per cent of the colored population is concentrated in southern states it is there that colored lawyers are scarcest, while the best field for Negro lawyers was found to be in the West. The estmated total for the nation is 159,375 white and 1,230 colored attorneys.

A FOOL'S SAFETY RULES

An exchange gives the following excellent suggestions for getting into trouble:

1. Don't be afraid to take a chance. Try anything once. If you get killed the wife can wash for a living. Besides, she can say that you were a brave man.

2. Don't waste any time with a safety man or his warnings. He's crazy.

3. When you get something in your eye, don't go to a doctor. Get your buddy to use his dirty handkerchief. Don't let him wash his hands— the more dirt the better.

4. Be as careless as you like. That's your business. Don't worry about getting killed, for you have to die once anyway.

DON'T SPEED WITH WORN TIRES

Step lightly on the gas when your rear tires are in poor condition. A blowout when speeding can cause a car to skid off the side of the road or even turn turtle.

Unless the driver is a strong man and keeps a mighty firm grip on the wheel his car is sure to skid dangerously if he has a blowout. The reason is that when a tire blows out, the resistance offered to it as it rolls is tremendously increased. This swings the car around sharply and, since the speed is high, and it all happens in the fraction of a second, unless the driver is braced for it and is holding on to the steering wheel he has not time to save the situation.

BANTAM BETTIE WON'T RETIRE AFTER 26 YRS. OF HER CAREER

Petersburg, Ind.—Bettie is becoming known as the bantam hen who refuses to retire. She lives with the Mr. and Mrs. John Tolers five miles southeast of here, near the town of Cato. Bettie has raised a family of 200 in her life of 27 years. Whether from a sense of maternal duty or because she suspects that idle hens soon leave the barn yard to become stew, Bettie begins the season of 1935 setting on ten eggs. She began that career when a year old.

A Southern judge was perplexed over the conflicting claims of two Negro women each of whom asserted that a certain cute little black baby belonged to her. Finally the judge thought of Solomon and told the two women that he would divide the baby in two and give each of them half. They were so shocked that they both screamed: "Don't do dat, boss. You kin keep him yourself."

OLD-TIME CHURCH WAYS

Boston Transcript: A woman of central Massachusetts charges in court as one count her grievances against her husband that "he goes to church to look at the pretty girls rather than to hear the sermon." Without wishing to appear to countenance waywardness in husbands we think it is only fair to say that in a kindlier age than ours young men used to think that churches had been built to serve as trysting places; the practice of going to church to look at the pretty girls was one of the first steps a youth took on the way to becoming a deacon or elder or bishop. That is to say, accepted wooers and those languishing between hope and despair used to sit in the back pews gazing all-a-quiver at certain arrangements of back hair, eager for a turn of the head and a shy glance during the singing of the first hymn. Some, in their madness, became pew-openers, takers-up of the collection, hoping thereby to enjoy the advantage of looking straight into the face of Huldah or Lois.

The young people were the mainstay of the evening service. Wise parents remained at home knowing that their daughters would not lack for escort through the perilous dark of the nine o'clock streets. The Wednesday evening prayer-meeting had not fallen into the apathy of these degenerate days. It was "a going concern." The attendance was large, the singing and "testimonies" fervent, the atmosphere almost electric, for prayer-meeting was the precursor to "seeing Nellie home." The greatly daring sometimes made a detour on the way to treat the incomparable she to a chocolate eclair at the caterer's, and at once became a marked man— the town talk. The years were coming when the safety bicycle would be invented and girls would forsake prayer-meeting to ride out to the park side by side with their worshipers. Nobody knows how many a bishop in the making was spoiled by the safety bicycle, for prayer meeting and Sunday evening service languished from the hour of its bursting upon a speed-starved world.

The Connecticut-valley husband whose turpitude we read about may only have taken up a by-gone practice, hoping to feel once more a flicker of the sweet contemplative emotion that used to make even the prosiest sermon hour something to look forward to all through the week. And though we may deplore his carrying the ruling passion of youth into old age, it is pleasant to know that pretty girls still go to church. Is it too much to hope that they still draw young men after them?

FARM LAND BRINGS $100 AN ACRE PRICE

(The Register's Iowa News Service)

Marengo, Iowa.—A farm of 201 acres south of Ladora belonging to the Adam Keil estate was recently sold to James Mathes, Marengo, for $100 per acre. He also purchased the J. M. Smith farm of 273 acres south of Ladora for $60 per acre.

Morning Sun, Iowa.—The improved 40 acre farm belonging to Charles Murray, and located four miles north of Morning Sun was sold recently to Charles Samuels for $100 per acre.

Hugh Bretz has purchased 132 acres of unimproved pasture land belonging to the Dr. W. R. Smyth estate for $40 an acre.

SARGENT RAPS REFORM ZEAL

Clinton, Iowa—Criticism of the procedure of the national administration in attempting to restore prosperity was voiced by Fred W. Sargent, president of the Chicago & North Western Railway, in an address before the Clinton Chamber of Commerce. Speaking on "Observations on the Depression," Sargent said:

"I have no quarrel with the so-called New Deal, but I think possibly it has undertaken too much at one time, and may have confused zeal for reform with sound, constructive efforts looking toward recovery."

Sees Farms as Key

This, he said, was responsible for the uncertainty which is retarding recovery.

The greatest recovery efforts should be directed toward solving farmers' problems, Sargent said. He approved emergency efforts so far taken, but declared that diversification and development of new crops like soy beans and hemp would do much toward a permanent solution of the farm problem.

He said foreign trade should be developed as a secondary consideration after the domestic consuming market has been protected for the American farmer.

Praises Carriers

Speaking of the railroads, Sargent said:

"When the history of this period is written it will be found that no other large industry has been more progressive."

He said the roads had been making quite and effective progress in research, safety and improvement of equipment.

'ME COLORED,' SAYS CHINESE TO RIOTERS; IT DOESN'T WORK

New York,—Police revealed today how a Chinese laundry proprietor "outfoxed" himself at the height of Tuesday night's rioting in Harlem.

Negro business neighbors of the Chinese hung signs bearing the word "colored" in their store windows in the hope the rioters would not molest their establishments.

So the laundryman hung out a large placard:

"Me colored, too."

His windows were smashed.

STOP THAT SOIL THIEF

While Farmers Pay for Deed, the Soil Washes Away.

Hordes of gulleys now remind us,
We should build our land to stay,
And departing leave behind us
Fields that do not wash away.
When our children pay the mortgage
On the place where long we toil,
They'll not have to ask the question,
"Here's the bond, but where's the soil?"

—Exchange.

Gumshoe—A dollar doesn't go as far this year as it did last.

Gumboil—No, but it goes a lot faster.

Grandma—Joie Lou, what part of school do you like best?

Joie Lou—Recess.

Heroism

It is no heroism to bear patiently where there is no provocation, bravely where there is no danger, calmly where there is nothing to perturb. Not the hermit's cave, but the heart of busy life, tests as well as making character. If we can live patiently lovingly, cheerfully amid all our frets and irritations day after day, year after year, that is grander heroism than the greatest military exploits.

Upon her grave for years the grass has grown;
Familiar paths she trod I walk alone.
But very near she seems when comes a tone
From songs she used to sing.

I shall fare forth without regret or fear
When my last summer comes, if I may hear
Again those soulful notes, to me so dear—
The songs my mother sang.

INTERESTING REPORT ON ACTIVITIES IN CAMPS GIVEN PRESS BY EDGAR G. BROWN

Young Men of Both Races Getting Valuable Training, Combined With Healthful Recreation, Says Writer

By Edgar G. Brown

Washington, D. C., May 27, 1935—Emergency Conservation Work, the organization which operates the nation-wide system of Civilian Conservation Corps camps in the forests and parks of the country, is on the threshold of an expansion program which will increase the Corps to approximately twice its present size. Under the plan of expansion, to which President Roosevelt gave his final approval on April 25, a total of 600,000 men will be participating in the CCC program by August 31, 1935. Between June 15 and August 31, more than 300,000 new men, including replacements for enrollees who drop out of the Corps prior to that time, will be enrolled in the CCC. Robert Fechner, Director of Emergency Conservation Work, has just authorized the construction of more than a thousand additional CCC camps to be ready for the occupancy of the CCC enrollees as soon as possible.

Something of the life at camp for these thousands of America's young men is a revealing and heartening story for the folks back home.

The most casual observer cannot help but be impressed with the commendable habits, appearance and spirit of these young men who have voluntarily enrolled in this character-building venture. Here you see these citizens of tomorrow intent on doing their bit in the conservation of our natural resources and in developing the historical and esthetic values of our national parks and monuments.

To get a first-hand picture of the life in the camps, the writer recently made a personal visit to the sacred shrine of the Gettysburg National Park, where two CCC companies of 200 colored men each are encamped on the hallowed ground where President Lincoln delivered his memorable Gettysburg address. What I saw there will long live in my memory!

The enrollees answer to call of revielle at 6 a. m. Beds are made up, clothes and belongings arranged and secured in individual trunks, showers are taken all in an atmosphere of good fellowship and then a piping hot breakfast of cereal, meat, potatoes, bread and a beverage is heartily enjoyed by all. A half-hour or so is spent in getting the odds and ends cleared away while the leaders, who are selected from among the boys themselves, and who are directly in charge of each of the seven barracks, confer with the supervisory force of the National Park Service on the schedule of work for the day. Shortly before eight a. m. the boys mount the half dozen waiting trucks and off they go to four hours on the job in the field before noontime. Landscaping, seeding and resodding, construction of guard rails, road repair, removing fire hazards, building of bridges and truck trails, resetting headstones in the National Cemetery, and brightening up the monuments erected everywhere on the Gettysburg Battlefield ment to the honored dead, are the tasks they set themselves to, conforming to the specification set forth in the blueprints of the master plans for Gettysburg National Park.

The objective of the National Park Service, according to Supt. James R. McConaghie, is the restoration of the battle area to its original state. When the work began many of the stone fences that are so common to the battlefield had been all but destroyed. Many of them were obscured by brush, fallen trees, briars and honeysuckle. A large portion of the fences had disintegrated to such a degree, that they no longer served their purpose as fences. Many of the farms within the boundary of the park have these stone walls serving as fences to confine their fields. Most of the stone fences were used as a shelter for both the Union and Confederate forces during the battle and have important historical value. Under the supervision of the technician for the park, Dr. Lee Jones, and his assistants, William Allison and Dr. Louis E. King, the first Negro historical foreman in the National Park Service, Department of the Interior, the work of repairing, rebuilding and general restoration has progressed rapidly. The Lincoln Memorial in the National Cemetery at Gettysburg has been prepared for the Memorial Day Service on May 30th, at which time Governor George H. Earl of Pennsylvania will be the principal speaker. Last year President Roosevelt spoke here on Memorial Day.

At noontime the boys return to camp for dinner. Then they return to the field again until four-thirty.

In this manner they put in forty hours a week for Uncle Sam. The enrollee receives thirty dollars a month for his services, as well as food, lodging, clothing and the life of the out-of-doors. Some twenty colored assistants and leaders among the enrollees in the two companies at Gettysburg received thirty-six and forty-five dollars a month. These men have been promoted to the more responsible positions in the camps. Each enrollee in a CCC camp allots an average of twenty-five dollars of his monthly salary to his parents back home.

At 5 p. m. Captain John Francis Moran, the commanding officer of Camp Renaissance, (NP-1) CCC Company 385, salutes our country's flag while a colored CCC boy, the company bugler, sounds "retreat." Two parallel lines, each of one hundred young men, stand at attention as the colors are slowly lowered by CCC enrollees.

The visitor is impressed with the alert and intelligent expression on the faces of these enrollees as, with heads bared, they participate in this moving ceremony. The enrollees are attired in comfortable and neat khaki colored uniforms and strong cowhide shoes. Just a half hour before these same lads were in their work clothes, returning to the camp from the field.

Captain Moran introduces the visiting guests; the boys applaud their greetings. Dr. King, the colored historical foreman, assures the boys in turn of the best wishes of the entire party and also those of the head of Emergency Conservation Work. Dr. King, who did his graduate and resident work at Columbia University, tells the boys something of the earliest history of Gettysburg, when Indian tribes roamed these wide meadows and hunted for big game. Dr. King's recitation of historical facts so fascinates these

hungry boys they seem oblivious of the supper bell.

Let us go inside the mess hall. This is indicated by a hand-painted marker of carved wood. We learn later that this sign, like similar ones on the hospital, recreation hall, supplies, officers quarters, garage and supervisors office, is the work of Emery Faucett, a colored enrollee, who has in the past two weeks been promoted to the position of sign painter for the Gettysburg National Park, as well as the camps. He has been given an office at the supervisor's building. More of the artistry of enrollee Faucett, who hitchhiked from California to Pennsylvania, finally landing up in the CCC camp at Gettysburg, is strikingly apparent on the inside of the dining rom. A gray and black color scheme predominates throughout, not only on the walls and ceiling but even including the huge built-in-ice-box, which we are informed was constructed by the boys, themselves. The twenty-five tables are highly polished and appear to be of a fine quality of mahogany but in fact are just made of plain pine lumber. The long benches are likewise spick and span. The enrollees repeat grace in unison while standing. The aroma of those platters stacked with crisp, luscious fried ham will not soon be forgotten. On the wall at the end of each table was a green metal holder, in which a card was inserted bearing the typewritten name in full of each enrollee who had a seat at the table as well as the name of the special leader at the top. His job has to do with the general deportment and a rather brotherly concern for the more timid youngsters who might possibly fail to get the necessary food requirements for a healthy body.

Captain Moran introduced us to Lieutenant Paul K. Monaghan, Senior Leader Lawernce Johnson, a colored enrollee, and Chef Charles Foy, a colored locally enrolled man. We then proceeded on our way, stopping to inspect the ice-box which was stacked with fresh food. This refrigerator contains twelve hundred pounds of ice. An automatic switch throws on the light when the door is opened. As we inspected the kitchen, six colored cooks clad in immaculate white trousers, coats, and caps went about the business of preparing dinner for two hundred strong hungry youngsters. All the cooks were trained by Chef Foy.

I have before me the daily menu of 385th Company CCC, Renaissance, Gettysburg, Pennsylvania, May 6, 1935. Breakfast—creamed chipped beef, baked beans, cereal, milk, bread, coffee, and oranges; Dinner—roast beef, brown gravy, mashed potatoes, spinach, bread, and fruit; Supper—ham, bread, fruit, coffee, kale, and boiled potatoes. It had the official approval of mess officer, Paul K. Monanghan, First Lieutenant, CA-Res, and is typical of the day in and day out menu.

In the store-room there is enough canned salmon, corned beef hash, and corned beef to fall back on for a week's feeding of the entire company, if any untoward delay in the food supply, like a snow storm in winter or a flood in the summer, should cut the camp off from its base of supplies.

We walk about Camp Renaissance on well laid out and uniform sidewalks lined with logs and white stones; we admire the shrubbery, lawn and trees, and especially a centerpiece of laid-in rock with individual drinking fountains which are lighted at night. This centerpiece is the boys special rendezvous, built by them, with the masonry and fixtures donated by the skilled artisans of the town. A striking feature of this camp is an embankment of turf, studded with white three-foot letters reading "C. C. C." and "Company 385." This company marker is easily seen from the roadside. It is illuminated at night by flood lights.

In each of the dozen barracks, thirty to forty army cots, clean and tidy, are lined up on either side of the wall. In cabinets especially built in by the boys at the end of each barrack, hang the raincoats, and overcoats of the enrollees. A pair of highly polished shoes and a set of overshoes are placed side by side at the head of each cot. The floor is immaculate and there is no evidence of dust storms in this sequestered woods. Windows are clear as crystal and not a spot is to be seen on the wall boards. Each enrollee's mess kit, after a dip in scalding water, has been replaced in the individual compartment of the built-in rack along each side of the barrack.

In contrast to the rafters in most of the camps, which are usually unfinished, the beams in all the barracks at Camp Renaissance are done in black. The red, green and yellow sign hanging out from the next building reads, "Recreation Hall." Across the whole width of the building is one of the finest pieces of letter carving I have ever seen. Cut out of white pine and as clean and fresh in its appearance as the day it was done, it reads, "CAMP RENAISSANCE-CCC-CO. 385.' The tables and benches are highly polished. There are overhead drop lights, two to each table, which can be drawn to the ceiling on special occasions such as dances, shows, and at the Sunday morning devotionals, when the soft, blue wall lights can be snapped on. Curtains and drapes are at all the windows, ash trays on the tables, books on the shelves, and a picture of George Washington's winter quarters at Independence Hall hangs in a prominent place. Also on the wall are replicas of historical monuments commemorating those who fought at the Battle of Gettysburg.

At one end of this beautiful recreation hall is another gem of workmanship, and a tribute to the boys' own labors, a huge built-in gray stone fireplace rising majestically to the ceiling. Logs four feet long await only the match's flame. President Roosevelt's picture done in colors is centered over the fireplace. On the right is a picture of the American flag and the colors of CCC Company 385. At the left in artistic lettering is the slogan "Remember your country is loyal to you; you must be loyal to your country and your President. You can express your loyalty by the constant obedience of orders given to you by those appointed over you." All this was done by Enrollee Faucett. On the walls were neatly painted cards reading: "Be Courteous," "Be Cheerful," "Be Friendly," "Be Clean," "Be Obedient" and "Be Loyal." Other decorations included paintings of the North Carolina monument, Virginia State Memorial, General Meade's Headquarters, and Major-General George Gordon Meade on horseback.

As a tribute to the courage of the CCC boys, Captain Moran proudly points to a CCC boxing championship certificate hanging on the wall. The certificate was awarded to James Nichols in 1933, while an enrollee of Company 385. He is now a professional, well on his way, it is said, to a chance at the light weight title. Track and baseball shields also attest the championship caliber and the athletic prowess of the Company.

We are ushered into a large well-stocked room at the end of the recreation hall. John L. Edwards, a colored enrollee, rated as a CCC leader, is in charge of the camp exchange, which supplies smokes, candy and the like to the boys in the evenings. More than three hundred dollars' worth of business is done each month.

"Edwards is one of my best men," said Captain Moran, "He is in full charge, and is entirely responsible, also, for the discipline of the recreation hall. He makes a daily inventory, and actually performs the usual services of a camp exchange officer." We asked Enrollee Edwards a few questions to which he answered: home-Duquesne, Pennsylvania, joined CCC to take care of his mother; has been in the CCC for thirteen months. Edwards is charged with the care of the camp radio and the movable company altar, designed with a cross of white pine on the front.

Two rooms opposite the camp exchange, as well as the headquarters office, are used for class meetings. All courses and activities included in the camp educational program are carried on within the camp area. The apparatus and equipment consist of specially illustrated and electrically illuminated educational views, of the kind used in visual instruction, (loaned indefinitely), a mimeograph machine, lantern slide projector, motion picture projector (loaned by Gettysburg College), radio parts and supplies, photographic material, large wall maps, charts, historical pictures, adequate supply of textbooks, paper, notebooks and so forth. Fred E. Kelly, the educational adviser, is ably assisted by Walter Wax, colored assistant educational adviser, who has been in the CCC for ten months. Captain Moran indicated that Wax's sincerity of purpose and exceptional interest and zeal in all phases of the camp program had prompted him to pass over boys with more formal training in his appointment of Wax to this responsible position in the company. Six FERA teachers supplied by the relief organization, the foresters and technical staff of the National Park Service, as well as the commanding officer, the first lieutenant, second lieutenant, camp surgeon (a reserve officer), and one enrollee, the instructor of the company's Glee Club and the Drum and Bugle Corps, compose the regular teaching staff at each of the camps in Gettysburg. Nearly fifty percent of the enrollees of both companies attend one or more of the optional classes. No difficulty whatever has been experienced in maintaining one hundred percent attendance in such courses as First Aid, Safety, Morale, Guidance, Leadership, and Health Hygiene. Over a hundred reels of motion picture film have been shown during the past three months. Sixteen sets of lantern slides, including geography, forestry, history, and safety topics, have been shown as a part of the general educational program.

The motto, "No Victory Without Labor," is both illustrated and printed on the cover of the Renaissance Journal, official organ of Camp NP-1. Camp NP-2 prints the "Mirror" bi-weekly. According to Mr. Franklin Peters, the camp educational adviser, at camp NP-2, the greater part of the material appearing in the publication is written by the enrollees themselves. It is further worthy of comment to note the ability that these enrollees demonstrate in expressing their thoughts and ideas clearly and intelligently, and there is no doubt that the men on the newspaper staff are making a very real contribution to camp life.

We next visited the headquarters office of Camp Renaissance. Here Walter L. Graham, one of the company's colored leaders, who has been in the CCC for eighteen months, is a member of the clerical staff. George H. Molson, also a colored leader, is in charge of the supply room of Camp Renaissance, in the past week he has been made senior leader in charge of the company to succeed Lawrence Johnson, who resigned to accept a position in private life. He has been in the CCC for sixteen months. George Washington Giles, with fourteen months in the CCC to his credit, lifted up the hood of one of the big army trucks entrusted to his supervision and handling to reveal a motor in the same spotless and bright finish as the day it left the factory.

We pass on to the camp hospital. It is immaculate. Floor, ceiling, walls, doors, curtains around each individual bed and medicine cabinet are all in white. Rubber mats cover all the walking space. Equally satisfying was the absence of any patients. Otis Holliday and Wallace Capel, who are to be promoted and transferred to new camps are in charge of the camp infirmary. There is a special health lamp and vaporizer for head colds, the most common malady so we are told by the camp physician. The CCC safety campaign for the prevention of accidents seems to be in full force, too, at Gettysburg National Park.

We walk out on the Confederate Avenue, and thrill anew to the landscape and beauty of Camp Renaissance. Everywhere those bright red barrels and water buckets alongside hose and axes and long-handled fire hooks give added testimony to the precautions which have been taken to protect these federal properties from fire and destruction.

"We have striven at all times," said Captain Moran, "to build up the young men of the nation in body and soul and to give them a new lease on life."

(E. C. D. 101620).

The Mid-Week Prayer

W. J. Thompson, D. D.,

Hilo, Hawaii, U. S. A.

The Source of Authority
(Romans 13:1)

Professor H. G. Wood: "The letter to the Romans belongs to the central group of St. Paul's epistles— including Galatians, First and Second Corinthians, and Romans. Romans, like most of the Pauline letters, falls into two sections: doctrinal (chaps. 1-11), and practical (chaps. 12-16). In this thirteenth chapter the apostle is dealing with practical questions and social problems.

"Our-fourth of Paul's letter to the Romans has to do with social problems, one-third of his letter to the Galatians, and one-half of his letter to the Colossians touches the social life." So here in this thirteenth chapter of Romans there is definite guidance regarding our relations with others, and our attitude toward those in authority.

Doctor Archibald Alexander reminds us that "during our Lord's earthly life the supreme earthly power belonged to the Roman empire." Though Jesus suffered much at the hand of those in authority, he lived in obedience to the government of the country, and acknowledged the right of Caesar to legislate and levy taxes in his own province. While giving all deference to the State officials before whom he was brought, he did not hesitate to remind them of the ideals of truth and justice of which they were the chosen representatives (John 18:23; John 19:9, 11).

St. Paul's teaching is in harmony with his Master's and is indeed an expansion of it.

"The powers that be are ordained of God. Render therefore to all their dues; tribute to whom tribute is due."

The source of authority to Paul was the risen Lord. He had met the Christ, and his whole outlook upon life has been influenced by this vision of his Lord.

When the apostle teaches the duty of humility he emphasizes the sublime example of Jesus Christ (Phil. 2:4-8). The duty of forgiveness is illustrated and imagined in the following words:

"Forbearing one another forgiving one another .... even as [illegible] forgave you, so also do ye" (Col. 3: 13).

Servants are to obey their masters sincerely and efficiently because in serving others well they serve the Lord Jesus Christ (Eph. 6:5-6). And masters also are reminded to be just and considerate because they have a Master in heaven. To the Apostle Paul Christ is the standard of his life the secret of his strength, and the source of supreme authority. May this be true of us in this twentieth century!

Follow with reverent steps the great example
Of him whose holy work was "doing good."
So shall the wide earth seem our Father's temple
Each loving life a psalm of gratitude.

—Homoletic Review.

The Narrow Way

"Can two walk together except they be agreed?"—Amos 3:3

Oh, straight and narrow is the way
Wherein I walk my Lord deside;
So easily my feet might stray
That I am glad it is not wide.
Because 'tis such a narrow way,
Oh, close together we must stay

The narrow way is sometimes dark,
And yet so near my Shepherd is
I do not mind when shadows come,
For night and day alike are His;
And so, because my sight is dim,
Oh, very close I keep to Him.
The narraw way is sometimes rough,
And I might stumble if alone;
But now my Lord directs my steps
And holds my hand within His own.
However steep the path may be,
I cannot fall, so close is He.

Sometimes a sorrow comes to me,
Or trial that is hard to bear,
And then He wipes the tears away,
For I am always in His care;
So not for long grieve or fear,
My Comforter's so very near.

Annie Johnson Flint

Reporter—I hear that a wild man was seen roaming about in a swamp here. Can you tell me anything about him?

Native—Yes. He was a man from the city trying to locate a choice building lot he'd just bought with his government money.

A THOUGHT FOR TODAY

I was brought up to think that a good citizen was a man who put by, as a rule, one-third of his income, invested in sound securities, and in his old age looked forward to a moderate competence which he could leave to his children.—Dean W. R. Inge, of England.

TALKS TO COLORED FARMERS ABCUT SUPPORTING THE AAA."

(Continued from Page 1)

colored landowner, sharecropper and day hand to earn more, save more, have more and be more, The landowner gets paid for the land taken out of production. Landowner and renter share the parity payments. The boss is able to pay his day hands better wages than he was paying two years ago. The sharecropper or renter, who, on account of the acreage reduction, cannot raise a crop of cotton, still can live on the land and gets his house, wood and garden plot free. There is no rule against raising food and feed crops on the land leased to the government. All of this land needed a rest from cotton anyway. All of us are getting some mighty good lessons now in diversified farming. We are raising food crops we didn't know we could raise—we are eating better and living better. Last year it worked out this way in many instances; croppers who couldn't raise a cotton crop were used as day hands and many made more money than they would have made had they cropped.

I have received many letters from good renters and sharecroppers who were kicked off the land and out of their houses by unjust landlords, and are now wandering about from pillar to post, or are in towns and cities living off "relief". Naturally, these bad landlords wanted to get rid, of their best renters or croppers because they were inclined to be progressive and independent. The landlords couldn't handle them as they wanted to. These bad landlords didn't want any tenants except those they could, skin and hold in debt-slavery. These good renters and croppers have suffered and are suffering. But I believe the KICKING OF AND OUT WAS A BLESSING TO MOST OF THEM. They should have left these bad landlords long ago. I hope they will soon have the opportunity to purchase small farms of their own.

The good secretary of the N. A. A. C. P. wired the Relief Administration in Washington not long ago and stated that thousands of tenants and sharecroppers in the state of Arkansas alone had been kicked off the plantations and were unable to obtain relief from local administrators. Others have gone so far as to say there are HUNDREDS OF THOUSANDS in such condition. The truth is—the good secretary, above mentioned, and the others, are seeing TOO BIG FIGURES. I know there are many in such shape, but there are not THOUSANDS IN ARKANSAS NOR HUNDREDS OF THOUSANDS ANYWHERE THE TRUTH IS—THAT EVEN IN THE SOUTH TODAY—THERE ARE MORE PEOPLE ON THE FARMS THAN THERE WERE TWO YEARS AGO. Though many have been KICKED OFF THE FARMS, MANY MORE HAVE BEEN KICKED BACK ONTO THE FARMS.

Many of our so-called "leaders" —colored and white—are giving out false and absurd information about the AAA. Our good brother in Texas has heard plenty of this kind of information. Mrs. Roosevelt—the President's wife—addressed a mass meeting of our group in Washington not long ago and among other things she said this: "You cannot blindly follow any leader. Follow a leader, but make him explain to you so you understand what it is you are doing. Do not just take anybody's say-so." This is fine advice for colored farmers. All of you ought to belong to the N. F. C. F. and get and take the advice of President Davis and others who know what they are talking about. If the Texas brother belonged to the N. F. C. F. a lot of the bunk he is hearing about the AAA would roll off his mind like water off a duck's back.

I know that under the AAA plans and policies there have been many instances of injustice and discrimination. In some countries members of the county AAA committees, bureaus, etc., have been unfair to independent colored farm owners and to managers, renters and sharecroppers living on farms and plantations owned by insurance companies and other corporations. The N. F. C. F. has suggested that a committee of responsible colored farmers be appointed by the AAA in every county or group of counties having an appreciable Negro farm population, to cooperate with and advise these various "white" AAA committees, bureaus, etc. I believe these "colored" committees would do a lot of good for all interested—for the white farmers,—colored farmers—and for AAA. They certainly would do no harm. These committees have not been appointed yet but they should be.

No right-minded farmer should condemn the AAA because it cannot make all in charge of that executive of its policies and plans deal justly,—keep their contracts —and obey the law. Instead, we should give those respousible for the success of the AAA credit for attempting to iron out all the wrinkles and for trying to make it as near perfect as possible. We know they have special representatives now travelling through farm sections attempting to ferret out cases of injustice and discrimination. Let's give them a little more time before ye squawk so much.

I believe that all the chief administrators of the AAA—from President Roosevelt on down—desire that the LITTLE MEN OF THE FARMING INDUSTRY be benefitted as well as the BIG MEN. President Roosevelt has repeatedly stated that aid must be extended by the government to all unfortunate citizens as "a matter of social duty." Sec. Wallace said only recently in an Address in Atlanta, Georgia,—"I know that the lot of the sharecropper is hard.... But I would like to ask what help any farmers, tenants or owners, would expect to get out of a relapse back to 5 or 6 cent cotton." If it had not been for the policies and plans of the AAA we would have had that kind of a price for cotton right now. Mr. Chester C. Davis, administrator of the AAA, said recently that mass purchasing power must be increased,—"that in order to have mass production, mass consumption based on changes in distribution of the national income must be achieved." In other words he meant that the little man,—the small farmer, —tenant and sharecropper must have more money to spend for what he needs and should have. Those who do not produce cotton but who handle it—the textile mill owners, cotton factors and exporters, etc.—are loudest in cussing the AAA. Mr. C. A. Cobb, Director, Division of Cotton of the AAA, has very wisely pointed out to them. that cotton is now selling for approximately $80 a bale while it was selling for $37.50 a bale two years ago, and, because this is so, "the economic situation on the farm and off the farm in the Cotton Belt shows a vast improvement." The farmer is getting around $40 a bale more for his cotton. I suppose these kickers and knockers are yelping because they can't get the extra $40. The idea that the more the little man has to spend the better off all of usare,—just does not fit into their way of reasoning.

One of the hardest worker's for the success of the AAA is Mr. E. A. Miller,—Mr. Cobbs' assistant. Mr. Cobb and Mr. Miller understand the problems of the cotton producers—all of them—and can be trusted to do what they believe is fair and just for all cotton producers.

As farmers, I see no reason why any of us should doubt the wisdom of the plans and policies of the AAA. It will pay us, both now and hereafter, to get behind those who have done so much for us, and have proven already that they know just about what we want and should have.

BAN ON IMPORTATION

(Continued from Page 1)

order makes possible such importations, since the authorities of those countries have recently been successful in eliminating the infection of foot and mouth disease. Importations are still subject, however, to established regulations governing the certification and entry of livestock.

The authority to import the species of livestock mentioned from Switzerland and the Union of South Africa is officially designated as Amendment 6 to bureau of animal industry Order 334. Restrictions on the importation of these animals from Switzerland had previously been in effect for many years, and from the Union of South Africa since 1933.

SAVE FOOD FLAVORS

(Continued from Page 1)

skillful handling and cooking which preserve the natural flavors. Dr. Florence B. King, of the Bureau of Home Economics, has a little information for the housewife in this regard. The first step in preserving the flavor of vegetables and fruits, she says, is to avoid delay in cooking them. With a few exceptions the fresh ones are always the best. If too much time elapses before perishable fruits or vegetables are cooked chemical changes so alter the flavor that they make much less appetizing foods. Many delicate flavors are destroyed by improper cooking. Foods cooked too long or with too high a temperature may often become strong and unpalatable, and if too much water is used they are not only drained of their flavors but also lose many of their valuable food elements.

A FARMHOUSE WINDOW

A little window-frame, a curtained bower,
Where old-fashioned plants for years have kept
Kind watch and ward, while many a garden-flower
Has bloomed and slept;
A little window treasuring the sweetness,
The fragrance and the joy of home's completeness.
A little window where in true content,
Someone is rocking slowly to and fro
While hovering, on gentle errands bent,
Still come and go.
A little window, framing pleasant faces,
Love's ministeries, and home's dear commonplaces.

Oh, little window, whence the old-time light
Sends out a welcome that none other hath,
And through the twilight and the early night
Makes fair the path!
Far from the world's unloving and uncaring,
Homeward, across the waters, let us be faring!

—Frank Walcott Hutt.

THE MODERN FARMER

Vol. VIII. NASHVILLE, TENN., JUNE 15, 1935 No. 5

President James P. Davis Pays Official Visit To The Modern Farmer

CONFERS WITH THE MANAGEMENT AND OTHER OFFICIALS

President James P. Davis, of the National Federation of Colored Farmers, paid an official visit to the office of The Modern Farmer last month. He came over to the headquarters of the publication after having visited the Sunday School Congress session held down in Houston, Texas, where he addressed the representatives of more than three and a half million Baptists that make up one of the organizations of the National Baptist Convention of America. After his address before that body of religious forces a ringing pronouncement calling upon Mr. Cobb of the Cotton Administration Department, to give the Negro farmer a fair deal in this New Deal set up, was worded and sent on to the nation's capital. In less than two hours an official reply had been received and read to the Congress while President Davis sat in the audience.

While here in Nashville he held a conference with the management of the Modern Farmer publication, as well as with the treasurer of the National Federation of Colored Farmers, residing in this city. They outlined plans for the future, not only of the publication but went into details relative to the coming National Convention of Farmers that is to be held in Little Rock, Ark.

More than four days were spent in Nashville and vicinity. President Davis visited Clarksville and Montgomery County, called upon

ATLANTIC CITY MAN BELOVED FOR FAIR DEALING, SUCCUMBS

Charles B. Boyer, White, Had Served 41 Years As School Superintendent

Atlantic City, N. J., July 4—(By Mary J. Washington for ANP)—Charles B. Byer, white, for forty-one years connected with the public school system of this city and for twenty-eight years superintendent, died here Sunday, his death coming like a quiet benediction on a week of the finest and most democratic commencement activities. The announcement of his death came to school officials toward the end of the Inspirational Services being held for the Senior class in the ballroom of Convention hall at the close of a masterly address by Dr. Mather Davis, president of Lafayette College.

Mr. Boyer, throughout his forty years built up such a fine spirit of fairness to all races that Howard University called him some years ago and destowed upon him the honorary degree of Master of Arts.

FED. ADMINISTRATOR DISCHARGED

Wm. A. McGrath Loses Position in Chicago

Chicago, July 4—(ANP)—Announcement was made here this week that William A. McGrath, Federal Probation Officer for Chicago had tendered his resignation and it had been accepted. McGrath incurred the wrath of the Negro citizenry hereby his unfair and prejudiced tactics, one of the most flagrant being the refusal to accept colored stenographers sent to him under the Work Relief measure by the I. S. R. C.

His assistant, Thomas C. Smith, also resigned.

CONGRESSMAN A. W. MITCHELL URGED TO PROBE NAVY POLICY

Chicago Group Resents Employing Colored Men Only for "Mess Service"

Chicago, July 4—(ANP)—That Congressman Arthur W. Mitchell had been requested to investigate and protest against the naval policy of enlisting Negroes only as "messmen" was revealed here this week by A. C. McNeal, president of the local branch of the N. A. A. C. P.

This request followed in the wake of correspondence between the N. A. A. C. P. head and Secretary of the Navy Swanson, in which the information was given by the latter relative to the type of service Negroes were permitted to render in the U. S. Navy and also that enlistments were only acceptable at Macon, Ga., Raleigh, N. C., Birmingham, Ala., Little Rock, Ark., and Nashville, Tenn. A protest against this discrimination was also forwarded to the President of the United States.

Plans 25th Year Celebration

New York, N. Y., June 27, 1935—The National Urban League is planning to observe the Twenty-fifth Anniversary of its founding with a nation-wide celebration some time early in the fall. Tentative plans were discussed at a special meeting of the visiting Urban League secretaries, returning to New York from the National Conference of Social Work which was held in Montreal. Among those present were the following Urban League officials: A. L. Foster, Chicago, Ill.; H. A. Lett, Newark, N. J.; Robert J. Elzy, Brooklyn, N. Y.; James H. Hubert, New York City; Jesse A. Thomas, Atlanta, Ga.; Lester B. Granger and T. Arnold Hill, New York City.

URBAN LEAGUE'S ACTIVITIES

Organization Seeking Better Relief Positions

New York, July 4 (ANP)—The National Urban League today moved into action on a wide front in order to secure an equitable share of work relief jobs for Negroes. T. Arnold Hill acting executive secretary of the National Urban League, made public a series of letters which have been addressed to various officials of the Works Progress Administration. His first letter to Hon. Harry L. Hopkins, Works Progress Administrator of Washington, requested that Negroes be placed in responsible positions in the National, as well as the State offices of the Works Progress Administration. Mr. Hill wrote to Mr. Hopkins in part as follows:

"Past experience has shown us conclusively that the presence of Negroes in the personnel of an administration is the most effective way of preventing certain forms of discrimination by careless or prejudiced subordinates and staff employes. Such a precedent is established in the appointment of Mrs. Ellen S. Woodward as Assistant works Progress Administrator and Assistant Federal Emergency Relief Administrator. According to the press accounts, Mrs. Woodward will be in charge of women's work under the two programs.

"The problems facing Negroes are as difficult and complex as those facing women. The number of Negroes on relief is relatively twice as large as the number of whites. The experiences under the CWA indicate that communities are not influenced by the high percentage of Negroes on relief to the point of giving them their share of relief work. It is my firm conviction, however, that if your administration were to set the example by the employment of a Negro in such a responsible position, the State Progress Administrators and the District Administrators (with whom such an individual would of course work under your supervision) would have set for them an example that they might very well follow in their local relations."

Mr. Hill also requested Mrs. Ellen S. Woodward, Assistant Works Progress Administrator, to give adequate attention to the employment of Negro women by appointing a Negro woman to her staff.

At the same time Mr. Hill addressed a letter to the State Works Progress Administrators of every state in the Union reminding them of the President's speech on June 17 in which the President made this statement:

"The second point I make is that we have to be extremely careful not to make any kind of discrimination. We cannot discriminate in any of the work we are conducting either because of race or religion or politics."

TRAINING COURSE OFFERED

Tuskegee to Help Rural Teachers This Year

Tuskegee Institute, Ala., June 29, 1935—In order to meet an increasing demand for teachers trained to work in the rural sections and with rural people, Tuskegee Institute will offer a course in Training Teachers for Rural Schools, beginning with the Academic Year, 1935-1936, Dr. F. D. Patterson, president, announced today. The new course leading to a Bachelor of Science degree will include actual observation, study and practice teaching under competent supervision in rural schools and will give the student an approach to and an appreciation of rural conditions not hitherto attained in the rural courses now offered.

For the most part current preparation of teachers adapts itself most readily to teaching in the city and town schools. Teachers thus prepared, finding it difficult to secure work in the city, turn to the rural school for employment. This does not always work out to an advantage of the rural school child.

Tuskegee seeks to correct this condition by offering a course of training peculiarly adapted for teachers who plan to work in rural sections and especially in rural schools.

Dr. Patterson made it known that there will be a limited number of tuition scholarships in this course offered to deserving students interested in preparing themselves for work in rural sections. There is also opportunity for such students to secure self-help which will enable them to earn something toward their living expenses. Application should be made immediately to the Registrar, Tuskegee Institute, Alabama

Herriford Heads Tuskegee Academic Dept.

Tuskegee Institute, Ala., June 27—(ANP)—Neal F. Herriford, who for eight years has been a teacher in the English department at Tuskegee Institute, has been appointed director of the Academic department, effective June 1.

Two years ago Mr. Herriford filled the position of "acting director" during the absence of Mr. Alphonse have back at his post of duty, after Heningburg, director, who was on leave, studying at Columbia university. Mr. Heningburg has been named Director of Vocational Guidance and Placement, and entered upon his new duties June 1.

Mr. Herriford is a graduate of the University of Kansas and received his Master of Arts degree from Harvard university.

FLORIDA LEGISLATURE GENEROUS

A. & M. College of Tallahassee Gets Big Sum

Tallahassee, Fla., July 4, (NP)—Florida A. and M. College received official notice today that the state legislature recently adjourned, had appropriated a total of $644,000 for operating and building costs during the biennium of 1935-37.

President J. R. E. Lee, is making public the appropriation stated that $344,000.00 of the amount was designated for operating expense, with the remaining $300,000,00 to be used in the erection of two new dormitories, one for boys and one for girls.

ANOTHER COUNTY OF NORTH CAROLINA PICKS HONEST JURY

Williamston, N. C., July 4 (ANP)—For the first time in more than a generation the names of Negro citizens were placed in the jury box, making them subject to duty on the petit and grand juries in the Superlow Court of Martin County. This action was taken on account of the now famous Scottsboro decision of the Supreme Court of the United States.

The commissioners limited their selection to men and the total number of veniremen is being held to the lowest point in several years.

1015 Teachers In Florida A. and M. Summer School

Tallahassee, Fla., July 4 (By ANP)—With 1015 teachers from all sections of the Southland, the summer session of the Florida A. and M. College got under way here this week. This marks the fifth consecutive session that the enrollment has topped the thousand mark.

Negroes and Whites Profit Through Negro's Bequest

Lexington, Ky., July 4 (ANP)—A trust fund of $50,000 for the advancement of the education of Negro and white youth was provided for in the will of Robert Henry Hughes, who died here last week.

The will was admitted to probate Wednesday and included many philanthropic bequests including one of $10,000 to the Old Ladies Home and a similar amount to Lincoln Institute while his home was left to the St. Peters Catholic church of which he was a member.

Snow and Berry Ideas Win Hand On Coast

Culver City, Cal., July 4—(By Fay M. Jackson for ANP) —It wasn't an easy matter for Valaida Snow and Nyas Berry to follow the splendid record set by Broomfield and Greeley at the Cotton Club for the production of classy creole floor shows. To the credit of all concerned, Miss Snow has joined the Frank Sebastian family, assembled the outstanding talent here and succeeded in putting over a beautifully costumed revue that does herself proud.

They're calling Nyas Berry, youthful husband of the versatile Valaida, creole Fred Astaire. He is, indeed, a masterful stepper, With lanky limberness, Berry, incidentally one of the home town boys, intermingles acrobatics with very cleverly executed dance steps. The whole makes a pleasing cocktail of rythmaniacs. The crowds scur-ream for more of Berry.

You probably know all of Valaida Snow's tricks. Out here she has the added advantage of scores of pretty chorines with which to work, and the assistance of Madame Houda, costumer, which vivify her ideas and present the cash customers with a delightful-to-see high brown show.

Myrtle Fortune captains the chorines. May Johnson, Ruth Scott, Boyd and Cleo Herndon, Rosa Lincoln, Juanita Moore, Lucy Battle, Emma Presasley and Gladys follow her commands.

Principals are the finest array of talent on current nite club bills. The inimitable Rutledge and Taylor, Dudley Dickerson a riot of fun, Mae Diggs, Flora Washington and the beloved Martha Ritchie. Cliff Ritchie, Jr., Glenrie Cheesman and Connie Harris do specialties.

Old Man Les Hite and his orc play with great inspiration since Valaida blew her trumpet at the Cotton Club.

Paul Robeson Stars

British Resident Commissioner Sanders has established peace in the jungle district under his rule, and has discovered unusual intelligence in a big, handsome native, Bosambo, whom he recognizes as an escaped convict.

Despite the fact that the entire district is under British protection, a tribe at the extreme end of the territory ruled by a very old king has been left alone due to the inaccessibility of the mountain country. The old king breaks the law, and engages in the slave traffic with the assistance of two white traders.

Acting upon the orders of Sanders, Bosambo stops the slave traffic, and makes Lilongo his wife. A few years of peace, and Sanders goes towards the coast to get married. Two white men whose slave trade had been ruined by Sanders, convinces the old king that Sanders was dead. The king immediately sends his warriors to attack Bosambo while other tribes prepare for war.

Deputy Commissioner Ferguson, who was in charge during the absence of Sanders is murdered by the old king when he goes into the latter's country after one of his spies who has been slain. In the meantime, the warriors have carried away Bosambo's beautiful wife.

Sanders returns when he learns of the disappearance of Ferguson, and arrives in the old king's village just in time to save Ferguson and his wife from death at the hands of the old man.

After the natives are subdued, Bosambo is made king.

Owens and Simmons

But what about the Jesse Owens, the Metcalfes, the Cornelius Johnsons, the Eullace Peacocks. O. Simmons and others? You no doubt ask. They go to make up the calvacade of Brown Crusaders who are leading the onslaughter on discrimination, segregation and all the evils, we as Negroes, so intensely abhor. Think of the University of Texas officially inviting Metcalfe to run in its annual relays as it did last spring! Think of 35,000 spectators singling a black boy out of 22 players on a football field and making him the object of ten minutes sustained applause at the Northwestern University of Iowa game last year, when the hero, Oze Simmons pounded a new path for Negroes in every line into the green coated sod of Dyche Stadium.

These things get us somewhere. Soap-box oratory; classroom analysis, leadened discourses by ancient reverends and other rustics may solve the problem, but for me I'd rather see it come through a solid punch on the jam, the flickering of dust from a cleated shoe in the face of the follow being left behind, or the smashing through a tiny hole on the left side of the line., second's tussle with the obstacle of ten or eleven players and then the victorus dash to the goal line by the brown-hued gridman.

Fear Louis Victory Will Enrage Mussolini

Boston, Mass., July 4 (ANP)—Fear that Joe Louis's victory over Primo Carnera last Tuesday night will incur the wrath of Premier Mussolini and bring about further reprisal against Ethiopia, was expressed here Wednesday by Prof. Rayford W. Logan of Atlanta University in an address before the fourth annual New England Institute of International Relations at Wellesley college.

Recrying Mussolini's policy with regard to Ethiopia, the Southern professor added: "I am afraid that the defeat of Primo Carnera by Joe Louis will be interpreted as an additional insult to the Italian flag which will permit Mussolini to assert against the necessity for Italy to annihilate Abyssinia."

Step In Fetchit Pals with Walt Kelley "Virginia Judge"

Hollywood, Calif., July 4 — (ANP) — "The Virginia Judge" expected to start in production this week will feature Walter C. Kelly and Stepin Fechit in top spots Chas. Rodgers productes the Paramount film.

Leon Herriford Orc With Hepburn Picture

Hollywood, California., July 4—(ANP) — Leon Herriford and his orchestra which is playing the entrancing music for guests at Taylor's Cafe, have been doubling in Katheryn Hepburn's picture, "Alice Adams," under the direction of George Stevens.

Supreme Liberty Directors' Meeting

Chicago, Ill. (Special)—Directors of the Supreme Liberty Life Insurance Company held their annual meeting in the home office of this city at ten o'clock, Saturday June 15th. There was almost a 100 per cent attendance. Mr. W. K. Gibson, chairman of the board, presided, while Mr. W. Ellis Stewart the secretary had the honor of recording and reading the minutes. Matters of the moment effecting the enlargement of the company came in for special attention. The directors from New York, New Jersey, West Virginia, Ohio and Tennessee all reported that the Supreme Liberty branch office in their respective cities showed every sign of improvement and increased business.

President Harry Pace delivered a very far-reaching address on "How we build a life insurance company." This board was elected at the recent stockholders' meeting held in this city several months ago, but the directors had postponed their meeting from time to time until they could be sure that many of the busy men who occupy the post and position of a director in this great insurance group could find time to wend their way to this city to sit in on these deliberations.

Teachers of Vocational Home Economics Hold One-Week Conference

Prairie View, June 22—The First Annual Conference for Vocational Home Economics teachers met at 10-15. Fifty-five teachers were in regular attendance during the week. High points in the conference discussions were methods of using the home and community facilities and conditions as back grounds for teaching home making, adequate methods of arriving at the solutions of girl problems, and those of the family.

Miss Susan Burson, agent of the Federal Board of Vocational Education, was present and led many interesting and worthwhile discussions. Miss Lillian Peek state supervisor, of Home Economics and Miss Josephine Pazdral, assistant state supervisor, were present and contributed greatly to the success of the conference. Other speakers during the week were Principal W. R. Banks and Dr. Gordon Worley of the State Department of Education, Austin, Texas.

Miss E. C. May, director and the faculty of the Division of Home Economics were especially helpful in caring for the entertainment, housing and working program of the guests.

Appeal Made for New Deal System, Etc.

New York, July 4 (ANP)—The National Urban League, continuing its complete participation of Negroes in the Recovery Program, made public a letter last week signed by T. Arnold Hill, acting executive secretary, to the Honorable Frances Perkins, Secretary of Labor.

In his letter to Secretary Perkins, Mr. Hill pointed out that "the setting up of the administration for the Wagner Labor Disputes Act, and the Social Security Bill, brings clearly to view the necessity for providing for Negroes very definitely . . ."

He further pointed out that according to Miss Perkins' statement "that government ought to arrange that labor play its part in the study and development of any economic policies for the future of the United States and under that promise he maintained, "the Negro ought to be allowed to make a more definite contribution to these policies."

Mr. Hill's letter continues:

Specifically, I am urging that the development of labor's program in connection with these two important measures mark the departure from the old deal which has too often characterized the consideration of Negroes by the Administration thus far. There will be Boards. There will be Directors. There will be investigators. There will be clerks, and there will be adjusters and conciliators. There will be specialists of every kind. In all this machinery, the Government ought to arrange that Negro labor play its part, and that Negro leaders as well as white leaders who are interested in the development of the commonwealth, and intelligent on labor matters, be given the opportunity to serve.

Record Enrollment In Summer Session at Atlanta University

Atlanta, Georgia, June 21—Special—Six hundred and ten students had enrolled in the Atlanta University Summer School for college and graduate work when the registration book for the six weeks session was closed this week. This represents an increase of 154 over the 1934 enrollment, and is the largest collegiate enrollment in the history of the local summer school. Of those enrolled, 161 are carrying work of graduate rank, and 449 are working for college credit.

In addition there are enrolled in the Ministers Institute 41 ministers and other religious workers. This branch of the summer school is being conducted on the adjoining campus of Morris Brown College for a period of four weeks ending July 10. The members of this group are registered from Georgia, Florida, annd Alabama.

As a feature of the summer session, a tri-weekly convocation is being conducted in Giles Hall, at which a prominent educator or leader in other fields is the speaker. During the past week the speakers have been Dr. Arthur F. Raper, field and research secretary Commission on Interracial Cooperation; Claud Nelson, secretary of Fellowship of Reconciliation, and Forrester B. Washington, director of the Atlanta School of Social Work. During the following week President John Hope of Atlanta University will speak on Wednesday, June 26, and Dr. Harold H. Bixler, director of testing and guidance of the Atlanta Public Schools, on Friday, June 28. On Monday, June 24, the convocation hour will be given over to a song recital by Mrs. Ruth Logan, soprano and J. Carlyle Walker, baritone.

In the progressive education demonstration school, which is being held in conjunction with the summer session, 80 children are participating. The school which occupies Laura Spelman Rockefeller Memorial Building on the Spelman College campus is made up of a nursery school, second, third, fourth, and sixth grades. A one-teacher rural school is being conducted also as a demonstration unit at Red Oak, Georgia, about 25 miles from Atlanta.

Howard Professor Returns To Duty

Washington, July 4—(ANP)—Dr. Leon A. Ransom returned to active duty as professor in the School of Law, Howard University, here Tuesday after a year's leave of absence spent in study and research at Harvard University.

A NEW SONG BOOK

IS JUST APPEARING FROM THE PRESS

"GOLDEN GEMS"—Get a copy, price 25 cents; then give us the benefit of your constructive criticism. We want to know how you like this new song book. Send this back with 25 cents for a single copy or $3.00 by the dozen—We will pay the postage.

"GOLDEN GEMS" is a book that is all that its name implies. It is pure gold in spirituality, originality and in religious fervor.

Insist up your friends using "GOLDEN GEMS". Recommend that your choir use "GOLDEN GEMS". Put "GOLDEN GEMS" in your Sunday School; use "GOLDEN GEMS" in your B. Y. P. U.; put a copy of "GOLDEN GEMS" in your home. If "GOLDEN GEMS" is introduced in your state it will prove that you are 100 per cent with Henry Allen Boyd in his earnest desire to give to the Baptists the best that money can buy, and when the best costs you no more, then get "GOLDEN GEMS".

Send this back to me, I want to know who is using and supporting "GOLDEN GEMS".

W. E. B. DUBOIS' NEW BOOK CONCEDED HIGH PLACE AMONG HISTORICAL WORKS

"Black Reconstruction" Unearths Data Which Refutes False Propaganda of Long Standing

W. E. B. DuBois New Book
BLACK RECONSTRUCTION
Reviewed by
Henry Raymond Mussey
Wellesley College

New York—This is a book of controversy. In form and intention a oslid history of the reconstruction period, with primary reference to the Negro's part in it, it is also an economic treatise, a philosophical discussion, an impassioned argument for the thesis so ably and eloquently maintained by its author over a generation, a poem, a work of art, all rolled into one. Listen to its early sentences:

America...added...a vision of democratic self-government: the domination of political life by the intelligent decision of free and self-sustaining men. What an idea and what an area for its realization.....It was the Supreme Adventure, in the last Great Battle of the West...

And then some unjust God leaned, laughing, over the ramparts of heaven and dropped a black man in the midst.

It transformed the world....it restored caste and oligarchy; it replaced freedom with slavery and withdrew the name of humanity from the vast majority of human beings.....Democracy died save in the hearts of black folk.

.....The resulting color caste founded and retained by capitalism was adopted, forwarded and approved by white labor and resulted in subordination of colored labor to white profits the world over.

It is a book of magnificent controversy, brilliant, bitter, uncompromising, but it is also a book of history, and to that history we now turn.

All decent Americans are today thoroughly ashamed of the history of Southern reconstruction. Too commonly the blame is laid lightly at the door of the mistakenly enfranchised Negro, with all his ignorance and corruptibility. It is primarily to refute this charge that Dr. Du Bois has written his book, assembling a body of evidence whose criticism and evaluation is a task that can be adequately performed by none but the trained historian of the period. I attempt only to suggest what Du Bois sets forth. He maintains, first of all, that the Civil War was won for the North by the activities of 200,000 Negro soldiers enrolled at a time when draft resistance threatened disaster, and by what he picturesquely calls the general strike, the drifting over into Federal-held territory of a half million black workers seeking freedom, thus depriving the Confederacy of an important part of the labor without which it could not live. On this point he quotes Lincoln effectively. Andrew Johnson, in some respects the most pitiful figure in American history, appears as the poor white in the presidential chair, played on by mighty economic and political forces, himself contributing greatly to the tragedy because he could never conceive the Negro as fully human. From first to last the outstanding figures in Dr. Du Boi's Washington reconstruction drama are Sumner and Thaddeus Stevens, the latter particularly, "at heart the greatest and most uncompromising of abolitionist-democrats," seeing the essentials with a clearness perhaps unmatched by any other public man.

Reconstruction legislation and administration is examined in greater or less detail in each of the Southern states, with distinctly unconventional results. Carpetbaggers and scalawags cease to be an undifferentiated mass of unmitigated scoundrels, and Negro politicians to be a corresponding group of ignorant and flashy bribe seekers. Honest, able men and rascals turn up in both classes. The constitutions and laws turned out by the black governments Dr. Du Bois finds, on the whole, not bad, taking everything into account, and he points out the survival of much of this legislation long after the restoration of white rule. Public debts, he admits, were increased greatly, but not excessively, in view the enlarged functions of government in the new society; and he finds Georgia and Virginia, where the whites never lost control, piling up debt in precisely the same fashion as the black-ruled states. The abominable railroad scandals of the period, he shows, were by no means peculiar to the latter group, and he reminds us that the saturnalia of waste, extravagance, graft, corruption and outright thievery that prevailed in the Southern states was matched within the precincts of Washington itself. Without denying the sorry facts in the states under black control, then, he vigorously denies the exclusive, or indeed the primary, responsibility of the colored man, laying the blame in first instance on white business men and adventurers, Northern and Southern alike, with both black and white legislators and administrators sharing in the spoils. The unexampled political corruption of the Southern states in reconstruction days, he maintains, was not a matter of race, but of ignorance, poverty, inexperience, plain human dishonesty, black and white alike. He writes as an advocate; but the fair-minded white historian (for I believe there are such, despite Dr. Du Bois) is bound to weigh his facts. His book challenges a re-examination of the facts.

Even more arresting than Dr. Du Bois's examination and estimate of those facts is his placing of those facts within a tremendous structure of essentially Marxian theory, dimly suggested in the initial quotation from his book. I have no space to develop, much less criticize it. For this purpose Negroes appear, not as a race as such, but as the poorest and most exploited group of American workers, and the reconstruction perion as what might have been the beginning, not of Negro domination, but of labor dictatorship for the purpose of a redistribution of wealth (in the South primarily land) and the spread of education so that a real democracy might arise. The movement was stopped by the combined power of Southern land owners and Northern industrial capitalists swiftly rising to dominance, ably aided by poor whites in the South and white labor in the North, both fearing Negro competition, and all alike, except during a few apocalyptic years of war enthusiasm, really disbelieving in the full humanity of the Negro and unwilling to accord him full civil rights. When the abolitionists "let the dictatorship of labor be overthrown in the South, they surrendered the hope of democracy in America for all men." From that day forward, capitalism has ridden triumphantly forward on the ruins of liberty; the masters of capital have stretched forth their hands to dominate not only the black, but the bown and yellow labor of the whole world, and at home by craft and guile to rule over the white labor whose ignorant and ill-advised cooperation has made their triumph possible. Over the reaches of nearly a century I seem to hear another voice crying: "The proletarians have nothing to lose by their chains. They have a world to win. Workingmen of all lands, unite!" If my summary makes Dr. Du Bois's theory appear a bit fantastic, such is not its intention; the conception has a gloomy majesty.

No intelligent person can read this book without profound respect for the scholarship of its author, plowing a solitary furrow in an almost unbroken prairie. None can deny the sensitiveness of his feeling, the beauty and brilliance of his style, the passionate earnestness of his convictions, the uncompromising sharpness of his thought and expression; and plenty there be to criticize his bitterness and lack of judicial balance Slavery was "a cruel, dirty, costly and inexcusable anachronism." The "infamous Black Codes of the post-Civil War period "established a new status of slavery with a modified slave trade." Being black "is still a crime in the United States." And as a brilliant example of the kind of blanket indictment of which Dr. Du Bois complains when applied to Negroes: "With a determination unparalleled in science, the mass of American writers have started out so to distort the facts of the greatest critical period of American history as to prove right wrong and wrong right." An advocate could scarce do his cause a worse disservice than this. My people, I know, have been and are cruelly unjust to Dr. Du Bois and his people. Shall I then complain if he is something less than just to us, and on that account refuse to examine and weigh the facts he lays before me? After all, he is but one more blind man, feeling a different part of the elephant and crying aloud his discovery. It is thus that we learn—and if only we might learn to do justice and love mercy and walk humbly. —N. Y. Herald-Tribune.

St. Louis Mayor Welcomes N. A. A. C. P. Conference

St. Louis, June 28.—Mayor Bernard P. Dickmann of this city welcomed the delegates and visitors to the twenty-sixth annual conference of the National Association for the Advancement of Colored People Tuesday evening in the auditorium of Vashon High school. In a short and straightforward speech he assured them that St. Louis was happy to entertain an association whose purpose was "to make 14,000,000 Americans economically, politically and socially free." He outlined what St. Louis was trying to do for its colored citizens, stressing particularly the new hospital and nurses training school now under construction.

Henry D. Espy, president of the St. Louis branch, welcomed the association on behalf of the colored citizens and the branch.

Delegates were present from 26 States and the District of Columbia.

THE MODERN FARMER

Official organ of the National Federation of Colored Farmers, Inc.

Leon R. Harris - - Editor

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT.

OUR PLATFORM

1. A Unit of the National Federation of Colored Farmers in every community of colored farmers.
2. Co-operative buying, producing and marketing.
3. Every colored farmer a farm owner.
4. Abolition of debt-slavery, injustice and persecution.
5. A written contract for every colored farm tenant and sharecropper.
6. Better rural churches, schools and homes.

Atlantan Appointed To Two Positions

Atlanta, Ga., July 4 (By the Associated Negro Press)— Forester B. Washington, director of the Atlanta School of Social Work was notified this week of two appointments which are considered of much significance and import. The first was to the board of directors of the Child Welfare League of America Inc., with headquarters in New York City and the second to serve as co-director of the 1935 session of the Institute of Race Relations which will be held at Swarthmore College, July 1-29.

Georgia Reduces Its Illiteracy by 22,866

Atlanta, Ga., July 4 (ANP)— Georgia's illiteracy was reduced a little more than ten per cent last year through the campaign against this condition, according to an announcement made by Dr. M. D. Collins, state school superintendent who declared that 22,866 adults, of both races were taught to read and write.

Howard Kester Reveals That Conditions of Slavery Exist Among Sharecroppers

Nation Within Nation Called Fantastical by A. Philip Randolph

St. Louis, June 28.—Urging the colored workers to ally themselves with the organized trade union movement, A. Philip Randolph, president of the Brotherhood of Sleeping Car Porters, speaking Tuesday night at the N. A. A. C. P. 26th Annual Conference here, ridiculed the segregationists' "nation-within-a-nation" philosophy as "superficial, fantastical and unfeasible." He declared that the nation within the nation would suffer the same troubles as are now being suffered by the states in the nation. He especially warned the conference against the programs of Father Coughlin and Senator Huey P. Long which he said were not feasible, and held that colored workers could not afford to stay out of the organized labor movement because some prejudice was manifest. Politically he urged the colored people to support the building of an Independent working class party to fight for the rights and security of all labor, black and white.

"Association Will Change Program" Spingarn Promised

J. E. Spingarn, president of the association, received an ovation when he was introduced at the opening session Tuesday night following the address of Mr. Randolph. In his opening remarks he recalled that he had spoken in St. Louis twenty-one years ago at a luncheon at the City Club and when he began, in his frank fashion, to speak in behalf of the Negro his audience deliberately left the room until at the end of his speech only about one-fourth remained.

He reviewed briefly the history of the association and its victories. He pointed out that times were changed and the association would change its program to conform to the new condition confronting the masses of black and white people alike. He said he believed the adjustment necessary could be made under our present constitutional democracy. He pledged that the association would not relax its efforts in fighting for full equality for colored Americans because white America could not be free until black America was free.

Southern White Man Cheered for Attack on Peonage System

On Wednesday night, Howard Kester, a young Southern white man of Nashville, Tenn., who has been investigating conditions of black and white sharecroppers in eastern Arkansas, received the greatest amount of applause of any speaker up to that time when he assailed the southern agricultural system as illdisguised slavery. His dramatic address contained many of his personal observations on the Arkansas plantations, and he gave a graphic picture of the plight of the white and black sharecroppers. He called for aggressive action by all organizations interested in the building of a more just and secure society.

Automobile Accident Is Fatal

Hertford, N. C., July 4—(ANP)— Attempting to retrieve his hat, Elijah Smith, 55, fell beneath the wheels of an approaching truck here Wednesday afternoon and was crushed to death.

Underprivileged of Both Races Furnish Chief Topic at St. Louis

St. Louis, June 28—Speaking here Wednesday night at the 26th annual conference of the National Association for the Advancement of Colored People, Hubert T. Delany, Commissioner of Taxes and Assessments of the City of New York, a director of the Association and a member of the commission appointed by Mayor Fiorella H. LaGuardia of New York to investigate the conditions which caused the recent Harlem riot, scored the policy of white retail stores and public utility companies in taking money from Negroes and yet refusing them employment.

"We have stores in Harlem which live upon the 200,000 people of the community, refusing to give employment to those who support and make possible the operation of these stores. We have utility companies such as telephone, gas and electric, and transportation who extract millions of dollars from the community, some of whom give no employment to Negroes at all, and most of whom employ far fewer Negroes than is represented by the proportional earnings they derive from the community. None of these companies including the milk distributors, have Negroes in other than in menial jobs.

"While I do not wish to touch specifically upon the events of March 19, I am convinced that discrimination in employment, the lack of housing facilities, police brutality, occasional injustice in the courts, each played their part in the disturbance which occured, which was by no means a race riot. It was an active expression of a resentful community against those who have exploited them and have failed to enable a people, though willing, to be able to provide for themselves the necessities that citizens of any civilized community need."

He stated that these conditions were not new in New York and were present in every large urban center in the United States in worse measure. "The government of the city of New York does not condone segregation and discrimination," he said "nor does it have laws that permit segregation and discrimination. Yet if such an outburst could occur in the city of New York with both the letter and the spirit of the law on a higher plane than it is found in any other city in the country, how much more possible it is for outbursts far more serious to occur than the one in Harlem. To merely talk of these conditions is not enough We must fight aggressively for their extermination. These fights cannot be won with mere words."

N. A. A. C. P. Conference Day Sessions Lively

The day sessions of the N. A. A. C. P. Conference were among the most interesting in years. On Wednesday, Rev. Roy L. Young, president of the Meridian, Miss., branch held the close attention of the delegates as he recited the frame-up of Brown, Ellington and Shields by the Kemper County Miss. authorities. The Meridian delegation of three and the Jackson, Miss., delegation of two pledged that the colored people of Mississippi would get behind this case and call upon the rest of the country to help fight for the liberation of these men.

Roscoe Dunjee, militant editor of the Black Dispatch of Oklahoma City, and president of the Oklahoma State conference of branches, told of the Jess Hollins case and the magnificent fight made to save him. He said the fight had infused a new spirit in Oklahoma Negroes.

Irvin C. Mollison, president of the Illinois conference of branches, detailed the numerous victories in civil rights cases won by the Chicago branch against restaurants, taverns and buses, and gave a resume of the Leander McClain extradition case won by the Chicago branch. Eight lawyers, he said, devoted much of their time to the legal work of the Chicago branch.

Ward Rodgers Tells of Negro Farmers' Plight

On Thursday, Ward H. Rodgers, a white Texan recently arrested for organizational work among Arkansas sharecroppers, and Mrs. Brown, a Negro farm woman from the central South, provided one of the liveliest discussions of the conference when they told of the plight of the Negro farmers. Their remarks were followed by prolonged applause.

Layton Weston of St. Louis spoke on the problems facing the Negroes engaged in transportation: dining car men, porters, trainmen, and others, and called for support for them by all organizations.

On Thursday evening John P. Davis, of Washington, D. C., secretary of the Joint Committee on National Recovery, reviewed the entire new deal program as it related to colored people in his characteristic fashion and flayed those who have kept the Negro outside of such recovery as has been made.

Pickens Pays Tribute to Mrs. Bethune

On Friday night the 21st Spingarn Medal was presented to Mrs. Mary McLeod Bethune, president of Bethune-Cookman College, Daytona Beach, Fla., by Mr. William Pickens, field secretary of the N. A. A. C. P. Dean Pickens paid high tribute to Mrs. Bethune's work as an educator and to her fearless espousal of the rights of colored people in the south and particularly in the state of Florida. He recalled her work in the intrest of the N. A. A. C. P. and her assistance in builidng up the branches in the state of Florida.

At 1:45 p. m., Sunday, June 30, Walter White, the association's secretary spoke over KMOX.

The sessions of the conference closed with a giant mass meeting at the municipal auditorium, Sunday afternoon.

NATIVES OF NORTH CAROLINA PROTEST CCC BOYS' PRESENCE

One Tennessee Village Calls on Senator McKellar to Prevent a Calamity

Washington, July 4—(By Staff Correspondent, ANP)—Many North Carolinians rather enjoy seeing Negroes work on the roads and live in convict road camps even if said camps are located near them on their resorts, as long as those performing such services are classified as convicts and under the surveilance of armed guards. When, however, the ball and chains, shackles and the armed watcher are absent there is a difference.

This fact is brought out by the howl that has come from several communities protesting the establishment of CCC camps for Negroes in vicinity of white sections or resorts. Two protests that are typical come from Colliersville, Tennessee and Elizabethtown, North Carolina and in each instance congressmen, senators and other mouthpieces have been connected to add weight and "pull' to the protest of the citizens.

From down in the North Carolina town comes the plea to desist from placing Negroes in the established CCC camp, because it is adjacent to White Lake, a resort in which no Negroes live and their presence might bring about strained relations between the races, endanger the well-being of the white patrons of the resort and cause a general depreciation in property values. Singletary Lake, however, would be an ideal spot because it has been used soley by Negroes for several years.

Paralleling the North Carolina case is that of Colliersville, where the citizens became aroused by reports from Fort Oglethorpe, Ga., that Negroes would be sent to the CCC camp at Frank Woods on Poplar Pike. Senator McKellar, according to reports reaching the Capitol City, has been swmaped with letters, telegrams, post cards from citizens of the section pointing out that the place of Negroes in the camp would cause a calamity as far as business is concerned.

In North Carolina it is said that the resort, White Lake was terraced by Negro convict labor and in the Tennessee sector Negro road gangs, prisoners are frequently engaged in building and keeping in repair the Pike on which the camp is supposed to be established.

Rosenwald Offers $1,000 In Prizes For Work Stories

Atlanta, Ga., July 1—The Rosenwald offer of one thousand dollars for "work stories of living Negroes" is exciting wide interest and has already brought in a large number of stories, according to the Commission on Interracial Cooperation, which is conducting the contest. The closing date for entry of stories will be Oct. 1, by which time it is expected that hundreds of interesting life histories will be awaiting the attention of the judges.

The stories already submitted come from all parts of the country and cover a wide range of activity. Some tell of success; some of struggle and failure; others of heroic effort still in progress. A boy just entering college recounts his long struggle through elementary and high school; an undertaker tells how he beat the depression; a farmer recounts his successful efforts to buy land; a preacher tell of his work and his ideals. There are stories of a successful real estate operator, a cook and laundress who is also a community leader, a teacher working for a graduate degree, a woman undertaker, an aviator, a blind man who fells trees, cuts cordwood, and bottoms chairs; and so on through a most interesting cross section of economic struggle.

The Commission points out that there is still ample time to prepare and submit stories and will send full information to anyone writing to its headquarters, 703 Standard Building, Atlanta.

Race Distinction Versus Race Discrimination

The National Association for the Advancement of Colored People has decided to concentrate its efforts upon race discrimination rather than race distinction. Race prejudice is so strong a passion with the American people that it exacts separate handling of the two races in matters involving intimacy of social contact, but under the 14th amendment differentiated treatment on account of race or color is forbidden. Hitherto the N. A. A. C. P. has devoted much of its strength and resources in combatting race distinction but now prudently treads softly on that pedal. Thus much time and energy was spent on combatting residential segregation with little or no effectuality. Much money and talent were wasted in attempting to force the attendance of colored students in a particular high school in Gary, Ind., in face of the fact that under the constitution of the state separate schools are permissable. The July number of the Journal of Negro Education published at Howard University, under the Editorship of Dr. C. H. Thompson, contains a most interesting analysis of the results of testing the legality of separate schools before the courts. The general conclusion is that a frontal attack on separate schools as such is apt to fail since the Supreme Court has sanctioned such provisions, but every case competently brought to test the requirement of substantial equal accomodations for both races is likely to obtain a favorable verdict.

The recent victory of the N. A. A. C. P., in the Maryland case is in harmony with this principle. A similar test was made in North Carolina but the case was thrown out on a technicality. The state of Maryland makes no provision for the professional education of Negro youth against the opportunities of white youth in the University of Maryland. The Maryland Court has ordered the admission of a colored applicant to the University of Maryland pending legislation forbidding co-education of the races or providing an equivalent offset for qualified Negro applicants. West Virginia and Missouri have set aside a sum of money to defray the expenses of Negro applicants, in more liberal states, for that type of education afforded white youth in the state but from which Negro applicants are excluded. There is little doubt that if this issue is judicially and judiciously tested similar arrangements can be effected in all states forbidding the co-education of the races. This is a task to which the N. A. A. C. P. might well devote its chief energies and resources with hope of constructive results.

Maryland is a border state and seems to be the battleground on which racial issues are tested. It was at Antitom in Maryland and Gettysburg near the border of that state that the Confederate forces were routed in their northward movement and the tide was turned in favor of Union and freedom. The Court of Appeals of Maryland was first to declare the grandfather clause in the revised constitution of that state unconstitutional. It was this same Court of appeals which outlawed jim crow cars for interstate passengers in the famous William H. H. Hart case. This is the only instance in which a definitive and effective decision has been registered affecting the rights of Negro passengers. And now this same Court of Appeals will shortly be called upon to pass on the University of Maryland Case which, we may take for granted, will be decided in the Negro's favor. No thoughtful or sensible person will suppose for a moment that either Maryland, North Carolina or any other Southern state will establish co-education of the races in the present state of public mind, but equal accommodation of educational facilities or at least a semblance of equality, will be the outcome.

Delaware is a border state and further North than Maryland. This diminutive state has never had seperate cars or attempted disfranchisement of the Negro, but like all other Southern states and indeed all Northern and Western states with a considerable Negro element, Delaware has separate scholastic provisions for Nefroes. The issue of a Negro entering the University of Delaware has never been raised. It was only in the past two years that a Negro has been admitted to the Bar in the state of Delaware. I remember distinctly when the admission to the Bar was fought out in the City of Baltimore more than forty years ago. I can also remember that about this time white teachers were supplanted by Negro teachers in the public schools of that ctiy. The state of Maryland has been consistently progressive in its attitude towards the rights and privileges of Negro citizens when the issue has been competently and persistently pressed.

The Negro in Maryland as elsewhere, has been sleeping on his rights, and has lacked courage and organized purpose to contend for equality before the law which is guaranteed to all citizens without regard to race or color. It is encouraging to note that the N. A. A. C. P. will now undertake to stir the race to a realizing sense of its rights, opportunities and privileges under the law which it has so lon glet lapse by default.

No Segregation In California CCC Camps

Los Angeles, Calif., July 4—(ANP)—Definite contradiction of published reports that L. A. County Relief Administration contemplates segregation of Negroes now members of Civilian Conservation Corps Camps was made last week by Harold E. Pomeroy, assistant director, LACRA. His statement follows:

"In reply to a query as to the authenticity of reports concerning segregation of Negroes in CCC camps in Ventura, Santa Barbara and Los Angeles counties:

"There never has been a statement made by any authorized official of the L. A. County Relief Administration that there is contemplated a plan to segregate by races men in CCC camps.

"Not even the SERA Administrator could make such a ruling. The reason for this is that the United States Army has complete responsibility for the operation of these camps.

"The LACRA acts merely as a recruiting agency."

TVA Cows And Cash Registers

Comptroller-General J. R. McCarl who is often and justly termed the "Watchdog of the Treasury," has sent a report on Tennessee Valley Authority to the President.

According to the Chicago Tribune News Bureau, the report shows TVA has spent more than $2,000,000 in an outright illegal or questionable way, incurring deficits in everything from power plants to cafeterias and tossing thousands of dollars around in an offhand manner. It enumerates among other things:

That TVA purchased cattle it had been previously offered for $200 per head, for as much as $950 per head, and later sold them for less than $200;

That each of TVA's directors overdrew his salary by more than $1,000;

That, in defiance of the law, TVA set up its main offices in a rented building costing $36,000 a year, in Knoxville, after reconditioning the administration building at Muscle Shoals, and then hired and bought a fleet of airplanes and cars to carry employees back and forth between the two towns;

That the TVA passed off shortages of hundreds of dollars occuring in its commissaries by saying that children had played with the cash registers;

That, while TVA is designed as a rate yardstick for private utilities and should lay aside $1,000,000 a year for depreciation, it has actually laid aside less than $83,000.

The report is in the President's hands. He will doubtless order a full investigation. Then the taxpayers will have an interesting insight into the efficiency of government in business, and learn where their money goes when public officials are given complete and unqualified control of hundreds of millions of public dollars.

Alabama State

SUMMER SCHOOL STUDENTS SUPPORT HISTORY ASSO.

Montgomery, Ala.. June 29,—July 4 will be a day of racial and professional patriotism for the 1748 students enrolled in the Alabama State Teachers College monster summer organizatiou at Montgomery-Birmingham-Mobile who heard President H. Councill Trenhelm at all three schools this week in a challenging appeal for their support of the Association for the Study of Negro Life and History in its proposal for Roll of Honor contributions, incident to its twentieth anniversary to be observed in Chicago on Sept. 9.

Being asked to enroll each of the three units of the summer school organizations with a contribution of at least twenty dollars to represent one dollar for each year of the life of the organization, these Alabama teachers were told by President Trenhelm of the valuable contributions made by the Association for the Study of Negro Life and History in the areas of individual and group research of publicity and increasing interest in Negro history through the Negro History Week Observance, and of pcblication on a philanthropically-subsided basis of many increasingly valuable books and documents. The Association as an example of the increasingly-appreciated service rendered to our over-growing civilization by those freed from material production to make the intellectually-creative contribution to our world, was declared to be worthy of a patriotic contribution which the Alabama teachers will make as their first term project preceding their now-annual second term drive for the National Association of Teachers in Colored Schools.

Alabama State Press Service

Must Serve Year For Hitting "Law"

Wilson, N. C., July 4 (By the Associated Negro Press)—Convicted on charges of assaulting a policeman, John Howard Hines was sentenced to one year on the county road gang here Wednesday. The testimony at the trial was that Hines resisted arrest at the hands of policemtn H. B. Harris, disarming the officer and beating him over the head with a black-jack. Harris presented a bandaged and lacerated head as evidence of the assault.

Morehouse College Halls Will Be Modernized

Atlanta, Georgia, June 29—Special—Work of renovating and modernizing the buildings of Morehouse College will begin immediately with the view of having the halls completely in readiness for use by the beginning of the college year in September, President S. H. Archer announced yesterday. Both the exterior and the interior of the four classroom dormitory buildings, as well as the President's Residence will be done over completely, he stated.

The program of improvement calls for the laying of new floors, virtual rebuilding of the stairways, painting and redecorating of the interiors, pointing up the brickwork, and painting the exteriors, repair of roofs and drains and installation of new plumbing. Work will get under way actively by the first of July and is to be completed by September 1 will in advance of the opening of the college.

Buildings to be renovated will include the Science Hall, Sale Hall, the classroom and chapel building, Robert Hall, the upper classman dormitory, Graves Hall, the freshman-sophomore dormitory and the President's Residence.

Of this group Graves Hall is the oldest, having been built in 1889 as a memorial to Dr. Samuel Graves, its second president. In 1910 Sale Hall was opened as a classroom and chapel, and named in honor of Dr. George Sale, third president of the college. Robert Hall, named for the first head of the college, Joseph T. Robert, and Science Hall were built in 1916 and 1921, respectively.

Atlanta University

WELFARE COMMISSIONER OF VIRGIN ISLANDS VISITS SUMMER SCHOOL

Atlanta, Georgia, June 28—Special—Intensise efforts are being made to improve conditions of the 22,000 residents of the Virgin Isslands, A. J. Moron, commissioner of public welfare for this dependency, told members of the Atlanta University Summer School this week. This is being done through the development of free public schools, reorganization of the currency system, establishment of a system of small government homesteads which may be purchased on a twenty year plan, improvement of housing and recreational facilities, and rehabilitation of local industries through government subsidy.

The Commissioner, a native of the Island, has served in his present capacity for 18 months and is on his first visit to the territorial United States since he took office. He is a graduate of Hampton Institute and Brown University, and as an Urban League Fellow completed his graduate work and received his Master's degree from the University of Pittsburgh.

Another visitor to the summer school this week was Dr. Walton C. Johns, senior specialist in higher education in the Office of Education, Department of the Interior, who in an address to the faculty and students emphasized the necessity of great thinking, if there are to be great students, and declared that if students only sought an education for the material gains it brought, education in a democracy would be futile.

On Monday, July 1, Dr. W. T. B. Williams, dean of the college, Tuskeegee Institute, is scheduled as summer school convocation speaker, and on Friday, July 5, the address will be made by Dr. Nolen M. Irby, state supervisor of colored schools in the State of Arkansas, who is directing the courses in curriculum at the summer school.

Summer School Plays

Three plays of Negro life representing a variety of moods and emotions will be given by the Atlanta University Summer Theatre during the week of July 1 as the third bill of the 1935 season of this unique dramatic group. The plays will be "Bad Man" by Randolph Edmonds, recently appointed professor of dramatics at Dilliard University, "Round Trip" by Carl Allensworth, and the well known "Rider of Dreams" by Ridgely Torrence, whose plays for a Negro theatre were among the first to be written and produced. The plays will be produced under the direction of John M. Ross, who has recently received his degree of Master of Fine Arts from Yale University, with a cast made up of advanced students of dramatics and faculty members, who comprise the full time acting company of the summer theatre. , ,

This week's bill will be the third to be offered to the summer school audience. The season was opened with Martinez Sierra's comedy of contemporary life in Spain, "The Romantic Young Lady" which was followed by a costume revival of Sheridan's 18th century comedy, "The Rivals", both of which have attracted excellent audiences. During the week of July 8 the company will present as an unusual feature of its season David Belasco's celebrated play 'The Return of Peter Grimm." The five weeks season will be concluded with the playing of John Drinkwater's amusing comedy of present day England, "Bird in Hand."

The full time acting company consists of fifteen advanced students and faculty members who are particularly interested in dramatics in all phases. The group is being directed by Anne M. Cooke, director of dramatics at Spelman College, assisted by Mr. Ross. The technical side of the production is in charge of Huerta Neals of Morehouse College. Burwell B. Banks, formerly of A. and T. College, Greensboro, North Carolina, now a graduate student at at Atlanta University, is business manager of the enterprise.

Hampton Institute

DR. CLARENCE CAMERON WHITE RESIGNS

Hmpton Institute, Va., June 28, 1935,—With the opening of the school year in September, 1935, plans for the re-organization of the Music School at Hampton Institute will be put into effect.

The changes voted by the Board of Trustees at the last annual meeting, April 25, 1935, comtemplate giving up the School of Music as one of the Schools of the College. The major offerings in voice, piano organ and instrumentation as well as certain classes in harmony and creative music will ultimately be done away with. ,,

Instead of the previous program Hampton Institute will confine the offerings in music to meet the demands for training to teach in the field of public school music This will mean a continuation of courses in music appreciation and teacher-training as well as instruction in the leadership of choral and assembly singing.

Provision will be made on the campus for individual instruction in music for all students but this will be by special arrangement and at cost.

The Choir, Glee Clubs, Trade School Singers, and Quartettes will be continued as in the past, and an even greater emphasis placed upon their importance.

The courses to be continued in music will be grouped as general courses and will be open to students of all schools and departments, but especially planned to serve the School of Education.

Realizing these changes will mean readjustments for some of the staff and students now enrolled, the new program will be inaugurated over the period of a year. No new student will be enrolled in the School of Music in September, 1935. Provision is being made for students now enrolled to continue their present programs for the session of 1935-36. After 1935-36 the new program will constitute the only music offerings of the Institute.

In view of these changes, Dr. Clarence Cameron White is resigning to devote the coming year to certain creative work he has given part-time to during his three years as Director of the Music School. This work has grown out of valuable studies he has been conducting in the History of Negro Music. His original composition work in this field is already known. From these studies he contemplates the editing of a history and textbook of Negro Music. The curtailment of classes next year makes it possible for him to concentrate in this important field.

Alabama Grid Stars Studying This Summer

Montgomery, Ala., July 4—If summer football was in vogue, Alabama State Teachers College could put out a formidable Hornet eleven from their roster of grid luminaries who have remained in college for the summer quarter to clear up shortages in hours and grade points or to get ahead and graduate within less than the conventional four years.

On the flanks would be placed the versatile 1934 Captain Carlos Parker of Portsmouth, Ohio, who is a senior next year and the powerful William Crenshaw of Birmingham. To the tackle posts would go McDonald Hughes of Wetumpka and James "Buddy" Robinson of Birmingham. At guard would be placed the 1934 alternate captain Nathaniel Parker of Xenia, Ohio and the determined Eugene King of Portsmouth, Ohio. Holsey Drake, who played the game of his career at center in that memorial Thanksgiving tilt with Tuskegee last season and who hopes to get his sheepskin this summer, would be the summertime center.

In the rearworks at quarterback would be placed the 1935 captain-elect Jerome Morris of Lakeland, Florida who had the credit in 1934 for the first touchdown of the season as well as for the touchdown scored against Tuskegee. The plugging Daniel Scrivens of Xenia, Ohio, and the clever Henry Moore of Milwaukee. Wisconsin would become the halfbacks while the powerful versatile all-American John Martin from Columbus, Georgia, who is the alternate captain-elect for 1935 would be shifted from his 1934 post of tackle back to his 1933 post of fullback at which position he won all-American honors in 1933 to round out this summer quarter backfield.

Eddie Mitchell, end, of Tuscaloosa, James McCorvey, guard, of Mobile, and James Parrish, halfback of Birmingham would be the lone reserves on the bench. With the veteran coach G. H. Lockhart in school at the University of Michigan, coaches Rufus A. Lewis and John G. Hardy would prepare the eleven for battle. Austin Johnson of Chicago, basketball flash on the 1935 Hornet five that won the Southern Conference Tournament Trophy, and

veteran cheer leader would direct the cheers of the 1700 Bama State summer students with the assistance of the crack Bama State Band under the baton of the new leader Prof. Dock D. Crawford.

The 1935 summer grid Hornets issue their challenge to any similar college aggregation in the nation to match them in "power on paper" since the Southern Conference forestalls anything more than this jest.

Tuskegee Institute

Tuskegee Institute, Ala., June 29, 1935—Three-hundred and fifty boys representing the New Farmers of Alabama concluded their two day annual session here Saturday with the election of David Simmons, of Tuskegee Institute, president; Frank Butler, Tuskegee Institute, first vice-president; S. W. White, Elmore county, secretary; Joseph Barney, Mobile county, treasurer; Clinton Calloway, Chilton county, reporter; Vice-presidents chosen were Monroe Conley, Sumpter county; Julius Thomas, Elmore county, and Eddie B. Kirk, Randolph county.

Immediately following the welcome address by E. A. Grant of the agricultural staff, representing President Patterson, and response by Merritt L. Pace, president of the State Chapter of the organization, the members launched into the program which included the judging of corn, sweet potatoes, seed identification, also the judging of hogs, dairy cattle, poultry and mules.

Awards in the various judging contests were made as follows: Potatoes; Felix James, Sumpter county, first; Gilbert Gordon, Marengo county, second; Winston Craig, Dallas county, third; Algie Copeland, Elmore county, fourth.

Corn Contest: Felix James, Sumpter county, first; Harry Kirksey, Green county, second; Ernest Botch, Green county, third; Jesse Oglesby, Randolph county, fourth.

Seed Identification: Clinton Calloway, Chilton county, first; Harman Simpson, Conecuh county, second; Green B. May, Choctaw county, third; Joseoh Barney, Mibile county, fourth.

Swine Judging Contest: Algie Copeland, Elmore county, first; McKinsey Chambliss, Macon county, second; Joseph Hart, Henry county, third; Coleman Simpson, Conecuh county, fourth.

Mule Judging: Monroe Conner, Sumpter county, first; Stanley Davenport, Henry county, second; R. L. Lockett, Monroe county, third; Algie Copeland, Elmore county, fourth.

Poultry: W. B. Goddis, Sumpter county, first; C. Lawson, Talladega county, second; Benjamin Eaton, Marengo county, third; S. Davis, Snow Hill, fourth.

In the oratorical contest conducted Friday night, Jesse Gibbs, of Montgomery county, speaking on "A Live-at-Home Program For My Community," was awarded first place, and second place went to Felix James of Sumpter county, who spoke on the subject of "A New Farm Policy For A New Day."

Arthur Floyd, teacher trainer, said the attendance this year was the largest in the history of the organization. Twenty-three chapters out of a total of thirty organized chapters in the state sent representatives to the meeting.

Tuskegee men engaged as teachers of vocational agriculture in 28 different counties in the state, who accompanied these boys to Tuskegee Institute, were in a large measure responsible for such a large representation.

Twenty-five Students Awarded Coaching Certificates

Prairie View, June 1—The ten days summer school for college and High school coaches, under the direction of Dr. E. B. Evans, director of Athletics, just closed, awarded 25 certificates to those who completed the ten days short course at Prairie View State College. The schedule of instruction for the coaching school was as follows:

S. B. Taylor, Foot Ball
Walter Riley, Foot Ball
W. M. Booker, Foot Ball

W. H. Houston, Track
S. B. Taylor, Track
N. T. Archer, Basket Ball
S. B. Taylor, Basket Ball
Dr. R. D. Miller, Athletic Injuries

C. W. Lewis, Tennis

Dr. E. B. Evans made the final address to the coaching class and awarded short course certificates to the following students:

1. Brown, Lloyd F.
2. Sayles, C. L.
3. Thomas, F. W.
4. Blanchette, J. S.
5. Collins, E. E.
6. Jenkins, J. C.
7. Martin, Katie W.
8. Coleman, Roosevelt
9. McFrazier, Mrs. Margarett R.
10. Smith, Minnie O.
11. Powell, John R.
12. Tabscott, Mrs. G. R.
13. Marshall, Marvin
14. Jackson, C. A.
15. Davis, S. J.
16. Crawford, Rhoda L.
17. Redd, Morris W.
18. Perry, Nettie L.
19. Singleton, J. R.
20. Harrison, Daisy L.
21. Jones, Geo. A.
22. Simmons, L. A.
23. Ross, Moses
24. Boykins, S.
25. Tell, Beatrice.

Napoleon B. Edward, Secretary.

Wins Discrimination Suit

Chicago, July 4 (ANP)—Judge Eugene McGarry ruled here Monday that the Riverview Park management must pay Mrs. Mattie L. Taylor and her son, the sum of $50 and all costs because they were refused service at the Bowery restaurant, one of the concessions owned and operated by the amusement corporation.

The discriminatory action occurred last Labor Day and the case has hung fire since that time. Atty Irvin C. Mollison, counsellor for the local branch of the N. A. A. C. P. represented Mrs. Taylor, and her son and the judgment was satisfied in open court.

Birmingham Pythians Meet

Birmingham, Ala., July 4 (ANP)—The forty-eighth session of the grand lodge of the Knights of Pythias of Alabama opened here Tuesday morning with the largest number present in the history of the order, 42 counties being represented.

The sessions were devoid of dissension, harmony prevailing as the reports of the year were rendered which showed that during the past year more than $150,000 had been paid to beneficiaries and that the membership, through reinstatements and new members had increased sub stantially. Oscar W. Adams is the Grand Chancellor.

Urban League Moves

(Continued from Page 1)

"There is no question in our minds," continued Mr. Hill in writing to the State Work Progress Administrators, "regarding the sincere desire of your office to give Negroes a fair opportunity to work. We are convinced, however, that unless definite safeguards are taken against the prejudices or carelessness of subordinates and staff employes, those good intentions will not be effectively carried through. The experience of Negroes under CWA proves this to anyone who cares to scan the record. Many State Employment officials have found since then that the appointment of well-qualified Negroes to their staffs has reduced this discrimination to an appreciable degree and, thereby, strengthened the staff's efficiency.

"Specifically we urge you to consider a similar procedure of your own State Administration, with the appointment of a Negro to your own staff and to that of the District Administrator. Such individuals can assist in seeing that the President's and your own desire for fairness and equality is made realistic and practical."

A copy of the letter to the Works Progress Administrators has been sent to the 296 Emergency Advisory Council officials, an organization formed by the National Urban League, to intercede with Recovery officials on behalf of the welfare of Negroes, with instructions that they contact their State and District Works Progress Administrators in order to insure fair play for Negro workers.

Atlantic City Man Succumbs

(Continued from Page 1)

A lover of social intercourse, Mr. Boyer brought his teachers together several times during each year in a way that encouraged the best race relations. Through pageantry, and through contests of all kinds he brought colored and white children together in a way that engendered friendliness between all races and all creeds. It was significant that on Monday morning, while his body lay in state, a Negro boy played the graduates' processional on the great Convention Hall organ, that a Negro girl spoke on the Commencement program, that four Negroes were accorded the stars of merit, one of them winning three, the highest granted by the school; still more significant, that at the three programs white and colored students marched happily in pairs in the processionals without regard to race or sex.

Charles B. Boyer leaves to the educational school system of Atlantic City a heritage of equal salary schedules, fairness to all the children of all the people, happiness in the labor of learning and schools equipped to send young people out into the world prepared to meet adequately the competition of life.

CONFERS WITH MANAGEMENT

(Continued from Page 1)

the government officials here who have to do with the A. A. A. and other measures effecting farmers. He left this city and went to Memphis where it is understood that he is planning a rural school for farmers instructing them in the grading of cotton, the handling of other produce from truck gardens, and means for grading tobacco which is grown extensively in Tennessee, and from there over to Little Rock and other points in Arkansas. He held a conference with His Honor, the Mayor of Little Rock, with the city officials and with county administrators as well as the rural agents. From thence it is understood that he went on into Missouri, the southern part of which has been one of the National Federation's new wewst districts to develop.

The official call for the next Convention is to be issued at an early date," said the President, while he was here at the office of the publication.

MORE TRICKERY EXPOSED

N. F. C. F. WARNS RACE FARMERS NOT TO SIGN AWAY RIGHTS.

Chicago, Ill.— Flooded with reports from numerous sections in the cotton belt especially in the Mississippi Delta section, — that white landlords, merchants and planters are attempting to compel Race farmers to sign agreements designating certain "trustees" or "committees" to act for them in selling their cotton, — the National Federation of Colored Farmers, Inc., is warning members of the organization against this apparent scheme to defraud them of their rights and is advising them to sign no papers unless they fully understand what they are doing.

It is reported that colored farmers are being told that they cannot sell cotton directly, but must agree to have others act for them. Information received direct from the Cotton Production Section of the AAA, Washington, D. C., through Mr. E. A. Miller, states plainly that neither landlord or tenant is required to execute any paper designating trustees or other individual to sell the cotton they have raised. Members are required to notify the national office of any attempt made to compel them to sign such papers.

Many complaints are also being received from Race farmers about the delay in getting cotton gin tags and the manner and methods used by many landlords to keep their tenants and sharecroppers from getting any money from this year's crop. Under the new cotton act, the landlord and sharecropper must sign jointly the request for the tags as they are jointly owner and therefore, partners in business. Many landlords have little use for this arrangement and are doing all they can to oppose it. They are determined that tenants and sharecroppers shall get no money that does not come through their hands first.

Complaints are also being received from some that government checks due last year have never been received. These checks in most instances, were sent to County Agent for distribution. Why the rightful owner never received them is hard to understand. Colored farmers who are due government checks from last year are urged to write to the national office, sending all information. An effort will be made to trace these checks to discover where they are and why they have not been paid to those they belong to.

President John Hope Receives LL. D. Degree from Brown University

Providence, R. I., June 17—(Special)—Brown University today honored one of its distinguished sons when at the 167th commencement it conferred upon President John Hope of Atlanta University the degree of Doctor of Laws. The degree is the third granted to President Hope by this university. In 1894 he received the degree of Bachelor of Arts, and in 1907 the honorary degree of Master of Arts. In addition, he received in 1919 the signal honor of election to the Brown University chapter of Phi Beta Kappa for achievements since graduation.

In conferring the degree President Clarence A. Barbour delivered the following citation:

"Worcester Academy and Brown University graduate with special work at the University of Chicago, honorary Master of Arts of Brown, the recipient of added distinguished recognitions by four educational institutions of high standing, devoting his entire life and strength since leaving college as teacher of colored youth, teacher or president or both in Roger Williams University and Morehouse College, now president of Atlanta University; serving the welfare of colored troops in France during the World War; active in many associations for international cooperation; recognized by the United States government as one of the most influential of those making for interracial understanding and the solution of interracial problems; patient, sane, unruffled, keeping his balance and his vision in a confused time; while not forgetting the things that are behind in the life of his people, reaching ever toward the things that are before; constantly planning and striving for the discovery and training of Negro leadership; wise and sane counsellor to the leaders of both races and trusted by them all; fine scholar and genial personality; one of the most potent factors among twilight millions struggling toward their promised land: by authority of the Board of Fellows, I confer upon John Hope the degree of Doctor of Laws."

Four other universities have given President Hope the degree of Doctor of Laws in recognition of his extended and valuable work in the field of higher education for Negroes. In 1920 Howard University granted him this degree, in 1922 Bucknell University, in 1928 McMaster University, and 1932 Bates College.

The honor from his alma mater is in recognition of Dr. Hope's long service among his people as an educator and administrator of educational institutions and as a leader in civic and religious affairs. Following his graduation from college, Mr. Hope entered the service of the American Baptist Home Mission Society as a teacher in Roger Williams University, Nashville, Tennessee. In 1898 he was transferred to Atlanta Baptist College, now Morehouse College, and in 1906 he succeeded Dr. George Sale as its president. With the reorganization of Atlanta University in 1929 and the affiliation with Morehouse and Spelman Colleges, Dr. Hope was unanimously elected president of Atlanta University.

Dr. Hope has served as president of the Commission on Interracial Cooperation and is now a member of the executive committee of the Commission's board of directors. He is president of the Association for the Study of Negro Life and History, member of the advisory board of the National Association for the Advancement of Colored People, a member of the board of trustees of the National Urban League and honorary chairman of the board of the Atlanta Urban League. He was active in the organization of the Georgia State Council for Work Among Negro Boys and is its president. His interest in youth is further indicated by the fact that he holds official connection with all branches of the Young Men's Christian Association, being an officer of the Atlanta Y. M. C. A., the National Council, the General Board, the International Committee, and the World Committee of this Association.

WHEATLAND HEADS NEW JERSEY ELKS

Camden, N. J., July 4—(By ANP)—Dr. Marcus Wheatland of this city, District Deputy of South Jersey, was elected president of the New Jersey State Association of Elks at the closing of a four day session of the organization, succeeding William A. Russell of Atlantic City.

Other highlights of the convention, which opened Sunday night and closed Wednesday, included: the public meeting on the opening day when Mayor Frederick Von Nieda in welcoming the visitors outlined the contribution of the group to the general advancement of the city; the oratorical contest which was won by Miss Georgietta Raymond, Jersey City, with William Glover the runner-up and the general report of progress by the retiring president.

Head of Hampton's Trade School Soon To Retire

Hampton Institute, Va., June 19, —In a letter to the editor of the **Southern Workman**, president Arthur Howe authorized him to make public an explanation which will be for many the first news that Mr. Harry J. DeYarmett, long-time director of the Hampton Institute Trade School, had planned to retire from his position next September.

The **Southern Workman** for June just off the press, carries president Howe's annual report to the Board of Trustees of Hampton Institute In that report is contained the announcement of Mr. DeYarmett's forthcoming retirement and the name of Mr. Willis C. Brown, of Boston, as his successor. It is in connection with this projected change that president Howe has sent the following letter, bearing date of June 15, 1935:

Dear Dr. Fisher:

Unforeseen changes in Mr. Willis C. Brown's plans have made it necessary for him to withdraw from the position he had accepted as head of our Trade School.

I am sorry indeed these matters were not brought to my attention in time to get them to you before the publication of the recent issue of the SOUTHERN WORKMAN. I am sending this word to you now in case any further inquiries come to your office in regard to the matter.

This change came about so unexpectedly that there has not been time to secure another for the post so there is no further announcement to make at the present.

Please use this information in any way you see fit that may clarify the situation before the public

Taxpayers Must Pay Taxes

While driving east of San Diego recently, I overhauled and passed what seemed to be an old-time prospector in a small wagon drawn by two burrors.

I stopped just ahead to buy some grape juice from a farm lady at her roadside stand.

I was ready to leave when the "prospector" drew up and stopped. On closer observation, he looked more like a dime novel hero or bad man, with all the traditional trappings, including a 45-calibre revolver hanging with the approved sag on his left hip.

This style of dress has not been the fashion or either "cowboys" or "prospectors" in the West for many many years, so I concluded he was advertising a "patent medicine" show.

Imagine my surprise when he said to the lady, "I'm a Federal man, a Federal prospector. I want to buy a jar of honey." She handed it to him and said, "Twenty-five cents, please, and one cent state sales tax."

"Oh, no," said he, "I don't pay that tax. I'm a Federal man. I'm tax-exempt." With that, he swaggered out, leaving the hard-working rancher's wife to pay the penny tax.

This was such a glaring case of the use of official power and privilege to escape the obligations of citizenship, that I was astounded. If this public servant's salary—which is paid in part by the taxes of the hard-working woman to whom he refused to pay the penny tax—is exempt from taxes, it is bad enough; if he uses his official position to bluff his way out of paying taxes, it is that much worse.

The moral of this incident is simple: In these days of exorbitant taxation, it is unjust, unfair and undemocratic that any government office holder be granted any exemption from taxation not granted to a private citizen who pays the wages or salary of the office holder. It is no harder for a public servant to pay taxes out of his income, than it is for a private citizen to pay it out of his own earnings.

Special privileges for officialism, at public expense, must be curbed or the common citizen will become nothing but a tax slave to dig up money for the tax-exempt bureaucrats.

Corn First Grew In Mexico

Mayas Have Legend That It was Gift of Gods

Long before the appearance of the human race, nature provided for the western hemisphere a single corn plant, and somewhere in the hills or plateaus of the American tropics brought the plant into existence. Botanically, we term the plant maize, or Indian corn, says an article published in the Clinton, Ia., Herald. The article coutinues as follows:

To the American, the word "corn" has but one meaning. But in Europe the various small grains —wheat, oats, barley, rye—are called corn.

Season after season, the plant grew and extended its domain. Man began to notice that young plants would make their appearance where seeds had been dropped accidentally. Then man learned to bury a few seeds where he wished new plants to be, and soon progress became more rapid. In due time knowledge as to the seasons, the methods of preparing the soil, planting and cultivation made its way.

In Indian Legends

Indian legends tell of the introduction of maize culture from tribes in the general direction of Central America. One popular myth of the Mayas of the forested foothills of the Yucatan and Central America tells how certain earthly deities gave to the barbarian tribes the seed of maize and taught them its culture and use.

The American origin of the plant is seldom questioned today. The high degree of maize culture practiced in Mexico and Peru has led some to consider a double origin of the plant—one strain being propagated in North America and the other in South America. But almost every one, who has studied maize, agrees that the original home of corn is in southern Mexico. It is also agreed that the common ancestor of the maize plant was probably a herbaceous perennial.

Spread Far and Wide

The Indian cultivation of maize became widespread. The early explorers to the new world looked with wonder upon the plant. By the close of the fifteenth century, the cultivation of maize had become extensive from the gulf of St. Lawrence and the Dakotas far down into Chile and Argentina. But the plant was most successfully grown in the fortieth parallels.

Peru and Mexico had become the most advanced agriculture seats. The highlands of eastern Brazil and the northern coast of South America had a nomadic population which depended upon maize for a part of its subsistence.

Columbus Found Maize

When Columbus reached the West Indies, he found maize grown by the Indians. In writing to Ferdinand and Isabella in 1498 he mentioned corn fields. All evidence points to the fact that maize was unknown to the old world before

(Continued on Page 8)

IMPROVE NEGLECTED GRAPEVINE

Proper Care Given Will Bring Profitable Results

The grape is believed to be the first fruit in history to have been cultivated, but nowadays neglect and improper pruning too often cut down the possibilities of the crop in a state like Illinois, according to Dr. A. S. Colby, chief in small fruit culture at the college of Agriculture, University of Illinois. This is the time of the year to start restoring this fruit to its rightful place, he says.

Many long neglected or improperly pruned grape vines will respond satisfactorily to heavypruning and may be made profitable producers if the root system is healthy and vigorous and care is used in building the new top, Dr. Colby pointed out.

Severe Pruning.

"Many neglected vines may be rejuvinated even though they are tangled masses of old canes, poorly placed with unwieldy tops and a few good fruit buds. They should be headed back severely in the early spring. Nothing but one or two old trunks about a foot long should be left. There will be a vigorous growth of young shoots this year from either the old wood or the crown of the plant if the soil is fertile and good cultivation is given.

"These shoots should be tied to the trellis as they grow. At the beginning of the season a straight cane growing in an upright position with several healthy lateral growths may be selected as the permanent trunk and arranged on the trellis according to the Kniffin system.

"Because of its extensive root system, a healthy vine will grow a new head capable of bearing a fair crop of grapes the second season. Such a vine is good for many years of production if it is pruned annually to some good renewal system, such as the Kniffin."

N. F. C. F. OFFICER VISITS NASHVILLE

Prof. L. B. Boler, Gen. Mgr., of the National Federation of Colored Farmers, accompanied by Miss Mary E. Cox and Mrs. Maggie Bowden of Charleston, Missouri, were the guests of Mrs. Josie Oglesby of 1501 Grant Street last week. While in the city they visited the Modern Farmer Office, the National Baptist Publishing Board's Plant and other business houses and schools. They were shown over the city by Mrs. Oglesby and Mr. Wm. Hardison, residents of the city. Prof. Boler is a member of the faculty of the Charleston, Mo., High School and has been very instrumental in assisting the farmers in his vicinity in securing farm

THE STUDY OF EGGS

Range In Size From Caviar To 9x12 Shell

"Eggs" mean only hens' eggs to the average reader—something to combine with ham in the morning or to stir into cakes or custards for dinner. But in the complex civilization of the twentieth century, man finds use for many kinds of eggs.

A New York museum did a thriving business not long ago in eggs of frogs and salamanders, says a bulletin from the Washington, D. C., headquarters of the National Geographic society. Jelly-encased frogs' eggs found floating in great numbers on top of Long Island ponds were shipped by thousands to public schools, where biology pupils put them in tanks and watched them develop into tadpoles.

The scarcer eggs of salamanders, found in stream bottoms, were shipped to research laboratories where scientists prefer them to other eggs in making certain studies of the embryo.

'Ripened' Eggs.

Roe, masses of tiny fish eggs, and caviar, the prepared and salted roe of certain fish, are favorite delicacies on our menus. The best caviar was long made from the great white sturgeons of Russia. Present-day caviar, lacking the fine flavor of the original, is often made from roe of spoonbills, buffalo fish and catfish of lakes and rivers in the southern United States.

Fish eggs are put to various uses. In Brittany, fishmen use salted cod eggs mixed with flour as bait to attract sardines. American sugar companies in Mexico have recently imported certain insect eggs from Cuba in their fight to exterminate other insects attacking sugar cane. And in the past the United States department of agriculture has made many similar importations.

Cormorants' eggs from the islands off the coast of Peru form a large item on the diet of Peruvians. Eskimos eat quantities of sea birds' eggs. In Nicaragua, hungry natives dig in the sand for alligator and are said to taste like ducks' eggs. In Mexico, eggs of certain species of flies are used in making a food paste which is considered a piece deresistance. A preference equally difficult to understand is the Chinese predilection for "ripened" eggs—hens' eggs which have been buried in the earth until decomposed to a decided degree.

Carry Eggs on Feet.

Humans are not the only creatures with a developed taste for eggs. Ants and spiders lick their chops over eggs of butterflies. Fishes gulp minute eggs of other fish borne on ocean currents. Unless Peruvians get there first, they are apt to find rookeries on the bird islands of Peru full of rifled nests and broken eggshells. The small greenish cormorant eggs have been devoured by gulls and turkey vultures or pierced and sucked by condors.

Birds with few enemies lay but one or two eggs. Most of the north oceanic birds, such as little auks, and black-and-white guillemots, which breed on arctic cliff ledges, lay but a single large egg. Pointed at one end, it rolls in a circle and so does not fall from the ledge. The king penguin of the antarctic takes especial care of its eggs by

Broilers Pay $400 In 14 Weeks

Barber Raised 1200 As Side Line On Small Plot

Rogers,—Poultry, even as a side line, has made Basil Davis, owner of a barber shop in Rogers, some money this year. Davis marketed 1,200 broilers in February at an average of 70 cents apiece with a profit close to $400 for 14 weeks work before and after business hours.

Basil Davis and his wife, who were reared on farms near Rogers in the Cave Springs community where poultry became an industry nationally known for its White Wyandotte broilers, own about an acre of land back of their residence lot. Last year they started in a small way in the poultry business. Records of production, cost and profit, inspired them to enlarge the business this year.

Got Early Price

Realizing the advantages of an early market, day-old chicks were purchased from a local hatchery in November, 1934, at $7.40 per 100. The chicks, their food, fuel for heat, and straw for bedding and scratch-pens, cost $440. Davis bought his entire stock at one time and sold them the same way, which is a saving in food mixtures and time used for different ages of chickens as well as added expense in heat, he said.

Last year after the broilers were sold, Davis had the land enriched by poultry fertilizer, and plowed and planted it in sweet potatoes Despite the adverse season, 60 bushels were harvested. About half were salable for table use at $1 per bushel. The others, cracked open by heat and dry weather, were sold for cow feed at 20 cents per bushel. Altogether about $35 was realized.

The sweet potatoes and cultivation made the soil fresh and sweet for the chickens this spring, and the plan is being repeated this year.

—Daily Dispatch

TRI-STATE MEETING IN MEMPHIS

Sessions To Be Held In Booker Washington School

The N. F. C. F. announces that a Tri-State meeting of its members will be held at Booker Washington High School on Lauderdale Street Memphis, Tenn., Monday, August 12. Representatives from the Department of Agriculture and Federal Credit Administration at Washington have been invited and they have promised to be present and address the members on many matter pertaining to their future welfare.

Farmers from Arkansas, Mississippi, Tennessee and south east Mo., will be in attendance.

Hon. G. A. Brelim head of Agriculure activities for the State of Tenn., will deliver special message.

CORN-HOG GROWERS GET NEW OPTION

Farmers who signed the corn-hog contracts that have been seriously affected by recent floods have been granted an option of complying with acreage allotments under the 1935 contract and receiving adjustment payments or withdrawing. Farmers who live in the flood area that decide to complete their 1935 contracts must limit their corn acreage to provisions in their individual contracts.

Adjustments, payments received under the contract will serve as crop insurance, which will partly off-set damage caused by floods.

Floods Not to Change Government Benefits

Hon. Chester C. Davis administrator of the Agricultural Adjustment Administration says loss through floods would cause no reduction in benefit payments to signers of AAA contracts. He says, "Full rental and adjustment payments will be made to co-operating producers of basic crops, if all or part of said crops have been destroyed by floods."

In case of cotton, contract signers will received not only the usual rental payments and parity payments, but also their alloted quantity of Bankhead act tax-exemption certificates. Non-signers will also get their quota of tax exemption certificates.

This is nothing more than crop insurance which operates to compensate to some extent for any crop damage, whether flood, drouth or from any other cause.

HUNTERS SHOOT 1,000 CROWS IN KENDALL COUNTY

Approximately 1,000 crows and some dozens of owls, hawks, woodchucks, and gophers were shot yesterday in the 12th annual hunt of the Kendall County Crow club. Eighty farmers and sportsmen divided into teams of four, competed for the honor of killing the greatest number of the pests, whose depredations have proven costly to raisers of grain and chickens.

Each team was credited with a point for each crow killed, with five points for each hawk or owl, one point for each woodchuck, and one-fourth point for each gopher. Crow eggs destroyed rated a half point each and hawk and owl eggs two and a half points each.

Edward I. Gutel, club president, reported that his team killed 35 crows and two hawks. Returns were not complete late last night

(Continued on Page 8)

SHELTER FOR LIVESTOCK

With a shortage of feed facing farmers in many parts of the country the need to provide animals with shelter against the cold of winter becomes more necessary than usual. It is necessary not only because it will add to the thriftiness of all livestock and lessen the chances of loss, but also because it decreases the amount of feed necessary. Animals exposed to the wet and cold are forced to draw on their own body fat for energy and this fat must then, of course, be replaced by feed. If it is not replaced it lessens the animal's resistance and greatly decreases their chances of pulling through the winter. Forage in most fields and pastures is now completely gone and stock allowed to range in the open uses up more energy than is gained from what little feed is found.

FORD QUOTA SET AT MILLION CARS

Vast Supply of Farm Produce Is Needed for Use in Making Machines.

Ford Motor company in its program of making a million automobiles this year will purchase vast quantities of agricultural products, it is announced by W. J. Cameron, Ford official.

The cars to be made this year will require 3,200,000 pounds of wool for upholstery, floor covering and anti-rust preparations. Products of 30,000 cattle, including 1,500,000 square feet of upholstery, also will be required.

For lard oil in lubricants and bristles in brushes 20,000 hogs will be used. The upholstering also will require 350,000 pounds of goats' hair, which means shearing 87,500 goats. To obtain electrical embedding compounds the labor of 93,000,000 honeybees will be necessary.

Every four-door Ford sedan uses 70 pounds of cotton. A millon cars will require 69,000,000 pounds — 25,000,000 pounds in tires, 34,000,000 pounds in batting, cloth, brake linings, battery box, timing gears and safety glass. It will take 433,000 acres of cotton to produce this material.

Some hali million bushels of corn will be needed ior butyl alcohol and starch used in manufacture bring the product of 11,280 acres of corn to the Ford factory. Flax growers will furnish 2,400,00 pounds of linseed oil, producing this by cultivating 17,500 acres of flax. Sugar cane used for the needed 2,500,000 gallons of molasses from which come solvents, anti-freeze and shock absorber fluids is furnished by 12,500 acres of sugar. Growers of the castor bean supply 240,000 pounds of castor oil for lacquers and artificial leather.

Almost 112,000,000 feet of lumber, mostly for packing purposes, and 5,000,000 feet of paper board are needed. The pitch pine provides 2,000,000 pounds of turpentine for solvents, paints and adhesives. Rubber trees, whose product is used in 203 parts of the car, will supply 35,000 tons of rubber. Sixteen thousand acres of tung trees will provide the needed 728,00 gallons of tung oil.

The motor car is not a kingdom in itself; it must buy something of nearly everything that is grown on the farm and that is made in other industries, said Mr. Cameron.

NEW-FANGLED COOKING

By Florence Hartman Townsend

They say "don't waste a single crumb, but of them dishes make;—
One cup of crumbs, a dozen eggs, three cups of sugar take,
Add one cup of flour, a quart of milk and two full grown nut megs,
A half a pound of butter and the whites of six more eggs."

You see 'twas quite a saving, now, to save those bits of bread,
As to the other ingredients of which you just now read,
You'll find when all is added up they cost but ninety cents,
And 'course that is economy in every word and sense.

It cost exactly ninety cents to save That cup of crumbs.
(Or else I'm bad at 'rithmetic and they'd et all night.
cannot do my sums)—
But then I must economize and 'conomize I will,
For I am economic, (but these salads make me ill).

"To make a tasty salad, a cup of string beans take,
(These are, of course, "left over") an onion, don't mistake,
One cold boiled white potato, of lettuce half a head,
Then mayonnaise, tomatoes, and last some crumbs of bread.

Then mix it all up smooth and nice and garnish well with mint"
I followed up the recipe and did it without stint,
I served it to the family, who madly gave a shout
And made a stampede for a drink to wash the bad taste out.

I 'conomized and 'conomized until one day my man
He stopped me and he says to me, he says, "now look here Ann,
What's gone wrong in that kitchen You might as well confess,
Why dear," he says "your cookin' has got to be a mess."

"I'm cookin' thus," I told him, "to save the country's food."
I was feelin' proud and haughty, but not feelin' very good.
"Sweet charity, my dear, begins at home," he said,
"Now can't we have for supper some good old ginger bread?"

Now if I do say so myself, my man is more than good,
So I planned a special supper while he carried in the wood.
I boiled potatoes in their skins and and broiled a whoppin' steak,
And then that ginger bread with sauce was really something great.

I made hot sody biscuits and opened up some jam,
And tho' I knew 'twas 'stravegant I fried some country ham.
And then to sorter round things out I cooked a dish o' peas,
And sliced tomatoes in a bowl all lined with lettuce leaves.

My sakes alive! The way they et it was an awful sight,
And if the food had lasted, I guess and they got 'em mighty quick,
They called for second helpings Altho' I kept a sayin' "I fear you will be sick."

"Why maw," they said, "this kind o' eats won't make nobody ill,"
And so I just set silent and let 'em eat their fill.
"Economy," I was musin', "is mightier than swords,"
But then I didn't say so—I was too full for words.

Junior—Say, daddy, did Adam have only one name?

Senior—Certainly. Now you go to sleep.

Junior—Say, daddy, was Adam his first name or his last name?

ERNESTINE'S 126TH EGG IN 126 DAYS WINS A CROWN

Paterson, N. J., June 24.—(AP)—Ernestine, an energetic white leghorn, took things easy today after hanging up a new all-state record by laying 126 eggs in as many days. She deposited the last in a nest at the Passaic county egg laying contest.

THE CHILDREN'S CHARTER

"To every child their rights, regardless of race, or color, or situation, wherever he may live under the protection of the American flag:.....

"Protection against labor that stunts growth, either physical or mental, that limits edueation, that deprives children of the right of comradeship, of play, and of joy." —The White House Conference, 1929.

HELPS FOR THE HOUSEWIVES

Marshmallows are easily eut it you use a pair of scissors which you remember to dip into hot water often.

You can put figs, dates and raisins through the fruit ehopper without fear of clogging the food ehopper, if you remember to add a few drops of lemon juice.

If salt and pepper shaker eorks are pushed inside or kept dropping out, try eovering the openin with a piece of adhesive tape. Use fresh tape after each refilling.

For cleaning aluminum, ironware and tinware, use a good scouring powder, a good metal pad, or both.

For real comfort on wintry nights, a standard sized double bed requires a blanket measuring 80x90 inches. For extra long beds, blankets may be had that are 80x108 inches.

If you perfer a dry method for removing iodine stains to washing, try this: Apply moistened starch, brush off, and repeat until stain is removed.

A new four-quart aluminum kettle has an elbow in the handle which holds the cover in plaee while draining and does away with the danger of getting burned by steam.

There is a ehromium snaek server with blaek wooden handles and three one-quart food eontainers. To keep the food hot and tasty until every guest has been served, you simply put water in the bottom, and plug in the current.

Next time you have sections of oranges with sliees of banana for desert, remember to sprinkle the fruit with shredded, eoconut. The benefit is two-fold: It serves as a garnish and adds to the flavor.

Keep bananas out of the refrigerator and where the air can get at them.

Did you know that fish cooked in salted water to which lemon or vinegar has been added, is sweet more tender and holds its shape better when remove from the water? Add one tablespoon salt, three tablespoons vinegar or lemon juiee to each quart of water when cooking fish.

After fish has started to cook, it should be allowed to eook slowly. In this way most of the value will be retained.

Vary your menu by serving a variety of breads or hot breads. For those who do not like white flour produets, include bran, corn or whole wheat.

Orange juiee should always be served fresh. Oranges which are squeezed the night before in order to save time, are sure to taste flat in the morning.

CHURCH CONCLAVE LAUDS COTTON PLAN

A telegram to Cully A. Cobb, director of eotton, AAA, Washington, D. C., asking that no change be made in eotton crop eontrol and in his reduction program an address by J. P. Davis, Chieago, president of the National Federation of Colored Farmers, and demonstrations by the home, woman's missionary and teacher training departments, featured the second day's session of the National Baptist Sunday School Congress which met at the munieipal auditorium.

In his address, Davis urged Negro farmers to remain in the South and keep their erops in ood shape. "It is the tiller of the soil that is really the background of the country," he said.

The registration committee stated that 26 states were already represented and at least 2000 more Sunday school messengers are expected here Saturday for the celebration of "Galveston night." "This is without doubt our largest congress." Henry Allen Boyd, seeretary and head of the National Baptist Publishing House at Nashville, declared.

The five days spent here in the teaching of the latest in Sunday school and B. R. P. U. methods was climaxed Sunday afternoon in a mass meeting at the auditorium, preceeded by a street parade.

Finishing touches for the National Baptist convention of Ameriea, which meets in September in Washington, D. C. were completed Thursday afternoon when the executive board of that body met at the Odd Fellow's hall. President Greene L. Prince of Galveston, Texas, and M. A. B. Fuller, president of the woman's auxiliary, presided.

TIME TABLE FOR CANNERS

Most housewives have their own methods of putting up fruits for the winter but since eanning season is here the following table will not eome amiss. For large fruits, after parting, cutting, etc., scald in boiling water from one and a half to two minutes; paek in jars and stand in boiling water to cover and let cook for the following periods; Apples, 12 minutes; peaches and plums, 16; pears and quinces, 20 minutes. For small fruits the jars should be kept in the boiling water as follows: Gooseberries and raspberries 12 minutes; cherries, grapes, blueberries and strawberries, 16 minutes.

Plain soap and water will remove fresh iodine stains as a rule. If the spots are not removed entirely by this method, apply eoncentrated ammonia to the stains and then wash them off with alcohol.

A NEW SONG BOOK

IS JUST APPEARING FROM THE PRESS

"GOLDEN GEMS"—Get a copy, price 25 cents; then give us the benefit of your constructive criticism. We want to know how you like this new song book. Send this back with 25 cents for a single copy or $3.00 by the dozen—We will pay the postage.

"GOLDEN GEMS" is a book that is all that its name implies. It is pure gold in spirituality, originality and in religious fervor.

Insist up your friends using "GOLDEN GEMS". Recommend that your choir use "GOLDEN GEMS". Put "GOLDEN GEMS" in your Sunday School; use "GOLDEN GEMS" in your B. Y. P. U.; put a copy of "GOLDEN GEMS" in your home. If "GOLDEN GEMS" is introduced in your state it will prove that you are 100 per cent with Henry Allen Boyd in his earnest desire to give to the Baptists the best that money can buy, and when the best costs you no more, then get "GOLDEN GEMS".

Send this back to me, I want to know who is using and supporting "GOLDEN GEMS".

HIS KIND IS RARE

My heart goes out to the man who does his work when the "boss" is away, as well as when he is at home. And the man who, when given a letter for Garcia, quietly takes the missive, without asking any idiotic questions, and with no lurking intention of chucking it into the nearest sewer or of doing aught else but deliver it, never gets "laid off" nor has to go on a strike for higher wages. Civilization is one long search for just such individuals. Anything such a man asks shall be granted; his kind is so rare that no employer can afford to let him go. He is wanted in every city, town and village— in every office, shop, store and factory. The world cries for such; he is needed, and needed badly — the man who can carry a message to Garcia.—Elbert Hubbard.

TOMORROW'S HOPE

Dark and dreary is today,
Fraught with ills and sorrow.
But we know, tho' we are weary,
There will be a bright tomorrow.
Will you win or lose today
If the path becomes much harder?
Or will you fight, and hope, and pray
For a better, brighter morrow?

If the odds are stacked against you
And the sun seems not to shine;
Will you stand for right and truth,
Or turn aside to fret and pine?

Tho' I'm often buffed and beaten,
And there's no one seems to care,
God holds out His hands to sweeten
Life, and make things fair.

For today is dark and dreary,
Fraught with ills and sorrows;
But I know, tho' I am weary,
There are many bright tomorrows.

Norman I. Edwards.

NOBODY'S CHILD

I'm only a plain little girl you see.
And I hardly think you would notice me.
Once I was happy the live long day
Fore mother and daddy were taken away.
Now there's no one to tell my troubles to.
May I try to tell them in rhyme to you?
There's no one to care if I should die.
For I am nobody's child, that's the reason why!
Children with mothers make me want to cry.
Oh, is it wrong to hope to die?
There's no one to lead me by the hand;
I hope that maybe you'll understand.
No mother to call me her dear little child,
And gently brush out each shining curl.
For I am nobody's child; I wonder I do.
Why God didn't think best to take me too.
Nobody's child so sadly I'm cherished only by thoughts of a heavenly home
Where some day united again we shall be
From sorrow and trouble forever free.
I've no daddy now to call me his joy.
And say that I'm almost as good as a boy.
There's no one to hear me say my prayers.
After I climb the winding stairs,
I've no mother to tuck me iuto bed
And call me her little sleepy head
I've heard that life is but one brief span
I must try to live the best I can.
I will always try to be good and true
Just as my mother would want me to.
And Nobody's child no longer I'll be
When I reach that home of eternity.

Exch.

YOU-OO, WHO-OO

Charles Irwin Herring

Across the years since boyhood days
There comes some memories that please
Of country life, its sights and sounds
Of bleating sheep and baying hounds
Of leafing trees and blooming flowers;
Of sun-lit skies and April showers
The woodman's ax gives ringing strokes,
On swaying beech and sturdy oaks:
Sweet sap drips from punctured trees,
While swelling buds invite the bees
Among the sounds to memory true
Calling across the fields, you-oo who-oo!
She had no horn nor dinner bell
To send the message she would tell
Of table spread for noon-day meal,
With hot corn pone and tender veal,

With cherry pie and eggs and ham,
Custard pudding and blackberry jam,
Pumpkin butter and apple sauce,
With sauer kraut and dumpling boss,
Potatoes steaming from the pot,
Golden butter and coffee hot;
I hear her voice, as I used to do,
Calling across the field, you-oo who-oo!

And when that invitation fell
On listening ears, that knew it well,
The farmer boys, with grin and jerk,
Unhitched their teams and left their work.
The well filled baskets from the crib
Were portioned out to Dick and Tib
The mangers filled with scented hay
Gave to each horse his ample pay.
Soon seated round the well filled board
Grandfather's voice in thanks was heard.
We eat again as we used to do
When Mother called to us, you-oo who-oo!

COLORED FARMERS OUTLOOK BRIGHTENS

More Families of the Race May Return to the Independent Way Of Making a Living

The AAA has issued an emergency ruling which liberalizes the provisions of the 1935 corn-hog contracts. Under the new ruling, corn hog contract signers may operate additional land not covered by contract or to rent out a part of the land in the unit under contract. Due to climatic conditions in some sections of the country the AAA deemed it wise to liberalize their rulings.

Heretofore a contract producer was forced to have all land operated as a part of his farming unit under some corn hog contract and to operate all of his land throughout the contract year.

Smallest Hog Slaughter in 20 Years

The Department of Agriculture in a recent announcement reflected that fewer hogs will be slaughtered this summer in the United States than for the past many years It said stocks of Pork on June 1st of this year were smallest on that date in 20 years, and stocks of lard were smallest in 12 years .

For the eight months from last October to May of this year, hogs slaughtered under federal inspection totaled 24,016,000 head, which is 24 percent less than the corresponding months in 1933-34.

A bill known as the Bankhead Farm Tenant Bill has been introduced in Congress and passed by the Senate which proposes that the government make it possible for millions of deserving American farmers to own the soil they till instead living their lives as share croppers, tenants, renters and day hands.

Hon. Henry A. Wallace, secretary of Agriculture spoke enthusiastically in favor of the measure. During the past ten years many farms have been lost through foreclosure and the land owning farms have decreased while the tenants and share croppers have increased very materially. Over fifty per cent of all cultivated land in the United States is now operated by tenants. Most of the tenants operate in the southern states.

In most cases there is practically no hope of the tenant farmer improving his condition. His earnings are not sufficient to provide a decent living, much less permit savings for the purchase of land.

WHO IS TO DRINK

The Reformed Church Messenger, one of our ablest contemporaries, gives the following in its editorial pages:

The following is the report of an actual dialogue that took place between two American citizens, one of them a business man and the other a clergyman, to whom the business man spoke frankly, as one does to a good friend:

"Well," said the layman, with an air of finality, "Prohibition is a failure, and we must get used to the idea of making America 'wet' again."

"But who is to drink the liquor?" queried his friend. "Will you?"

"Why, no," he replied; "you know I am a teetotaler."

"Will your son drink it?"

"No, that shall not be!"

"Would you want it to come back for the sake of your clerks?"

"No; it is my practice to discharge any clerks who drink liquor."

"Do you want your customers to drink it?"

"No, I would much rather not; I am sure that those who use strong drink will not buy so much from me or pay their bills so promptly."

"Would you want the engineer on your train to use it?

"No; I admit I don't want to ride on a drunkard's train."

"Ah, then you want this liquor for the men whom you meet driving cars on the public highways?"

"No, of course not; that is a danger of everybody."

"Well, then, who is to drink this liquor in America, pray tell me?"

"I am not sure that anybody should drink it. I guess we are better off without it."—Watchman-Examiner.

THE MODERN FARMER

Official organ of the National Federation of Colored Farmers, Inc.

Leon R. Harris - - Editor

Published monthly by the Modern Farmer at Nashville, Tennessee.

Office, 447 4th Avenue, North.

Devoted to the interests of the Farmer, Truck Gardener, Livestock and Poultry Breeder, the Home and the People.

Entered as Second Class Matter, April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 447 4th Avenue, North, Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, 75c for six months, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT.

OUR PLATFORM

1. A Unit of the National Federation of Colored Farmers in every community of colored farmers.
2. Co-operative buying, producing and marketing.
3. Every colored farmer a farm owner.
4. Abolition of debt-slavery, injustice and persecution.
5. A written contract for every colored farm tenant and sharecropper.
6. Better rural churches, schools and homes.

MR. H. H. INGRAM SENDS LETTER

Tchula, Miss., July 5, 1935—(Special to Modern Farmer)—Dear Editor:—Will you allow me to speak to the National Federation of Colored Farmers through your paper? Dear Readers:—I thank the good Lord I am getting on foot again, since we last met in Convention at Charleston, Mo. Untold numbers of farmers as well as myself have suffered, and a great number of them has fallen asleep in death, but in spight of everything, with God's help we are moving on. After meeting a great number of our Negro business men, who tell me to press my claim. Dear Readers of the Modern Farmer, I am sorry that you were not there to catch a glimpse of the Negro farmers of the southland, especially. We are the only nation on earth that is bound with the chain of Debt Slavery, and will not elect to be free. Why are we blind to these conditions? Are we ignorant? Will you remember the prison doors that were opened to Paul and Silas by the power of God? Here is a picture. It seemed that Paul reached this conclusion. He did not put himself into the prison and he was not coming out himself. Dear Readers, our conditions are a little different from Paul's. There is no greater prison in the world than DEBTS. Every Negro in the South knows his circumstances better than any one else. God has prepared and sent us another Moses as a leader, not of Israel, but a leader of the Negro race, in the person of Mr. James P. Davis. We can safely say there is not a man in the race that has done as much for the Negroes as Mr. Davis.

Listen Readers, do you feel that I have said too much? Let us pray that he will live long to put over this program. O, Friends, let us wake up. Let us not all sleep. Just a word to the Modern Farmer. Those who have been reading this paper have been guided by helpful things found in its columns. Our homes are dark without this paper. What is the good of having a leader, if no one will follow. Let us follow this leader we have and let us continue to read this paper and help ourselves and help the other fellow.

Faithfully yours,

H. H. INGRAM

Professor—What would happen if an irresistible force me an immovable body?

Farm Student—If it was a mule it would kick itself.

RUST-PROOF OATS LEAD

Red rust proof oats have proved their value to Ouachita county farmers, according to their county agent, Paul Carruth. About 75 per cent of the oats planted in the county were winter turf oats, which flourished until rust started its damage. Now the turf oats are all gone, while the red rust-proof acreage is doing spendidly, he states.

New Hand—That mule certainly is sure-footed.

Farmer—What do you mean—sure-footed?

New Hand—He kicked me three times in exactly the same place.

THE GOVERNMENT AND THE FARM—HOW FAR?

In Des Moines, Ia.—Register

By Harvey Ingham

A single paragraph from a recent statement by L. C. Gray, chief of the division of land economics under Secretary Wallace, is enough to hint the large outline of the program ahead of us.

Suggesting that the small size of our farms and the temporary occupancy of tenants is in many instances what stands in the way of protection against erosion and other weakenings of the soil Mr. Gray says:

"It is proposed that the credit facilities of the government be made available to farm owners for adjusting the size of farm tracts in certain areas, and for promotion of farm ownership in areas where tenancy is prevalent. One proposal is that the government acquire the present extensive areas of farm lands held by banks and insurance companies and by other classes of landowners who are not interested directly in operating their land, and extend long-term credit to tenant operators for the buying of farms of profitable size."

If we admit that something of this sort ought to be brought about in some workable way, the next question is to name that workable way. Mr. Gray comes to that with the suggestion that:

"During the transitional period a supervisory agency be set up to facilitate the change of status from tenancy to independent ownership."

This agency would be known as a Farm Tenant Home corporation with money to finance long time land purchases, an agency congress is already definitely considering.

Without going into the program Mr. Gray outlines in too much detail, we may profitably read the summing up of our present day wasteful land handling as disclosed in the report of the National Resource board, named by the president in May of last year. This board has made what Mr. Gray says is "the most comprehensive survey ever undertaken" and its recommendations if carried out may "write a new chapter of national policy." Here is the summing up:

(1) "A net yearly loss of approximately 222 million tons of the invaluable organic elements of our soil. Half of this loss is due to erosion and leaching.

(2) "Complete destruction of the usefulness for farming of 35 million acres of land. This is an area equal to all the land in farms in the states of New York, Pennsylvania and New Jersey.

(3) "The topsoil largely removed from an additional 125 million acres, or an area larger than all the farm land in the states of Ohio, Indiana, Illinois, Michigan, and Wisconsin.

(4) "Farming carried on in many areas of the United States on tracts too small to permit either a decent livelihood or practices of farming which conserve soil fertility.

(5) "More than 400 million acres of farm land under lease in the United States—that is, farmed not by owners but by tenants. In many sections of the country the type of tenure has accentuated misuse of land.

(6) "Continued destructive exploitation, with little exception, of privately owned forest lands in the United States."

It will be noted that the national reserve board lists tenant farming as one of the six major troubles, which explains why Mr. Gray gives so much of his discussion to getting the tenant farmer back into land ownership under government planning.

In Iowa 54.8 per cent of the farms are in the hands of tenants, the ratio running as high as 72 per cent in some of the northwestern counties and as low as 28 per cent in Dubuque county. Curiously enough the lowest rate of tenancy is in the "Switzerland of Iowa" the northeast counties. How much of this may be due to the character of the early settlers is not explained. But land was cheap in all the counties when the early settlements were made.

One thing is plain to those who have known the farm situation from the early days, and that is that the government must stabilize the values of land and keep them stabilized if a lot of land owners of one year are not to become tenants the next. The shift in the middle west in this last period of deflation has been terrific, and not at all at the instance of the banks, insurance companies, and private citizens who have been forced to take over the lands. So long as land is like other property open to purchase and sale for profit there will be a steady shifting of ownership. It is this, unquestionably, that explains the demand for government regimentation.

Government regimentation is spoken of by Mr. Gray as "a broad policy" which if it is carried out over a period of years will bring "intelligent utilization, rather than haphazard exploitation, of our magnificent but not unlimited land resources."

Mr. Gray sums it all up with this statement: "It will bring about utilization of our good farm land, gradual retirement of poor and impoverishing land and a wiser policy of land settlement. It will seek to correct the exploitation of our forest areas and conserve the remaining areas of the public domain. It will promote erosion control and facilitate desirable changes in holding of farms. It will aim to effect utilization of all our lands for the purposes to which each region and area is best suited."

INTEREST RATE WILL BE SLASHED BY LAND BANK

Cut Applies to Credits Through U. S. Farm Loan Units

The interest rate on all Federal Land bank loans made through National Farm Loan associations will be reduced to 3 1-2 per cent for all interest payable in the one-year period commencing July 1, 1935, and to 4 per cent for all interest payable in the the two-year period commencing July 1, 1936, A. C. Williams, president of the Federal Land bank of Houston and general agent of the Farm Credit Administration of Houston, announced Thursday.

This temporary reduction of interest on Federal Land bank loans having installments due prior to July 1, 1938, is the result of new legislation, the farm credit act of 1935, which was signed by President Roosevelt on June 3. Interest payable on installment dates occurring after July 30, 1938, will be at the original contract rate, which is 4 1-4 per cent on loans now being made through National Farm Loan associations and varies from 5 to 6 per cent on loans made prior to April 1, 1935.

Since May 12, 1933, when the Farm Credit Administration was established, the Federal Land bank of Houston, acting for itself and as agent for the land bank commissioner has made 42,738 loans aggregating $129,192,350. This is almost as large as the amount of business carried on the books of the bank on May 1, 1933, after 17 years of operations, Mr. Williams said.

The interest rate reduction provided by the act will affect only Federal Land bank loans, all of which are first mortgage loans. The interest rate on Land Bank commissioner loans, which are made on either first or second mortgages on farm property, will remain unchanged at 5 per cent.

The act extends until January 1, 1940, the time in which the Land Bank commissioner may make direct loans to farmers on first or second mortgages. The commissioner may not lend more than $7500 to one farmer; and the amount of a commissioner's loan plus any prior encumbrances on the property may not exceed 75 per cent of the appraised normal value. Formerly, Land Bank commissioner loans could be made only for the purpose of refinancing debts, for repurchasing farms lost through foreclosure and for working capital. Under the amended law these loans can also be made to finance the purchase of farms.

Commenting on this new provision, Mr. Williams said:

"The new act should enable many deserving tenants to purchase farms of their own. One reason why farm tenancy has increased so steadily in the United States during the past 20 years is because it has been so difficult for young farmers and tenants in many sections to finance the purchase of farms on reasonable terms. The new provision enabling the Land Bank commissioner to make loans for the purpose of purchasing farms provides a new opportunity for young farmers and tenants to become farm owners and home owners in their own right."

Under the amended law, the total authorization for the issue of government-guaranteed bonds of the Federal Farm Mortgage corporation remains unchanged at $2,000,000,000; but the previous limitation on the amount of such bonds that might be used for making Land Bank commissioner loans is removed.

The act also provides important additional credit service for farmer co-operatives. "Physical facility" loans from the banks for co-operatives, formerly available only for purposes of co-operative marketing, may also be obtained for purposes of co-operatively purchasing and furnishing farm supplies. Another new provision authorized the banks for co-operatives to make loans to farmer co-operatives which furnish farm business services.

BIRTHS BOOST U. S. FARM RESIDENTS TO RECORD HIGH

The farm population— now the largest in the nation's history —is estimated by the bureau of agricultural economics as of Jan. 1, 1935, at 32,779,000 persons. This is 270,000 persons more than on the same date in 1934. The increase is attributed to a surplus of births over deaths rather than to any marked farmward movement from cities.

The bureau says the movement away from farms last year was larger than the movement to farms. It is estimated that 783,000 persons moved out of cities, towns and villages to farms last year, but that $994,000 persons moved from the farm to cities, towns and villages.

The net migration from farms was 211,000 persons, but this loss was more than made up by a surplus of 481,000 farm births over deaths. The net gain of 270,000 persons in the farm population is reported to have been only 3,000 persons more than the gain in 1933.

BLACK WIDOW SPIDER

The black widow spider is more deadly to its own kind than to mankind. The female of the species, the worst biter of the family, usually eats her mate and often her young. Some people have even gone so far as to call her the family arbiter. She attacks human beings only if they irritate her when she is hungry. A well-fed black widow spider is anything but aggressive, according to Dr. F. C. Bishop of the United States department of agriculture.

This spider bites humans infrequently, but its bits is more poisonous than that of any other Northern American spider. As the insect has recently extended its range westward and northward from the south, where it is better known, and as it is hard to tell a hungry spider from one that has just a good meal, Dr. Bishop offers a few suggestions for destroying the black widow spider. The best thing, he says, is to spray with creosote oil the spots she frequents — garages, woodsheds and other outbuildings, as well as wood, brick and stone piles on manholes and culverts. She seldom enters houses. Gloves are a great protection in working around places where this poisonous pest may lurk. Crushing spiders and their eggs is also effective.

The black widow spider, sometimes called red dot, is easily recognized by her shiny black face and the red spots on her under side —one or more above the spinnerets at the tip of abdomen and an hour-glass-shaped one father up. She weaves a loose and irregular web with coarse strands, in which she lays her eggs— 300 to 400 at a time— in a dense, whitish ball the size of a large pea.

The spider's stout jaws, working sidewise, may nip any moving object, Dr. Bishop says. Venom, injected from glands near the base of the jaw through a needle-like tooth, causes a stinging sensation, followed by pain which progresses from the spot bitten until it reaches the chest or abdominal region. It has a retarding effect on the heart. First aid is the same as for a snake bite— make the wound bleed freely by enlarging it and then apply suction. A few —but only a few —authentic cases of death to human beings from black widow spider bites are on record in this country

HELPFUL HINTS

Make cheesecloth bags and fill them with bran. They are very useful for cleaning wallpaper and are also good for cleaning bathtubs and the like without the aid of soap.

When baking or cooking dishes become very brown inside, fill them with buttermilk and let them stand several days. The acid in the milk will dissolve the stain.

Mix equal parts of olive oil and turpentine and apply lightly to furniture that has become dull or dingy. Then rub dry with a clean soft cloth.

Keep a little lime on shelves where jellies and preserves are. This will help to prevent formation of mold.

A good hair drier is made by placing an electric fan in an oven. Cake ingredients should be at room temperature before the cake is mixed.

MATTRESS COSTS $2.06 AND SOME HOME LABOR

Six sugar sacks, two packages of rose dye, 20 pounds of new cotton and some more that was not so new, some thread and last winter's Sunday hat, mixed with some labor and knowledge gained from a club demonstration, is Mrs. John Polton's recipe for many nights of restful sleep on a home made mattress.

Mrs. Pelton is a member of the Salem home demonstration club of Saline county, and witnessed a mattress making demonstration at the May club meeting. At the next meeting she reported a new one at a total cost of 2 06, most of which was for the new cotton. The old hat furnished the belt buttons for tacking the mattress.

ALFALFA FOR HORSES

Alfalfa is a good horse feed, says A B. Caine, of Iowa State College, and it is safe if the daily ration does not exceed one pound for each 100 pounds of live weight. Alfalfa is richer in both portent and mineral than timothy, and is also more palatable.

In colorful rooms, the use of black accents are distinctive. For instance, a black ornament or cigaret box on maple. Or silhouettes in narrow black frames against an apricot or bisque wall are effective.

Try an uncooked cranberry relish. Chop two large raw apples with each pound of way cranberries. You may use the meat grinder for this. Stir in the cup of sugar. Serve with meat.

1934 COTTON CROP 9,636,000 BALES, LOW SINCE 1921

Washington, D. C., May 22.— (Special.) — The department of agriculture in its final estimate on the 1934 cotton crop today placed the yield at 9,636.000 bales of 500 pounds, a reduction of 3,411,000 as compared with the preceding year. Production was the smallest since 1921, and with that exception the lowest since 1901.

On April 1, says the Bureau of Agricultural Economics, farm wages were highest for that date since 1932. Per day wages, without board, averaged $1.34 for the whole country and ranged from 79 cents in South Carolina to $2.55 in Massachusetts.

TREATING POTTED PLANTS

By immersing potted plants such a cyclamen, chrysanthemum, geranium, antana, fuchia and begonia completely in water at a temperature of 108 degrees Fahrenheit for 20 minutes, harmful mites can be killed without injury to the plants. Water hotter than 110 degrees, however, may kill the plants. This was learned by Department of Agriculture tests.

Mother—David, you better not eat any more chicken. You must leave room for the cake

David —I got plenty room, ma. The chicken can move over.

Teacher—Tommy Simpson, have you any good excuse for being late this morning?

Tommy— Yes—we had waffles and syrup for breakfast.

"A KISS A DAY," ETC.

For the past eight years Herman Sachtjem, Dane country, Wisconsin, divorce council, has been hearing lots of material difficulties. From the many different stories and causes and irritations told him he has tried to figure out a formula for happy marriages. By this method he has come to the conclusion that if you want a happy marriage, remember "a kiss a day keeps the divorce courts away." From his experience he declares "woman is a sensitive creature and must be treated in much the same way after wedding as while you are courting her." Besides he offers a few don'ts for prospective brides and bridegrooms. Don't marry the only child of the youngest in the family — they are used to having their own way. Don't marry an opposite. Don't marry a bootlegger. Don't take in boarders. Don't let your wife work out. Don't marry a woman who smokes in bed— she is probably— irritable. Don't elope church marriages last the longest.

BOY'S HEART TURNS TO STONE

Medical men in all parts of Europe are interested in the strangest medical case in London, that of a boy whose heart is slowly turning to stone. The child was taken from Birmingham to a famous hospital, but details are being kept secret. The feature of the illness is that the membrane which encloses the heart, the pericardium, has become densely thickened, and stony plaques have begun to develop. It is beyond the scope of medical treatment to remedy this progressive condition, and already there are signs that this imprisonment of the heart is threatening the efficiency of the circulation. An operation is to be performed on the heart, to free it from the stricture.

CHISELING CHICKENS MUST GO!

Philadelphia Inquirer: And now chiseling chickens have become the targets of New Deal regimenters. Undersized eggs, the hens of the country are warned in an AAA pronunciamento, are banned from now on, and every dozen eggs must weigh 23 ounces, or 1 11-12 ounce per egg.

Any hen that falls down on the job and lays a below-standard product is consigned to the stew pot in the interest of egg eugenics. The size of eggs holds the AAA, is a matter of heredity, and elimination of the disqualified hens by the stew pot route should quickly insure government specifications for all the eggs on the nation's breakfast tables.

The egg yardstick might be applied farther — and determine just how many quarts of milk a cows must poduce, how many pigs there must be in a litter, how many sides of bacon in a hog.

MISLAID

Cincinnati Times-Star: During all the central European excitement Mussolini seems to have mislaid Abyssinia.

THE CRUST OF BREAD

I must not throw upon the floor
The crust I can not eat;
For many little hungry ones
Would think it quite a treat.

My parents labor very hard
To get me wholesome food;
Then I must never waste a bit
That would do others good.

For willful waste makes woeful want,
And I may live to say,
Oh! how I wish I had the bread
That once I threw away!

INDIANA FARMERS STUDY THREE M's

Management, Marketing, Machinery Prove Popular

Special to The Christian Science Monitor

LaFayette, Ind.—Indiana farmers are going to school in steadily increasing numbers, but instead of studying the three R's, have been following courses in the three M's— management, marketing and machinery.

During the first three months of 1935, a total of 26,126 persons attended 229 schools conducted by the Purdue Agricultural extension staff in practically every county in the State, according to figures recently released by Purdue University authorities. This was an average of 114 persons per school and is the largest attendance figure ever reported in Indiana for this type of extension work. Increased attendance at all educational meetings, other than the special extension schools, indicates, according to Mr. L. M. Busche, assistant county agent leader, a more widespread interest in the work on the part of farmers and a desire to keep posted on the latest developments in farm operations.

The 229 schools usually lasted one day and this year were all held during the daytime. Arrangements for each meeting were made by county agricultural agents, with the assistance of local farm bureaus, cooperative associations and other farm organizations. Specialists from Purdue acted as instructors, thus providing direct contact between the university and the farmers including, in many cases, the women on the farms.

Management Courses

A total of 3758 attended 27 farm management schools to hear discussions of the business side of farming, including farm organization and operating problems, along with outlook and other economic information. Film strips were used by speakers in describing methods, and round table discussions dealt with analyses of business records submitted by individual farmers in the particular communities where the meetings were held. No names were mentioned, but the figures were used to show the organization of the most profitable and the least profitable farms. The reasons therefore were determined, and the important factors in each farm business were compared with averages of others in the area. This comparison brought out the strong and weak points to serve as a guide to improve the business.

Farm machinery schools held in 18 communities enrolled 2061 farmers who came to learn how to repair their farm equipment. Arrangements were made beforehand, so that the Purdue instructor would have demonstration material available on which to make actual repairs. In many cases it was necessary to tear the machine entirely down in order to replace bearings or broken parts. This process, as many farmers expressed it, was an education in itself. Many farmers brought along their own equipment and immediately applied the lessons learned to put the machinery in good order.

Poultry and Hogs

Poultry schools proved the most popular, judging from attendance figures. A total of 4892 persons, including many women, attended the 36 classes at which problems of production and marketing of poultry and eggs were presented. Nine schools which considered more efficient marketing of eggs drew 798 persons.

Hog schools, devoted to problems involving this "mortgage lifter," were held in 14 counties, with an attendance of 4291. Sheep schools numbering 16 were attended by 2043. Sixteen schools for tomato growers, held at different canning factories throughout the state, attracted 1805 producers to consider methods of raising, harvesting, and marketing this crop.

Farmers in the 1934 drought sections of Indiana turned out to the number of 1640 to hear discussions given at 19 schools on emergency hay and pasture crops. Eight corn-growing schools were held with an attendance of 943. Dairy feeding was the subject presented to 448 farmers in 16 schools, while in 12 other dairy-legume schools 859 farmers heard the specialists explain the growing of legumes to simplify the dairyman's problems. Weed control and pure-seed schools drew 907 to 15 different classes, and special schools for truck gardners in the muck-land sections serving the Chicago market attracted 820.

Many communities requesting schools could not be accommodated because of lack of staff to meet the demand, Mr Busche states.

Potential results of this far-reaching educational program fascinate the imagination, but extension leaders prefer not to attempt an appraisal. The Indiana project is only one of many closely similar programs held in other states and territories. Considered alone, however, the work among the Hoosier farmers admirably explains why educators recognized the federal extension service as one of the most amazing educational efforts sponsored by any government.

H. H. Dawson.

REPORT 64 BIRTHS, 48 DEATHS DURING MARCH

Sixty-four births and forty-eight deaths were reported to Dr. Carl A. Peterson, Moline City physician dning March. Thirty-five of the babies born during the month were boys.

Stranger—Had plenty of rain here-abouts, haven't you?

Farmer—Yep. It's hurt my crops too.

Stranger—Will you lose much money this season?

Famer—No, I'll about break even by haulin' autos out 'o the mud.

Mother—How would you like to go to the country for a while this summer, Johnnie?

Johnnie—I don't want to go where they've got thrashing machines. It's bad enough to be thrashed by hand.

CHILDREN NEED SLEEP

If children are expected to progress in school, maintain health and grow normally it is absolutely necessary that they get the right amount of sleep. Health authorities have tabulated the amount of sleep necessary for children of various ages. Children from five to eight years of age should have 12 hours sleep a day, those of 11 need 11 hours, and when 13 they require 10.

GOOD HARVEST STILL LIKELY, TESTS REVEAL

Fair Yields Obtained From Plantings Up to July 15.
PRICES MAY SOAR

Crops Are Far Behind in States Growing Bulk of Feed

There is a warning to Arkansas planters and farmers to make special efforts to produce ample feed supplies, in the threat of a short corn crop, due to continued rains, which now overhangs the Corn Belt, say leaders of the state extension service. They point out that the Middle West grows the bulk of the country's corn, and that a short crop there would mean prices that would cut hurtfully into the cotton income of Arkansas who depend on buying rations for their work animals and other livestock.

If the corn crop should be much reduced, as now seems likely, the prices of other feeds would rise with the price of corn, extension leaders remind home users of grains and hay. Hence, in view of the unfavarable outlook in the Middle West, they urge liberal plantings of corn and sorghum as an insurance against high feed bills next winter and in the spring of '36.

Tried Out at Scott

Corn can be planted in Arkansas as late as July 15 with the expectation of good yields, said D. J. Burleson, extension agronomist. Experiment station tests show, he continued, that at Scott, in Pulaski county the best date on the average was June 1. The yields from different planting dates were, June 1, 36 bushels; June 15, 35.1 bushels; July 1, 32 bushels; and July 15, 20.3 bushels.

In central Arkansas, any time in June is a good time to plant corn, but it is better to plant before July 15. Mr. Burleson asserted, adding:

"At the cotton branch experiment station in Lee county, June 1 proved the best date The yields averaged, June 1, 39 bushels; June 15, 32.3 bushels; July 1, 31.5 bushels. Fewer plantings were made on July 15, with a much lower yield. The conclusion is that in eastern Arkansas there is a very little difference in yields from planting June 15 to July 1, but the planting should not be made later than July 1."

The tests show that in northern Arkansas, April 15 is the best corn planting date, according to Mr. Burleson, but if it has to be planted as late as May 15, then it may as well be planted any time up to June 15, and plantings on July 15 yielded only about a bushel less per acre than June 15 plantings.

Two Varieties in Lead

Among the varieties used in these tests, Paymaster and Mexican June led in yield, with Paymaster seeming to be about as good as Mexican June, the crop specialist said.

Dry weather is, of course, apt to damage corn whether it is planted early or late, but the same period of drouth will not affect both early and late corn, unless it is a long season. Mr. Burleson pointed out, adding:

"Grain sorghums, such as hegari, sagrain, grohoma, and darso stand dry weather much better than corn, and part of the grain acreage should be planted to some of these varieties. Experiments carried on for several years by the experiment station show that in dry years, such as 1928 1930 and 1934, grain sorghums produced more than corn. In favorable seasons, corn led grain sorghums on good corn land . On thin soil subject to dry weather damage, grain sorghums will yield more grain than corn almost every year.

Planting grain sorghums is, to a certain extent, drouth insurance, Mr. Burleson commented, pointing out that the fact that Arkansas has had too much rain up to this time is no indication that dry periods will not come later in the summer.

CORPORATIONS OWN MUCH OF IOWA

Many Farm Ownership Tragedies Brought About by Depression

PERCENTAGE INCREASES

Plans for Returning Land to Private Ownership Are Made

Acreage of land in Iowa now held by corporations—the equivalent of ten counties—is a heritage from the depression and for the most part represents ownership tragedies.

That is stated in Farm Land and Debt Situation in Iowa, 1935, a bulletin by William G. Murray and Willard O. Brown, Iowa State college agricultural economists, which will be published soon.

In the last fifteen months the acreage of land held by corporations has increased from 7.9 percent to 10.1 percent of all farm land in the state, the bulletin reveals. It has been acquired through two main channels, either through foreclosure or a mortgage or through acceptance of a deed to the land in the cancellation of a mortgage.

The increase of corporate-owned land in the last fifteen months is made up of the increase in insurance company holdings which have risen from 3.9 percent to the total farm land to 6 percent.

Areas of largest corporate holdings of farm land are in south central, north central and smaller area in western Iowa. Acreage range from 26.0 percent in Decatur county to 2.9 percent in Winneshiek county.

Advantages and disadvantages of corporate ownership are outlined in the bulletin. In some instances where previous absentee owners were unable to keep up the buildings, the corporations have made improvements. In still others, owners, loaded down with debt, have removed their obligations by allowing foreclosure and then have arranged to repurchase the land on a satisfactory basis.

But in contrast, no money is being spent by corporations to maintain improvements on some farms. In addition, some farmers who lost their farms find themselves without the necessary cash to repurchase the farms they once owned. A final disadvantage is that most corporate-owned farms are for sale, giving the tenant little assurance from year to year whether he will be able to stay even though he may be doing satisfactory work.

To offset the disadvantage of corporate ownership, options to purchase are being given to some tenants and interest is being shown in devising contracts with tenants by which they will be able to buy the land with a small down payment.

READJUSTING THE FARMER

Readjusting the farmer to bring about a sound economic system, as we knew it prior to the war, means that agriculture must get more out of the national income than he has been getting. It means that the farmer must get more out of the city man's dollar than he has been getting.

It is natural for us to make considerable fuss about higher prices for foodstuffs, but that is the only way in which the readjustment of farm and industry and transportation and labor can be brought about. Farms suffered ten years from maladjustment by which the cities were taking more of the farm dollar than they had before the war.

The action was disastrous. It resulted first in depleting the farm accounts of their cash, then in taking their equities in the land. Meanwhile, the crash of a group of farmer caused the closing of a bank. Through the wheat and the corn belt the closings increased.

We in the cities said they had too many banks, that they were poor bankers anyhow, that they speculated in land, and that the farmers should engage in mass production and be smart like city people.

We failed to take into account the fact that the economic system of the country was being honeycombed under our doorsteps by this progressive sapping of agriculture by reduction of the value of the farm dollar.

The result was inevitable.

One of the first undertakings of the new administration at Washington was to bring back the value of the farmer's dollar to the point it held in 1913. It has not been able to accomplish that because, coincident with setting up AAA for that purpose, it set up NRA to offset what AAA might do.

The drouth, however, did what the congressman failed to do. It curtailed production beyond reach of both AAA and NRA and sent prices of farm produce to upper notches.

President Roosevelt announced, when he introduced the AAA bill into congress, that it was an experiment, and that if it failed he would be the first to make the acknowledgement. It is an experiment in all its phases, from compulsory reduction of cotton acreage to destruction of pigs, but if it is constitutional, which some of these experiments are not, a fair trial is merited.

We can not give the farmer back his share of the dollar and still keep it. Either we mean to readjust our economic system so that he will come on to the market, as he formerly did, and buy the things he needs for his farm, or we don't mean it.

If we do mean it, he will constitute the greatest market on the face of the earth for the things the city people have to sell, and we will not have to worry so much about export markets. If we don't mean it, then we can go on feeding his farms to the bankers and the insurance companies, the creeping paralysis that caused the crash.

If we do mean it, then we shall have either to pay more for what the farmer sells or receive less for what he buys from us.

We cannot have it both ways.

That's politics, not business.

CLEAN RANGE FOR TURKEYS

One of the most important factors in successful turkey raising is that the turkeys be provided with a clean range away from places where chickens have left their drop in the past several years. If such a range cannot be provided it is better that the turkeys be raised in complete confinement, according to E. M. Funk, poultry expert at Missouri State College.

Like salt, sugar may be used to develop flavor rather than for seasoning alone. In cooking peas lima beans or fresh corn when it is in season, try adding a little sugar along with the salt. It will also improve the flavor of stewed tomatoes.

CORN FIRST GREW IN MEXICO

(Continued from Page 1)

Columbus found it growing here.

DeSoto found large fields of maize in Florida in 1575. In 1580, LaSalle noted large supplies of it in the section now known as Illinois.

But Columbus played a part in the early considerations of the new plant. He caused the adoption of the word "mayz," a derivative of the native name in many dialects. From this came the modern word "maize."

Taken to Spain.

Corn was taken to Spain by Spanish explorers and upon recognition of the plant's usefulness was distributed to Italy, France, Germany and other European countries. The Portuguese distributed the plant along the coast of Africa.

Authorities state that the maize plant was the economic stepping stone of the colonists in temperate North America. I was also to be the banner of the immigrant into the Mississippi valley.

The maize area, most influential in the early colonization and development of America, comprised all portions of the United States east of the arid plains region. In some places it extended as far as 50 miles into Canada.

Cultivated by Colonists.

By 1610 the colonists had thirty acres of maize under cultivation. By 1650 they had a hardy crop and exported 600 bushels that year.

Watching the cultivation by the Indian, the white settlers realized that to maintain the standard of a crop, breeding the maize was necessary. The comparative ease with which the crop could be grown at first eliminated the spur of necessity, and it remained for the closing years of the last century to convince civilized men of the necessity of applying scientific knowledge to the breeding.

Up to the present time, all methods of civilized agriculture have failed to do more than indicate the general trend of evolution in the plant. Throughout history, the breeding of maize has done little more than to eliminate a few superfluous organs and concentrate the fruit into one or only a few ears. The elements of specialization are said to be a continuation of the process that nature and the Indian have been promoting for centuries.

Today maize is extensively grown in Mexico, Argentina, Hungary, Rumania, Italy, Russia, Egypt India and South Africa, and to a less extent in Canada, Peru, Chile, Central, America, Spain, Portugal France, Germany, China, Japan, Australia and the Philippines.

It remains the chief crop of the United States, and each year the nation produces three times as much corn as all other countries together.

The aim of producing merely more corn was indefinite and gave way to an attempt to reach definite ideals of perfection coincident with high yields. Many methods have been employed in the attainment of these results. In recent years, the principles of genetics have been applied.

Improved by Inter-Breeding.

Maize is susceptible to the improving influence of hybridization (inter-breeding) and selection. Regarding the latter, farmers are indebted to it for the most of the progress so far. Agriculturist declare that hybridization will play the major role in the future.

The improvement of corn doubtless had its beginning in the almost unconscious choice at planting time of the best ears from the depleted store left over from the previous year's crop. Farmers with foresight selected their seed earlier resulting in the fields at or before harvest time.

The botanical study of the many varieties of maize shows only superficial differences between them and points to a wild ancestor that was much like the modern plant. The effect of the cultivation has been chiefly to reduce the number and to increase the size of the inflorescense or blossom of the plant.

The choice of available varieties of the one best suited to a particular set of conditions seems to have been made about as intelligently in the past as now. The Indian's taste for the gaudy kept in use the wider range of colors in corn than is known to the average American today.

N. F. C. F. OFFICER

land, homes and positions. They made many new friends in Nashville, and reported a pleasant vacation tour.

STUDY OF EGGS IS INTERESTING

(Continued from Page 1)

carrying it about on top of its foot, proteced by a fold of skin. The male and female relieve each other at this task. Robbed of its egg, a king penguin may sometimes be seen attepting to shuffle about with a stone on its instep.

Aside from the echidna, the only mammal that lays eggs is the remarkable duck-billed platypus which lives in the streams of Australia and Tasmania. It combines beaverlike fur and habits with webbed feet and bill similar to a duck's and lays two eggs, each three-fourths of an inch long, encased in a flexible white shell.

„Game birds, which are frequently preyed upon, rear large broods. Some quails lay as many as thirty eggs for a setting. However, quails take a back seat compared with marine creatures, which, because of their many enemies, must lay eggs by the millions in order for the race even to hold its own. A cod lays about 5,000,000 eggs, a sturgeon about 7,000,000, a turbot about 14,311,000; but so greatly are the young preyed upon, that only a small proportion will survive to maturity.

A lobster "in berry" will carry about guled to the under-surface of her body, like clusters of berries, anywhere from 3000 to 75,000 eggs. Perhaps one egg in 5000 will mature. A single female oyster may spawn as many as 60,000,000 eggs in a season. Of the slight few of these that hatch into "spat," only a handful will develop into adult oysters. A mother oyster may be considered lucky if she raises successfully one out of 10 million children. This ruthless destruction has its advantages, for if every egg in the sea matured, the sea would soon become a solid, squirming mass of fish and marine creatures.

Eggs vary as greatly as people in color, size and shape. Exception to the rule that all domestic fowl lay ovoid, white or brownish eggs is the Araucana, a strange South American fowl which lays blue eggs. Eggs laid in holes or domed nests are usually white. Colored eggs, invisible in dim light, would be in danger of being broken or rolling out of reach. Although puffins lay their colored eggs in holes, they cover the shells with a chalky incrustation which reflects light. Eggs of many fishes floating at the sea surface, in masses sometimes 30, feet long, are transparent, which probably hinders their being detected and eaten. The shells of kingfisher eggs are translucent, those of some snails' eggs slightly iridescent.

The shapes of eggs present an interesting variety. Plovers lay pearshaped eggs, white owls and titmice lay spherical ones. Those of sand-grouse are shaped somewhat like capsules: those of grebes are pointed at both ends. The generally soft shells of most lizards stretch to accommodate the growing embrye. Eggs of certain shell-bearing slugs are so elastic that if dropped on stone they rebound several inches.

Birds' eggs vary in size from the tiny white ones of the humming bird to the large one of the ostrich. The ostrich egg is small compared to the egg laid by the now extinct Aepyornis. Measuring 9x13 inches, a single Aepyornis egg would make an omelet for a giant. Drifting sands in Madagascar have uncovered several eggs of this bird which is supposed to be the prototype for the roc in the Arabian Nights. Eggs of the extinct great auk are even more valuable than those of the Aepyornis. A collector paid nearly $1500 for a single one.

—Daily Dispatch

HUNTERS SHOOT

(Continued from Page 1)

and the winning team had not been announced. Half of the hunters were placed under the leadership of Fred Kellogg of Yorkville and half under that of Lowell Peterson of Newark. The half with the lower score will treat the winning side to a dinner next week.

FARM NOTES

Flue cured tobacco growers in Georgia, voted almost unanimously for the continuation of the AAA program for another year. The vote represented practically every farmer growing tobacco in the eleven counties.

W. B. Brown, who lives near Lincoln, Illinois has a two headed pig on his farm. The animal can eat thru either mouth and squals thru each of its snoots. The pig has three eyes, one on either side of the head and the third in the midle of its wot snoots.

The Census bureau in Washington says cottonseed crushed in the 11 month period, August 1st to June 30th, totalled 3,481,539 tons, compared with 4,056,212 in the same period a year ago. Cottonseed on hand at mills June 30th totalled 126,840 tons compared with 280,537 a year ago?

Negro farmer in Arkansas will hold meeting at the A. and M. School at Pine Bluff, August 13th. A most interesting program has been arranged by Dr. J. B. Watson the able president of the college, and many prominent men and women, both white and colored have accepted invitations to be present and speak.

Dr. Watson is a real leader and has been untiring in his efforts to aid Race farmers throughout the state.

R. H. Cawthron prosperous farmer of Dunnsville, Virginia, announces there will be a big farm meeting held in his vicinity July 30th. This is the first time Negro farmers have come together in that part of the state.

They will discuss and make plans for a co-operative buying and selling organization, and also to form a federal credit union, which will permit its members to secure loans from their own organization.

Rev. P. Prioleau of Alvin South Carolina has been appointed as Deputy organizer for the National Federation of Colored Farmers for Berkeley county.

Rev. Prioleau is one of Carolina's oldest and most prominent farmers. Berkely, is the largest cotton producing county and has the largest Negro farm population in that State.

B. S. Harvey a farmer living near Senath Missouri has a potato vine on which the potatoes grow above the ground. They are about the size of radishes and the yield is much heavier than the regular potato which matures in the ground.

Richard Winters a 13 year lad living in McCullough county, Texas, and head of the 4-H Club in that county made a net profit of 937 dollars in a period of seven months by feeding 24 head of Hereford Calves for the market.

Mrs. Clinton Stearns of near Wakefield, Mass., has a mallard duck that built her nest in a rock garden and laid thirteen eggs.

It is estimated that 5,463,000 acres were planted in Illinois this year to soy beans. This is an increase of over a million acres over last year and more than double the acreage reported in the years from 1928 to 1932. The soy bean is a cash crop. It is also a drouth resisting crop.

The Booth-Harper unit of the N. F. C. F. in Jeff Davis county Miss., under the direction of Prof. V. W. Booth are now harvesting a large crop of okra, peas and beans which they had contracted to sell to a large cannery in south Miss. They are getting good prices and are now planning a larger acreage for another year.

According to data made public by C. E. Hall of the U. S. Bureau of Census in Washington, D. C. there are 22,937 farms operated by Colored in the state of Oklahoma, Maryland 5,267, Delaware 807, Virginia 39,673, West Virginia, 491, South Carolina 77,425 North Carolina 76,873, Georgia 86,789, Tennessee 35,138 Alabama 93,829, Arkansas 79,579, Louisiana 73,770 Texas 86,063, Kentucky 9,104, Florida 11,043 and Mississippi 182,888.

This data also revealed that all Negro farmers in the 17 states reported, had only 4,775 telephones and 2,816 electric lights in their homes.

DuBois unit at Sandusky, Ill., headed by Rev. M. M. Barrett Obrey Chambers, J. L. Johnson and others are making plans for a big meeting to be held in their community Saturday, August 12th. Several prominent specialists in agriculture have been invited to address the members. Units from Miller City, Mound City in Illinois, and Charleston, Missouri have been invited to participate in this meeting.

A fish fry with all the trimmings is being arranged.

THE SOCIAL INCOME OF RURAL AREAS IN THE UNITED STATES

BY ALL recognized standards the social income of rural communities is lower than that of urban communities.....The average city takes its health department for granted, but only about one-fifth of our rural counties have public health departments with full time personnel to serve rural dwellers. Eighty-five per cent of the rural population does not have access to local libraries, whereas about eighty-five per cent of our urban population does have this service.

Throughout the country, teachers in rural communities have been paid salaries averaging about one half of those of urban teachers. School terms are shorter in the country than in the city. Teachers in the country are often the least experienced and the most poorly trained. The turnover among these young teachers is very high. A much smaller proportion of rural children have been attending high school than is the case in urban territory.

The efforts of those working for rural social improvement have recently been bent in the direction of securing larger Federal and State grants in aid. Most of these leaders believe in Federal aid as one means of redistributing the national income by using the Federal tax powers. As yet, however, only the merest beginnings in this direction have been made.—The Status of the Farm Population, Information Service, January 5, 1935.

The perfect accompaniment for baked ham is baked apple stuffed with pineapple. Fill the cored center of apple with canned pineapple, and bake as usual.

Fish should be well seasoned with salt, pepper and lemon.

BLEEDING GUMS!

THE MODERN FARMER

Vol. VIII. NASHVILLE, TENN., AUGUST 15, 1935 No. 7.

Farms Home Corporation Bill Submitted to U. S. Senate

WOULD CORRECT ABUSES

Senator Bankhead of Ala. Offers Correction

Rural Rehabilitation and Home Building Plans Provided in Measure

May 7 (Calendar Day, May 9, 1935)
Ordered to be printed

Mr. Bankhead, from the Committee on Agriculture and Forestry, submitted the following Report.
(To Accompany S. 2367)

The Committee on Agriculture and Forestry, to whom the Senate recommitted S. 2367, to create the Farmers' Home Corporation, to promote more secure occupancy of farms and farm homes, to correct the economic instability resulting from some present forms of farm tenancy, to engage in rural rehabilitation, and for other purposes having considered the same, report it to the Senate with an amendment in the form of a substitute with the recommendation that the bill do pass.

Strike out all after the enacting clause and insert the following:

That this Act may be cited as "The Farmers' Home Act".

Sec. 2. The powers conferred in this Act shall be exercised with a view of checking the increase of tenancy in the United States, and dealing in an adequate way with the problem of farm tenancy in the United States, aiding in rural rehabilitation and encouraging the ownership of farm homes.

Sec. 3. (a) There is hereby created a corporation to be known as the "Farmers' Home Corporation" (hereinafter referred to as the "Corporation"), which shall be an instrumentality of the United States.

(b) The management of the Corporation shall be vested in a board of directors (hereinafter referred to as the "board") of five members, consisting of the Secretary of Agriculture and the Governor of the Farm Credit Administration as members ex officio, and three members to be appointed by the President, by and with the advice and consent of the Senate, and not more than two of said three members shall be members of the same political party. Each of the three appointive members shall receive a salary at the rate fixed in the bylaws of the Corporation, but not in the excess of $10,000 a year, and shall hold office for a term of six years, except that (1) any member appointed to fill a vacancy occurring prior to the expiration of the term for which his predecessor was appointed, shall be appointed for the remainder of such term; and (2) the terms of office of the members first taking office after the date of enactment of this Act shall

AUGUST CHECKS MAILED

Rural Resettlement Division Gets Attention

August checks to clients of the Rural Resettlement division of the Resettlement Administration, which were delayed because of the transfer from the Rural Rehabilitation Corporation, are being mailed out at the rate of 1,000 per day and will reach all of the 20,000 beneficiaries by August 20, E. B. Whitaker, state director, said yesterday.

Before leaving yesterday afternoon for Baton Rouge and New Orleans, T. Roy Reid, regional director, announced the appointment of Walter W. DeMelman of New York as regional finance manager.

Mr. McMelman has been vice president and sales manager of a New York carpet company, and is a merchandise and sales finance expert. He will co-ordinate and audit expenditures in the sixth region.

Staff Reduced

Mr. Reid instructed the state directors in Arkansas, Louisiana and Mississippi, to drop approximately 50 per cent of the personnel of the division, inherited from the Rural Rehabilitation Corporation, beginning September 1. The order came from Washington. Mr. Whitaker said Arkansas will lose 354 of its 900 employes, many of them part-time workers. The Land Utilization Division of the Resettlement Administration has already released 50 per cent of its personnel, inherited from the old sub-marginal land program, Dr. B. M. Giles, director, said.

AMPLE LABOR ASSURED

No 'Relief Revolt' Feared In the South on Farms

An ample supply of labor together with reduced acreage will assure the rapid picking of cotton as the crop begins to move actively in this territory during the next three or four weeks, according to local cotton men. Growers generally expect little change in the wage scale for pickers as compared with the 1934 season. At that time pickers were paid around 50 or 60 cents per hundred pounds.

Prospects that some sections might witness conditions similar to those that prevailed earlier in the year in the mid-western grain fields and the eastern berry country where workers refused to go off the relief rolls and gather the crops were discounted in local cotton circles yesterday. As one leader of the industry expressed it: "Our cotton pickers are not subject to the subversive influence of foreigners and agitators as are the laborers in the east and the middle west."

FIRST BALE AT HELENA

Helena, Ark., Aug. 14—Ernest Tibbs, a Negro cotton farmer, living below Helena in Phillips County, brought in the first bale of cotton for the year, which carries a premium of $25 given by the Helena Cotton Exchange, and which will be auctioned off Saturday. Tibbs brought in the first bale of 1934, one week earlier than the 1935 bale came in.

HEAVY MULE SHORTAGE

Hike in Prices Start—Due To Italian Crisis

East St. Louis, Ill., Aug. 13—Purchase of 2,000 American pack mules by Italy, presumably in event of war with Ethiopia, would create a serious shortage of the animals for domestic use, dealers here said today.

Inquiry on the price of that number of animals was made by Italian dealers last week at this market, international center of the horse and mule trade.

J. J. Searcy, president of the St. Louis Horse and Mule Commission Co., said there was a scarcity of the type of mule wanted—a short, sturdy, heavy boned jack able to carry heavy burdens over precarious mountain trails.

"We could sell all those now available in the domestic market," he said, 'particularly in the South, where the smaller animals are used."

Last year's drought and a tendency of farmers to quit raising mules because of the increased use of tractors have created a shortage with a resultant boom market. Searcy estimated prices, higher now than at any time in the last two decades, have risen 40 per cent in the last 18 months. Today's quotations list a top price of $160 for average mules. Outstanding animals fetch considerably higher, but specific prices are not stated.

BEANS AND CORN SAVED

How to Preserve Them In Salt Water Told

Preserving beans and corn by salting is recommended when it is not practical to preserve them by canning or drying, says the New York state college of home economics at Cornell University, Ithaca, N. Y.

The college gives the following directions for salting beans and corn:

SALTED BEANS—Thoroughly wash and clean, and then weigh the vegetables. Mix them well with one-fourth their own weight in salt. This results in about a 25 per cent brine when the salt dissolves in the juices withdrawn from the vegetables.

Press the mixture of vegetables and salt well down into the container. If enough brine is not formed by dissolving the salt in the vegetable juices to cover the vegetables, add brine made by dissolving 1 pound, or about 1 1-2 cups of salt in 1 1-2 quarts of water. Cover the vegetables with a plate or a piece of paraffined board cut just to fit the inside of the container. Weigh the board. A jar of water or a clean stone, no limestone, will do. Do not use a metal weight. Set the container in a cool place. As soon as the bubbling ceases, remove the weight and cover the surface wtih paraffin.

SALTED CORN—Husk the corn and remove the silk. Put it into boiling water and boil it for about 10 minutes. Cut the corn from the cob, weigh it, mix it with one-fourth its weight of salt, and pack it as directed for salted beans.

Farmers of The Nation To Hold Annual Convention October 28-31

President Davis and Secretary Harris Release Official Call For Session

LITTLE ROCK, ARKANSAS TO BE HOST

Little Rock, Ark.—(Special)—Farmers of the nation will gather in this city from October 28th to October 31st inclusive, for their annual convention. President Jas. P. Davis and Secretary Leon Harris have released the official call over their signature, and Little Rock has been assured of this meeting. A conservative estimate places the attendance at more than five thousand. "This," said one of the representatives here, "of course, will depend upon economic conditions and the ability of these tillers of the soil, raisers of fruit, cattle and poultry to leave their work long enough to sit in upon the deliberations."

President Davis has been constantly on the road. He made more than twenty-five states of the nation within the past six months. He has been here in Arkansas, visited Kentucky, Tennessee, Mississippi, Texas and those states east of the Mississippi, going in and out of Washington on his trip more than fifteen times in the past ninety days.

A complete exhibit of farm products, livestock of every description will be installed here, as will be cannery, home backing, needle work, art craft and other avocations indulged in around the farm. It was further announced by President Davis that he hopes to have more than two thousand dollars in cash prizes to be offered in the various exhibits, to be paid out to the winners. There will be a fat stock show, there will be competition in cotton raising and grading as well as in fruit growing. Then, too, this year it is expected that there will be a division of nuts, such as pecans, hickory nuts, walnuts, peanuts, etc.

Extensive preparations are being made here in Pulaski County to give them an unusual reception. A place for holding it sufficiently large to accommodate not only the meeting, but where exhibit rooms and hall may be easily accessible, is being negotiated for.

Representatives from the Department of Agriculture, from the Farm Credit Bureau, the Farm Loan Bank, Farm Land Bank, and

(Continued from Page 5)

FARM AID IS EXPLAINED

Resettlement Will Make Farmers Self-supporting

Little Rock, Ark., Aug. 14.—The rural resettlement program will be concerned only with assisting the more intelligent and able classes of farm families and will not undertake to aid all needy families indiscriminately, T. Roy Reid, director of the rural resettlement program in Arkansas, Mississippi, and Louisiana, pointed out today.

"Establishing the 'cream' of the tenant farmers and impoverished landowners on a program of permanent self-support by co-operative supervision is the major task of our program," he said. "The present load of 'rural rehabilitation' cases, transferred to the resettlement program from direct relief by the FERA before the Resettlement Administration assumed the work, will be gradually shifted to other agencies, except the cases that can qualify for participation in this program."

BUCKWHEAT AS NITROGEN INDEX

In a recent attempt to ascertain the nitrogen requirements of young trees the New York State Conservation Department planned buckwheat in the soil at the Saratoga nursery where several species of young evergreens had been growing, reports Science Service. The degree of green of the stalks was taken as an index to the relative abundance of nitrogen left in the ground after the trees had been removed. The buckwheat developed its most yellowish hue on soil where red cedars had grown, indicating that species as the largest consumer of nitrogen. Spruces were next in their nitrogen requirements, and pine trees required the least, the study revealed.

—From New York Times.

LOAN PREDICTIONS VEER COTTON PRICES

Futures Here Close Week 14 to 16 Points Higher After 80-Point Fluctuation.

RAIN LIFTS CROP GUESSES

At Least 12,000,000 Bales Now Forecast — Domestic Mill Conditions Improve.

The course of prices for cotton futures last week was governed almost entirely by predictions from political quarters concerning the prospects for government loans on this year's crop. The net result was that, after moving over a range of about 80 points, prices on the New York Cotton Exchange closed the week with net advances of 14 to 16 points.

Twice in the week, on Wednesday and Friday, predictions by United States Senators that there would be a 12-cent loan on the new crop brought advances of $2 a bale. Since, prior to these predictions, prices were working lower in reflection of rising crop prospects and under expanding hedge selling, statements by the AAA Administrator and the Secretary of Agriculture which were construded as in conclusive on the loan question were followed by declines.

The price gyrations which followed the Washington announcements were not confined to domestic markets and to raw cotton markets, but prevailed, to a greater or lesser extent, in raw cotton, cotton yarn and cotton cloth markets throughout the world Traders in Liverpool, Alexandria, Bombay and Osaka have had their eyes fixed on Washington for weeks, and every rumor, remark or statement from governmental sources that was considered as suggesting what the government would do about the proposed loan has been the signal for a price change.

Silence, Too, Brings Changes

Between such Washington reports, the absence of official statements has been given a price significance in world markets and has induced further price changes. Meanwhile, price uncertainties in the raw-material field have contributed to a slowness of yarn and cloth markets in Europe and the Orient.

With dry sections of the belt receiving rain, the precipitation not being excessive in most areas, crop estimates have risen since the government issued its crop forecast of 11,798,000 bales on August. 8. It is probable that trade ideas last week centered around 12,000,000 bales or more. Harvesting is making good progress in the southern half of the belt, and, as merchants have bought on an increasing scale, offerings of futures for hedging purposes have expanded. Prices receded under these influences early in the week, but in an orderly fashion, since trade and speculative buying came forward on a scaledown. With the loan announcements, however, the prospective size of the crop lost its influence on prices, for the time being at least.

Domestic mill conditions have improved lately, but the European mill situation shows little or no change on an average, and the spinning industry in Japan recently has been losing ground. The improvement in this country is regarded as a natural sequence to the low rate of mill operations and the light buying of goods in recent months. The recession in the Japanese spinning industry follows prolonged expansion of production and exports of yarn and cloth by Japan and the erection of obstacles to Japanese goods in many countries. There is a feeling in some quarters that Japan may find it more difficult to expand its cotton industry in the future than it has in the last few years.

Mill Buying Improves

Southern spot markets reported that mill buying of cotton improved considerably last week, both for early and deferred shipments. Buying interest was mainly in the shorter lengths. The domestic demand has been helped by the pickup in the goods market, while seasonal factors have made for larger buying abroad. England was the brightest spot in the export situation, but Japan showed more interest. Spot sales in reporting Southern markets last week totaled 40,000 bales, compared with 38,000 in the same week last year and 79,000 two years ago.

The movement of American cotton continued to run below that of last year and the year before. Forwardings to mills of the world in the last four weeks totaled 679,000 bales, compared with 697,000 in the same weeks last year and 905,000 two years ago. Exports have totaled in the same periods, respectively, 189,000, as against 266,000 and 569,000 bales.

ANCIENT CITY FOUND IN NORTH SYRIA DIRT

Important Syrian-Hittite Capital 1000 to 500 B. C. is Indicated by Ruins

ROYAL PALACE UNCOVERED

Chicago University Excavators Discover Fine Art —Expect Light on History.

(Special to The New York Times)

Chicago Aug. 18. — Discovery of an ancient city-site in North Syria, believed to have been a local capital of considerable importance in the Syrian-Hittite world about the period 1,000 to 500 B. C. was announced today by the Oriental Institute of the city of Chicago.

The discovery was reported by Dr. C. W. McEwan, field director of the institute's Syrian expedition who recently returned to this country. Trial excavation has uncovered a royal palace and has given indication that there are other public buildings on the site. One of the finest examples of Hittite art yet found, a double-lion column base has already been unearthed.

Dr. McEwan, whose expedition has been excavating two ancient mounds about midway between Alexandretta and Aleppo in North Syria, in his report related the circumstances of the discovery of this third mound in the district.

"The native foreman of the expedition was going to Antioch on his bicycle one day last season when he noticed two carefully cut blocks of basalt in the deep ditch beside the highway," Dr. McEwan reports. "They were on the edge of a long low, lying mound called Tell Tainat. The foreman was experienced enough in antiquity hunting to recognize them as important clues.

"When the members of the expedition investigated the mound they found huge columns bases of a type characteristic of royal buildings of the late Hittite period—after 1,000 B. C. The natives of a little village near by had been digging into the mound, not for antiquities, but for ancient burned brick to fill depressions in road building.

"These clues were so striking that they demanded further investigation. In the late Spring the Oriental Institute therefore undertook a two-week dig at Tell Tainat, in cooperation with the Department of Antiquities of the District of Alexandretta, which was represented by M. Claude Prost. The trial excavation proved very successful, uncovering a 'hilani,' or Syrian-Hittite palace, which showed three construction periods ranging from 850 B. C. to 600 B. C. There is promise of further buildings for future work.

"The Syrian-Hittite culture was a composite of Hittite, Aramaican, Phoenician and Assyrian elements flourishing in North Syria from about 1100 B. C. to the conquest of Alexander the Great. The discovery of a local capital of this people will bring new light to bear on a most interesting period. The Oriental Institute hopes to return to this site in the Autumn for further excavation of the mound.

"The most striking single find in the palace was a double-lion column base, two crouching lions whose backs supported a column at the entrance to the palace While column bases of one kind or another are of course, common in archaeological excavation, this is the first object of its kind found in this civilization, and it has been pronounced one of the finest specimens of Hittite art yet recovered."

INFLATION SINGS EVIDENT SLOWS REICH TRADE

Berlin Holds War Would Sway International Trade and Speed Price Recovery

Italy, It is Felt, Would Buy Campaign Materials From Depreciation Countries.

(Wireless to the New York Times)

Berlin, Aug. 17. — The dullness of German business is attributed largely to the uncertainty of the outlook in Ethiopia. It is considered certain that if war is not averted it will assume dimensions large enough to influence international trade materially and in particular to accelerate a world price recovery.

The banks here are confident that Italy will receive no general foreign credit but expect that she will seek individual exporters' credits for raw materials for armament. Italy is regarded as being in the process of inflation, of which the recent decline of her bond market and the advance in her stook market are characteristic symptoms. Italy's continued heavy import surplus, coming after a drain on her currency reserves, is seen as foreboding further depreciation of the lira unless Italy obtains a loan.

Under the agreement of last May Italy despite her new control of imports, is obliged to maintain quotas for German goods on the basis of German's actual deliveries in 1934, but she is not obliged to admit German goods for which no demand exists. German exporters fear that depreciation of the lira would compel Italy to cut the quota of imports and that special imports for the Ethiopian campaign of field locomotives, rails, automotive vehicles, sheets, wire and chemicals would be taken from currency-depreciation countries.

CURING COWPEA HAY

Cowpeas reduce the cost of A. A. Kolkmeyer's dairy ration. They supply roughage and portein cheaper than any other feed available in Newton county, Missouri, he says.

"I can get 2 1-2 tons of cowpea hay an acre," said Mr. Kolkmeyer. "I have good soil and each acre will produce normally, 15 to 18 busheds of seed. Cows like this feed as well as bright alfalfa hay. In 1933 I got 100 tons of cowpea hay from 40 acres. I figure it contained 600 to 700 bushels of peas. That means that each 100 pounds of hay contained about 18 ponnds of seed. I ground the hay. I had roughage practically as good as alfalfa and it had the protein supplement already mixed in. I began feeding it about December 1 and it lasted until July sold $200 worth of milk a month and had little additional feed cost except pasture.

"Some farmers say it is to hard to stack cowpea hay so it will keep, but I have had no trouble. I use 10 quarts of slack lime and 10 quarts of salt for each 1,400 pounds of hay. I put on a layer of hay, then a layer of salt and lime, then another lay of hay. The hay comes out of the stack as geen as it goes in. If salt and lime are not used the hay may become musty and molded.

—Missouri Ruralist.

OLD AGE PENSIONS IN MISSOURI

Latest state to establish an old age pension is Missouri. The act, to become effective August 27 next, authorizes payment of pensions not to exceed $30 a month to persons more than 70 years old, who are incapacipated from earning a livelihood and are without means of support, and not to exceed $45 a month to a man and his wife. The state legislature appropriated $2,750,000 to pay pensions and cost of administration during the remainder of the biennial period of 1935 and 1936.

—Cappers Weekly.

COLORED POPCORN HIS HOBBY

Iowa as a Luther Burbank in popcorn growing . Inspired by the growing demand for color in everything, Warren B. Perry, on his 40 acre farm near Cresco, has developed new strains of popcorn in shades of red, white, bronze, black, purple, pink, yellow and blue . Perry began cross-breeding in 1913.

LEFT HAMS MOST TENDER

A Cincinnati restaurant advertises that it uses only ham from the left hind quarter of the hog in their sandwiches Right hams are not wanted. Expert hog observers, so their story runs, have discovered that it is the tendency of porkers to use the right rear leg for more for scratching and turning purposes, et cetera. Therefore, while the right leg may develop muscles like a marathon dancer's the left ham is invaribly tender and succulent. In this complex and competitive age there seems no field where the guidance of a specialist isn't necessary.

MANY USES FOR SOYBEANS

For centuries, soybeans have been one of the staple foods in China and Japan. They are the main food crop of Manchuria. In the United States, we have grown them largely for forage, 3,000,000 acres of them last year. In recent years, chemists have been discovering new industrial uses for the beans that may make them as important crop as they are in the Orient. The beans provide a cooking oil of high quality. They also are used in making flour for "health breads" particularly for diabetics. R. H. McCarroll, chemist for Henry Ford, declares a lacquer made from soybean oil is the best yet developed as an automobile finish. After the oil is extracted, plastic parts are made for car bodies Last year, the Ford Motor Company had out 10,000 acres of soybeans which were used for these purposes. This year, the acreage is tripled.

—Cappers Weekly.

COTTON BAGGING FOR COTTON

(Montgomery Advertiser)

At least it apperas that something may be done to substitute cotton for jute as bagging for cotton bales. Representative Hampton Fuller, of South Carolina, has introduced a bill which would change the method of selling cotton by gross-weight to net-weight, and the measure has received a favorable report by the House Agriculture Committee.

The new system of weighing, it is hoped, will open a market for 2,000,000 bales of cotton.

For years the use of jute for bagging has been a problem that appeared to have no solution. If the bill is passed and the old system goes out of use, it will mark the end of one of the most non-sensical something-for-nothing ideas that ever attached itself to the farmers of the South.

PREDICTS ANNOUNCEMENT OF 12-CENT COTTON LOAN

Washington— Senator Bankhead (D., Ala.), predicted today that the administration would announce a 12-cent loan on the incoming allotted cotton crop "by the end of this week."

In a statement he said:

"I am absolutely confident of the announcement of the 12-cent loan on the incoming allotted cotton crop.

"There are a number of senators in possession of information that will not be controverted to the effect that the moment the AAA amendments and Bankhead act are concluded in conference that the administration will fix the 12-cent loan. The conference report will be adopted, this legislation will be passed and the act will be on the president's desk at the end of this week.

"This administration has put its hand to the plow and there will be no turning back. We have got to go.

BRITISH SUBJECT, NOW IN THE UNITED STATES, SAYS ETHIOPIA CERTAIN TO DEFEAT ITALY IF WAR IS WAGED

Native African Predicts Huge Mosquitoes and Poisonous Flies Will Help Destroy Italians

By Garland Mackey

Washington, D. C.—Ethiopia will beat Italy, but it will not be through superior arms or better trained soldiers, according to Abraham Abdi, Washington's lone native of British Somaliland.

Abdi who was born within walking distance of Ethiopia, where he spent the greater part of his life has been in this country since 1914. He spent his first years in America in New York City and came to Washington in 1922.

He is a familiar figure on U Street and has been a salesman all of his life. His speciality is ladies' wear and silks. He followed the same line of work in his own country. He is almost an American citizen since he has taken out his first papers.

Poison Insects

Bullets will not win the war for Emperor Haile Selassie's mountain warriors, but the natural safeguards against military invasions will be death to the invaders, according to Abdi. The greatest enemy to the white man is a huge mosquito, whose bite is fatal, said Abdi. Then there is a poisonous fly which is equally as dangerous to whites.

A bite from either one results in a slow fever that is invariably fatal. Most of the natives are immune to the poison of these insects, although some do feel the effects, but they do recover

Country Fever-Laden

The mosquito of the lowlands through which the Italian soldiers must pass, is four or five times as large as the American breeds.

The insect is vicious and can pierce clothing with his sharp bill. These two insects, with the fever-laden lowlands and high treacherous mountains, will defeat the most modern army Italy can send, said Abdi.

Addis Ababa, the capital, is near the center of the country and the only city with modern conveniences. Unless one walks, the only means to reach the town is by a railroad There are no policemen or law, from Jibuti, in French Somaliland. The distance is about 900 miles. The rest of the country is the same as it was 10,000 years ago. There are no lights, schools or streets. other than the law of the feudal mountain lords.

There is no depression in the country. There are no taxes or rent to pay as none work for wages. It is impossible to become hungry as food is plentiful and people do not think of charging for meals. Food is free usually for the asking. The strongest usually has the most. The natives do not bother about locking doors as thieves are rare. When one is caught his arms are usually cut off, which renders him hors de combat for taking that which does not belong to him.

Addis Ababa has a population of nearly two million in the day and about 800,000 at night. Those in the mountains come to the city to trade and buy in the day and leave at night. The people as a rule are kind to visitors, who conduct themselves properly, but they do not hesitate to murder those who try to take advantage of them, said Abdi. Abdi vouches for the fact that prisoners are mutilated by the Ethiopians. Some are slowly bled to death, while others are treated in the most horrible manner.

Italy Wants Railroad

Abdi says the fever is worse after the rainy season and the temperature usually runs about 120 degrees.

He says the main bone of contention, which Italy is fighting for is to build a railroad from Italian Somaililand to the vast rich country of Ethiopia. At present France has the only railroad through the country. Rich mineral deposits are located in the mountains and Italy needs the material for her well being. France has been hauling it out for sometime and Italy is jealous. Ethiopia has no outlet to the sea. The country is surrounded by land owned by foreign powers. However, the natives are self-sustaining and raise all that is necessary for their simple needs.

Abdi believes that when war comes the fever, poison from the insects of the lowlands and the heat will do more to destroy the Italian army than the guns of Selassie's mountain men.

AMERICAN LEGION COMMANDER VISITS TUSKEGEE INSTITUTE

Tuskegee, Ala., Aug. 17—Dr. Francis Marion Inge, outstanding surgeon and physician of Mobile, Ala., recently elected State Commander of the American Legion, visited the Brittain G. McKenzie Post No. 150 here Friday. Dr. Inge was accompanied to Tuskegee by Mr. D. Trotter Jones, State Adjutant At Tuskegee the Department Commander and the State Adjutant were joined by Mr. R. M. Howe, Mr. W. M. Hendon and Mr. Segrest of the John C. Waters Post and were escorted to the Veterans Administration Facility where they were met by Lewis W. Driver, Commander, and E. H. Cravens, Jr., Adjutant, of the Brittain G. McKenzie Post No. 150. A. R. Barnes, J. H. Wright, J. W. Lockett, Cleve L. Abbott, Dr. Drue King, Dr. J. A. Kennedy, Jeff Russell, R. S. Darnaby, James E. Davis, Walter B. Martin and Archie Yates, members of the Executive Committee of Post 150, were presented and accompanied the distinguished Legionnaires on tour of inspection of the Facility. After the inspection there was an assembly of War veterans in the Recreational Building where they were addressed by the State Commander, Adjutant Jones, Mr. Howe, Mr. Henden and Mr. Segrets, prominent attorney of the town of Tuskegee.

The State Commander expressed himself as being pleased with his visit and with the program that the newly organized Brittain G. McKenzie Post has undertaken for the year.

MOTOR DRIVEN BY HORSES

Old-Time Farm Implement on View In Pennsylvania.

(From New York Times)

How Pennsylvania farmers of 100 years ago used horses to develop power for threshing grain, shelling corn and cutting feed, is shown in an old-time horse-power machine placed on display recently in the State Museum at the Department of Public Instruction, says The Capitol News.

The massive wooden horse-power machine consists of a heavy vertical central turn-beam topped with large cog wheels through which power was transmitted by six horses hitched to four arms extending outward near the base of the shaft. On two of the arms horses were hitched single, and in pairs on the remaining two. The horses trod in a circle around the turn-beam to provide the power.

The machine is 10 feet high, occupies a floor space 12 by 14 feet and dates back to 1835, according to Dr. Charles F. Hoban, director of the museum.

There were but few of these large machines used in the State, and they were found only on large farms, principally in Berks and Lehigh Counties. The one now on exhibition in the State Museum was used on the Willoughby Grimm farm at New Smithville, Lehigh County, and came to the museum through his son, Harry Grimm, who now operates the farm.

CHINA EGG ENDS BULL SNAKE

(From New York Times)

Al Harker of Sidney, Iowa, has solved a mystery. For a long time he had been missing eggs from his henhouse. Finally a china nest egg disappeared, says The Associated Press. Shortly afterward Harker found a bull snake dead in his garden with a suspicious looking lump in its middle. When he cut the snake open he found the china egg.

SALT ROADS WEAR WELL

N. Y. State Experiment Leads to Building of New Type High ways.

Highways of salt are now being built in New York State, as the result of the experiments of Dr. Floyd D. Looker, research director of the International Salt Company of Ithaca, N. Y., says Science Service. These roads prove very successful as highways which do not carry a lot of traffic. They can be built and maintained at a low cost.

In the "farm-to-market" type of road where traffic will not exceed 500 cars a day, it is considered one of the cheapest and best methods yet devised to "get the farmer out of the mud." For the last two years a road of this type has been used to connect the city of Ithaca with its new airport. Thousands of loads of "fill" were moved over this road while the airport was under construction and it held up very well.

More than one method may be used in applying the salt. One way is to mix the salt with the road material by blading, while sprinkling water on to moisten the mixture, and then rolling it to a firm surface. Another and more practical method is to build the road up in layers, scattering a layer of salt with layers of road material. About twelve tons of salt are used to the mile of an eighteen-foot high-way, or about two pounds per square yard.

The clay packs to a harder surface because the salt draws the moisture from the air and keeps the surface moist. Not only does the salt compact the clay, giving a concrete-like surface, but it crystalizes on the road surface and retards evaporation of water from the road. Once the crystalization has taken place, the road, because of its shedding power, does not become slippery or muddy during a rain.

LOST AND FOUND DEAF-MUTES OF 14 NATIONS AT LONDON CHURCH SERVICE

By The Associated Press.

LONDON, AUG. 18,—One of the strangest and most touching services ever held under the mighty dome of St. Paul's Cathedral saw 700 deaf and mute persons from fourteen nations pray and sing today without a sound being heard.

They were athletes attending the fourth international games for the deaf and mute beginning tomorrow. Because many nationalities were involved, the service was conducted in the international sign language.

One after the other, chaplains and missionaries, some of them also deaf, mounted the lofty pulpit and voicelessly acted out the prayers, hymns and songs with eloquent looks and gestures.

Then the congregation joined in prayers and hymns.

GOLD FOUND IN LOGS

Small Crystals Taken From Petrified Forest in Nevada

(From New York Times)

Gold has been discovered in Churchill County, Nev., but not in sufficient quantities to cause a gold rush, according to a recent report by Professor W. S. Palmer of the Mackay School of Mines at Reno.

Unfortunately for would-be prospectors, the gold is found in logs of petrified wood, now changed by time and nature into crystalline and chalcedonic silica, carbon and calcite. The petrified forest area is 500 yards square, surrounded by rocks of volcanic origin, and gold has been found in only a part of the logs, which differ widely in gold content, says Science Service.

Spaces between the quartz crystals contain the irregular and crystalline gold grains most commonly occurring in individual crystals shaped like cubes, octahedrans and dodecahedrons. The largest gold crystal found so far is 16 inches in diameter.

SAFE BY A HAIR'S BREADTH

Sleeping Hobo Rudely Awakened When Train Runs Over Locks

(From New York Times)

George Rue, a transient, missed death literally by a hair recently when one of the drivewheels of a locomotive pinned his hair to the track.

Rue was sleeping on the right-of-way near Rapid City, S. D., so near the rail his flowing locks were across it says, The Associated Press. The engineer was unable to stop the train before the engine reached him, and it was necessary to move the locomotive to free the sleeper.

Rue continued his slumbers under a near-by tree.

MINNESOTANS STUDY BIRDS

(From New York Times)

To some it's a novelty, to others a hobby, and a few just smile—but to the growing roster of northwest outing enthusiasts bird study is a sport, says The Associated Press. Trappings for a "field trip" are a modern match for sportsmen's paraphernalia. With binoculars for a gun and a camera for ammunition, the bird-fan is set to "shoot" his prey. In some Minnesota communities the swelling ranks of bird troupers bid fair to outnumber the gun-toting sportsmen. Unencumbered by closed seasons and species limitations, bird lovers—young and old—daily invade Minnesota's wild life haunts by the hundreds.

MULES GET MUSICAL SEND-OFF

Forty mules bound for Fort Robinson, Neb., bade farewell to Fort Douglas Utah to the strains of "The Old Gray Mare" and "Wagon Wheels" recently when soldiers of the Thirty-eighth Infantry loaded the hybreds into stock cars, reports The Associated Press. The farewell music was furnished by the post band.

TEXAS COWS LIKE "LIQUOR"

Whiskey in Water Makes Them Give More Milk, Dairyman Says.

(From New York Times)

Give your cows a drink if you want them to return lots of milk.

That's what E. R. Eudaly, dairy specialist for Texas Agricultural and Mechanical College, told a group of farmers meeting in Houston recently.

Obviously, however, cocktail hours for cattle are impractical. Cocktails would be too expensive.

The thing to do therefore, is to feed cows water flavored with liquor, says Science Service. This is because they like such water, and will drink more of it than water of the Volstead era. And when cows drink more water they give more milk.

Mr. Eudaly has concocted a special "brew" for cattle. It is simply fermented water out of silage trenches. Its alcoholic contents is less than one-tenth of 1 per cent, but cattle drink a great deal of it, Mr. Eudaly says.

It is made in this way: Into a trench, about 5 feet deep, green corn, maize, sorghum or other food-stuff is placed. Water is poured over it to drive out air which would destroy the feed. Forty pounds of black strap molasses is poured over each ton of the silage. The food-stuff is then covered up with dirt, and will keep indefinitely. Rain seeps through, keeping the silage wet and fermentation set in.

When water from such a trench flowed into a stream near Waco, Texas, recently, it made the fish so drunk that they came to the surface and could be easily caught,

4. **Abolition of debt-slavery, injustice and persecution.**
5. **A written contract for every colored farm tenant and sharecropper.**
6. **Better rural churches, schools and homes.**

FARM NOTES

We believe hog prices will remain high for the next year. There is a shortage of lard in Europe. The grain crop is heavy this year and it will be a profitable venture for the farmer to turn his grain into pork. The number of pigs raised in the United States this year is the smallest in 40 years.

Dr. George Jones of the Missouri College of Agriculture says use calcium arsenate as a dust which will control the green worm that eats in cabbage plants. Dr. Jones says the arsenate will in no way injure the cabbage for food.

A farmer living in Putnan county Missouri bought a cow in the spring of 1934 for eleven dollars. Three months later the cow had a heifer calf. This spring she had twins claves. The cow is a fine milker. He has refused 50 dollars for the animal.

Army worms have been found near Millington in West Tenn. These worms strip the leaves from the stalks of the cotton plant, which exposes the immature bolls to the sun and causes premature opening. The best effective remedy against the army worm is to dust freely with calcium arsenate and lime.

Mrs. Sally Brooks whose age is given as 103, has applied for old age pension. She lives near Wynne, Arkansas in Cross county and is said to be the oldest woman in the state. Under the old age pension laws she will likely receive thirty dollars per month for the rest of her life— the government to pay 15 dollars and the state a like amount.

The Secretary of the Memphis Cotton Exchange has issued a report showing that Memphis handled 947,282 bales of cotton last season with a value of nearly sixty-two million dollars. The gross receipts of Memphis which included through cotton, or in others words, cotton that was assembled in Memphis after having been sold in the interior points, totaled 1,441,517 bales. The average value per bale was 63.54.

Farm wages in the middle western states have gone up about 6 percent since the beginning of last spring . In the state of Indiana the farm hands are getting $1.50 per day, and in Illinois $1.60 per day. This is without board.

The first of the 1935 corn-hog adjustment payments totalling a little over four million dollars have been mailed to corn hog farmers from Washington, D. C. This is the beginning of first payments on more than one million contracts signed by corn-hog farmers. The last installment will be paid after the first of January 1936.

Prof. McHatton head of the horticulture department University of Georgia says August is a good month for starting late vegetables. There is always a good profit in fall beans, as well as fall cabbage and Georgia collards. Since the pospect is for high priced meat this winter we can expect an abnormal demand for all vegetables.

There has been an increase of from 5.67 cents to 6 cents per pound in the cotton ginning tax under Bankhead act for the 1935 crop.

It is said that a loan would be made on the 1935 crop but the amount has not yet been determined. A total of 10,500,000 bales of tax-exempt cotton has been alloted to the producing states for 1935.

Hon. Rexford G. Tugwell Assistant Secretary of Agriculture has expanded rehabilitation eligibility regulations in order to provide aid for farmers who are in a bad way and on the verge of applying for relief. Heretofore only those who were actually on relief had been considered for aid.

A holstein cow owned by George Ramussen of Lake Forest Illinois is said to be the champion milk and butter cow of the United States.

The cow is milked four times per day and in a period of one year she has given 34,640 pounds of milk and from this milk 1,658 pounds of butter were churned.

Phillip, Postel, white farmer living near Mascoutah, Ill., sold fifty-two hogs the first week in August and received a check for $1,165.72. The lot of hogs weighed 9,900 pounds and price per pound was 12 cents.

Mrs. Becky Dilworth, colored farm mother and grand mother, a citizens of Ouashita county, Ark., applied to the ordinary of that county last week for an old age pension. She gave her age as 108 and has resided in that county for nearly ninety years. She is the mother of 19 children.

AUGUST EDITORIAL.

Report issued from the offices of the AAA that in the eleven months which ended May 31st its expenditures totaled 767,195, 306 dollars.

The report further reads that for the eleven months funds avaluable were 18,045, 135 dollars leaves a balance on hand June 1st amounting to 150,849,329 dollars. Rental and benefit payments to farmers amounted to 535 547, 689 dollars divided as follows: Cotton 102,503,017 dollars wheat 97,503,986 dollars, tobacco 23,784,768 and corn-hogs 296,435,-801 dollars Pennsylvania flood victims can borrow from the government to restore their crops and homes. Loans would be made to non-profit organizations in all flood stricken states.

It is said that the government will approve requests for CCC aid in clearing away debris caused by the flood waters.

Tommie Davis near Piggott, Arkansas, was feeding his mule. The mule stepped on the dog's foot. The dog bit the mule. The mule kicked at the dob, missed and struck Davis breaking a leg.

At this time of the year the biggest task is weeding and thinning.

All vegetables should be thinned out.

Get after all the weeds and keep after them.

According to the Census of agriculture Alabama has 275,455 farms comprising 19,665, 484 acres. These farms were valued at—land and buildings 368,094, 212. Jefferson county has 6491 farms as of April 1st 1935 with an acreage of 198,322 with a value—farm lands and buildings over twelve million dollars.

The AAA have awarded contracts for the purchase of three million one hundred fifty thousand pounds fresh butter, which when delivered is to be turned over to Federal Surplus Relief Corporation for distribution to the needy. The AAA have also purchased one million bushels soft winter wheat in the Pacific northwest territory for distribution to the unemployed.

Last Summer New York City consumed more than two million watermelons. This does not include shipments unrecorded to chain stores. In Harlem which is the section almost exclusively inhabited by colored, more melons are eaten than any one section in the world.

Twelve states send watermelons to New York, the largest quantity coming from South Carolina. The Tom Watson melon which comes principally from Georgia is a very popular seller.

The state Welfare Department in Little Rock, Ark., has started distributing old age pension and unemployed relief applications to the county welfare board. The Commissioner says no money is yet available for old age pensions and other aid and the approved applicants will not receive any assistance until state and federal funds are available.

John Karrant a Greer farmer located near Fort Smith, Ark., has two acres of land near the city limits and from this small tract he expects to sell over three thousand dollars worth of tomatoes. This is not anything extra for him to do. He has been farming this small tract for over eight years and has always been successful in producing a large and profitable crop every year.

Mr. Chester C. Davis administrator AAA Washington, D. C., says full rental and adjustment payments will be made to co-operating producers of basic crops, even if all or part of such crops have been destroyed by floods. Cotton contracts signers will receive not only the usual rental payments and parity payments but also their alloted Bankhead act tax-exemption certificates.

Dallas is the largest Negro rural farm populated county in Alabama. Recently figures reveal the rural population is nearly forty thousand, and of this number thirty thousand are Negroes. The average normal cotton yield is around fifty thousand bales.

Negro farmers are getting ready to file applications for loans under the new Bankhead Farm Home Tenant Bill to purchase farm lands, so they can own the soil they till.

PLUM TREE AND OCEAN

As a growing girl held by a rigid tether,
Stretching soft hands toward her neighbor sea,
Craves for adventure in the sultry weather,
She rustles, quivering, the young plum tree

Decorous greenery, chaste sward are hers,
A robin's twitter burden of the hour,
But her light leaves are—signaling those breakers
That seek lost caverns in thunderous power.

Sunk deep in an ancestral world of garden,
Feet bound like a Chinese girl's to loyalty,
She prays for quick uprooting lest life harden,
To float upon the inviolable sea.

"Stay with us, sweet, and honor earth your sire;
Bear small, ripe plums to moisten thirsty lips!"
But the tree bends convulsed with sharp desire.
Her tossing fullness wildly beckoning ships.

Laura Benet.

FARM HOMES MODERNIZED

Pennsylvania Records Show Rise In Radios, Autos and Motors

The number of farms and farm homes having modern conveniences continues to increase in Pennsylvania, according to the State Department of Agriculture Estimates as of Jan. 1 this year show that Pennsylvania farmers have 154,340 automobiles, 49,560 motor trucks, 35,950 tractors and 63,660 gas engines. A total of 67,450 farms having telephnes, 58,650 have radios, 40,850 have heating systems, 67,740 having running water and 56,920 having electricity, either from central station service or individual farm generating plants.

These figures represent slight increases over a year ago in automobiles, motor trucks, radios, heating systems, running water in home and farms having electricity. The number of tractors and gas engines was approximately the same as last year but the number of farms having telephones decreased about 3 per cent, says Capitol News.

The estimates also show 40,100 silos on farms, which is the highest number on record.

—From New York Times.

COTTON STUDY PLANNED

Senate Resolution to Urge Appointment of Technical Groups

Special to the New York Times

Washington, Aug. 18. — A resolution providing for the appointment of two committees to study the entire cotton situation and report back to Congress at its next session will be introduced in the Senate tomorrow by Senator George.

The first committee, to consist of "seven outstanding agricultural and business men who have experienced utilization and distribution of cotton," is to make a study of the disposition and distribution of cotton in government control. Not more than two of these men may be Federal officials, the resolution provides.

The second committee of three "distinguished technical experts and scientists" would conduct a program of research into various new fields for cotton and cotton products.

Both committees would be appointed by the President. An appropriation of $200,000, is provided by the resolution.

TYROL REVIVES HAND-WEAVING

Vienna. — There has been a great revival of weaving in Tyrolian districts during the last few months, according to J. Mast, manager of the American Express Travel Service. The reason for the return of the ancient craft, at one time in every mountain hut, which cherished its spinning wheel and loom, is a combination of necessity and the revival of traditional customs being everywhere manifested in rural districts. Tyrolian handwoven goods have become quite a fashion in Austria, and are particularly popular with hikers and sportsmen ,who have taken to short green or white jackets as the orthodox dress for a walking holiday.

—From New York Times.

BEHEADED BY HIS OWN SCYTHE

(From New York Times)

Munich (Reuter.)—A haymaker of Landshut, South Bavaria, Alt von Pifias, has been beheaded by a blade of his own scythe. He was riding home after work, on his bicycle, his scythe strapped to his back. A motor car came past a wagon behind which Piflas was riding and the protruding blade of his scythe smashed through its windshield. Piflas was lifted bodily from his bicycle and dragged fifty feet before the motor car crashed into a ditch and flung him loose. He landed on his back on the paved road, the sharp blade of the scythe severing his spinal cord at the neck, killing him instantly.

WOULD CORRECT ABUSES

(Continued from Page 1)

expire, as designated by the President at the time of appointment, one at the end of three years, one at the end of four years, and one at the end of six years, after the date of the enactment of this Act. The President shall designate one of the appointive members as the chairman of the board. The Secretary of Agriculture and the Governor of the Farm Credit Administration and any of the appointive members who hold another Government office shall receive no additional compensation for their services as members of the board. The members of the board who are first appointed shall be deemed to be the incorporators, and the incorporation shall be deemed to have been effected from the date of the first meeting of the board.

(c) The Corporation shall have capital stock in the amount of $50,000,000, and the board, with the approval of the President, is authorized to increase such capital stock from time to time in such amounts as may be necessary to carry out the functions of the Corporation. Such original capital stock shall be subscribed for by the President on behalf of the United States, and payments for such subscriptions may be made from any sums appropriated by the Emergency Relief Appropriation Act of 1935; and the President further authorized to transfer the corporation from the sums so allocated or otherwise made available for rural rehabilitation, and prevention of soil erosion, reforestation and forestation, such sums as he may from time to time deem desirable to carry out the purposes of this Act. Payments for such stock and other sums to be transferred shall be made to the Corporation by the Secretary of the Treasury at such time or times as the President may direct and the amount of all payments so received shall be available to the Corporation for administrative expenses under, and also to carry out the provisions of this Act. The Corporation shall issue to the Secretary of the Treasury receipts for payments by him for or on account of such stock, and such receipts shall be evidence of the stock ownership of the United States.

(d) The Corporation is authorized to issue bonds in an aggregate amount not to exceed $1,000,000,000, which may be sold by the Corporation to obtain funds for carrying out the purposes of this Act. Such bonds shall be in such forms and denominations, shall mature within such periods from the date of their issue, shall bear such rates of interest, shall be subject to such terms and conditions, and shall be issued in such manner and sold at such prices, as may be prescribed by the Corporation, with the approval of the Secretary of the Treasury. Such bonds shall be fully and unconditionally guaranteed both as to interest and principal by the United States, and such guaranty shall be expressed on the face thereof, and such bonds shall be lawful investments, and may be accepted as security for all fiduciary, trust, and public funds, the investment or deposit of which shall be under the authority or control of the United States or any officer or officers thereof. In the event that the Corporation shall be unable to pay upon demand, when due, the principal of, interest on, such bonds, the Secretary of the Treasury shall pay to the holder the amount thereof, which is hereby authorized to be appropriated, out of any moneys in the Treasury not otherwise appropriated, and thereupon to the extent of the amount so paid the Secretary of the Treasury shall succeed to all the rights of the holders of such bonds. The Secretary of the Treasury, in his discretion, is authorized to purchase any bonds of the Corporation issued under this subsection, and for such purpose the Secretary of the Treasury is authorized to use as a public-debt transaction the proceeds from the sale of any securities hereafter issued under the Second Liberty Bond Act, as amended, and the purposes for which securities may be issued under such Act, as amended, are extended to include any purchases of the Corporation's bonds, hereunder. The Secretary of the Treasury may, at any time, sell any of the bonds of the Corporation acquired by him under this subsection. All redemptions, purchases, and sales by the Secretary of the Treasury of the bonds of the Corporation shall be treated as public-debt transactions of the United States. The bonds issued by the Corporation under this subsection shall be exempt, both as to principal and interest, from all taxation (except surtaxes, estate, in heritance, and gift taxes), now or hereafter imposed by the United States or any District, Territory, dependency, or possession thereof, or by any State, county, municipality, or local taxing authority. The Corporation, including its franchise, its capital, reserves, and surplus, its loans and income, and its personal property, shall likewise be exempt from such taxation. The Corporation shall have power, however, to make payments to States and governmental subdivisions thereof for the furnishing of such public services and facilities as are customarily provided for out of taxes and assessments, to the farms, farm homes, and farm communities established as provided for hereinafter. The Corporation shall have power to purchase in the open market at any time and at any price, not to exceed par, any of the bonds issued by it. Any such bonds so purchased may, with the approval of the Secretary of the Treasury, be sold or resold at any time and at any price. The Corporation shall make appropriate provision for applying payments received by it to the retirement of the bonds issued under the provisions of this Act.

None of said bonds shall be issued within one year after the approval of this Act. Within three years after the approval of this Act not more than $300,000,00 of said bonds may be issued.

(e) The Corporation shall have power to select, employ, and fix the compensation of such officers, employees, attorneys, or agents as shall be necessary for the performance of its duties under this Act, within the provision of the Civil Service laws and the Classification Act of 1933, as amended. No such officer, employee, attorney, or agent shall be paid compensation at a rate in excess of the rate hereinabove provided in the case of directors of the Corporation. Insofar as applicable, the benefits of the Act entitled "An Act to provide compensation for employees of the United States suffering injuries while in the performance of their duties, and for other purposes", approved September 7, 1916, as amended, shall extend to persons given employment under the provisions of this Act. The Corporation shall be entitled to the free use of the United States maiis for its official business in the same manner as the executive departments of the Government, and shall determine its necessary administrative and other expenditures under this Act, and the manner in which they shall be incurred, allowed and paid, without regard to the provisions of any other law governing the expenditure of public funds: **Provided,** That the appointment of any person receiving a salary of $4,000 or more per annum from the funds of the Corporation shall be subject to the confirmation of the Senate of the United States.

The Corporation shall, at the close of each fiscal year, make a report in writing to Congress stating in detail its activities, the names, salaries, and duties of all employees and officers in the employ of or under the supervision of the Corporation, and an account of all moneys it has disbursed.

(f) The board is authorized to make such by-laws, rules, and regulations, not inconsistent with the provisions of this Act, as may be necessary for the proper conduct of the affairs of the Corporation.

Sec. 4. (a) The Corporation shall have succession in its corporate name, and shall have power—

(1) To sue and be sued in its corporate name in any court of competent jurisdiction, Federal or State.

(2) To adopt and use a corporate seal, which shall be judicially noticed.

(3) To establish, and to assist in the establishment of farms and farm homes, together with the necessary buildings and other structures, livestock, equipment, implements and machinery, furnishings, supplies, facilities, and to assist the beneficiaries of this Act in the organization of cooperatives: **Provided,** That any individual farm shall be of such size and fertility and so stocked and equipped as to reasonably indicate returns which will permit the occupants thereof to repay any obligations incurred by them for the purchase thereof, and to maintain a decent standard of living: **And provided further,** That the Corporation shall have power under rules and regulations to be promulgated by the Corporation and the Secretary of the Interior to finance in the same maner the establishment of individual farms and homes upon the public domain or upon lands within any reclamation project.

(4) The Corporation shall limit the loan made to any purchaser to the amount that will provide a farm to be limited to area to the size of an average farm in the State where the land is located as determined by the preceding Federal Census, and not to exceed in cost the price of property of similar size and value in the same section or area. No property, real or personal, shall be purchased hereunder save upon an appraisal by competent experts, reported in writing and sworn to and filed and preserved for inspection by the Congress, or any Member thereof. If the services of appraisers of the Federal land banks are available, no farm land shall be bought by the Corporation save upon an appraisal by one or more appraisers of the Federal land bank, reported in wrting and sworn to and filed and preserved for inspection by the Congress, or any Member thereof

(5) In carrying out the provisions and purposes of this Act, to enter into contracts, make loans or grants, or both, and to acquire, by purchase, gift, or otherwise any real or personal property or any interest therein, and to improve, develop, maintain, and sell any such property or interest therein. The provisions of section 355 of the Revised Statutes, as amended, shall not apply to lands acquired, or construction work undertaken by the Corporation under the provisions

WOULD CORRECT ABUSES

(Continued from Page 5)

of this Act, and title to all land, chattels, and other property, real or personal, acquired under the provisions of this Act, shall vest in the Corporation for the purpose of this Act.

(6) To enter into contracts to sell its properties, and to make conveyances under the terms of such contracts. The Corporation may lease any farm which has been repossessed by it, pending a resale of said farm.

(7) To pay all expense incident to the examination and survey of the necessary areas and the acquisition of title to lands to be acquired, including fees for the services of abstractors, title attorneys, and escrows, official certifications and evidence of title, and title insurance policies, recording fees, and options when deemed necessary, to assist the beneficiaries of the program to secure and maintain appropriate insurance policies, and to pay such other expenses as may be determined necessary to the efficient carrying out of the programe herein authorized.

(8) To accept and utilize such voluntary and uncompensated services, cooperate with such Federal and State agencies, and utilize, with the consent of the State, such State and local officers and employees as may be necessary.

(9) To establish such branch and local offices as it may deem necessary, but the principal office of the Corporation shall be in the District of Columbia.

(10) To utilize the service of other corporations and agencies on such terms and conditions as the board may prescribe, and to exercise such other powers as may be necessary or appropriate to the efficient exercise of the powers specifically conferred.

(b) Preference shall be given applicants who are married or who have dependent families, farm tenants, share-croppers, farm laborers, or those who recently were farmers; but the Corporation shall not approve any application for the benefits of this Act if it finds that the income of the applicant derived from farm property owned by him is sufficient to support his family and to pay the expenses of operating such property and the fixed charges on his indebtedness in connection with such property.

(c) The Corporation may provide for such amortization periods for the repayment of indebtedness owed to it, and may postpone the date when the initial installment shall be due, as it may deem advisable, but in no event shall the amortization period exceed sixty years.

(d) The rate of interest to be charged by the Corporation upon indebtedness owned to it shall be at as low a rate of interest as the Government shall secure the money, and may include a reasonable charge to be applied toward the expenses of administering the provisions of this Act, not to exceed 1 per centum per annum.

(e) The board and the Corporation shall give due consideration to the desirability of avoiding the expansion of production for the market of basic commodities for which the price is lower than the parity price as defined in the Agricultural Adjustment Act, as amended; and shall, so far as practicable, assist beneficiaries of the program to become established upon lands now in cultivation.

(f) Nothing in this Act shall be construed to authorize the Corporation to make a loan to any corporation for the purpose of purchasing real property, to sell or otherwise dispose of any real property or interest therein owned or held by the Corporation to any other corporation, or to enter into any contract or agreement with any other corporation with respect to the acquisition by it of any real property or interest therein.

Sec. 5. All contracts of sale executed by the Corporation and all mortgages taken by it shall contain a provision that if a voluntary lien is created by the debtor on any of the property covered by such contract or mortgage, or if an involuntary lien is established on any of such property, the Corporation may declare all unpaid installments of principal and interest (accrued or to accrue) to be immediately due and payable. No land purchased from the Corporation herein created up to the value of $2,500 shall ever be encumbered with any lien or obligation, either statutory or contracted. Such land shall not be subject to any debt, or debts, or obligations of any kind of the owner, except taxes, and every conveyance, lease, or contract executed by the Corporation herein created shall contain a provision that the land shall forever remain free of all liens or encumberances of whatever kind, and such provision shall be a covenant running with the land as long as it shall be used as a farm homestead. This provision shall not affect the lien of the Corporation for the money loaned for the purchase of the land, or equipment for the land.

Sec. 6. No purchasers of property from the Corporation shall, so long as the purchase price is not paid in full, without the written consent of the Corporation, sell, lease, mortgage, transfer, assign, or convey any such property included in a contract of sale by the Corporation or in a mortgage to the Corporation: **Provided,** That if he shall have first given the Corporation sixty days' notice of his intention to sell and convey said property, and unless the Corporation, within such sixty-day period, does not purchase such property at a price equal to the appraised value thereof, as established by an independent appraisal, such sale shall not be prohibited hereby. If any sale, lease, transfer, assignment, mortgage, or conveyance of such property is made without complying with the foregoing requirements, or if any property is abandoned, the Corporation may declare all unpaid installments of principal and interest (accrued or to accrue) to be immediately due and payable.

Sec. 7. (a) The jurisdiction, both civil and criminal, over lands acquired under the provisions of this Act shall not be changed by reason of such acquisition: **Provided, however,** That this section shall not be deemed to affect the jurisdiction of the United States to punish offenses against the United States, the intent of this section being that the several States in which such lands are situated shall not, by reason of such acquisition, lose their jurisdiction, nor the inhabitants thereof, their rights and privileges as citizens or be absolved from their duties as citizens, of the respective States.

(b) Nothing in this Act shall be construed to exempt any real property held by any purchasers from the Corporation, notwithstanding the legal title remains in the Corporation, from taxation by any State or political subdivision thereof to the same extent, according to its value, as other real property is taxed.

Sec. 8. The Federal Reserve banks are authorized, with the approval of the Secretary of the Treasury, to act as depositaries, custodians, and fiscal agents for the Corporation.

Sec. 9. (a) Whoever makes any statement, knowing it to be false, or whoever willfully overvalues any property, for the purpose of influencing in any way the action of the Government or the board upon any application, advance, purchase, or repurchase agreement, or loan, under this Act, or any extension thereof, or the acceptance, release, or substitution of security therefor, shall be punished by a fine of not more than $5,000.

(b) Whoever (1) falsely makes, forges, or counterfeits any note, debenture, bond, or other obligation or coupon, in imitation of or purporting to be a note, debenture, bond, or other obligation, or coupon issued by the Corporation; or (2) passes, utters, or publishes, or attempts to utter, pass, or publish any false, forged, or counterfeited note, debenture, or other obligation or coupon, purporting to have been issued by the Corporation, knowing the same to be false, forged, or conterfeited; or (3) falsely alters any note, debenture, bond, or other obligation or coupon, issued or purporting to have been issued by the Corporation; or (4) passes, utters, or publishes, or attempts to pass, utter, or publish, as true any falsely altered or spurious note, debenture, bond, or other obligation or coupon, issued or purporting to have been issued by the Corporation, knowing the same to have been falsely altered or spurious, shall be punished by a fine of not more than $10,000 or by imprisonment for not more than five years, or both.

(c) Whoever, being connected in any capacity with the Corporation, (1) embezzles, abstracts, purloins, or willfully misapplies any moneys, funds, securities, or other things of value, whether belonging to it or pledged or otherwise entrusted to it; (2) with intent to defraud the Corporation, or any other body politic or corporate, or any individual, or to deceive any officer, auditor, or examiners of the board or the Corporation, makes any false entry in any book, report, or statement of, or to, the board of the Corporation, or without being duly authorized, draw any order, or issues, puts forth, or assigns any note, debenture, bond, or other obligation or draft, mortgage, judgment, or decree thereof shall be punished by a fine of not more than $10,000 or by imprisonment for not more than five years, or both.

(d) The provisions of sections 112, 113, 114, 115, 116, and 117 of the Criminal Code of the United States (U. S. C., title 18, secs. 202—207, inclusive), insofar as applicable, are extended to apply to contracts or agreements of the Corporation, which for the purposes hereof shall be held to include advances, loans, purchase and repurchase agreements, extensions and renewals thereof, acceptances, releases, and substitutions of security therefor, and sales of property of the Corporation.

(e) No person, partnership, association, or corporation shall directly or indirectly solicit, contract for, charge, or receive, or attempt to solicit, contract for, charge, or receive any fee, charge, or other consideration from any person applying to the Corporation for a loan or other assistance, whether bond or cash, except ordinary fees authorized and required by the Corporation for services actually rendered for examination and perfection of title, appraisal, and like necessary services. Any person, partnership, association or corporation, violating the provisions of this subsection shall, upon conviction thereof, be punished by a fine of not more than $1,000 or imprisonment for not more than one year, or both.

Sec. 10. If any provision of this Act, or the application thereof to any person or circumstance, is held invalid, the remainder of the Act, and the application of such provision to other persons or circumstances, shall not be affected thereby.

The committee incorporated in the bill all of the amendments adopted by the Senate, but changed the amendment which made all the property of the Corporation subject to taxation so as to exempt its franchise, capital, reserves, surplus, loans, income, and personal property from taxation. All real estate owned by it is subject to taxation.

The provision setting up $50,000,000 capital stock in the original bill was left in the discretion of the President. The bill as reported makes the subscription to said stock in the sum of $50,000,000 mandatory.

The amended bill as it relates to the bond issue, includes the following limitation:

None of said bonds shall be issued within one year after the approval of this Act. Within three years after the approval of this Act no more than $300,000,000 of said bonds may be issued.

U. S. Government To Get Services Of Geo. Carver

Tuskegee Institute, Ala., Aug. 19—Announcement has been made of the appointment of Dr. George W. Carver, director of agricultural research and consulting chemist at Tuskegee, as collaborator in the Department of Agriculture, in the Bureau of Plant Industry, Washington, D. C. Dr. Edson, eminent agricultural authority, is Chief of the Bureau of Plant Industry, division of mycology and disease survey. Dr. Carver's appointment was effective from August 1, and it is understood that he is to serve without compensation.

FIRST GIN TO MILL CROP ON ELI'S LAND

Westboro, Mass., Aug. 13.—Cotton grown on Eli Whitney's New England farm will be run through Eli Whitney's original cotton gin this fall.

Victor Despres, present occupant of the farm once owned by the cotton gin inventor, has a full acre of cotton in full bloom, he said today.

Whitney's family, now living in New Haven, Conn., promised Despres the use of the original gin.

MULES DECLARED A MEAL ARMISTICE IN CHACO

(Christian Science Monitor)

Wars and rumors of wars have no effect on the well-established habits of mules raised in Southern Alberta, as a consignment of mules shipped last year from the Taber district to the Gran Chaco refused to move one inch, much less haul gun trucks or ammunition supplies, during the dinner hour. These mules shipped from Alberta had, it is understood, been used at some time on railway construction in Alberta and so were used to stopping work immediately the noon dinner hour arrived.

The buyers declared that when the mules were shipped overseas to form artillery teams in the war between Paraguay and Bolivia they still kept to their habitual noon hour rest interval so that fighting and maneuvers had perforce to halt abruptly while the mules "took time off." There they rested, and until the noon hour had fully elapsed they refused to budge a wheel.

A NEW SONG BOOK

IS JUST APPEARING FROM THE PRESS

"GOLDEN GEMS"—Get a copy, price 25 cents; then give us the benefit of your constructive criticism. We want to know how you like this new song book. Send this back with 25 cents for a single copy or $3.00 by the dozen—We will pay the postage.

"GOLDEN GEMS" is a book that is all that its name implies. It is pure gold in spirituality, originality and in religious fervor.

Insist up your friends using "GOLDEN GEMS". Recommend that your choir use "GOLDEN GEMS". Put "GOLDEN GEMS" in your Sunday School; use "GOLDEN GEMS" in your B. Y. P. U.; put a copy of "GOLDEN GEMS" in your home. If "GOLDEN GEMS" is introduced in your state it will prove that you are 100 per cent with Henry Allen Boyd in his earnest desire to give to the Baptists the best that money can buy, and when the best costs you no more, then get "GOLDEN GEMS".

Send this back to me, I want to know who is using and supporting "GOLDEN GEMS".

CELEBRITIES ON PROGRAM ARRANGED FOR BIG MEETING TO BE HELD IN CHICAGO

Drs. Charles S. Johnson, Carter G. Woodson, R. R. Wright and Many Others to Speak at Convention to be Held September 9th

Chicago, Ill.—The actual program for the celebration of the Twentieth Anniversary of the Association for the Study of Negro Life and History in Chicago on the ninth of September has assumed definite form. Four days will be devoted to these exercises. On Sunday, the 8th, the day before the exercises begin, the visitors will be entertained at a musical in the auditorium of the new Wendell Phillips High School, and they will be further entertained on that same day at a Get-Acquainted Dinner at International House. Mrs. Maude Roberts George, chairman of the Music Committee, has a number of faithful coworkers who with the local talent in that city will state a real "Afternoon with Nergo Musicians and Their Music," assisted by some outside artists like Clarence Cameron White and Roland Hayes who have been requested to participate. At the Dinner that evening visitors with brief accounts of what they have done in this field will be introduced to respond to addresses by distinguished citizens of Chicago.

Monday, the ninth, the day of the actual celebration, will be devoted to addresses of historical retrospect and evaluation of the work of the Association for the Study of Negro Life and History. The first address will be delivered by Dr. W. Sherman Savage, of Lincoln University in Missouri. He will review "Twenty Years of the Association for the Study of Negro Life and History." At the same session that morning Professor L. P. Jackson, of Virginia State College, will speak on "The Work of the Association and the People." Following these gentlemen will be a general discussion in which visitors and workers from afar will mention what is being done in various parts to carry out the purposes of the Association as understood hy the people who are now becoming interested.

On Monday afternoon Dr. Charles S. Johnson of Fisk University will make a special "Evaluation of the First Twenty Volumes of the JOURNAL OF NEGRO HISTORY." This speaker will not eulogize the editor or praise the efforts of his co-workers. He will endeavor to apply the test of modern historiography to the current articles, reviews, and documents, which have been published in this magazine during the last generation. President R. R. Wright of Wilberforce University will follow this speaker with an address on "Negro History in Our High School and College Curricula." As an author, an instructor of experience in this field, and at present an educational administrator very much concerned with this effort, President Wright's observations will doubtless prove to be valuable. These discourses also will be followed by a general discussion from which is expected other thought of instructors engaged in various parts of the country. Among these will be Mr. Herman Dreer, of St. Louis; Mr. F. E. DeFrantz, of Indianapolis; Mr. Louis C. Blount, and Mr. Snow F. Grigsby, of Detroit; Mrs. G. Estelle Massey Riddle of Akron; and Professor D. J. Jackson, of Xavier University, New Orleans.

On Monday evening at the Wendell Phillips High School President John Hope of Atlanta University will speak on the work of the Association from the point of view of an officer cooperating with the staff. Dr. Carter G. Woodson, the founder and director of the Association for the Study of Negro Life and History, will speak on the unfinished task which lies before the Association. The Mayor of Chicago is scheduled to speak at this same session and the Honorable Louis B. Anderson to introduce him. This opportunity is given the city to express its appreciation for the work of the Association which was organized in Chicago on the ninth of September in 1915 and ever since that time has found there some of its most substantial supporters. Among these were Dr. George Cleveland Hall who participated in this organization on that date, and Julius Rosenwald, who became interested soon thereafter, contributed annually to its support, served as one of the officers of the Association from that time until he died. It might be noted too that E. R. Embree, the head of the Rosenwald Fund, which has also given some aid, was a classmate of the founder of the Association when these two youths were studying at Berea College in Kentucky, still dominated by the spirit of that mountaineer abolitionist, John G. Fee, Mr. Embree's grandfather.

Tuesday, the second day of the celebration, will be devoted to certain scholarly addresses on topics of much concern to the Association and to the general public at this time. At the morning session Dean Carl Frederick Huth, of the University of Chicago, will deliver an introductory address and preside. Professor Hasseltine, of the University of Wisconsin, will then read a paper on "A New Aspect of the Slavery Argument." Miss Bessie Louise Pierce, of the University of Chicago, will give "A Thought from a Teacher of History." Professor Lorenzo J. Greene, of Lincoln University in Missouri, will discuss the paper by Professor Hasseltine, and Professor Rayford W. Logan, of Atlanta University, will discuss that of Miss Pierce. Afterwards comes the general discussion of these topics.

The two remaining sessions of the day will be devoted to the discussion of the timely topic, the African situation. That afternoon Mr. E. R. Embree will deliver an introductory address and preside. Professor Melville J. Herskovits of Northwestern University, a recent traveler and student of African affairs, will discuss "West Africa as a Field for Research." Dr. W. D. Hambly, of the Field Museum of Natural History, another investigator of Africans from the ethnological and anthropological points of view, will deliver a lecture on "African Art." Mrs. Wendell Green of Chicago will open the general discussion and Mrs. Schuh of the same city will follow her. Others interested in the approach to Africa with scientific objectivity will participate in this discussion.

At the evening session at the Wendell Phillips High School three other scholars concerned with Africa will speak. Professor Ralph J. Bunche, of Howard University, who several years ago made a special study of colonial administration on that continent, will deliver an address on "The French in Africa." Professor W. O. Brown, of the University of Cincinnati, who has just returned from a year's survey of conditions along the East Coast and South Africa in particular will speak on "The Present Status of the Negro in Africa." Dr. F. Ernest Work, of Muskingum College, for years the Educational Advisor of the Negus of Abyssinia and knighted by the Emperor of that now much discussed land will speak on "Abyssinia as a Pawn in European Diplomacy." It might he noted here that Dr. Work is bringing out this fall a book dealing with the present Abyssinian situation and the Association will sell this work.

On Wednesday there will be a brief business session of the Association in the morning and another session of the Executive Council in the afternoon. At eight o'clock in Harris Hall on the campus of Northwestern University in Evanston with President Scott of that institution presiding the Association will hold the final session of the celebration of its Twentieth Anniversary. The Honorable E. B. Jourdain of Evanston will deliver an address on "What the Negro May Learn from History" and Dr. Charles H. Wesley of Howard University will give a discourse out of his experience and knowledge as to "The Place of the Negro Among Those Who Have Achieved."

CARTER G. WOODSON.

NEW EXTENSION AGENT APPOINTED IN ALABAMA

Tuskegee Institute, Ala., Aug. 19—The appointment of Nicholas Kollock as State Agent for Negro Extension Work for the State of Alabama, succeeding Eugene Clarence Dobbs, deceased, and Robert Bell as Movable School Agent, vice Nicholas Kollock, promoted, has been announced by T. M. Campbell, Field Agent for the United States Department of Agriculture Extension Service.

Nicholas Kollock, who is a product of South Carolina State College at Orangeburg, and of Tuskegee Institute, entered the Extension in 1923, and has made an enviable record as Movable School Agent. He has an extensive acquaintance with farmers throughout the State of Alabama.

Robert Bell is a graduate of Tuskegee Institute high school and college departments, graduating from the high school in 1929 and from the college in 1933. Immediately following his graduation he was employed by Tuskegee Institute as general farm mechanic and assistant farm superintendent. He was also employed by the Alabama Extension Service to do part time work in farm management.

Both agents have entered upon their new duties.

NEGRO FARMER HARVESTS FIRST BALE COTTON

Greenville, Miss.—Anderson Riley brought to Greenville, Miss., on August 9th the first bale of cotton of this year's crop. The bale weighed 535 pounds and will be sold at auction.

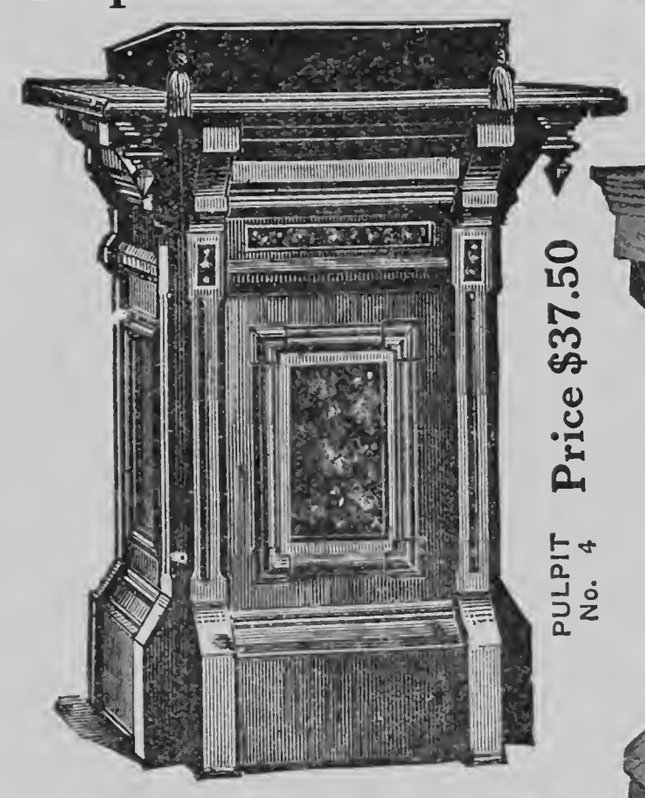
Mr. Riley is one of the best cotton farmers in the Delta section of Mississippi and is always one, if not the first of the farmers in that section to bring in the earliest of the crop.

MICHIGAN FARMERS RALLY TO DEFENSE OF AFRICAN NATION

Ontonagon, Mich.—(ANP)—Condemning Italian Fascism's threatened war on Ethiopia, only independent Negro nation, 250 persons gathered here today to voice their solidarity with the Ethiopian people.

Adding their voices to those of the workers, were many youths from the local CCC camp, and farmers from all parts of Ontonagon County. The meeting was under the auspices of the Ontonagon Section of the Communist Party.

Pulpits or Bible Stands that Grace any Church Edifice



PULPIT No. 4 Price $37.50

FARMERS OF THE NATION TO HOLD ANNUAL

(Continued from Page 1)

in fact, some feel that Mr. Cobb as well as Mr. Wallace will grace the session with their presence.

This organization represents in principle the nine hundred fifty thousand or more Negro farmers of the nation. Their official organ, The Modern Farmer, will carry a full write-up and program of the meeting.

VIRGINIA RACE FARMERS ORGANIZE. OZENA, VA.

August 12th 1935—Colored farmers living in Essex and Middlesex counties Vriginia met on July 31st and organized the Tri County unit of the National Federation of Colored Farmers Incorporated Temporary officers were elected and the unit starts off with 21 members.

Recent statistics as issued from the Census bureau of the Department of Commerce at Washington, D. C., gives the following information:

Essex County Va.

Negro population	3816
Negroes of voting age	1812
Total Negro farmers in the County	633
Total Negro farm owners in county	535
Negro tenants	98
Number acres owned by Negroes	23990
Full value of all land and buildings owned by Negroes	$1,062,090

Farmers in the county have 796 acres in tomatoes 14,416 acres in corn, 6038 acres in wheat and 317 acres white potatoes.

A special meeting has been called for September 2nd at which time a movement will be started by the organization to form a corporation that will operate a canning plant next season.

Every farmer who signed up as members of the new unit also pledged their subscription to the Modern Farmer the only out-and out farm paper edited by our race.

The first bale of cotton of 1935 crop in Brazil brought 4 dollars per pound at auction. It was sold for charity. Cotton is being grown in South America on a very large scale and will no doubt force ahead as one of the leading cotton producing countries of the world.

The land utilization of the re-settlement division under the direction of Dr. Rex Tugwell Assistant Secretary of Agriculture has accepted options on over ten thousand acres farm lands in South Carolina, and they have authority to purchase as high as thirty-five thousand acres in the same section.

Concord unit N F C F at Hayti Missouri have purchased a complete canning outfit and the members are now busy preparing to put up a large quantity of fruits and vegetables for their own use and sell the surplus.

This unit has about 40 members who are wide awake and thru regular meetings they are making great strides toward growing their living and thereby cut the cost of operation of their farms.

The Concord unit also has a sewing circle.

Mrs. Sallie Ingram prominent citizen of Shelby County Tenn., and expert truck gardner has for the fourth time won prize in truck gardening contest in the county.

(From Late Editions of Yesterday's Times).

'BRAINLESS' BABY LIVED FOR 27 DAYS

AUTOPSY REVEALS INFANT WAS BORN WITH FLUID-FILLED CRANIAL CAVITY

APPEARED TO BE NORMAL

Cried and Reacted to Pain, but Fell Ill After Week—Doctors Studying Rare Case

An autopsy performed yesterday at St. Vincent's Hospital, Seventh Avenue and Eleventh Street, revealed a case rare to medical science when a baby boy was found to have lived twenty-seven days with fluid in the cranial cavity instead of a developed brain. The child was born July 21 and died yesterday morning.

According to a member of the hospital staff, the infant, for its first six days of life, was outwardly perfectly normal. It partook of food regularly, cried as all babies cry, and moved its hands, arms and legs. In pointing out that it has always been believed that the brain dictates behavior, the member of the staff advanced the opinion that reflexes had probably caused the leg and arm movements, as well as other functioning.

He declined to disclose the names of the infant's parents, and was extremely reluctant to discuss the case.

"The present diagnosis is cerebral agenesis, which means that the two hemispheres of the brain failed to develop," he said.

Asked if the baby was normal in appearance when it was born, the physician said it was, but that an X-ray of the chest showed a partial collapse of the lungs. It was understood that skillful obstetrics on the part of the senior interne at the hospital had minimized this.

"It moved, cried and ate regularly up to the sixth day," he continued. "Not until then was there any outward indications of an abnormality."

On the seventh day the infant began to refuse food, or to take it fitfully and with an apparent absence of appetite.

Simultaneously the baby's skin became slightly bluish, starting at the face and extending over the entire body in a period of a few hours.

The baby received every possible care and was kept under constant surveillance.

"As remarkable as anything else about the case was that the baby reacted to pain tests", the physician said.

Science has always held that nerves telegraph sensations to the brain, and that if either the nervous system or brain becomes atrophied or useless there is no feeling of pain. How this child could have responded to pain is one of the mystreies of the case.

In the last few days the child's head began to enlarge, puzzling the physicians and surgeons studying the case.

Death came at 4 o'clock yesterday morning. Several hours later the autopsy was performed.

"We removed about ten ounces of fluid from the cranial cavity," said the staff member.

Several physicians are continuing their examinations and may have additional information within a few days, it was said.

Mrs. Ingram is 72 years of age. She says farming is the only hope for our race.

ANCIENT AMERICANS RUINED BY DROUGHT

GEOGRAPHIC SOCIETY TRACES FALL OF NATION IN WEST AS LAND BECAME A WASTE

WASHINGTON, Aug. 18 (AP.)—Drought was blamed today for the decline and fall of an ancient American nation.

A determination by Dr. A. E. Douglass of Steward Observatory at the University of Arizona of weather prevailing centuries ago was made today by the National Geographic Society. It recalled a recent prophecy by Rexford G. Tugwell, Under-Secretary of Agriculture, that vast areas of the great plains might become a desert unless proper conservation is carried out in the area.

Such evidently was the case six centuries ago, causing the abandonment of a settlement of forty villages in the Chaco Canyon region of New Mexico, the largest of which was Pueblo Bonita, a building of 1,000 rooms.

Today the society says the area is a semi-aird treeless waste in which agriculture is almost impossible. About 700 years ago and earlier, however, a pine forest flourished there and the soil produced sufficient crops to support a large population.

Evidence of these facts was found by Dr. Douglass in a lengthy study of the tree rings. One is put on each year by a growing tree and its width determined by the supply of moisture available. The most ancient records were obtained from logs used in the construction of the pueblos.

Some of the old logs overlap in age with living trees and series of rings in both, formed in the same years, can be matched. The old logs in turn overlap in age with others still older so that yearly rings can be counted backward for 1,200 years.

Dr. Douglass thus detertmined that wet and dry weather occurs in cycles with a major drought occurring once every 300 years and minor droughts happening in the intervals. His work in part corroborated the findings of Dr. C. G. Abbott, secretary of the Smithsonian Institution who last week announced new evidence of a twenty-three-year cycle of weather caused evidently by increases and decreases in sun spots.

The drought which caused the abandonment of the large Indian settlement and probably the deaths of many of its inhabitants occured about the time the great Mongol Emperor, Kublai Khan, was ruling China. It began in 1276 and lasted until 1299, a period of twenty-three years.

"Droughts are working havoc today, just as they did in the days of the old pueblo people," Dr. Douglass declared.

"We cannot change nature's great laws that govern the movement of the earth's atmosphere, but perhaps we can protect our cities and farms to some extent by wise reclamation projects and preservation of the forest cover."

SPECULATORS SELL OATS

Crop Damage Disappoints Trade—Rye Business Light

Special to The New York Times

CHICAGO, Aug. 18,—Latest reports on the oats crop indicate serious damage from extremely hot weather in the critical period, with a large percentage of the crop in the best sections severely damaged and of light weight. This has disappointed the trade and caused selling by speculators who had bought futures expecting there would be a large demand, especially from processors, as the crop of 1934 was the lightest and poorest in recent years.

Despite the unfavorable crop reports prices here declined last week and closed at the bottom, with net losses of 3 3-4 to 4 cents a bushel for the week. Receipts were heavier, yet premiums on No. 2 white at the close were 4 to 4 1-2 cents over the September, and on No. 3 white, 1 to 2 1-2 cents over the September. Primary receipts of oats since Aug. 1 have aggregated 13,075,000 bushels, compared with 5,505,000 a year ago.

Aside from spreading operations between the near and distant futures in Chicago and Minneapolis, trading in rye was light here last week. Bnying of the near asd selling of the distant futures furnished much of the business. Consumers' purchases were not heavy and receipts here by the Great Lakes were 419,000 bushels.

WHEAT CROP DISAPPOINTING

Spring Yields Show Effect of Black Rust and Dry Weather

Special to The New York Times

Chicago, Aug. 18—Harvesting of Spring wheat is well along, especially in the United States and Western Canada, having made good progress. Yields, however, are disappointing as the effects of black rust stem damage and dry weather becomes more apparent. The result is that prospects for good crops of small grains have disappeared and expectations are that liberal reductions in yields will be the final outcome. Threshing indicates that yields of wheat are much smaller than earlier expectations and weight also is unusually light Low temperature in Western Canada reported at the close of last week caused uneasiness because of the lateness of the crop.

Corn, on the whole, is doing well but needs rain in many sections of of the Middle West. Reports covering a large part of Ohio, Eastern Kentucky and in scattered areas throughout Northern Illinois, Northeastern Iowa and parts of Indiana indicate a somewhat spotted position.

The oats harvest is somewhat disappointing in yields in many of the best sections. Threshings throughout Illinois are slow and yields irregular.

Both Races Desire to Stage Demonstration Against Mussolini

Chicago, Ill—(CNA)—Across the wide expanse of land and ocean, Mayor Kelly has clasped hands with Benito Mussolini in carrying on the campaign of lynch incitement against the people of Ethiopia.

Kelly has steadfastly refused the Chicago Joint Committee for the Defense of Ethiopia a permit for a parade while the jingo press calls for dismemberment of Ethiopia.

Last Sunday when the Negro population and white sympathizers gathered on the South Side to demonstrate their solidarity with the Ethiopian people, the Mayor ordered the poilce to smash the meeting.

Kelly may be very proud of the decoration he recently received from Mussolini and perhaps he is working hard for another—but the Committee for the Defense of Ethiopia and its supporters are determined to march.

A city-wide campaign has been inaugurated to win a permit for a mass parade on August 31st. A preliminary conference of all leading Negro and white organizations to mobolize support will be held Monday, August 19th, at the Lincoln center.

Early response to the conference indicate that groups hitherto inactive in the fight against Mussolini's plan to enslave Ethiopia have joined the fight for the permit.

May Remove C. C. C. Camp Because of White Opposition

Shelby, N. C.—(ANP)—What to do about the C C. C. camp where Negro youths have been placed to work on a local project, is the problem of General McCloskey, who is in charge of the C. C. C. camps in this area.

The camp was established a few days ago and the youths moved in. A group of 25 or more whites protested and since their arrival the youths have been at leisure due to the fact that the citizens would not permit them to begin work and refused to furnish water and lights for the camp. A larger group of farmers, however, are insisting that the youths should be permitted to carry out the work to which they have been assigned and have placed their case before General McCloskey at Fort Bragg.

Alabama City Shows Loyalty to Latest Ruling

Birmingham, Ala.—(CNA)—As a result of the Scottsboro ruling handed down by the U. S. Supreme Court on April 1st, the names of 3,000 Negroes were included this week in the 25,000 to 30,000 names of the Jefferson County's jury box for the Fall term.

James T. Smith, white, chairman of the Jefferson County jury board who made the announcement, stated that in the past, there had been names of Negroes in the jury box, "but only a few."

Occasionally, they were drawn for jury service, he added, but usually asked to be excused and as a rule their requests were granted. It was pointed out here by many political observers that when a Negro asked to be released from jury duty, it was usually under compulsion or threats.

THE MODERN FARMER

Vol. VIII. NASHVILLE, TENN., SEPTEMBER 15, 1935 No. 8.

MISSOURI'S OLD AGE ASSISTANCE ACT

Who May Have an Age Pension Explained by the Missouri Ruralist

To make clear the terms of Missouri's old-age assistance act, which becomes effective August 27, the state eleemosynary board, which will administer the law, has prepared this questionnaire which answers inquiries in regard to the provisions of the act.

The maximum payments are $30 a month for single persons and $45 a month for married couples. The law, however, contemplates paying the actual needs of a person which may run as low as $10 a month.

Q. How old must a person be to be eligible for assistance under this law?

A. Seventy years or over.

G. Are all persons of 70 years or more eligible for assistance ?

A. No. Only under certain conditions.

A. Persons must be incapaciated from making a livelihood and without adequate means of support; must be a citizen of the United States: must have resided in Missouri for 5 years or more within the 9 years immediately preceding date of application for assistance; must not at the date of application, or of receiving aid, be an inmate of any prison, jail, insane asylum or any other public reform or correctional institute, and have no other person responsible under the law of the state and found by the state board or by the county board able to support him.

Q. What persons are responsible under the state law for support of an applicant?

A. Guardians, trustees and others who may hold property for the applicant, or be bound by any contract or agreement to support applicant. Of course, a husband is legally liable for support of his wife.

Q. What are the exemptions in calculating the income of applicant?

A. Earnings of applicant which do not exeeed $150 in any calendar year shall not be considered.

Q. What is the amount of assistance which may be payable?

A. The amount shall be fixed with regard to conditions in each case, but in no event shall it be an amount, which, when added to the income of the applicant from all other sources, shall exceed a total of $30 a month for single persons or $45 a month for married couples.

Q. How is the amount of aid determined?

A. By the county old age assistance board of the county where the applicant resides.

Q. How and when is assistance payable?

A. By state warrants drawn by the state auditor; monthly for a period of one year.

Q. Must a new application be made every year?

A. Yes. That would be the business-like way of keeping track of pensioners.

Q. Are funeral expenses paid?

A. Yes, if the estate of applicant is insuffieient to defray the same expenses for funeral and burial shall be paid to such persons as the state board direets, provided expenses do not exeeed $100.

Q. If applicant is married are both husband and wife eligible for assistance?

A. Yes, provided they both are eligible in all requirements. Amount of aid shall not exceed $45 (a month, per couple).

Q. How much property does a person have to own to be totally disqualified?

A. Value of property or interest in property when single exeeeds $1,500; when married and aetually supporting a wife exceeds $2,000.

Q. How is value of property determined?

A. Appraised by the county old-age assistance board at its true value.

Pension Payments By Nov. 1

As announced by W. E. Jameson president of the Missouri eleemosynary board whieh will administer old age pension funds, payments should begin November 1. They will include accumulated back pay from the time the aet goes into effect August 27.

Applieants must be more than 70 years old and should apply to the chairman of the county control board named by Governor Park. Assistant Attorney General Nolen has ruled that inmates of county homes are eligible for pensions, if past the required age.

Payments will be made monthly by check from the state treasurer's offiee after the pensioner is once on the rolls. The state appropriated 2 1-2 million dollars for old age pensions for the rest of this year and all of 1936. To this sum will be added grants from the Federal government under the social seeurity program which contemplates that the national pension plan will bear half the cost of the old age assistance.

After the first rush officials expect the administration of the pension system to operate without much delay for the old folks who are eagerly awaiting pensions they need so much.

Pay No Fees to Anybody

Grafters already are out collecting money from all green enough to pay them for "assistance" in getting an age pension. They promise to use their "influence" when no influence is needed. A eommittee in your county looks after all elaims. If a pension grafter calls on you turn him over to the sheriff.

TOM STEWART DEAD

News just received at the national office of the National Federation of Colored Farmers bringing the sad intelligence of the death of Tom Stewart of Tchula, Miss.

Mr. Stewart was one of the first Negro farmers to sign up for membership in the federation. He was elected as Secretary of the Good Hope unit and later Asst. National Sec. He attended every national convention and was ever ready to render assistance to the members and visitors at all of the gatherings. He was loyal, true to his race and a most devoted husband.

Memorial services will be held during the convention that is to convene in Little Rock, Oet. 28.

MAKING PICKLES FOR WINTER

Chow-Chows and Relishes Inexpensively Produced

The huge advances in the canning industry have made it almost impractical to can fruit and vegetables at home because commercially canned foods are perfect in quality and inexpensive to buy. Just the same, when the canning season rolls around many a woman feels the desire to put up just a few jars of her family's favorite food.

The last of the commercially canned foods to be accepted as equal to the home canned products are chow-chows, bottled tomato sauce, piecalilli, etc. Many women still take pride in preparing their own piekles and relishes.

Here are several standing favorites that you will find easy to prepare and inexpensive to make. A supply of several of these relishes will help you to add a dash of spiee to your winter menus.

Bottled Tomato Sauce

12 large tomatoes
3 bunehes celery
4 green peppers
3 cups vinegar
2 onions
2 tablespoons salt
2 tablespoons sugar

Peel and ehop tomatoes and onions, put in kettle and add celery (from which root and leaves have been removed) and peppers, both finely chopped, and remaining ingredients. Bring to boiling point and simmer 1 1-2 hours. Fill clean hot bottles with mixture, cork and seal.

Chow-Chow

4 quarts green tomatoes
1-4 cup salt
6 small onions
1 pint eucumbers
1 green pepper
1 bunch celery
1 quart vinegar
1 eup brown or white sugar
1-2 teaspoon cinnamon
1-2 teaspoon ground allspice
1 tablespoon ground mustard

Chop the tomatoes, add salt and mix. Let stand over night. Next morning drain the tomatoes, and add the onions, cucumbers, pepper, and celery, chopped fine, the vinegar, sugar and spices. Put the mixture in an enamel kettle, and eook until clear. Stir well with a wooden spoon, pack in clean, hot jars and seal.

Ground spiees make a dark pickle. Whole spiees may be used; they should be tied in a cloth bag and removed before the pickles are sealed.

AGED COLORED PREACHER DEAD

Rev. John Simmons, ninety years old, of the African Methodist Episcopal church died recently near Marion, Arkansas. He was born in New Bern, N. C., in 1835. He has lived and worked in the same neighborhood and for the same family for 70 years. For many years he served

REVISED AAA COTTON PROGRAM

WILL GIVE WOMEN JOBS

Huge Sewing Circle to Employ over 54,000

Creation of a gigantic sewing circle, spread out over 41 States, to provide work relief jobs for 54,199 women at a cost of $20,218,000, was approved yesterday by President Roosevelt.

Mrs. Ellen S. Woodward, director of the PWA (work Progress Administration) women's division announced 150 million yards of cotton eloth will be purchased to provide a six-months' supply for sewing room projects.

Distributed Free

The garments made by the women will be distributed free to the destitute through publie relief agencies. Dresses, overalls work shirts and ehildren's wear will be ineluded.

Women's aetivities will not be restricted to wielding the needle. The Federal allotment takes in a total of 613 projects, offering employment opportunities of a wide range to fit individual skill.

Some will be put to work in libraries, preparing eatalogues and mending damaged volumes. Qualified artists, and musicians will be given painting and orchestral asignments.

Some Clerical Jobs

Several thousand women will get clerical jobs and take part in surveys and investigations. Others will work in canning faetories; try to improve cooking and budgetary methods for relief families and assist in beautifying their eommunities through garden and landscaping work.

The program announeed yesterday will cost less than $400 per woman employed. It does not inelude New York city, which will have a separate program expected to run into high figures.

ALABAMIANS TILL 19,665,484 ACRES

Washington Lists 275,455 Farms Over State

Washington, July 24 — Alabama had 275,455 farms comprised of 19,665,484 aeres Jan. 1, 1935, according to the census of agriculture announced today by the Department of Agriculture.

These farms were valued, land and buildings at $368,094,212 while the 1930 census placed a value of $502,370,806 on 257,395 farms comprised of 17,554,635 acres.

The report for 1935 shows that Jefferson County contained 6491 farms Jan. 1, 1935 as eompared to 3349 April 1, 1930. Acreage this year was 198,322 as compared to 178,888 in 1930.

The value of farms, land and buildings in this eountry Jan. 1, 1935 was reported as $12,100,790 compared to $15,991,824 in 1930.

TEN PER CENT FARM LOAN PROVIDED FOR

Plan Evolved at White House Conference To Apply Says United Press

A revised AAA cotton program calling for a 10-cent loan and a 12-cent guarantee on Bankhead allotments emerged today as a result of the battle between southern senators and the Agriculture Department.

The plan, evolved at a White House conference in an effort to break the Congressional deadlock of the third deficiency bill, applied only to cotton produced under Bankhead allotments on AAA adjusted acreage.

Farmers must sign up for the 1936 program, which the AAA warned will provide for a sharp reduetion, to receive benefits of the plan. About 88 per cent of the 1935 crop has been produeed under the Bankhead allotments calling for a crop of 10,500,000 bales, it was estimated.

Failure of Congress to aceept the compromise does not affeet the new program, which requires no legislation.

There are several important differences between the new AAA 12-eent guarantee plan and that announced last week. The new plan provides:

The AAA will loan 10 cents to all co-operating farmers. Whenever the grower decides to sell his Bankhead allotment cotton the AAA will pay him immediately the difference between the average for 7-8-inch low middling in the 10 spot markets on the day he sold and 12 cents.

Actually the plan does not guarantee the grower a flat 12 cents on all Bankhead eotton, tho it would work out to about that average in practice.

FCA HEAD ANNOUNCES JUMP IN FARM SALES

Land Banks Business Reported 97 Pct. Ahead of Last Year

Washington, September 11.—W. I. Myers, Governor of the Farm Credit Administration, announeed today that sales of farms by the Federal Land Banks this year up to August 1 showed a 97 per cent increase compared with the corresponding period last year. He said:

"The banks sold 4133 farms from January 1 up to August 1, 1935, compared to 2093 in the corresponding period in 1934.

"During the 12 months ending July 31, 1935, a total of 6905 farms were sold, the largest number of dispositions for any 12-month period in the history of the land bank system.

"While increases in the number of sales were reported from all except one distriet in the eountry, the heaviest demand for farms was in the eastern cotton belt, the Northwest and Northern Pacific States. Over half of the properties in the 12 months ending July 31, 1935 were in the Columbia, New Orleans, St. Paul and Spokane distriets.

FARM REHABILITATION IS CONFERENCE THEME

Education is Major Factor, Speaker Says

CONDITIONS ARE CITED

Thousands of Acres Must Be Removed From Production Because They Are Unprofitable, He Reports

Restoration of hundreds of thousands of farm families to a basis of self-support will be taken over soon by the Agricultural Extension forces of the nation. Dr. Carl C. Taylor, director, rural resettlement division, Resettlement Administation said yesterday.

Speaking before some 150 state directors and extension service officials from 14 states in this region at the Peabody, Dr. Taylor said that the taking over of the rehabilitation work by the extension forces will mean the extending of the service to the whole field of rural activities, social and cultural as well as economic."

Must Be Taught Success

"Needs of rural rehabilitation families today demand a technique approaching that of the charity case worker," said Dr. Taylor. "These families have to be taught almost the a, b, c's of agricultural success."

He estimated that 75 per cent of the families in the program cannot operate a farm without supervision and some financial aid. There are 290,000 families in the nation and 165,000 in the south involved in the rural resettlement work.

"If these families are incapable of learning, the task is futile. Hundreds of thousands of them are capable. They are families who, because of social and economic inheritance, or because of social and economic conditions, have never developed outstanding success in agriculture. The fact that thousands have functioned in the past leads me to believe that through proper agricultural education and social guidance, many of them can be permanently removed from the relief rolls."

Dr. Taylor pointed out that a preliminary survey by the National Resources Board indicates that about 450,000 farms including 75,000,000 acreas of land, should be withdrawn ultimately from arable farming in order that both the natural and human resources of the nation may be conserved.

"There are approximately two and on-half million of farm tenant families in the nation. I would guess that 10 per cent of these —the cream of the tenant families of the nation —are potential candidates for resettlement. They are among the best farmers of the nation, but they have been caught in the meshes of an economic arrangement from which they cannot extricate themselves without assistance from someone.

"I am personally interested in the young couples starting out in life. They find themselves, a stranded couple, with practically no alternative except to start as hired servants or tenants and in many cases even this door is closed. I am wondering if we cannot create a new type of frontier into which these young married farm couples can go."

In closing Dr. Taylor said, "Let us remember that there is nothing wrong with the stock of the southern tenant. What he needs is an economic opportunity with skillful guidance."

The conference will close tomorrow.

PORK PRODUCTS

PORK PRICES went up again during the latter half of July. During the last 2 weeks of July pork chops incleased 1.3 cents a pound, whole smoked ham 1 cent, and lard prices 0.3 cent a pound. Compared with prices of a year earlier, pork chops were 53.2 percent, whole smoked ham 24.8 per cent, and lard 83.2 percent higher on July 30, 1935.

INCREASES in retail prices of pork during the past year have been rather closely in line with changes in the wholesale prices of hogs and hog products. The average price of packer and shipper hogs at Chicago during the week ending August 10 was $10.-84 a 100 pounds. A year ago during the week ending August 11 the average price was $4.75. Prices received by hog producers rose from an average of $3.97 a 100 pounds on July 15, 1934, to $8.40 on July 15, 1935.

WHOLESALE PRICES of both hogs and hog products continued to rise in the first half of August. This is in line with the normal seasonal movement at this time of the year and is in addition a reflection of the very small supply of hogs being marketed together with small storage supplies of both pork and lard. When the spring pig crop begins to be marketed this fall, supplies may increase somewhat although it is expected that the spring pig crop will come to market somewhat later than usual and total slaughter of hogs during the coming winter will be some what smaller than the small slaughter of last winter.

IT IS LIKELY, therefore, to be some months at least before there is any sharp drop in the prices of pork and other hogs products. The most uncertain factor in the situation is the degree of cousumer resistance to the present high price of pork.—Consumer's Guide.

FARM SOCIETY 150 YEARS OLD TODAY

Agricultural Organization is the Second Most Venerable in U. S.

Today is the 150th anniversary of the founding of the Agricultural Society of South Carolina, the second oldest such organization in the United States The formal observance of the event will not take place until fall, when the annual banquet will be held, according to W. McLead Frampton, secretary and treasurer.

The Philadelphia Agricultural society is the only agricultural society in the Uinted States which is older than the Charleston organization, having been formed February 11, 1785. The Charleston society was founded August 24 of the same year.

Mr. Frampton says that plans for the largest celebration ever held by the society are being made, and that members of the Philadelphia society will be invited, this being a return of a courtesy extended members of the South Carolina society when the Philadelphia group held its celebration.

Stephen E. Welch, ninety-two year-old Confederate veteran, is president of the Agricultural Society of South Carolina. In addition to promoting agricultural in the lower section of the state, the society has fostered a number of social and cultural movements.

Its floral fairs, held for many years also were the occasion for art displays. It founded the Charleston county board of health in the spring of 1917. Elias L. Rivers, member of the society, developed a wilt-resistant cotton when wilt was threatening to exterminate the sea island cotton. He conducted experiments with representatives of the United States department of agriculture and with W. G. Hinson, but it was due to his efforts that the variety was developed.

In 1904, the society obtained a county agricultural agent for Charleston, and in 1905 it studied boll weevil in Georgia and Alabama, as a result of which diversification of crops was advocated and truck industry was inaugurated here.

It gave 300 acres of land for an agricultural experiment station after several years of work to obtain the station, and it was instrumental in securing the James Island experiment station. It took an active part in establishing the city abattoir.

In 1929 the society began a calf club lending money to worthy boys in the county to purchase blooded stock. It has published pamphlets on forest protection

COTTON —WHITE HOUSE HAS A PLAN

Following a series of intensively studious conferences at the White House, a new cotton plan was programmed last week.

The outright loan of 12-cents-per pound will be discontinued and in its stead the Government will grant a 9-cent loan to farmers This will be offset by a plan, applying only to producers who cooperate this year and are willing to live up to the rule for next year, in which the AAA will make payments to farmers to equal whatever difference, if any, may exist between 12 cents and the average price of 7-8 inch middling cotton as reflected in the ten spot market from September 1 to January 1.

Payments will be limited in ration to production up to the amount of the producer's allotment under the Bankhead act.

The loan of 9 cents per pound will be made by the Commodity Credit Corporation at the farm, without recourse to the borrower, on 13-16-inch in low middling cotton or better.

Observers expected immediate dumping to secure the present price, accompanied by a sharp break in the cotton market. This did not occur, at least at first, possibly because of the numerous checking balances set against such a possibility. The plan, it is hoped, will mean the free movement of new cotton crops into consumption, which coupled with the certainty of a strong 1936 program, would mean a definitely more hopeful outlook for the cotton farmer.

Some said that the move insured the Solid South for Roosevelt next year, despite the irritation and disappointment with which a number of the cotton Senators greeted the plan in the Senate.

The direct subsidy will make up the difference between the average market price, as noted, during the nearly four months, and 12 cents.

Farmers of The Nation To Hold Annual Convention October 28-31

President Davis and Secretary Harris Release Official Call For Session

LITTLE ROCK, ARKANSAS TO BE HOST

Little Rock, Ark.—(Special)—Farmers of the nation will gather in this city from October 28th to October 31st inclusive, for their annual convention. President Jas. P. Davis and Secretary Leon Harris have released the official call over their signature, and Little Rock has been assured of this meeting. A conservative estimate places the attendance at more than five thousand. "This," said one of the representatives here, "of course, will depend upon economic conditions and the ability of these tillers of the soil, raisers of fruit, cattle and poultry to leave their work long enough to sit in upon the deliberations."

President Davis has been constantly on the road. He made more than twenty-five states of the nation within the past six months. He has been here in Arkansas, visited Kentucky, Tennessee, Mississippi, Texas and those states east of the Mississippi, going in and out of Washington on his trip more than fifteen times in the past ninety days.

A complete exhibit of farm products, livestock of every description will be installed here, as will be cannery, home backing, needle work, art craft and other avocations indulged in around the farm. It was further announced by President Davis that he hopes to have more than two thousand dollars in cash prizes to be offered in the various exhibits, to be paid out to the winners. There will be a fat stock show, there will be competition in cotton raising and grading as well as in fruit growing. Then, too, this year it is expected that there will be a division of nuts, such as pecans, hickory nuts, walnuts, peanuts, etc.

Extensive preparations are being made here in Pulaski County to give them an unusual reception. A place for holding it sufficiently large to accommodate not only the meeting, but where exhibit rooms and hall may be easily accessible, is being negotiated for.

Representatives from the Department of Agriculture, from the Farm Credit Bureau, the Farm Loan Bank, Farm Land Bank, and in fact, some feel that Mr. Cobb as well as Mr. Wallace will grace the session with their presence.

This organization represents in principle the nine hundred fifty thousand or more Negro farmers of the nation. Their official organ, The Modern Farmer, will carry a full write-up and program of the meeting.

N J. FARMERS DEFY U. S. ON POTATOES

34 CITE BOSTON TEA PARTY IN FIGHT CONTROL

Lambertville, N. J., Aug. 2 (I.N.S.)—Citing the historic colonial Boston tea party as their precedent for American revolt against "arbitrary and unjust laws," farmers of this Southern New Jersey area today stood four-square in defiance of the new Federal "potato control law."

Unanimously approving a resolution to be forwarded to President Roosevelt, 34 of them vowed to "produce such potatoes as we wish" and to dispose of them "as we deem proper" despite the provisions of the statute. The act empowers the Secretary of Agriculture to limit production in any State and to impose a 45-cent processing tax per bushel on those in excess of the Government's quota.

AAA A GODSEND TO OUR FARMERS

Now, my friends, I also voted for the AAA and for the AAA amendments, and for other emergency farm relief legislation, at this session of Congress. And again I have no apologies to make. I leave it to the farmers of Kansas, to the people of Kansas, whether or not the AAA, the drouth relief funds, the emergency loan funds, were not a Godsend to the people of Kansas and the other farm states during the last few terrible years. We saved their farms, saved their homes, gave them new hope. And I am proud my vote and influence was able to help.

This nation cannot long endure—let us face the fact frankly, my friends—unless agriculture is placed on an economic parity with industry. No one dislikes control of production more than I; no one is more of a believer in the economy of abundance as opposed to the economy of scarcity than I. But at the same time I must warn you that if industry, thru the protective tariff; if utilities thru rate regulations; if the railroads thru the transportation act; if finance thru our banking and monetary laws, are given certain economic advantages, then the farmer is entitled uto similar prot ction on what he has to sell—protection equivalent to, tho not necessarily the same as the protection given others on what the farmer has to pay.

That, I claim is true Americanism. It is best defense we have, in the long run, against all other isms in these United States.

The above is frob Senator Capper's talk to Home Folks over the radio September 2nd.

William Jackson prominent Colored farmer from Mississippi while in attendance upon farmer's meeting at Memphis, Tenn., August 12th said: "AAA must BBBB, or farmers are going to raise something beside cotton next year".

VOTE MORTGAGE RESPITE

A new Frazier-Lemke mortgage moratorium act, rewritten to pass the constitutionally test, it is believed, passed the senate last Monday. It provides a three-year moratorium, for farmers whose mortgages have been foreclosed, thru taking special bankruptcy enabling them to stay on their farms three years, paying a reasonable rental fixed by federal district course. The change from the previous act which was declared unconstitutional is a provision by which the court may sell a farm at auction in the three-year period on demand of the mortgage holder. The bill was passed without roll call, senators of both parties supporting it. Both Kansas senators, Capper and McGill, voted for it. Senator Borah led the fight for its passage. Whether the bill will reach the house for a vote this session depends upon the administration. It was not on the list of 11 "must" measures approved at the recent White House conference.

This bill after passing both houses has been signed by the President of the United States and is now a law, and will be of considerable aid to the farmers who are being threatened with foreclosure.

For further information, write the head offices of the N. F. C. F. in Chicago.

FARM CREDIT ADMINISTRATION OF LOUISVILLE

Louisville, Ky.,

Office of Information Agent

Louisville, Ky., Sept.—F. L. Kerr, Federal land bank employee since 1931 and for the past year and one-half Assistant to the President, has been elected Vice President of the Production Credit Corporation of Louisville and will assume the duties of that office as of Sept. 1, Walter F. Gahm, President, announced here today, (Aug. 31).

Mr. Kerr is a former Tennesseean, reared on a farm near Kenton, and has had 15 years experience in operating farms and in cooperative farm management work. He is a veteran of the World War with 16 months active service. For a number of years he was superintendent of the Union City, Tenn., Training School and other schools, and for a time was engaged in commercial banking. Prior to his connection with the Federal Land Bank of Louisville he was Secretary-Treasurer of the Kenton National Farm Loan Association for two years.

"As Vice President of the Production Credit Corporation of Louisville Mr. Kerr will be in charge of credits and collections, and will supervise the activities of the 44 Production Credit Associations of Ohio, Indiana, Kentucky and Tennessee," stated President Gahm. "These organizations are cooperative credit associations which make short-term loans to their members for all farm operating purposes, as provided in the plan of the Farm Credit Administration. Under the law corporation exercises general supervision over their work. Up to the close of August the association this year has made over 14,000 loans for sums aggregating upward of $5,000,000."

MISSISSIPPI MEN FIGHT APPEAL TO SUPREME COURT

Jackson, Miss., Sept. 26, (ANP)—The State of Mississippi, through Assistant Attorney General W. D. Conn, Jr., Thursday filed a petition before the United States Supreme Court opposing a review before that court of the tral and sentence of 3 Negroes sentenced to die for the murder of a white banker.

The defendants, Ed Brown, Henry Shields and Yank Ellington, were convicted and sentenced to death for the murder of the white man and the State Supreme court affirmed the sentence of the lower court. Counsel for the defense filed before the Supreme court a petition for a writ of certiorari asking the U. S. Supreme court to review the case on the ground that the defendants were denied their constitutional rights of trial by "due process of law."

In opposing the issuance of a writ of certiorari Attorney Conn, contends that the defendants were not denied "due process" and further that the confessions obtained were not secured under duress as claimed by the counsel for the defense.

COLORADO GOVERNOR SENDS COLORED WOMAN TO MEETING

Mrs. D. A. Briggs to Represent Her State at Big Emancipation Celebration

Denver, Colorado, Sept. 24—Mrs. D. A. Briggs, social, civic and welfare worker of Denver was named last week by Governor Ed. C. Johnson to represent the state at a meeting in Philadelphia, called by Major R. R. Wright for the commemoration of the 72nd Anniversary of the issuance of the Emancipation Proclamation. Major Wright's meeting will have in attendance distinguished representatives from all parts of the country when it convenes in the Quaker City on next Thursday, September 26. An unusual program has been planned for the occasion with prominent speakers from the staff of government officers, leading churchmen and professional men on the program.

Mrs. Briggs is one of the best known women of the state. She has been prominent in the work of the YWCA, of the Scott Methodist Episcopal Church of which she is a member, has served as president of the Taka Art and the Coterie Clubs, as Grand Lecturer of the Order of Eastern Star of which she is also Past Grand Matron, and in 1933 was the Colorado delegate to the National Association of Colored Women held in Chicago. Mrs. Briggs left the city last Sunday, going direct to Philadelphia for the conference.

LEADING CITIZEN OF DENVER HEADS Y. M. C. A. CAMPAIGN

Denver, Colo., Sept. 24—The Director of the annual Y Membership Campaign this year will be Lieut. Earl W. Mann, one of the most influential citizens of the state, and a trusted employe of the Denver Water Company in the capacity of clerk The campaign organization this year is regarded by the officials of the Branch as one of the most effective of the many such efforts and the goal has been set at five hundred men and boys.

Lieut. Mann has been a resident of Denver for more than twenty years and is a native of the state of Iowa. His father, the late Mr. Washington Mann was the brother of the mother of Roland Hayes, tenor. Lieut. Mann acquired a technical education in electrical work and stationary engineering and was one of the first men to attend the Officers Training Camp at Fort Des Moines where he received his commission. He went overseas with Headquarters Company "C" of the famous 365th Infantry, and was gassed in a fierce combat with the enemy during an engagement late in 1918. He returned as a "casual" and was recommended for a captaincy at the time the Armistice was signed. Lieut. Mann is a frequent contributor to the local and national press, and served as the first U. S. Deputy Marshal in 1926 under the local Federal District Court until forced to resign from illness. The dates of the Y Campaign which he will direct have been set for Sept. 30—October 18.

Mr. Mann's wife is the charming Grace Wills, daughter of the well-known St. Paul, Minn. mortician She is the niece of J. Walter Wills of Cleveland, Ohio.

NOTED WOMAN, FORMER WIFE OF PAUL L. DUNBAR

Ranked High as Lecturer, Teacher and Author Of Several Splendid Books

Philadelphia, Pa., Sept. 26—(ANP) Mrs. Alice Ruth Dunbar-Nelson, noted writer, lecturer and teacher, succumbed to a heart attack, with which she was stricken several days ago, at the University of Pennsylvania hospital Thursday.

The former wife of the poet, Paul Laurence Dunbar, Mrs. Nelson ranked as one of the most prominent women nationally as well as in this section. As a teacher she spent fifteen years at the Howard high school of Wilmington, Del., as a writer she was the author of "Goodness of St. Rocque," "Masterpiece of Eloquence" and numerous articles, serving as staff correspondent of the Associated Negro Press, and as a lecturer she had traveled extensively delivering lectures at conventions, schools and colleges and before civic organizations.

Mrs. Nelson was born in New Orleans, La., July 19, 1875 and was educated in the city schools and at Straight University. Following her graduation from Straight University she entered the University of Pennsylvania and also studied at Cornell and the School of Industrial Art, Philadelphia. In 1898 she was married to Paul Laurence Dunbar, from whom she was divorced in 1906.

Her second marriage occurred April 20, 1916 when she became the wife of Robert J. Nelson, prominent fraternal and political leader and recently a member of the Pennsylvania Athletic Commission, who was at her bedside when she died. She is survived, in addition to her husband, by Mrs. Mary Young, a sister and a niece Pauline Alice Young, of Wilmington, Del., and a nephew, Laurence T. Young of Chicago.

INFORMATION PRIMER

Revised August 9, 1935

National Youth Administration
Washington Auditorium

Washington, D. C.

Its Orgin and Authority

The National Youth Administratoin was established by President Roosevelt on June 26, 1935. "I have determined," declared the President upon establishing this administration, "that we shall do something for the Nation's unemployed youth because we can ill afford to lose the skill and energy of these young men and women."

The executive order of the President established the National Youth Administration as a division of the Works Progress Administration through the authority of the Emergency Relief Appropriation Act of 1935. Fifty million dollars of Works Progress Administration funds have been earmarked for the NYA program.

Objectives

The major objectives of the National Youth Administration are:

1. To provide part-time employment for youths of certified relief families at work-relief projects suited to their abilities and needs.
2. To extend part-time employment to needy college students and small cash assistance to high school students in relief families.
3. To offer vocational guidance, training and placement services to youths.
4. To encourage the extension of constructive educational and job-qualifying leisure-time activities.

National ADMINISTRATORS

Miss Josephine Roche, Assistant Secretary of the Treasury, is chairman of the Executive Committee of the NYA. The members of the Executive Committee are: Arthur J. Altmeyer, Second Assistant Secretary of Labor; John Studebaker, Commissioner, Office of Education; M. L. Wilson, Assistant Secretary of Agriculture; Lee Pressman, General Counsel, Works Progress Administration; Chester H. McCall, Assistant to the Secretary of Commerce.

Charles H. Taussig is Chairman of the National Advisory Committee.

Aubrey Williams, Assistant Administrator of the Federal Emergency Relief Administration, is Executive Director of the NYA John Corson is Assistant Director.

The Washington headquarters will be a small coordinating nucleus, and the regular branches of the FERA and the WPA will be utilized to the fullest possible extent.

State and Local

State Youth Administrations are being established in the several states. The activities of the state organization are to be administered by a State Director, aided by a State Advisory Committee composed of representatives of labor, business, agriculture, education, youth and public agencies. Administrative or advisory committees may be set up in cities and counties.

Allocation of Funds

Approval of work-relief projects is up to the State Youth Administration Director and the State Works Progress Director; final clearance will be made available by Washington officials. High school aid funds will be granted through relief authorities in cooperation with school principals and superintendents.

Scope of Program

1. Work Relief

Work relief employment especially adapted to young people will be provided for young men and women between the ages of sixteen and twenty-five in relief families. The wages to be paid will be at regular work relief rates, but the hours of work will be limited. Preference will be given projects favored by the young themselves, particularly such projects as recreation and social centers for young people. These projects are to be constructed principally by youth labor under the guidance of skilled adult workers. It is planned to employ competent youth in connection with census to be taken throughout the United States.

2. Student Aid

A part-time student employment program will enable needy youths to enter or remain in college. Youths financially unable to go to college without this assistance will be given part-time work relief jobs which will enable them to earn on an average of $15 per month while attending school.

A selected group of several thousand college graduates who are unable to find any work or continue post-graduate studies without some earnings will be given part-time employment on a work-relief basis.

Cash assistance not exceeding $6 per month will be extended to a limited number of youngsters in relief families who are unable to attend high school for want of money for carfare, lunch and other small but necessary incidentals.

3. Vocational Guidance and Job Training

Counselling, guidance, adjustment and job placement services are to be developed in cooperation with the United States Reemployment Service and its two thousand offices and with other public and private agencies. Placement of youths on work relief projects will be made through the Reemployment Service Offices.

Efforts will be made to coordinate and cooperate with the college and university employment agencies to find jobs for recent college graduates.

Provisions for job training will be developed by the State Youth Administrators through the utilization of available school shop facilities and private factories for trade training classes. These classes will be taught in late afternoons or evenings by unemployed but qualified persons on a work relief basis.

Federal Committee on Apprentice Training and its affiliated State Committees will continue activities under the National Youth Administration.

4 Leisure Time Activities

To meet the need of young people for increased leisure time activities, the NYA and its State Youth Administrations will encourage the extension of present educational and recreational facilities. An effort will be made to reach the groups most in need of such facilities through the promotion of leisure time activities in camps, schools, community centers and forums.

For Further Information Persons desiring further information as to eligibility requirements and local Youth Administration activities should communicate with the State Youth Division. (Watch the newspapers for news regarding the establishment of these Divisions.) High school and college aid information may be obtained through the head of the institution to be attended.

THE WORK PROGRAM

National Youth Administration

NYA announces part-time employment program for graduate students.

Some 6,250 needy graduate students are to be given part-time employment which will enable them to continue their studies, it was announced today by Aubrey Williams, Executive Director of the National Youth Administration. This aid, which will be available to graduate students pursuing study toward non-professional degree, is in addition to aid available for college students under regulations previously announced.

Eligibility of graduate students for such employment, according to a letter sent today by Mr. Williams to the State Youth Administration Directors, will be based on the necessity for aid, and on the ability to do high grade advanced work.

All institutions of college or university character which award non-professional master's or doctor's degrees and which are of a non-profit making character are eligible for allotments of NYA funds for the benefit of their graduate students.

All students, benefiting by the program are to be employed on socially desirable activities and research on part-time basis under the supervision of the cooperating institutions of higher education. Such work will take advantage of their special training and abilities. No university may, however, employ graduate students under this program to displace any employees who were formerly on the payroll of the institution or to-fill any position which was formerly filled by a paid employee. Nor may NYA funds be used to provide regular classroom instruction or to replace funds heretofore available for student aid.

The new allotment makes provision for graduate students who have not completed a full year of graduate study to earn an average of $25 per month (or a maximum of $30 to any student). Students who have already completed one year of graduate study may earn an average of $30 per month (or a maximum of $40 to any such student).

The number of non-professional master's and doctor's degree conferred by a university between July 1, 1934 and June 30, 1935 will determine the allotment of funds for the aid of its graduate students. Such allotments will provide assistance to a number of students equivalent to about twenty percent of the total number of non-professional master's degree conferred during the academic year 1934-1935 by each university and to about seventy-five percent of the total number of non-professional doctor's degrees conferred during the same period.

A special additional allotment is to be made for part-time employment of Negro students who have already completed one year of graduate study. The National Youth Administration is reserving at its Washington headquarters this special allotment in view of the present limited development of graduate work facilities for Negro students in certain areas.

AAA POTATO PLAN NEAR COMPLEION

The Adjustment Administration recently announced that work on national and state AAA potato allotments for 1936 is preceeding rapidly with the expectation that they will be ready for presentation to growers on or before November 1.

A. E. Mercher, a specialist in fruit and vegetable marketing for a number of years, has been appointed chief of the potato section in Tennessee, which will be a unit of the division of tobacco, peanuts, rice and sugar headed by J. B. Hutson.

Allotments and other problems involved in the potato control act will be discussed thoroughly with growers before a decision is reached. "As a matter of fact, all problems involved will be threshed out with growers and we will depend upon them for guidance and advice as to the questions of enforcement," Mr. Mercer said.

The act is intended to result in the normal production of potatoes and to prevent over-production, officials said. Operation of the act is intended to bring prices to a level such as will eliminate the distressingly low prices received by growers the past season, but not to lift consumer prices above moderate levels.

"Reports to the effect that a tax of three-quarters of a cent a pound is to be paid on all potatoes are entirely erroneous," Mr. Mercher said.

"The act exempts from any tax a quantity of potatoes deemed sufficient to meet consumptive demands at prices on a parity with prices the potato grower must pay for the things he buys."

PEANUT GROWERS SEEK AID

Appeal to AAA to Stabilize Prices to Protect Produeers

An advisory committee of peanut growers has recommended to the Agricultural Adjustment Administration a plan designed to stabilize prices of the 1935 peanut crop through an arrangement for diverting to oil any peanuts which would not be absorbed in the regular channels of trade return to growers says a bulletin from the Department of Agriculture.

Under the plan, millers who entered into agreements with the AAA would receive payment on peanuts used for the manufacture of peanut oil. These payments would be at such rates as would tend to make up the difference between the value of the peanut for oil and the specified prices for peanuts, which it is desired to establish and maintain. The payments would be financed from funds available from processing taxes on this commodity.

KICK BY MULE FATAL

Boy, 19, Suecumbs to Peritonitis, Which Followed Injury

Walter Gruse, 19 years old, died last night at Missouri Baptist hospital as a result of abdominal injuries suffered Aug. 21, when he was kicked by a mule on his father's farm near Union, Mo.
Peritonitis developed.

GOVERNMENT PLANNING AID FOR AGRICULTURAL STUDENTS

Plans for making loans to finance agricultural students in group work are now being considered by the farm administration.

It is said the plans would make it possible for organized groups of farm boys to grow crops or raise live-stock under the direction of governmental officials of other responsible leaders.

The funds to be loaned through the Production Credit associations operating in the section in which the project is located. The leader of the group will borrow the money as trustee for the boys and note to be signed by the individual's parents guardian or a responsible adult.

This is another wonderful opportunity for our colored boys.

Corn Loan To Be Announced Soon

Farm administration officials are about to announce how much to loan on farm stored corn this fall as the crop reporting Board indicated the crop probably would be near the average for the 1928-1932 period. Some officials said a loan of around 45 cents per bushel was likely, while others made estimates ranging from 40 and up to 50 cents.

Hon. Charles E. Hall Chief Statistician Bureau of Census Department of Commerce has given out the following interesting information showing.

DAHLIA SUGAR TO PROVE PROFITABLE

Product Produced Twice As Sweet As Ordinary Market Variety

San Francisco — (AP)— Fields aflame with brilliant dahlias may be the source of a sizable portion of America's future commercial sugar supply, the American Chemical Society in convention here was informed Tuesday.

A method of producing for market sugar twice as sweet as that now commonly used has been developed by Dr. Wray M. Rie Ger and Prof. Leroy W. Weatherby and research associates at the University of Southern California.

Commercial production has become a practical possibility, the scientists saw, as the result of the working out of a means of manufacturing on basis comparable with that of beet sugar.

Prof. Weatherby pointed out that due to the difference in growing seasons, dahlia sugar could be manufactured in cane or beet sugar plants during ordinarily ideal seasons.

He said economic possibilities of dahlia sugar are enhanced by its dietary properties. Those on reducing diets, the university experimenters declared, would find in it sweetness with less calories. There is the further favorable factor in the relief of most diabetic patients who cannot utilize common sugar they can retain sugar or fruits such as dahlia sugar.

Another factor in diet was reported by Prof. C. A. Elevhjem, of the University of Wisconsin, who said infants should be fed a little copper daily in addition to iron to insure good health.

In growing infants iron alone is not sufficient, Elvehjem said, and unless copper is included the new cell formation necessary to overcome anemia cannot be produced. He said another metal, manganese, was also necessary for the properly nourished infant.

Calavos, California's salad fruit, were described as a cure for anemia in a paper presented by Prof. Leroy S. Weatherby and Miss T. Cooney of the Univeristy of Southern California. The medical value of the calavo was attributed to its iron and copper content and to organic radicals which from the framework of hemoglobin, occurring in the coloring matter of the plant.

NEW RULING ON FARM LOANS

Under the executive order by President Roosevelt Dr. Rex Tugwell Director Rural Resettlement Administration is in position to make loans to larger groups of the farm population that were hitherto eligible to borrow from the agency.

This new order set up the machinery for financing the purchase of farm lands and equipment by farmers, farm tenants, share croppers or farm laborers, and for any other purposes necessary in the administration of approved projects involving rural rehabilitation and relief in stricken areas.

Dr. Tugwell has the power to fix the rate of interest on these loans, but they may not be more than 5 nor less than three percent. These loans are to run from one to forty years.

Negro farmers interested should get busy.

FARM LANDS OWNED BY TILLER, U. S. PLAN

Resettlement Aid Says This Would Cure Unrest

Regional Meet Ends

Tugwell Program for Southland Explained to Rural Project Heads In Dixie States at Session

Place the "landless horde" of southern tenant farmers on small self-sustaining farms, and lynching high murder rates and racial antagonism will decline, in the opinion of Dr. Will Alexander, assistant administrator of the new Federal Resettlement Administration.

"The land banks and insurance companies are now the largest farm holders in the south—the people have been losing the land, he declared yesterday.

"You can't build a great civilization with absentee farm ownership. it just can't be done."

Explains Plan to South

The leading figure at the three-day regional resettlement conference, which ended last night at the Peabody. Dr. Alexander was explaining the meaning of the administration's program to the south. Dr. Alexander is assistant to Dr. Rexford G. Tugwell, head of the administration.

The conference was held for the purpose of organizing the working forces in 14 southern states in the program of resettling farmers who are on relief.

More than 1,000,000 farm families in the nation now are on relief with the southern states bearing a relief load much larger than other sections of the country, Dr. Alexander said.

"Fifty per cent of all southern farmers are tenants and the income of the tenants is the lowest of an producing group in the country."

One Crop System Hit

Poor land, the one-crop system unreasonable credit facilities and lack of education and guidance in farm management are some of the important factors underlying the poverty of the tenant farmers, Dr. Alexander continued.

"What we need is to turn the landless hordes into land-owning farmers. We are not going on a wholesale land-buying scheme. We have lists of all farm families on relief. We are proceeding slowly, carefully selecting those families with the initiative to make good in new localities.

"Some we may help with leases for a few years. Then we will watch and see which can be helped to buy small pieces of land."

Dr. Alexander said that the Jones-Bankhead small farm ownership bill, which has passed the Senate and is now before a House committee, was designed to "slowly take the program on through a long number of years."

BROWN ROT CAN BE ELIMINATED

Brown rot, the terror of peach growers in wet weather, can be eliminated altogether, without question, in the opinion of Ben E. Niles, secretary of the Kentucky State Horticultural Society, and W. W. Magill, horticulturist at the Kentucky Agricultural Experiment Station. Spraying will not turn the trick, but dusting will, they say. Dusting with sulphur, with perhaps the addition of a little lime, will prevent the dreaded destroyer of this fruit, it is said, if the dusting are applied after each rain.

Secretary Niles cites instances of large growers saving their entire crop this year when brown rot was unusually prevalent. One Trimble County grower marketed 10,000 bushels of peaches without losing a single one because he faithfully applied surplur dust after each downpour. Rains wash off previous dusting and in wet weather the parasitic fungi which cause the rot are very active.

Dusting apparatus is much more efficient than spraying machines for applying anti-rot agents because dust covers so much more territory. A dusting machine can cover twenty acres or more in a day. The cost of these machines, however, prevents the small growers from owning them. This leads to complications when growers ship their fruit cooperatively. Some fruit has been dusted and is brown-rot proof. Other fruit may look good when packed, but may rot the next day.

Where a number of small growers are members of a shipping association, it would appear to be good policy to purchase dusting machines cooperatively and require that peaches be dusted after each rain before they are packed and shipped.

PACKERS DOING WELL AGAIN

The four large meat packing concern have not fared so badly the last two years as shown by the record of their net profits listed below. A deficit on a whole year's business ocurred twice in 1932 as indicated by (d) below. The figures given for five years show net profits after making deductions for depreciation, interest, taxes and other charges..

1929—Armour, $9.810,518; Swift, $13,076,816; Wilson, $2,304,592; Cudahy, $2,753,851.

1930—Armour, $4,741,027; Swift, $12,491,189; Wilson, $2,542,656; Cudahy, $3,170,318.

1932—Armour, (d) $3,857,565; Swift (d) $5,337,789; Wilson, $51,-336; Cudahy, $985,985.

1933—Armour, $2,849, 661; Swift, $10,499,582; Wilson, $3,055,924; Cudahy $1,813,766.

1934 Admour, $10,596,396; Swift, $11,432,492; Wilson $38,40923; Cudahy $1,968,262.

From the above figures it seems that packers are prospering under the processing tax they are forced to pay on the slaughter of hogs, despite the fact they are kicking with both feet. Corn-hog farmers are happy.

IS IT LEAN MEAT YOU WANT?

The Amount of Lean Meat in Beef Cuts Does not Determine Their Price per pound.

Suppose you have 25 cents to spend for beef and want to get the most lean meat you can for this money. Which cut should you buy?

All beef cuts include some portion of waste, some amount of fat. How much of each depends, of course, on the cut. Strip them both from whatever cut and you have left lean meat with approximately the same food value. Fat makes its separate contribution to food value, to tenderness, and flavor . The more lean meat is streaked with fat, the more tender it is. Toning up the appetizing quality of lean meat from less tender cuts is a trick of cooking.

What you lose in tenderness by buying cheaper cuts you frequently gain in quantity of lean meat. Top cut in price, porterhouse, has much less lean meat per pound than have some of the cheaper pieces. You may pay—as city consumers did early in August—3 1-2 cents less for a pound of round steak than you pay for a round of sirloin but actually you are getting lean meat in the round steak from for 12 cents less a pound than in the sirloin steak from. Fore shank will cost about 5 cents more a pound than hind shank, but it usually has about a third more lean meat than hind shanks.

Below we list the approximate proportions of lean meat you ordinarily get from the better-known cuts if prepared according to the Chicago method of cutting. If economy buying is important to you, do a little figuring next time you go to market. List the prices charged. Balance against them the amount of lean meat you will likely get from each cut. If round steak (full cut), for instance, is selling at 35 cents a pound, and 81 percent of a good grade steer is lean, you are really paying for the lean meat in that steak at the rate of 45 cents a pound.

Five Cut of beef are included in the price reports of the Bureau of Labor Statistics. From bottom to top prices, ordinarily they line up like this: Plate chuck, rib roast, round steak, sirloin. Average prices (for 51 cities) in July were: Plate, 16.2 cents a pound; chuck 23.5 cents; rib roast, 30.1 cents; round steak, 36.5 cents; sirloin, 40. 2 cents. But if you apply the proportions of lean meat listed below to these average prics, you will find the cost of the lean meat in each of these cuts is (in round numbers): Plate, 28 cents; chuck, 33 cents; round steak, 45 cents; rib roast, 47 cents; sirloin steak 57 cents.

Top cost of lean meat on the basis of these prices, then, is sirlion. Bottom cost is plate.

No fixed rule on the specific cut you should buy in order to get the greatest amount of lean meat for your money works everywhere, since prices vary. Nevertheless when we compared the cost of lean meat for the five cuts in Boston, New York, Detroit, Jacksonville, Chicago, St. Louis, and Los Angeles, on the basis of July prices, we found the same meats headed and ended the list. Lean meant in sirloin from was the most expensive in all these seven cities. Plate, also, was the cheapest form in which to buy lean beef in all seven cities.

Lean Meat

usually comes in these proportions in each pound of a particular retail cut, if the beef is good grade steer and is cut according to the Chicago method:

	Percent
Flank steak	87
Round steak (full cut)	81
Sirloin steak	70
Chuck roast	70
Rib roast	64
Porterhouse	60
Plate	58
Rump, with bone	53
Fore shank	47
Hind shank	31

Customers' Guide.

Vegetables (Fresh)

Potatoes, onions, and cabbage all dropped during the latter half of July and at the end of the month were all below prices a year earlier. Cabbage was considered very cheap a year ago at 3:5 cents a pound. This year the average price is reported at only 2:6 cents a pound or about 26 percent less than last year's low price. At this figure there can be no doubt that cabbage is a very economical food. This situation is rather typical of fruit and vegetable crops at the present time. Most fruits and vegetables are selling at very reasonable prices.

Price of potatoes on wholesale markets have been dropping for several weeks. The August crop report indicates that prospects for the potato crop have improved during July and total production is now forecast at 377 million bushels as compared with 385 million bushels in 1934 and an average of 363 million bushels from 1928 to 1932. There has been a good deal of blight damage-ing Northeastern State, but the crop on the whole appears to be turning out well. The usual seasonal movement of prices is downward from now until the harvesting of the crop gets well under way in the fall. Average price received by farmers for potatoes in July was 52 cents per bushel. Last year this time the price was 66.9 cents per bushel. Parity price as defined in the new Act is about 90 cents per bushel.

The three most important potato States in the northeast, Maine, New York, and Pennsylvania, are expected to have a crop of about 25 percent less than that of last year. This is offset by sharp gains in the Western States and some of the Central States.

Reports indicate a drop in the acerage of cabbage in the late States, amounting to about 5 percent in the domestic type and about 6 percent in the Danish type which is commonly used for winter storage. However, the yield per acre of cabbag is likly o be higher than a year ago in most States.

August 1 forecast of the onion crop is about 11 million sacks compared with about 9 milion sacks last year and 5-year average production of about 10 million sacks.

(Fresh)

Lettuce and Carrots fell off in price during the latter half of July while spinach prices increased rather substantially. Prices of all three of these vegetables ended this month below last July's levels. This is true of a number of other fresh vegetables.

Reports from California indicate that there was a steady improvement in the lettuce crop on the central coast during July. The yield per acre has also been improving in that section. Condition of the late lettuce crop is reported to be better than it was a year ago.

Little information about spinach about supplies is available at this time of the year because most markets get their crop from local market gardeners who are covered by Federal crop statistics. Spinach prices have continued to be lower than last year and probable supplies are fairly plentiful in most markets.

Acreage of carrots in the late States is estimated to be slightly below that of 1934. Decreases are reported in Michigan, New York, and Washington and increases in Colorado, Illinois, Indiana., Minnesota, Ohio, and Pennsylvania. A preliminary estimate of the production for the fall, early, second early, and intermediate groups of States indicates a crop of carrots of about 3 percent above last year's crop.

Many of the vegetable crops are showing increases in production. Snap beans and cantaloupes have been among the most spectacular. The August forecast indicates a crop of snap beans 47 percent above that of last year and a crop of canteloupes in the late group of States 86 percent above that of a year ago.

Consumer's Guide.

BREAD

Bread prices stayed steady during the last 2 weeks in July except for an increase in rye bread from 8.0 cents to 9 cents a pound. White bread continues to sell for an average of 8.3 cents which is exactly equal to the average price on July 31, 1934. Prices of rye and whole wheat bread are both slightly above the prices of a year ago.

As usual there is a great deal of variation in bread prices reported in the different cities. It is also undoubtedly true that there is a great deal of variation in prices of different grades of bread in each city. A considerable part of such variation is due to differences in bread formulas, and in costs of such extra things as wrapping and slicing. The old-fashioned unsliced bread seems to be rapidly passing out of the picture in many cities, although we find that it is usually possible to buy bread unsliced if the consumer insists on doing so. Many consumers believe that bread keeps better when it is sliced at home and like to slice it thinner than it is commonly sliced in the bakery.

A rather sharp increase in the wholesale price of flour occurred during the last 2 weeks in July. This was partly a reflection of higher wheat prices, although it appears that flour prices increased considerably more than did the wholesale price of wheat during this period. If wholesale flour prices are maintained at around the levels of July 30, bakers may either have to work on a somewhat narrower margin than they have during the past year, or bread prices may increase again moderate. The average price of white bread has been 8.3 cents a pound almost continuously since November 20. Last fall, from August 28 to November 6, the average price was quoted at 8.1 cents.

—Consumer's Guide.

ETHIOPIANS EAT RAW MEAT FOR COURAGE

Red pepper sauce, so hot that it makes Mexican chile con carne taste like a soothing syrup, is being made by Abyssinian housewives.

They are getting ready for war—knowing that if there is a war—the women will have to help feed their men.

And if an hors d' oeuvre of raw meat soaked in this red pepper sauce doesn't put pep into the army—nothing will.

It is made of raw red pepper pods, of powdered red pepper, of garlic, ginger and onions; of black pepper, salt and cabbage seed. It is all pounded and then mixed with vinegar and sealed up in jars to ferment.

By the time war is declared the sauce will be ready.

Tej Native Brew

Favorite army rations of the Abyssinians are thin caked bread made from a reddish grain called teff; raw meat with the aforementioned red pepped sauce; hard boiled eggs and lots of tej. Tej is a home brew, made with water and honey and geichi leaves.

I was told in Ethiopia a tale about the eating of raw meat being a sort of traditional ceremony at certain feasts and celebrations held during the year.

It seems that many years ago the country was in a bad way during an invasion of the Mohammedans. The native soldiers had to hide for many days in the forests. They could make no fires. So they began eating their meat, raw. As a result they became so strong and courageous that they rushed out of the forest, surprised and conquered their enemy. Therefore at big feasts the raw meat is eaten in memory of this victory.

HOG CHOLERA FIGURES LOWEST IN 14 YEARS

Outbreak of hog cholera in Maryland during the first six months of 1935 was the lowest recorded in the past 14 years. it has been announced by Dr. Mark Welsh, State veterinarian. Dr. Welsh said the disease was found on only 48 farms, 15 where hogs were raised as a business, and the rest on farms where hogs were kept in pens or in small, dry lots.

He pointed out that it is significant that most of the cases occurred where hogs are raised chiefly for home consumption and where they are fed large quantities of garbage.

A NEW SONG BOOK

IS JUST APPEARING FROM THE PRESS

"GOLDEN GEMS"—Get a copy, price 25 cents; then give us the benefit of your constructive criticism. We want to know how you like this new song book. Send this back with 25 cents for a single copy or $3.00 by the dozen—We will pay the postage.

"GOLDEN GEMS" is a book that is all that its name implies. It is pure gold in spirituality, originality and in religious fervor.

Insist up your friends using "GOLDEN GEMS". Recommend that your choir use "GOLDEN GEMS". Put "GOLDEN GEMS" in your Sunday School; use "GOLDEN GEMS" in your B. Y. P. U.; put a copy of "GOLDEN GEMS" in your home. If "GOLDEN GEMS" is introduced in your state it will prove that you are 100 per cent with Henry Allen Boyd in his earnest desire to give to the Baptists the best that money can buy, and when the best costs you no more, then get "GOLDEN GEMS".

Send this back to me, I want to know who is using and supporting "GOLDEN GEMS".

SEWING FUND GIVES WOMEN JOBS

Creation of a gigantic sewing circle to spread over 41 states to provide work relief jobs for 54,199 women at a cost of 20,218,000 dollars, has been approved by President Roosevelt.

Mrs. Ellen S. Woodward, director of PWA women's divis on, announced 150 million yards of cotton cloth will be purchased to provide a six months supply for sewing room projects. The garments made by the women will be distributed free to the destitute through public relief agencies Dresses, overalls, work shirts and children's wear will be included.

Women's activities will not be restricted to wielding the needle. The Federal allotment takes in a total of 613 projects, offering employment opportunities of a wide range to fit individual skill.

Some will be put to work in libraries, preparing catalogues and mending damaged volumes. Quallfied artists and musicians will be given painting and orchestral assignments. Several thousand women will get clerical jobs and take part in surveys and investigations. Others will work in canning factories, try to improve cooking, budgetry methods for relief families and assist in beautifying their communities through garden and landscaping work.

The program announced recently will cost not less than 400 dollars per woman employed.

J. P. Davis, President N. F. C. F., Inc., is now in Washington, D. C., conferring with officials relative to sewing clubs of units of the organization located throughout the country.

SOMETHING NEW IN SUGAR CANE

The Agricultural Department at Washington, D. C., announced recently of a new early variety of sugar cane known as CP 29-320 for commercial planting in Louisiana where experimental tests have been approved. Experiments show that this new variety is satisfactorily resistant to mosiac disease.

This new cane is a little earlier than the other varieties in maturity.

COLORED MAN SLAIN

Jim Lasic share cropper living near Fort Depos t, Alabama was slain about three weeks ago at a farm six miles east of the county seat during a disturbahce attributed to "communism".

The Sheriff and his deputies are searching for the Colored man who is supposed to have killed Lasic. Lots of communistic literature has been spread throughout that part of the state in the past several months. This propaganda is harmful to both white and colored and it should be stopped.

FARM NOTES

The U. S. Department of Agriculture recently announced that the cows of New York state give more milk than the cows from other states. On June the first of this year the record shows ponnds of milk per cow on one single day as follows:

Alabama,	9 lbs.
Arkansas	10 lbs.
Arizona	18 lbs.
Colorado	13 lbs.
Florida	7 lbs.
Georgia	8 lbs.
Iowa	18 lbs.
Indiana	18 lbs.
Missouri	14 lbs.
Mississippi	8 lbs.
North C	12 lbs.
S. C	10 lbs.
Virginia	14 lbs.
Texas	11 lbs.
Tenn.	12 lbs.
New York	21 lbs.

CANNERY OPENED IN SOUTHERN ILLINOIS

Tamms, Ill.

A large cannery to be operated exclusively by Colored was opened here Sept. 5th.

The plant has a capacity of several thousand cans per day and will pack tomatoes, corn, carrots, kraut and tomato juice.

Mr. York Parms one of the oldest residents of Southern Illinois and reputed to be among the leading farmers in the state has been selected as manager. He employs about 18 Race men and women. Mrs. Clayton is supervisor. Mr. Parms is an officer of the DuBois unit of the National Federation of Colored Farmers Inc. and was one of the leaders in the First movement to get Negro farmers organized in Alexander county.

The cannery is to run throughout the fall months giving steady employment to our people.

TREND OF THE MARKETS

Please remember that prices given here are Kansas City tops for best quality offered:

Steers, Fed..	$11.65	$10.50	$6.00
Hogs	12.00	10.50	7.10
Lambs	9.00	8.15	6.10
Hens, Heavy	.16	.13½	.12
Eggs, Firsts	.24	.22	.21
Butterfat	.19	20	.22
Wheat, Hard Winter	.107	101¼	106

Prairie	9.00	8.50	18.00

Under poser generated chiefly py the announcement of the minimum price for the Canadian farmer wheat has reached the highest price on the Chicago Board of Trade since the early part of last August in Minneapolis market Millers were active bidders for choice grades of spot wheat, paying a high as 1.33 per bushel and futures 1.33 per bu.

FRAZIER FARM BILL SIGNED

(Special to the M. Farmer)

Washington, D. C.,—J. P. Davis, President National Federation of Colored Farmers Incoporated wires the Modern Farmer that President Roosevelt has signed the Frazier-Lempke farm moratorium bill.

The measure, designed to reduce the farmers" overhead expenses, allow the property owners to turn over their assets to the courts, legally speaking, and then pay a reasonable rental" for three years. At the end of that time a new valuation would be placed on the property. The "reasonable rental" would be applied first to taxes. As passed by congress signed by the President of the United States, the bill freezes mortgage foreclosures and protects the agricultural producer for the coming three years. Mr. Davis says he will ndeavor to get literature fully explaining this new law for distribution to our race farmers, in order that they may fully understand same.

FARM FACTS

ALABAMA

Latest figures furnished thru Hon. Charles E. Hall Statistician Bureau of Census, Department of Commerce gives the following information:

Number Negro farmers in the state, 93,975.

Number landowners, 15,920

Total cotton acreage 1,312,963 bales of this amount Negro operators produced 423,198 bales or 32.2 percentage of the total production.

The average yield of sweet potatoes in the state will run over six and one-half million bushels.

The total number of farms operated by Negroes in Dallas County is given at 6,409 and of this number only 484 are owned by our racial group.

Monroe County has 2,091 farmers operated by Colored with 584 of the number owned or 27.9 percent of the total.

SOUTH CAROLINA

Williamsburg County has 3045 farms operated by Negroes and of this number 805 are owned which is 26.5 per cent of the total. Orangeburg County nas 4694 farms operated by Colored with 821 and landowners or 17.5 percent of the total.

MISSISSIPPI

Bolivar County has the largest Negro farm operators of any county in the state. Figures show there are 13 236 farm operated by our group but only 455 or the number as landowners of 3.4 percent Cooiah has 2,521 with 510 of the number owned or 20.2 percent of the total. Out of 11,644 farms operated by Negroes in Sunflower County only 194 are owned or 1.7 percent.

Ne ro farmers in Carroll county own a little over 12 percent of the farms operated by the race.

TEXAS

Harrison has 4949 farms operated by colored with 1443 as owners or 28.9 percent while Smith county has 3120 with 914 owners or 30.2 percent.

ARKANSAS

Columbia County 2,374 Negro farm operators with 587 owners or 24.7 percent. Hempstead 2,212 and 524 owners or 23.7 percent Pulaski 2040 operating farms or 21.2 percent.

Crittenden county has 7,003 farms operated by Negroes but only 248 owners or 3.5 percent.

RE-ELECT BURDEN MASONIC LEADER

Marion, Ind., Sept. 5—The 79th annual session of the Grand Lodge Free and accepted Masons, Prince Hall Affiliation of the Jnrisdiction of Indiana convened here, the guests of Wilson Lodge No. 12, on August 20, 21 and 22. The Hon. W. T. G. M., John W. Burden presided for the 14th consecutive time and was re-elected Most Worshipful Master.

Visiting delegates inspected the Masonic Home and Farm at Marion and were highly pleased with the condition of the home and farm.

After a successful and harmonious session, election of officers was held, which resulted as follows: Rt. G. M., John W. Burden, Marion, Ind.; Rt. W. Dept. G. M., Fred H. Evans, Terre Haute, Indiana; G. S. R. Waden, Edgar J Davis, East Chicago, Ind.; Grand Jr., Warden, Harry Hastey, Evansville, Ind.; Grand Treasurer, B. T. Shaw, Fort Wayne, Indiana; Grand Secretary, Attorney C. R. Richardson, Richmond, Ind.; Grand Trnstee, W. W. Waldron, Kokomo, Vaughn Casey, Marion and Duke Carter, Richmond. Rt. Rev. Barney Stone was elected Grand Chaplain for the 22nd consecutive year. The Grand Session will convene for its 80th Grand Session at Jeffersonville, Ind.

Brother E. J. Davis of East Chicago, organizer of the Juvenile Crder who held a Grand Session and participated in games.

PITTSBURG COURIER

This is a worthy institution. The officers are all men of sound judgment.

This farm should be taken over by Rural resettlement and a colony established for Negro farmers.

ALA. SHERIFF SHOOTS DOWN SHARECROPPER

Montgomery, Ala., Sept. 13—High Sheriff R. E. Woodruff, white carved another notch in his gunbutt when he shot down Willie Witcher, militant cotton striker, on the Bell Plantation, near Haynesville.

Woodruff has been accused of being the notorious leader of a gang of landlords and paid thugs who are trying to smash the cotton pickers' strike. The gang has already slain one striker, Jim Press Meriweather, and beaten six others.

Riding up to cabins in the dead of the night, the gangsters dragged the striker from his bed carried him a few miles away and beat him unconscious.

Strikers Stand Firm

Last Monday Woodruff was called to the Bell plantation where a strike was in progress. His coaxing and honeyed words to return to work fell on dead ears. The strikers reiterated the demand for $1.00 per hundred pounds of cotton picked.

Expressing the sentiment of the strikers, Witcher walked off stating that he was going home and would not return until the strike demand was met. The sheriff ordered him to halt.

When the laborer complied with the order, Woodruff drew his pistol and shot five times, hitting him in the thigh. A deputy then fired at Witcher as he fell to the ground.

"I'll kill you," swore Woodruff, slugging Witcher over the head as he lay writhing on the ground.

"You may kill me, but you can't scare me," Witcher defiantly retorted.

The mortally wounded farmhand was taken to the Haynesville jail.

INFORMATION FOR STUDENTS DESIRING TO MAKE APPLICATION FOR ASSISTANCE UNDER THE HIGH SCHOOL STUDENT AID PROGRAM OF THE NATIONAL YOUTH ADMINISTRATION

Students Who are Eligible to Participate

1. Students must be between the ages of 16 and 25.

2. They must be members of relief families and must be able to do high grade work in school.

3. They must be able to show that they have had to quit school for lack of such financial assistance in the past, or that they will be unable to attend this year without such assistance.

Institutions which are Eligible to Participate in this Program

1. All institutions of less than college grade, both public and private, are eligible to participate in the program provided they are non-profit making in character.

2. If you are not sure that the institution you wish to attend comes under this classification, consult your public school superintendent in the city, county or other school district in which you reside.

Type of Aid Available

1. The aid provided high school students is in the form of part-time, jobs, which enable students to earn on an average of $6 per month while attending school.

2. In the case of individual students who are especially well qualified, or for whom the assignment of work is impractical, aid may be granted for maintaining excellence in their school work. In such cases, the assistance granted shall be in the amount determined by the student's individual need, but in no case to exceed $6 per month.

How to Make Application

1. Make your application direct to the principal of the school you wish to attend.

Students Who are Eligible to Participate

1 The student must be able to do high-grade college work and must be financially unable to go to college without this assistance.

Institutions which are Eligible to Provide Part-Time Jobs

1. All institutions of collegiate grade, both public and private, are eligible to participate in the program provided they are non-profit making in character.

2. If you are not sure that the institution you wish to attend comes under this classification, consult your State Youth Director.

Type of Aid Available

1. The aid provided students is in the form of part-time jobs, which enable students to earn on an average of $15 per month while attending school.

2. There are no scholarships or loans to college students provided by the Youth Administration, as Congress has never authorized such an expenditure of funds.

How to Make Application

1. Make your application direct to the president of the institution you wish to attend, asking specifically for an assignment of one of the part time jobs being provided by the National Youth Administration. In order to secure one of these jobs it is not essential that you attend a college in the state in which you reside.

2. In the event that the college of your first choice is unable to assign you a job, because their quota is filled, you should consult your State Youth Director as he may be able to suggest other colleges which have not yet filled their quota.

FOOD REQUIREMENTS OF WASHINGTON NEGRO POPULATION

It is 800 miles from Georgia to the New York City Market. If 600 organized Georgia Negro farmers can ship and sell on the New York market it would seem that the 3,103 Negro farmers in Counties LESS than 75 miles rom Washington could create, through the organization of a Maryland—Virginia Farmer Market Association, a market for their food products among the 132,068 Negro residents of the District of Columbia.

Based on consumption per capita per annum of the total population of the United States, the Washington Negro population requires the following quantities of food stuffs in addition to other food products used by each person or family in varying quantities:

Eggs—2,641,360 Doz. or 118 car loads
Potatoes—19,810,200 Lbs. or 495 car loads.
Cabbage— 7,792 012 Lbs. or 354 car loads
Poultry— 1,981,020 Lbs.
Beef —6,603,400 Lbs
Pork— 8,980,624 Lbs.
Lard—1,822,530 Lbs.
Onions, turnips, etc.—2,245,156.
Snap beans —924,476
Spinach, kale, etc.— 666,340.
Milk —9,773,032 Gallons

The number of Negro farmers and the acerage under cultivation in both Maryland and Virginia would of course need to be increased to supply even the Washington Negro market, with no consideration given to the 142,106 Negroes in Baltimore and the 219,599 in Philadelphia, all three cities being easy to reach by rail, water, and public highways.

Negro farmers in South Carolina, Virginia, Georgia, Mississippi, Tennessee are getting ready to produce this food to supply our racial group another year. Group planting and co-operative shipping through units of the N. F. C. F. Inc. will make it possible

HOG SHORTAGE PREDICTED FOR REST OF YEAR.

Production Last Fall and This Spring Were Far Below Normal

New York, Aug. 25. — The price of hogs at Chicago, including the processing tax of $2.25, average $13.28 per 100 pounds in the first half of August. This was the highest price reached in the current upward movement and it exceeded the per-depression peak of $11.44 in March, 1929, according to the Alexander Hamilton Institute. As compared with the depression's low of $3.04 in December, 1932, the price during the first part of August was more than four times as high.

The Primary reason for the high price of hogs at the present time is the exceptionally small supply. Production has been sharply curtailed since the beginning of 1934. Part of this curtailment was made necessary by the short feed crops of 1933 and 1934, while part was due to the Government's restrictions on hog raising. Prior to the reduction in the output, the Government contributed to the present shortage by slaghtering 6,369,000 sows and pigs in the fall of 1933.

The hog shortage will continue during the remainder of 1935. This is indicated by the small pig crops of last fall and this spring upon which this year's total supply for consumption is dependent. Last fall's crop of 15,432.000 pigs was equal to only half the usual fall crop. This spring's output was 30,402,000 pigs as compared with the five year 1929-1933 average of 48,600,000. The total supply available for the current year thus amounted to 45,834,000 pigs as compared with the five year 1929-1933 average of 77,180,000 hogs slaughtered for consumption, a decrease of 40.6 per cent. Since half the current year's supply was slaughtered during the first six months, it is apparent that the hog shortage will remain as acute during the remainder of the year as it was in the first half.

FARM NOTES

Units in three communities in South Carolina met the first week in September and elected delegates to the national convention of N. F. C. F. Inc., which is to convene at Little Rock, Ark., the last four days in October.

On State Highway 66 about 8 miles out from Stevens Point, Wisconsin there is a sign reading "Let the dairy cow endorse your note. First National Bank."

Farmers in Williamsburg Clarendon and Berkeley counties are also busy handling their tobacco crop which is the best they have had in several years. Prices are holding up fairly well and everybody is happy..

Colored farmers living in the northern part of Alabama have called a meeting for the latter part of September. Prominent government officials have been invited to address them.

J. P. Davis, President N. F. C. F. has also been invited to speak.

Units of N. F. C. F. near Bassfield, Miss., who planted okra, tomatoes and beans under contract have gathered their crops and made deliveries to the cannery as per agreement. They secured good prices, and will plant larger acreage another year. Prof. V. W. Booth depnty for southern Mississippi, says conditions in his section are better than for several years past.

CHARLESTON, MO.

Prof. L. B. Boler made a stirring address to Race farmers at Sandusky settlement near Tamms, Illinois, on August 10th. Prof. Boler has made wonderful progress in land owning during the past three years. He has several fine tracts in southeast Missouri.

Mail coming into the main office of N. F. C. F. reflects that the members are active in cultivating certain of their crops with a view to producing some prize winning vegetables, for the big convention in Little Rock.

One railroad official has pledged to give two thousand dollars in cash to be given for prizes for various farm products.

Under date of August 2nd the AAA announced payments to cotton producers from sale of options placed in the cotton pool totalled nearly 66 million dollars through July, 1935. These options were given to producers as part payment on contracts in the 1932 adjustment program 575,312 producers took options on 2,447,474 bales at 6 cents per pound payments by states through July 21st were: Alabama, 5,302,525.00. Arkansas 6,733,118.00. Florida 98,978.00, Georgia 5,762,797.00, Kentucky 30,973.00. Louisiana 3,205,325.00 Mississippi 7,819,447.00, Tenn. 1,792,314. Texas 20,195,103.00.

ALABAMA LAD 'SCRATCHES' TO EARN LIVING

Chicken Raising Pays Way Through School And Helps Brother.

Farmers who are yelling for Government aid can take a lesson from this youngster.

He is Winfred Barton, a Cordova, Ala., boy who, with no previous experience on the farm, started from scratch with a hundred baby chicks and has not only paid his own way through high school, but has helped his brother. And all this during the worst depression in the world's history!

"In 1929,' Winfred writes Parade, "we moved from the mines to the farm. I had never been on a farm, before except for a short visit, and knew nothing at all about framing or poultry.

"In 1930 I joined the local 4-H Club and bought 100 Rhodes Island Red baby chicks for my club project. To brood them, I built a 300-chick-capacity brooder, brick furnace type, for a total cash outlay of 67 cents.

Makes Flock Pay Its Own Way.

"I raised 37 pullets and 35 fryers from the lot, sale of the fryer paying for my feed cost.

"During the summer I built a 100-hen-capacity laying house for $3.89.

"I have made my flock pay its own way and have increased its size only as I cleared the money to increase with. No outside capital has been put into the business since building the brooder.

"I now have 45 hens, 105 pullets, six roosters, a 300-egg incubator, and my two building all clear of any debt, and am planning to build two more houses and raise 600 fryers this fall.

"Now that I have put myself through high school with my poultry, I plan to go to college when I have increased the business sufficiently to care for my expenses.

"I owe my success entirely to 4-H Club work and our county farm agent, who first interested me in poultry. Before that I knew nothing about chickens and cared less."

THE MODERN FARMER

Vol. VIII. NASHVILLE, TENN., OCTOBER 15, 1935 No. 9.

VERSATILE COOK'S FINDINGS

Many New Ways to Serve Late Chicken Fryers

A few frying chickens are still coming on the market, but they are the stragglers. As October days become more crisp and cool and colorful, plump young roasting chickens take the place of fryers. Southern housewives liking chicken over all meats, should plan other ways to serve them.

Those who are especially fond of fried chicken need have no regrets over the passing of the real fryer season. The meaty little fellows which escaped an early fall visit to the fattening pens have added another pound or two. Those extra pounds, according to simple arithmetic and Nature's laws, make them roasting chickens. But they are still young and tender and delicate, and therefore they can still be fried with delectable results. All they need is a little more time to cook. Otherwise the frying is the same as for smaller birds.

Stuffing is so delicious that few people like to serve roasted chicken without it. For those who wish to dispense with the work of stuffing the chicken, the market man will cut up the bird just as he cuts a fryer or a stewing fowl. The cut-up roasting chicken may then be baked in a casserole or a skillet and served with gravy. The pieces are browned first on top of the range, then the pan is covered and set into a moderate oven (350 degrees F.) for an hour. Potatoes and apples may be baked at the same time, so that the oven carries a full load while it is operating. This kind of dinner also has the advantage of requiring almost no attention while it is cooking.

Another way to cook cut-up roasting chicken is to put a well seasoned stuffing in the bottom of a large casserole and place the pieces of browned chicken on top. Cover and bake at 350 degrees F. until the chicken is done, about an hour or an hour and a quarter.

TWO EMPLOYED AS EDUCATIONAL ADVISERS

Washington, D. C., Oct. 10 (ANP)—Two additions were made to the list of educational advisers in the CCC camps in the states of Pennsylvania and New Jersey last week when Joseph A. Bailey and Leon E. DeKalb were appointed by Robert Fechner, Director of Emergency Conservation Work.

Both of the new appointees are graduates of Lincoln University in Pennsylvania. Mr. Bailey has previously been engaged in teaching and Mr. DeKalb, who has also received his Master of Arts degree from Columbia served as a welfare worker in New York City and was connected with the Y.M.C.A.

Dairy Cows' Contribution Big Factor in Farm

GARDEN TOPICS DISCUSSED

By Floyd Bralliar In Nashville Banner

Boxwood has become exceedingly popular in most of our territory in the last few years. Perhaps at no time has there been such a demand for boxwood as at the present time and as it is very expensive it seems advisable to give culture directions for this plant.

Boxwood requires for its successful cultivation rich soil and an abundance of moisture, but resents standing water about its roots. This means that in any location where there is a sub-soil of tough hard clay, abundant provision for thorough drainage should be made before boxwood is set, for this plant is entirely too expensive to set where it cannot be expected to thrive. While boxwood prefers a loamy soil with an abundance of humus in it, it will grow in rather heavy soils if furnished with enough water and enough drainage, and it will also grow in light sandy soil provided it is fertilized heavily enough and is given sufficient water.

Without doubt, barnyard manure is the best fertilizer for boxwood. It is highly important to work plenty of thoroughly well decayed barnyard manure into the soil where boxwood is to be set, being sure that it is put deeply into the soil and that it is thoroughly mixed with the soil for three or four feet, for after the plants are set it is not advisable to dig too close to them and for this reason we will never have another good opportunity to fertilize the soil as it should be fertilized. Should the manure we are using show some indications of being fresh, we must not allow it to come in direct contact with the roots when the plants are set. The best way to use manure on old boxwood is to use it as a mulch under the branches. This is best put on in the autumn. It may also be spaded in the soil in a ring a foot or two beyond the outer branches of the plants. In many ways this is better than using it as a mulch.

Where stable manure is not available, a fertilizer may be made by mixing cottonseed meal, tankage, dried blood and ground bone, making about half cottonseed meal and the other parts about equally divided. However, care must be used to not apply this too freely.

If a boxwood seems to be pale in color and not growing well, it is often advantageous to water it thoroughly with a solution of nitrate of soda dissolved in water at the rate of an ounce to two gallons. Repeat this every four weeks until three applications have been made. Sulphate of ammonia will do instead

EXCEEDED ONLY BY COTTON, COTTONSEED AND TOBACCO IN TENNESSEE

(By H. Burton Wilkerson, Pres. Nashville Pure Milk Co.)

Although milk may never have been regarded as an important farm "crop" in the State of Tennessee, the dairy cow's contribution to the farmers' cash income in this State is exceeded only by cotton, cottonseed and tobacco. Last year, out of a total cash farm income of $109,615,000, cotton and cottonseed accounted for slightly over $34,000,000, tobacco nearly $19,000,000 and milk $9,528,000. Some 521,000 dairy cows obtained this nine and one-half million dollars' worth of cash income for the farmers of this State.

These same cows produced about 560 pounds of milk for every person in Tennessee last year. Comparing this figure with the 1934 average of 796 pounds of milk (eaten as milk, ice cream, butter, etc.) we note that Tennessee is not producing quite as much milk as is probably consumed by the residents of the State. Nevertheless, Tennessee has more than kept pace with the national growth of the dairy industry, and it seems likely that dairy farming will continue to become of greater importance in this state.

Since January, 1928, the last low point in milk cow numbers, the number of dairy cattle in this state has increased from 450,000 to 521,000 head, or over 15 per cent as compared with a national increase in dairy herds of about 13 1-2 per cent. According to the United States Department of Agriculture the average price received by the Tennessee dairy farmer per cwt. was $1.32 last year. This was an increase of nearly 13 per cent over 1933. This was the blended price, however, received by the producer for milk sold in the form of butterfat to creameries, milk sold to condensaries and cheese factories, milk the farmer himself sold to his neighbors in smaller towns and cities and the price he received from distributing companies for that part of his milk sold in fluid or bottled form.

Generally speaking, the farmer has to receive his lowest price for milk sold as butterfat to creameries. This price varies according to what the housewife pays for butter. He receives his highest net price for milk sold to distributing companies for resale in bottles. Naturally all reputable milk distributing

(Continued on Page 8)

QUICK MEAL MENUS

Milk Should be Used in Various Ways

It is a good idea to get some milk into the quick meal several times during the week.

If ice cream is served for dessert, some milk will be provided. Cottage or cream cheese used with salad or at the end of a meal will do its part. Cream soup which may be easily made by diluting certain canned soups with milk, will provide milk in a more liberal way. The preparation of a custard dessert the night before or in the morning before office hours is another suggestion. Rice steamed in milk provides a good hot dessert, especially if combined with crushed fruit or sprinkled with maple or brown sugar.

If one of the family needs to gain weight, hot cocoa as a beverage will aid, although, of course, milk in its own form at a meal or before going to bed will do the same. An extra amount of milk may be used with the creal served for breakfast or hot milk may be used to dilute coffee made stronger than is usual for coffee served with cream.

Quick Meal.

Cream of pea soup
Minute steak
Broiled sweet potatoes
New cabbage in cream
Cucumber salad
Mixed fruit
Coffee

Method of Preparation.

Scrub potatoes and boil.

Prepare salad and dressing and chill.

Wash fruit and chill.

Prepare cabbage and cook.

Cook steak.

Dress cabbage.

Heat soup.

Make coffee.

Recipe for Cream Soups

3 tablespoons butter.
1 tablespoon minced onion.
3 tablespoons flour.
1 teaspoon salt.
Pepper.
3 cups milk.
1 1-2 cups ground or strained cooked vegetables.

Melt butter, add onion and cook one minute. Stir in flour and seasoning and add milk gradually. Stir over fire until smooth and creamy Have ready about 1 1-2 cups of ground or strained cooked vegetables. (Mixed vegetables may be used.) Add to first mixture. Reheat and add more seasoning if necessary. A dash of nutmeg with pea soup, of cloves with tomato of celery salt with potato, of paprika with corn, will improve the

(Continued on Page 8)

WHEAT AND CORN CROPS

Estimated Yield Many Million Bushels

Washington, October 10.— (AP)— The agriculture department today boasted its 1935 wheat crop estimate by four million bushels and corn production by 20 million bushels beyond its figure of a month ago.

The report was projected into a situation where war tension again today swiftly lifted wheat prices. Its issuance however, came after the closing of today's markets, which sagged from earlier highs toward the end of the day.

The potato production estimate, contrasting with wheat and corn, was seven million bushels lower than last month.

The October 1 estimate placed wheat production at 598,935,000 bushels compared to 497,000,000 bushels. The five year average from 1928 to 1932 of 861,000,000 bushels.

The 1935 corn crop was estimated at 2,213,319,000 bushels, an increase from the 1934 total of 1,377,000,000 bushels. The five year average corn production was 2,562,000,000 bushels.

Severe September frosts in some late potato states were blamed for some of the decrease in potato pros pects to a crop of 366,000,000 bushels. This compares with a total crop last year of 385,000,000 bushels and a five year average of 363,000,000.

The changes from crop prospects a month ago were described by department officials as too slight to be of material importance in affecting prices or the AAA adjustment program.

Secretary Wallace took the occasion for comment upon recent criticism of agricultural imports.

"Addition of 29 million bushels of corn from Argentina would be a lot," Wallace said, smiling, "but when you add that much to our domestic production it doesn't mean much."

Estimates of spring wheat, barley and hay production increased about two per cent during the past 30 days while forecasts for oats, buckwheat rice, beans, tobacco, soy beans, peanuts, and sugar beets were raised slightly.

Officials said the estimate for the grain crops would be nearly final, and that small changes could be expected during the remainder of this year.

TUSKEGEE CHAPLAIN AT WEST VA. INSTITUTE

Charleston, W. Va., Oct. 14—Rev. H. V. Richardson, Tuskegee Institute Chaplain, is here for a three days speaking engagement. Yesterday he was guest speaker at the First Baptist church, Rev R. H. Hill, pastor, and his program for Monday includes an address to the student body of West Virginia Institute and a dinner discussion with members of the Men's Fellowship League of Charleston.

APPEALING APPLES FOUND ON MARKET

By Edith M. Barber

Apples red, green and golden are back with us in market, giving their gay note to the stalls and making us select the most colorful for our fruit dishes. For making that brown Betty which is such a satisfying dessert on a cold evening and for apple sauce we will select the less fancy type, which often has a more delicious flavor. Of course, some people serve brown Betty cold, but I like it hot just as I like apple pie.

When you make apple pie be sure not to skimp on sugar. You just cannot get that delightful gumminess which a good old-fashioned pie should have without adding sugar with a heavy hand. I wonder if you belong to the nutmeg or cinnamon school, as far as apples are concerned. Personally, I am a cinnamoner, but there are many members of the other school.

Now, a word about baked apples. Ever so often some one asks me how to prepare apples so that they look like those which are sometimes seen in the window of a restaurant or at a good delicatessen. As you know, large apples are always used. They should be cored, thoroughly, and then an inch of skin should be cut from the top. Very often the apples which you wish to duplicate are not actually baked. They are cooked slowly in a covered pan on top of the stove with sugar and water. When they are tender they are sprinkled with granulated sugar or spread with corn sirup and put under the broiler or into a very hot oven for a few minutes.

Apple Sauce, Old Standby.

A simple but delicious desert can be made by folding beaten egg whites into sweetened apple sauce. A dash of almond flavoring gives a special touch. By the way, when I make apple sauce I use practically all of the apples except the blossom end. When the apples have cooked long enough in a little water to make them tender I press them through a coarse strainer, beat them thoroughly as I add my sugar and a dash of cinnamon.

A reader asks how she can make her mint jelly a good color. She boils mint leaves with her apples and gets a delicious flavor, but not the color she expected the green leaves to contribute. Mint jelly is always colored artificially by the use of the many good liquids, pastes or powders. The coloring should not be added until the strained apple juice has been cooked with sugar long enogh to get he jelly test. Plain apple juice does not have a particularly appetizing color. For this reason as well as for the flavar, grape juice is an addition. Peach juice will also give flavor, but for really good color a tiny bit of artificial red coloring produces a better appearance.

An article in regard to apples would not be complete without a mention of dumplings, which you may bake or steam and serve with cream or hard sauce. Fried apples in their simplest form, sauted in butter, are particularly good with pork or duck, while sliced apples dipped in batter and fried in deep fat and sprinkled while they are hot with cinnamon and sugar make a wonderful dessert.

One of my favorite cold desserts is tapioca with stewed apples chilled until very cold and served with plain cream. In its raw form the apple contributes to salad and to fruit cup, for which it seems to be used more abroad than it is here.

BLACK WALNUTS VALUABLE CROP

Shortage of Supply Should Result In Good Prices, Block Brothers Declare

Farmers who have a walnut tree with a good crop of black walnuts, stand a good chance of making a nice profit if they will care for them properly, according to Block Brothers, who state that a short crop is predicted in many localities which is certain to boost the market to good prices.

Block Brothers, located at 141-43 Second Avenue, South in Nashville, have established a reputation as one of the largest and most reliable wholesale dealers in beefhides, wool, furs and roots over a period of sixteen years. Five years ago, they succeeded in securing an outlet for black walnuts, practically unsalable in this section before, and farmers trading with the firm have since received thousands of dollars for this item.

There is little in the art of gathering black walnuts except being sure not to pick up the premature ones. A good way to avoid this is to pick the early drops and discard them so that they are not mixed with the good ones later. It is of great importance to hull the nuts as soon as gathered. Leaving the hull on for any length of time permits the acid in the hull to soak into the kernel, darkening it and reducing its digestability.

Hulling can be done with a corn sheller or by stacking the nuts in a pile of running over them with an auto until they can be picked out of the mass.

Another method is to make one hole or two holes of different sizes in a board and hammer the nuts through with a mallet, causing the nuts to pop out, leaving the hulls on top. After hulling the nuts should be washed in a tub with a broom and spread on a roof or attic floor to dry before marketing.

Block Brothers are also in the market for black walnut kernels which should be dry, clean and free from shells to bring top prices. Their latest price list on all items handled will be furnished on request.

—Nashville Banner.

GOOD ENGLISH

Some Questions Often Asked

Which of the following forms are correct?

Tomorrow is Sunday.

Tomorrow will be Sunday.

This material is not to be compared to that.

This material is not to be compared with that.

Answer: "Tomorrow will be Sunday is the correct form. (Yesterday was Friday, today is Saturday, and tomorrow will be Sunday).

"This material is not to be compared with that" is right, 'Compare with' is used when the meaning is to bring out the relative value of the two things compared. "Compare to" is used in bringing out a likeness; as, "He compared New York to a beehive."

—Nashville Banner

FLOWERS FOR SCHOOL GROUNDS

One of the most noteworthy movements in the State now is the school improvement work among Negro schools. Teachers, pupils and patrons are enthusiastically planting their school grounds in grass, shrubs, and trees, and they are making their school buildings cleaner and more comfortable and more attractive.

They need and deserve all the encouragement and assistance that neighboring citizens can give them Have you a spirea, a crepe myrtle, or a basket of iris that you can give the school in your community, and can you take a bit of time to advise them how and when to make plantings. You'll have to look at that schoolyard as you pass by, you know. And after all we are our neighbor's keeper.

THE BEE

Most everyone knows that the bee is a buzzing insect that can sting with a wallop and that they produce honey which is very good with hot biscuits and butter. But have you ever tried to think about how many bees there are and some things they can do? In the United States there are about 25,000,000,000 bees at work in over 4,000,000 hives. These little fellows produce more than 150,000,000 pounds of honey every year.

The queen bee, who is the mother of all the bees in one colony or hive, can lay as many as 1,500 eggs a day and she can keep this rate up for days at a time. For so many eggs and baby bees a lot of nurses are needed and in a colony there are bees who do nothing but tend to the eggs. They seal each hole as the queen lays the egg in it and then they put food in each day until the egg hatches.

With so many new bees hatching the hive becomes too crowded for all the bees to live in it. When a new queen hatches she and the old queen are very likely to have an argument as to which of them will move out. The winner stays in the hive and the loser must find a new home. But first scouts are sent out to look for a good place to gather in. When the swarm lights on a tree or in another hive a new colony is started and the work of honey making begun again. If an apiarist the persons who raises bees, thinks that one of his hives i sover populated he will get a new hive all ready for the swarm of bees that he knows will soon be seeking another home.

Once a swarm of bees settled in a railroad switch lock. That rather tied up things until someone thought to put a hive near the spot. The bees soon moved into their new home and no one was stung. It seems strange to think that a bee could stop a train. Of course, in this case it took quite a number to do it.

Bees can overcome handicaps that would daunt many larger insects or animals. During a flood a hive was washed five miles down the stream but the bees still made honey in spite of a topsy-turvy trip and a good wetting. Soon the wet hive froze in a wintry wind. When the sun thawed them out their work went on as usual.

Every day we find out that substitute has been discovered for something we never thought would or could be substituted for. Bees are no exception for in Mexico and Texas wasps that can make honey have been found. It looks as though the bee has a rival.

Greyhounds follow game by sight and ear instead of smell. They are one of the oldest known dogs and are prized for their speed and keen sight.

When different lights are thrown into the ocean red loses its power first, yellow next then green and blue.

Farmers of The Nation To Hold Annual Convention October 28-31

President Davis and Secretary Harris Release Official Call For Session

LITTLE ROCK, ARKANSAS TO BE HOST

Little Rock, Ark.—(Special)—Farmers of the nation will gather in this city from October 28th to October 31st inclusive, for their annual convention. President Jas. P. Davis and Secretary Leon Harris have released the official call over their signature, and Little Rock has been assured of this meeting. A conservative estimate places the attendance at more than five thousand. "This," said one of the representatives here, "of course, will depend upon economic conditions and the ability of these tillers of the soil, raisers of fruit, cattle and poultry to leave their work long enough to sit in upon the deliberations."

President Davis has been constantly on the road. He made more than twenty-five states of the nation within the past six months. He has been here in Arkansas, visited Kentucky, Tennessee, Mississippi, Texas and those states east of the Mississippi, going in and out of Washington on his trip more than fifteen times in the past ninety days.

A complete exhibit of farm products, livestock of every description will be installed here, as will be cannery, home backing, needle work, art craft and other avocations indulged in around the farm. It was further announced by President Davis that he hopes to have more than two thousand dollars in cash prizes to be offered in the various exhibits, to be paid out to the winners. There will be a fat stock show, there will be competition in cotton raising and grading as well as in fruit growing. Then, too, this year it is expected that there will be a division of nuts, such as pecans, hickory nuts, walnuts, peanuts, etc.

Extensive preparations are being made here in Pulaski County to give them an unusual reception. A place for holding it sufficiently large to accommodate not only the meeting, but where exhibit rooms and hall may be easily accessible, is being negotiated for.

Representatives from the Department of Agriculture, from the Farm Credit Bureau, the Farm Loan Bank, Farm Land Bank, and in fact, some feel that Mr. Cobb as well as Mr. Wallace will grace the session with their presence.

This organization represents in principle the nine hundred fifty thousand or more Negro farmers of the nation. Their official organ, The Modern Farmer, will carry a full write-up and program of the meeting.

NUTRITIOUS, APPETIZING, AMONG GOOD REASONS FOR USE OF CHEESE

Just as regularly as we buy sugar, flour, butter, eggs, bread and other so-called staples, so do most of us put cheese on our list. We are always able to fall back on it if unexpected company arrives for lunch or for the evening.

One housewife says that when she feels she has forgotten something while marketing she adds cheese because if that wasn't what she intended to get it will usually do just as well.

The term cheese covers so many different products made from milk. When we say a pound of cheese we mean the American cheese which is known in some parts of the country as store cheese. Far the largest part of the cheese made in this country is of this variety, the American Cheddar.

There are many interesting flavors in cheese of other types. A few of these are now being made in this country, but many of them are imported directly from the district where they are made.

There are several good reasons for including cheese in the menu. It is one of the most nutritious foods we have. It contains most of the original value of the milk

from which it is made. A supply of calcium, which is difficult to obtain otherwise except by the use of milk is obtained through cheese. This is of special value for persons who do not care to drink milk.

Another good reason for using cheese is its delicious flavor. It gives a tang to food whether it is eaten with pie or with salad, or is used in a made dish. When cheese is used in cooking it should be grated if it is hard. If it is soft, it should be rubbed through a strainer with preferably a wooden spoon. This is much easier than trying to grate it.

Cheese needs a low heat or a short exposure to heat when it is cooked, if it is to remain soft and tender. Combined with other things or as it is in souffle, a cream sauce, or in a timbale, it is easily digested. Children may have cheese prepared in this way as well as cream and cottage cheese.

One of the nicest combinations of cheese with other food is that of cottage cheese with fruit. In France where the most delicate of cream cheese is made in the shape of a heart, sugar is served with the cheese and is mixed with it before it is eaten with berries.

—Tennessean.

WOOD EXPERTS DRIVE HOME POINTS ABOUT USING NAILS

Valuable "tips" on the art of nailing woods together come from experts of the Forest Products Laboratory, Madison, Wis., according to the United States Forest Service, which maintains the laboratory in cooperation with the University of Wisconsin. Good nailing, they say, consists largely in selecting the right kind, size and number of nails and then using them properly.

Some points in the technique of good nailing are: Strength of a nailed joint depends on the frictional contact of the nail with the wood fibers. Nailed joints must resist two types of pressure. The first is direct, tending to withdraw the nails the other lateral, or sidewise. A nail's resistance to the latter pressure is greater, and depends upon the diameter of the nail and the kind of wood used. Tables have been made up showing the exact increase of resistnace to lateral pressure provided by nails of various diameters.

A nail is long enough if about two-thirds of it goes into the board receiving the point. Splitting can be avoided by using a thin, blunt nail, or by blunting the end of a sharp nail and by boring a lead hole into the wood. The strength of nailed woods increases directly with the number of nails used. Good joints cannot be made with green woods that later dry out. Nails are more efficient when driven into the side grain of dry wood, than when driven into the end grain.

Tests show that the resistance of nails to withdrawal depends approximately on the area of contact with the wood. Resistance against withdrawal, point out the wood experts, depends on the surface condition of the nail. For temporary service, cement-coated nails give about 25 to 100 percent more holding power, but this effectiveness falls off in time. More permanent is the grip of those nails which have a pitted or etched surface.

MELON CROP PROFITABLE

Augusta, Ark., Area Markets One of Its Biggest Yields

Augusta, Arkansas, Sept. 21.—One of the biggest crops of watermelons ever grown in this area was marketed during the last season. The largest growers were the tenants on the Stanley farm, of which Thomas E. Stanley, Jr., is manager. A total of 30 acres was seeded to melons, 20 of which were planted by Edward Smith. On this crop Mr. Smith realized a total of $800 and a grand total of $1,100 was received for the entire crop.

Varieties raised were the Tom Watson and Kleckley's Sweet and they averaged 25 or 30 pounds in weight. A ready market for the melons was found in the towns of Woodruff, Cross, St. Francis and Monroe counties, where they were delivered in trucks, many of them peddled from house to house. The melon crop was found to be a splendid substitute for cotton and it is highly probable that a larger acreage will be planted next year.

1936 WHEAT PLAN TO COVER 4 YEARS

The new wheat adjustment program is drawn up for a four year period, but contracting farmers will be allowed to withdraw after two years provided they have cooperated with the government in every respect, according to a statement issued yesterday by F. W. Colby extension service director of Tennessee.

"The reduction required of wheat growers for 1936 is 5 per cent, and at no time will be set at more than 25 per cent," Mr. Colby said. "Subsequent reduction figures will, of course, be determined by the supply on hand, plus the prospective needs of the company."

Mr. Colby explained that the primary purpose of the adjustment program is to guarantee that a sufficient amount will be grown to supply domestic needs, "Fifty-four per cent of our wheat production is ordinarily consumed at home," the official said. "Therefore a grower must seed at least this much of the base acreage each year, or suffer a full penalty. This also guarantees that the reduction asked by the government will not be over 46 per cent. All wheat over 54 per cent is used for exporting purposes," he said.

LARGE COTTON SHIPMENT LEAVES U. S. FOR JAPAN

New Orleans, September 21—(AP)—One of the largest cargoes of cotton ever to leave the port of New Orleans left here today aboard the Swedish freighter Aurora for Japan. There were approximately 23,000 bales of high density compressed cotton in its hold.

Richard Murray, president of the Murray Shipping company, which chartered the ship for the voyage, expressed the belief that the cargo was the largest of its nature ever loaded at New Orleans for export.

Other evidences that cotton is going to market in a big way were reported by railroads and warehouses. Memphis warehouses are crowded with 10 per cent more cotton than at this time last year.

BOSTON PARENTS ASK REMOVAL OF BOGUS TEXT BOOKS

Boston, Mass., Oct. (By E. W. Clark for ANP)—The battle against the use of books with insulting terms and pro-slavery leaning in the public schools of this city was continued last week when a delegation from the Parent-Teachers Association called upon the Boston School Committee and urged immediate and favorable action in this direction.

The delegation not only cited Rudyard Kipling's "Captain Courageous" in which the word "nigger" appears thirteen times but also the text book of United States History in which the role of the colored people in the Reconstruction period is perverted and colored to suit the prejudices of the author.

Another request made by the delegation was that more Negroes be appointed as teachers. The committee reserved the reply to both petitions desiring more time for consideration.

Teachers BIBLE

No. 4408 REDUCED PRICE **$2.95**

LARGE BLACK FACE TYPE
8 VO. SIZE 5½x8 INCHES with Family Record, marginal references, full Helps to Bible Study.

The best intrinsic value ever offered in a Bible for Adult Readers, Teachers, Preachers and Students. The durability of materials, mechanical excellence and value of contents are equal to any Bible at double this price.

RECOMMENDATION FOR A GOOD COMEDY

If your community wants to give a play, let me recommend "Goose Money," written by a farm woman of Wisconsin. Copies may be had from the Extension Service of the College of Agriculture, University of Wisconsin, at Madison, for only 6 cents each.

The play was given recently by a group of women in Marion County, near Chattanooga, and it "brought down the house." It is a comedy in which the audience learns to laugh with a rural family rather than at them. The mother of the family sells her flock of geese for a considerable sum. The point that makes the play, is the way she disposes of the money. She proves that she is "not quite such a goose," herself. You'll enjoy the little skit.

A very young ballplayer was boasting of his skill at the bat. "Every time I hit that ball I knock it right into the pitcher's hands," he said.

—Nashville Banner

WORLD WIDE MAN HUNT

The greatest "Man Hunt" ever staged in the English speaking world is being conducted during the four-hundredth anniversary celebration of the printing of the English Bible under the auspices of

"The Prophetic Voice Program"

A Sunday morning broadcast (8:30) over W.9 X. B. Y. (1530 Kil) Kansas City. The "Count charged" is the commendable "offense" of having read through either the entire Bible or only the New Testament, the greatest number of times. Appropriate rewards are being offered to a limited number of "Champions." A properly witnessed letter is required. Tune in for further details. Editors and radio preachers please publish.

A. E. Wendt

BEAN-TOMATO SOUP

A new soup in cans which blends delightfully the goodness of beans and of tomatoes is now on the market. It is prepared in Bretonne style—thick and savory as a peasant soup, nice for cool days.

—Nashville, Tennessean

NEGROES WONDER WHETHER THEY WILL GET JOBS

Columbia, S. C., Oct. 10 (ANP)—An announcement that some 5,000 men would be put to work on WPA projects here within the next fortnight has given rise to the question, "will Negroes share in these jobs and if so to what extent?"

According to the announcement the men will be selected from the relief rolls. Negroes constitute a large proportion of those on the relief rolls and many of them are qualified to fill any job which might be included in the projects. These interested in seeing that the racial group get its share of the jobs are pointing out that if the plans as outlined is carried out Negroes will be employed in large numbers, but if the money is to be spent or to be used as a political machine builder," Negroes will receive nothing since they are prohibited from voting. In the meantime Negroes are watching and waiting and hoping.

Methodist Meeting Stresses Education

Omaha, Neb., Oct. 10 (By R. C. Price for ANP)—Education was stressed here at the annual meeting of the Missouri and Kansas District of the C.M.E. church, which closed Wednesday.

Bishop J. Arthur Hamlett who directs this particular district presided at all of the sessions during the three days of the conference. He was assisted by presiding elders of the district, including Dr. C. E. Chapman, Dr. B. J. Gamble and Dr. D. W. Bass of Richmond, Mo.

What the denomination was doing to promote education, particularly religious education was outlined by Rev. B. J. Smith, Chicago, general secretary of the Department of Religious Education. Dr. Smith pointed out the need of the church attracting better trained men as ministers and stated that there was a noticeable improvement in this direction. More young people were becoming interested in church work and were taking a more active part in the conduct of the general program. Sermons by prominent ministers in the districts added much to the general program during the conference.

THE MODERN FARMER

Official organ of the National Federation of Colored Farmers, Inc.

Leon R. Harris - - Editor

Published monthly by the Modern Farmer at Nashville, Tennessee.

Office, 447 4th Avenue, North.

Devoted to the interests of the Farmer, Truck Gardener, Livestock and Poultry Breeder, the Home and the People.

CANNED SALMON IS STILL OLD STANDBY

Served For the Quick Meal, Its Many Uses Make It Invaluable

Among the oldest contributors to the quick meal problem is canned salmon. Before the days of the business woman housekeeper, quick meals were considered legitimate at house-cleaning time and on days when there was a seamstress in the house and all the women in the family had to help so that she could turn out as many gowns as posible, then the men of the household just expected to have canned salmon.

Even today when there is a much greater variety of canned products on the market salmon is the same good old standby. On a warm evening a salmon mayonnaise is most appetizing especially if the salmon has been chilled. Minced pickle or olives may be added to the mayonnaise with perhaps a dash of onion juice. As a further filling garnish there may be halved hard-cooked eggs.

If the weather is cold, creamed salmon in ramekins, bread cases or patty shells may be used for the main course, a few sliced mushrooms, green peppers or bits of pimiento will add flavor and color. Then there is that generally popular combination of soft bread crumbs, well seasoned, of course, and flaked salmon which may be baked in a casserole. It looks particularly attractive in an oven-proof baking dish through which its delicate color shows. If you happen to have those small shallow glass dishes which are known as "au gratin" you may prepare it in individual quantities if you like.

The distinctive flavor of salmon makes it especially appropriate for a souffle with a bread or cracker crumb base, you may bake it in a short time in a comparatively hot oven and in this case it becomes a quick meal dish.

Quick Meal.

Scalloped salmon
Baked tomatoes
Grapefruit and melon salad
Crackers, Cheese, Coffee.

Mayonnaise of Cold Salmon

Remove salmon from can, Drain and remove any pieces of skin or bones. Let salmon soak an hour in a marinade of tarragon vinegar. Serve on lettuce with mayonnaise and garnish with capers.

Salmon a la King

1 can mushrooms, cut in quarters.
1 medium-sized onion, sliced.
2 tablespoons butter.
2 tablespoons flour.
3 cups milk.
2 egg yolks.
1 pimiento chopped.
1-2 teaspoon lemon juice,
1-2 teaspoon paprika.
Salt, pepper.
1 pound can salmon, flaked.

Cook the mushrooms and onions in the butter until tender and slightly browned. Add the flour and when well blended add the milk slowly and cook until thickened. Add the egg yolk beaten slightly. Add the seasonings and salmon and heat. Serve on buttered toast or in patty shalls.

Scalloped Salmon

1 pound can salmon.
2 tablespoons butter.
2 tablespoons flour.
1 1-4 cups milk.
Salt, pepper.
2 hard-cooked eggs.
1-2 cup buttered bread crumbs.

Shred the salmon and remove the bones. Melt the butter, add the flour and when well-blended add the milk slowly, stirring constantly until thickened. Boil one minute. Season. Arrange a layer of salmon in the bottom of a greased baking dish, add some of the sauce, some sliced eggs, then another layer of salmon, and so forth, until all the ingredients are used. Cover the top with buttered bread and bake in a moderate oven, 375 degrees Fahrenheit, until the crumbs are brown.

—Tennessean.

Thirteen Men Enlist In Navy

The following thirteen men were enlisted in the U. S. Navy as Mess Attendants third class at the local Navy Recruiting Station, 405 Custom House Building, on October 2 1935, and transferred to the Naval Training Station, Norfolk, Virginia for a period of recruit training. After completing this preliminary training they will be granted leave of absence to visit their homes. if practicable, and will then be assigned to duty on vessels of the U. S. Fleet.

STANDING STALKS SAVE SOIL

Midwestern farmers check soil blowing in fields of corn and sorghum harvested with a binder for forage by leaving 4 to 6 rows of standing stalks every 20 or 30 rows. Topping the sorghum and husking or snapping the corn saves the grain. This method of checking soil blowing is most effective when rows run at right angles to the prevailing winds. Some farmers prefer to leave a uniform stubble about a foot high—which is just as good a plan—says the Soil Conservation

FORTY HOUR WEEK MAY GIVE 25,000 NEW POSITIONS TO POSTAL WORKERS

Washington, Oct. 10—(ANP)—A total of 25,000 additional postal workers may be added to the U. S. payrolls with the enactment of the 40 hour week on October 1, a survey of the field shows.

Previously postal employes labored 44 hours weekly. The new schedule means a reduction of one eleventh from the old order. It has, in effect, taken away one out of every 11 employes previously working. With approximately 275,000 in the nation, the theoretical reduction is 25,000 which means that number would have to be hired to keep normal conditions. Whether or not the estimated 20,000 substitute workers will be given full time employment is not known.

However, colored stand to gain either way if more workers are added. They will also benefit by the cutting of hours giving all workers an extra four hours week for personal business.

LEMUS SAYS A. F. of L. WILL NOT BENEFIT DINING CAR WAITERS

New York City, Oct. 10— (ANP) —Reports that the American Federation of Labor was attempting to organize dining car cooks and waiters was deprecated here Thursday by Rienzi B. Lemus, grand president of the Brotherhood of Sleeping Car Employes, in an interview with an ANP representative.

"Despite the impressions and beliefs of dining car men to the contrary, the American Federation of Labor is not a labor union" said Mr. Lemus, "but simply a sort of holding company for independent craft unions, each sovereign of and within itself. Nothing could afford more proof of the organization's lack of control over its independent unions than the categoric absurdity of a hotel and barkeepers union being allowed to seek jurisdiction over railroad workers.

"Yet this hotel men's union, absolutely without knowledge of dining car employees' requirements has the temerity to attempt to unionize them. Back in 1921 contracts were made by the Brotherhood of Dining Car Employes, covering the New York Central men east of Buffalo and for the men west by the National Brotherhood of Dining Car Employes. The former is still in force having been operating in the interest of the men without a break for fourteen years.

"Beginning in September, 1934, local 351 of the Hotel Men and Barkeepers Union, which had superceded the disorganized National Brotherhood, began negotiation for a new contract. They boasted of their proposals, a 204 hour-month; time and a half for overtime, elimination of Negro waiters in charge and the closed shop which they asserted they were certain to secure. The contract was finally negotiated effective September 1, 1935, but it does not contain any of the things local 351 boasted of getting. The waiters in charge are still there increasing in number and local 351 was happy to incorporate in their contract the increased rates got for waiters in charge by me effective March 1, 1935 on the New York Central East of Buffalo.

"On behalf of the Brotherhood of Dining Car Employes, I am endeavoring to persuade the vice president of personnel of the N.Y.C. to join me in submitting our dispute on interpretation of the organization's contract for seniority rule to the National Adjustment Board for hearing and decision, to avoid making it ex-parte. I formerly rejected his decision sustaining the dining car's managements application of the seniority rule and offer to dispose of it so as to conform with the seniority rule accepted by local 351 and will cite the case of the Adjustment Board on either joint or ex-parte submission, as provided in the Railway Labor Act amended."

SWEET POTATOES BRING 50 CENTS AT COOKEVILLE

Cookeville, Tennessee, Oct. 12—(Spl)—The sweet potato crop in this county is better than usual this year. Farmers have been bringing potatoes to the Cookeville market for the past week. Prices on the local market have been 50 cents a bushel.

The lespedeza crop is also much larger than usual. Hay made in this county has been selling at good prices, from 40 cent to 60 cents a hundred pounds.

STATEMENT OF OWNERSHIP

The Modern Farmer as required by the Act of Congress, August 24, 1912, State of Tennessee, County of Davidson:

Personally appeared before me, a Notary Public in and for the State of Tennessee, County of Davidson, S. B. Wilson, who having been duly sworn according to law deposes and says that she is the Business Manager of the Modern Farmer, and the following is to her knowledge and belief, a true statement of the Ownership, Management, etc., of the said publication for the date sworn above caption requested in section 443 Post Office laws and regulations.

1. That the name and address of the publisher and business manager of the Modern Farmer, Nashville, Tenn., S. B. Wilson, Business Manager.

2. That the owners are Henry Allen Boyd and S. B. Wilson, both of Nashville, Tennessee.

3. That there are no known bonds, mortgages or other security holders holding one per cent or more and that there are no bonds, mortgages or other securities on the corporation.

(Signed) M. G. Ferguson, N. P

Sworn before me this 26th day of September, 1935.

My commission expires April 4th, 1939.

TENNESSEE LESPEDEZA SOUGHT FOR FEEDING ARMY HORSES, MULES

Tennessee lespedeza to feed army horses and mules is the newest idea in the hay fields of this state.

For the past two months feeding trials have been conducted at southeastern army posts to determine whether or not lespedza from Tennessee will be satisfactory for feeding cavalry and artillery horses.

About 30 carloads of lespedza, harvested in the sunny fields of Tennessee, have been shipped to army posts in this area for the experiment, but all but about five cars have been rejected. For the past few days, A. D. Harlan, supervising hay inspector for the southeastern and southwestern states for the U. S. department of agriculture with headquarters in Atlanta, has been in Nashville in behalf of Tennessee despedeza.

Rejection of the carloads of lesbehalf of Tennessee lespedeza. horses at Fort Braggs, N. C., Fort Benning, Ga., and Fort Oglethorpe Ga., is unfortunate for the lespedeza outlook in this state and Mr. Harlan, a native of Maury county, came up to Nashville to aid dealers and producers who have been having difficulties in making deliveries at the army posts.

"The rejections were due to factors that can be easily eliminated, I am sure," said Mr. Harlan Friday afternoon. "The average Tennessee farmer who has never produced lespedeza for the market does not realize that as much care should be used in harvesting the hay crop as in harvesting his tobacco crop.

"The Tennessee farmer must not ship weedy, undercured or out-of-condition hay. The farmer, by a little attention to his hay meadows and slight changes in his methods of harvesting, can bring the Tennessee lespedeza up to requirements.

"He can clip the weeds in his hay meadows in June and eliminate foreign material. He can store the lespedeza in the barn directly from the field instead of baling in the field and obtain a sound product acceptable by army posts and commercial users," said Mr. Harlan.

Because the Tennessee farmer has never produced more lespedeza than is consumed on his own farm until the past two years he has not had to meet the standards set by farmers in other states who have produced it for market for many years. Improved varieties of lespedeza have been grown in Tennessee for 10 years and it is estimated that fully 100,000 farmers now produce it yearly.

The hay crop this year for the first time in the history of the state is above 1,000,000 tons, state agricultural officials estimated Friday. With a surplus of lespedeza now being produced they believe that a new source of income is opened for the farmers if they will improve this hay in the manner suggested.

Army use of lespedeza hay is something new, he explained, for in the past horses and mules have been fed on timothy from Indiana and Ohio, or upland prairie hay from Oklahoma and Kansas. or Johnson grass from Alabama and Mississippi.

—Tennessean.

CAVE OF MUMMIES DISCOVERED

In limestone caves of the coastal mountains of New Guinea rows of mummies of men, their chins on their hands, their elbows on their knees. have just been discovered. They are believed to be 1,000 years old. The caves are near the strip of coast administered by the Australian Government. Almost at the time of the discovery a party of explorers stumbled on a valley populated by a hitherto unknown pastoral people who had dwelt there when the mummies were living men. Until the mummies were found there was no evidence that New Guinea tribes preserved their dead.

—Nashville Banner

RESULTS OF RESEARCH USED IN FIGHTING CAMELTHORN

Because research showed a few years ago that some plants can "go into reverse" in carrying solutions through the vascular system—that is, absorb a liquid through the leaves and take it to the roots—the California Department of Agriculture has been able to combat camelthorn, a spiny leguminous weed which has invaded certain lands in the southern part of that State.

Jars are filled with a solution of sodium arsenite and placed at intervals in a patch of camelthorn. A handful of the growing plants is thrust into the poisonous solution and left there. The solution is carried through the leaves and stems into the long, fibrous roots. Because of the extensive root system, large areas of the weed are killed.

The camelthorn, says L. W. Kephart, weed specialist in the Department of Agriculture, came into this country chiefly in alfalfa seed from Turkestan. Despite the spiny stems the plant is grazed by camels in some parts of Asia.

RESETTLEMENT ADMINISTRATION REGION IV, RALEIGH, N. C.

Raleigh N. C. Oct.—The old expression, "dirt cheap," belongs to a past era, according to James M. Gray, Regional Director of Land Utilization for the Resettlement Administration.

"Dirt is not always cheap," Mr. Gray said. "When erosion robs a man of his topsoil and leaves him with a non-productive, gully-cut farm, he realizes that his dirt was worth more than gold itself. Dirt, in the sense of productive soil, is the most valuable of all the nation's resources."

Mr. Gray is directing a program designed to return selected areas of eroded lands in North Carolina, Tennessee, Kentucky, Virginia and West Virginia to profitable use, these projects being integrated with the board national land adjustment program of the Resettlement Administration.

SCHOOL TIME IS COOKY TIME

School time is cooky time, time for old-fashioned ginger cookies, new-fashioned icebox cookies—any kind of good cookies that will add to the appeal of the school lunch box or the cooky jar when school is out.

There is a cooky press on the market now which turns out cookies of old-world charm. You select a form-plate, fill the press, turn the handle, and "here comes cooky." Knowing how to make good cooky dough is important, however, and here is one suggestion:

Molasses or ginger cookies: Boil one cup molasses for a minute, add one cup sugar, one cup shortening, two teaspoons ginger, two teaspoons soda mixed with one-fourth cup vinegar. Add about five cups of flour to make a stiff dough. Roll thin. Cut as desired. Bake in a 375 degree oven for about twelve minutes. Sprinkle with sugar before baking, if desired.

YEAR'S WHEAT CROP 598,935,000 BUSHELS

Corn Production Set at 2,213,319,000 Bushels

Washington, Oct. 11 (AP)—The Department of Agriculture announced Thursday its preliminary estimate of this year's wheat crop as 598,935,000 bushels and indicated corn production as 2,213,319,000 bushels.

The indicated production of other major crops for the year were:

Barley, 290,000,000; rye, 52,200,000; rice, 38,900,000 bushels; all tame 76,700,000 tons; peanuts, 1,240,000,000 pounds; apples total crop, 168,000,000 bushels; apples, commercial crop, 96,90,000 bushels; peaches, total crop, 21,400,000 bushels; grapes, 2,330,000 tons; white potatoes, 366,000,000 bushels.

Sweet potatoes, 69,000,000 bushels; tobacco, 1,273,000,000 pounds; sugar beets, 8,450,000 tons; hops, 47,100,000 pounds.

HENINGBURG HEADS OCCUPATIONAL STUDY OF TUSKEGEE GRADUATES

Chicago — Alphonse Heningburg, former Director of the Academic Department of Tuskegee Institute and now Director of Student Personnel, has opened a temporary office at 47th Street and South Parkway in Chicago, for the purpose of interviewing Tuskegee graduates and former students in the Chicago territory.

Mr. Heningburg is compiling information relatives to the social, civic and occupational activities of Tuskegee graduates, as well as the extent to which they are following vocations for which they prepared at Tuskegee Institute.

Mr. Heingburg, who, enroute to Chicago, attended a meeting of the Commission on Secondary Schools which was held at Fisk university, announced upon arrival here that after his work in Chicago is completed, other centers will be visited for a continuation of the occupational study of Tuskegee graduates.

FLOWERING CHERRY, DOGWOOD ATTRACTIVE TREES FOR LAWN

By Dean Halliday

Are you planning additional small flowering trees about your home grounds this fall? There are so many lovely ones to choose from, that it often becomes a problem just which ones you have room enough to accommodate. Usually we would like to have all of them.

Whether your graden is large or small, include for the sheer beauty of their double pink fragrant flowers next June, the Bechtels double-flowering crab. Another popular flowering tree we always like to include is the white dogwood, which will grow in either sun or shade. It is much safer to move the dogwood in the spring, with a ball of earth, but allow room for it in your planting scheme. This is also true of the planting of the magnolia trees.

There are many lovely hawthorns among the smaller trees, some with white blossoms, others with pink blossoms. One very striking variety is Paul's double scarlet hawthorne, having double, bright-scarlet flowers in the spring, and it grows well in either full sun or semi-shade.

For other spaces you might use the Japanese flowering cherry, and then, too, the Japanese maples, which are dwarf trees, having striking blood-red foliage, which takes the place of blossoms and which are very ornamental.

FAITH

Faith is prone to hide away—
You can find it though some day,
If you seek it.

Doubt will never filter through
Warm content inside of you—
If you keep it.

—Nashville Banner

SMALL POTATOES, INDEED

Don't throw away small potatoes. Wash them, boil them with the skins on and put them through the ricer. The skins stay in the ricer but the mineral salts, lying beneath the skin, are all retained. If you have canned cod fish on hand, mix it with the fluffy delicious fish balls, ready to saute.

—Nashville Banner

195 POUND MELON GROWN IN ARKANSAS

Hope, Ark., Sept. 21. —(AP)—Oscar D. Middlebrook brought to Hope today a 195-pound watermelon, described by local sources as the largest edible watermelon known in the history of the trade.

Middlebrooks' Magic Half Acres south of here also produced this year a melon weighing 140 pounds, six weighing more than 130 pounds, and 32 melons of more than 100 pounds.

The Middlebrook Farm won the 1930 championship with a melon of 164 3-4 pounds.

A DECORATION OF FLOWERS

Have you thought of using flowers as part of your house furnishings? If tastefully selected and carefully arranged they become as much a part ot the decorative scheme as pictures on the walls or pillows on the couch; and they may be changed far more frequently than pictures and pillows usually are. If the permanant furnishings of the room are of neutral colors the principal color scheme may be changed with a vase, basket or pot of flowers. Think of flowers as furnishings, they are lovely, easy to obtain, and inexpensive.

Love is a funny thing, as has been remarked several times before, but one of its most mystifying qualities is that it can enable people to walk hand in hand although they dwell in different realms.

DEATH RATE FROM TUBERCULOSIS ON GENERAL DECLINE

Chicago, Oct. 10 (ANP)—Although four cities with Negro populations of 100,000 or over showed increases, death rate through the nation among colored from tuberculosis continued to decline in 1934, although at not so rapid a rate as during the preceding year. This decline, despite economic conditions, was revealed in an exclusive report Godias J. Drolet, statistician and to the Associated Negro Press by acting director of the New York Tuberculosis and Health Association.

The Drolet survey, which includes the 42 largest cities and the known mortality of their residents both in town and in health resorts, reveals a death drop of five per cent in 1934 after a six per cent drop in 1933. Negro population in these cities totaled 2,759,702. In 1934 6,098, or 220.9 per hundred thousand, died. The 1933 survey showed 6,217 deaths at a rate of 232.9. In the 42 cities for 1934 Negro mortality was 27.9 per cent of the total of 21,833 among both races.

Memphis Low, Atlanta High

Memphis showed the biggest decline of any of the major cities studied. It's 111,217 Negroes showed a drop of 20 per cent. New York, with 400,372, dropped 6 per cent; Chicago, 285,502, dropped 14; Detroit, with 152,918, dropped 14; New Orleans, with 141,532, dropped 14; Birmingham, with 111,036, dropped six tenths of one per cent; St. Louis, with 103,419, dropped 4.

Increased death rates from tuberculosis were shown in four cities, Atlanta, with 101,388 Negroes, increased 11 per cent; Washington, with 141,231, increased three tenths of one per cent; Baltimore, with 156,114, increased 10, and Philadelphia, with 254,997, increased 2.

Omaha Worst, Syracuse Best

The "best" and "worst" cities were not in the 100,000 class. Omaha showed the largest proportionate death rate rise, jumping 300 per cent in 1934 for its population of 11,459. However, Cincinnati retained its title as having the highest actual mortality with a death rate of 372 per 100,000 a rise of 3 per cent over 1933. Syracuse retained its title of "healthiest" city with only one death last year in its 2,163 Negro population, a decline of 4 per cent over 1933.

Cities where the greatest number of Negro deaths occured in proportion to all deaths, white and colored were Houston, 41 per cent; Cincinnati, 45; Kansas City, Kans., 46; Baltimore, 49; St. Louis, 41; New Orleans, 55; Washington, 68; Memphis, 68; Atlanta 70 and Birmingham 79.

Vigilance Still Needed.

Commenting upon the tuberculosis situation in 1934, Mr. Drolet said, "While it is very gratifying to know that the death rate from tuberculosis among colored continues to decline, it is nevertheless a drawback to the successful progress of the whole movement to find so many cities still unexpectedly showing large increases in 1934. The survey would seem to indicate that while we may all be encouraged by the gains made, we should still remember that there is scarcely such a thing as too close vigilance with such an insidious disease, which is always surprising us by shooting ahead suddenly where it was thought to be in check.

"Everyone must redouble his efforts at cooperating as far as possible in helping to keep tuberculosis under control. One of the important ways is to let the health authorities or your own physician know at once if you or a member of the family show symptoms of the disease so that they may be given proper treatment, while there is the opportunity to save his life, and possibly also that of other members of his family by limiting the spread of infection to others."

PRESIDENT OF HOWARD UNIVERSITY TELLS STUDENTS TO HAVE FAITH IN THEMSELVES TO ACHIEVE SUCCESS

Points to Example of Christ Who Never Surrendered Principles for Favor of Roman Dictators

Washington, D. C., Oct. 10—(ANP)—If Negroes are to make any contributions to civilization and to advancement in any direction, there must be a complete mastery of any inferiority complex was the advice given the students at Howard University by the president, Dr. Mordecai Johnson, here Tuesday.

"There is only one danger to the great dictators of the world," said Dr. Johnson, "and that is a healthy, obedient will. Just as Christ believed the vaunted splendor of the Roman empire and the rampant patriotism of the Pharisees were diseases of spirit affecting the social security of the masses of the population, so because of such disease the empire fell.

"And here are you students in a relative position in the modern world openly disfavored, segregated, economically powerless and with the knowledge that the situation presses down upon the will. In your first week of university life may I say that scholastic attainments, alone is not able to overcome this empirical diseases.

Must Help Make World

"It is not merely ignorance, nor unskilled effort that the Negro must overcome, but he must through simple faith, attain the will which will enable him to feel in the midst of a dominant civilization, that the world is not yet made and that he can have a hand in making it.

"If you give up your theological inhibitions and philosophical obstructions that stand in the way of obedience to the will of God then you may attain a sense of well being and incipient power which will emancipate and liberalize both mind and soul.

"The diseased sense of subordination to a Roman empire was overcome by Christ, when He realized it was not necessary for Him to be like a Roman nor an associate of Romans, to violate His self-respect and sense of importance. He never bought a ticket to Rome, nor reported to His congregations that He had talked with Roman senators or princes.

"With all its weaknesses manifested today, the Christian religion is still a contender for control of the will of mankind. From a lowly beginning arose the Spirit that outlasted the Jewish state and the Roman empire, and will outlast every other dominant culture of the world."

NAME CAMP IN PENNSYLVANIA FOR COL. CHARLES YOUNG

Washington, D. C., Oct. 10 (ANP)—Announcement was made here this week that CCC camp number 315 and located at Media Run, Pennsylvania, had been designated "Charles Young Camp" in honor of the late Colonel Charles Young.

The designation was made official in compliance with a request made by the enrollees at the camp. Col. Young gained distinction as soldier and as one of the few Negro graduates of the United States Military Academy at West Point, N. Y., and according to the petition made to Director Fechner of the Emergency Conservation Work, the enrollees felt that the designation requested was not only a fitting honor for the late soldier but that it would also serve to inspire the boys in their work.

A NEW SONG BOOK
IS JUST APPEARING FROM THE PRESS

"GOLDEN GEMS"—Get a copy, price 25 cents; then give us the benefit of your constructive criticism. We want to know how you like this new song book. Send this back with 25 cents for a single copy or $3.00 by the dozen—We will pay the postage.

"GOLDEN GEMS" is a book that is all that its name implies. It is pure gold in spirituality, originality and in religious fervor.

Insist up your friends using "GOLDEN GEMS". Recommend that your choir use "GOLDEN GEMS". Put "GOLDEN GEMS" in your Sunday School; use "GOLDEN GEMS" in your B. Y. P. U.; put a copy of "GOLDEN GEMS" in your home. If "GOLDEN GEMS" is introduced in your state it will prove that you are 100 per cent with Henry Allen Boyd in his earnest desire to give to the Baptists the best that money can buy, and when the best costs you no more, then get "GOLDEN GEMS".

Send this back to me, I want to know who is using and supporting "GOLDEN GEMS".

GOVERNMENT OPENS INQUIRY ON COTTON

To draft 1936 Adjustment Program From Evidence

Memphis, Tenn., Oct. 11—(AP)—Charles McNeil of Jackson, general manager of the Mississippi Federated Cooperatives and the Mississippi Farm Bureau Federation told AAA representatives at a hearing today that 90 per cent of the tenant farmers, or share-croppers of his State had voted for the continuance of the cotton adjustment program.

Memphis, Tenn., Oct. 11—(AP)—The Government today opened an inquiry into the sentiments of the cotton belt concerning controlled production and planned to draft the 1936 cotton adjustment program from the evidence obtained.

Farm administration officials, headed by Cully A. Cobb, chief of the AAA cotton division, arrived from Washington for the hearing which is to play a major part in their future program. Robert K. McConnaughey, attorney with the Department of Agriculture, is presiding at the two-day inquiry.

The American Farm Bureau Federation, favoring a continuation of the adjustment programs, was prepared to send at least a score of witnesses to the stand to plead for future acreage reduction in the Southern cotton fields.

Donald Kirkpatrick, general counsel for the American Farm Bureau Federation, was prepared to read into the record a letter from Gen. R. E. Wood, president of Sears, Roebuck and Company, Chicago, to Edward A. O'Neal, federation president, declaring business has recovered rapidly in the South since the AAA adjustment programs became effective.

J. F. Tompkins, president of the Arkansas Farm Bureau Federation, said in a prepared statement of his testimony that adjustment programs should be made a permanent part of a national policy for agriculture.

Thad Snow, Charleston, Mo., representing the Missouri Farm Bureau Federation, warned that without controlled reduction Missouri's delta counties would be able to double production.

Charles G. Henry, general manager of the Mid-South Cotton Growers' Association, Memphis, subsidiary of the American Cotton Cooperatives Association, attributed peak bank deposits in Memphis, Atlanta, and Dallas to increased farm and industrial prosperity resulting from the AAA programs.

L. C. Sloan, master of the Arkansas State Grange, denied in a statement that abandonment of cotton lands is stimulating production of crops which are competing with those of the Central West.

John W. Steely, a cotton farmer residing near Hartford, Ala., said that 80 to 90 per cent of the farmers of Geneva County, his home, are in favor of the continuation of the adjustment programs.

Another Alabamian, W. H. Roberton of Loachopoka, who led a farmers' march on Washington last spring, declared that without an adjustment program, the price of cotton would drop to less than 50 per cent of parity.

Walter L. Randolph, Montgomery, executive secretary of the Alabama Farm Bureau Federation, reported that out of 30,000 Alabama cotton producers, in attendance at recent meetings, only five voted against resolutions adopted by all of the others in favor of the production control program.

FERTILIZER MAKES LEGUMES BETTER NITROGEN FACTORIES

Legumes are natural nitrogen factories—but their production may be increased with the use of phosphorus and potash.

Many farmers grow legumes as green manure crops because they collect nitrogen from the air and put it into the soil. Applications of phosphorus and potash to legumes stimulate their growth enabling them to produce more nitrogen than if they did not receive these fertilizer materials. These are not wasted as they are available for the next crop as corn or cotton when the legumes are plowed under and decay.

By this method the farmer gains the use of three fertilizer materials for other crops although he applied only two.

Phosphorus and potash applied to legumes when grown as a green manure crop help to produce heavier yields of corn and other crops than if the same fertilizer is applied directly to the crops, tests of the United States Department of Agriculture show. In the South, fertilizer mixtures of 0-10-4 and 0-8-4 applied at the rate of 400 pounds an acre are generally satisfactory for increasing the growth of the Austrian winter pea and other legumes grown as a green manure crop preceding corn and cotton.

RESETTLEMENT ADMINISTRATION REGION IV. RALEIGH, N. C.

Approval of the purchase of land for two forest and recreation projects in Tennessee was announced this week by James M. Gray, of Raleigh, N. C., Regional Director of Land Utilitization for the Resettlement Administration.

One of the projects is located in Madison, Hardeman and Chester counties. The other is near Woodstock, in Shelby County, 12 miles from Memphis. Each will contain approximately 10,000 acres. Allocation of $70,000 have been approved for the purchase of land on the Madison-Hardeman-Chester project and $160,000 for the Shelby project.

Options are now being accepted on lands in the project areas that have been approved for purchase. All acreage being bought by the government has been offered for sale voluntarily by the owners, who will be paid for their land when the titles have been properly approved.

Located in a section of severely eroded land formerly covered with valuable timber but now largely abandoned to sage grass, persimmon bushes and scrubby pines, the Madison-Hardeman-Chester Forest and Park Project, when developed, will give West Tennessee a noteworthy forest, playground area, and game preserve. The project is readily approachable by concrete highways from Jackson, Nashville and Memphis, the nearest cities, opening recreational opportunities to both urban and rural people.

At the same time, the project provides for the re-establishment of thirty-five of the families now in the project area on adjacent lands better suited to agriculture. These families will be aided by the Resettlement Administration in relocating.

Plans for development of the project call for the building of homesteads for forest workers, construction of lakes, vacation cabins, forest roads and trails, telephone lines, fire tower sand lodges and the reforestration of 4,000 acres of the present gully-marked bush-covered terrain.

The Shelby Forest Recreational area lies along Shelby County drive for a distance of about six miles and a number of gravel roads run through the area approved for purchase.

"This area is well suited to serve principally the city of Memphis and generally West Tennessee, Eastern Arkansas and Northern Mississippi," Mr. Gray said. "About 355,000 people live within twenty-five miles of the project and over 740,000 live within a radius of fifty miles.

"The retirement of the acreage in the tract now being farmed at a great disadvantage and the subsequent development of this area as a forest and recreational center will give permanent benefits to the people of the surrounding region and to the nation."

While the detailed development plans are still in the preliminary stage, Mr. Gray pointed out that the bulk of the area would be used for a forest, with recreational facilities to be provided throughout the project area.

Any nation anywhere in the world can join the Soviet Union. —Nashville Banner.

FABRIC

While Life was weaving cloth for you of woolen strength,
Its cotton wrap in squares of sturdy brown ingrain,
Cocoons of butterflies were spun in silken length
For me — And fairy palettes splotched each fragile skein
With colors soft as pansies after rain.

Lack of faith in one's friends is really a disease. It finally smothers all natural instincts of love and trust and becomes a phobia. Friends may be imagined—a thing of your believing—but once you are disappointed in a neighbor, it is hard to believe in him again. That may account for the thousands of people who make a radio voice their confidante. They hear that same voice day after day until it seems like a very near and dear friend—an understanding heart. Their confidences are written without any fear of being betrayed or ridiculed. Secret sorrows hoarded in the mind and heart become painful as a foreign body wedged into your brain. Relief will come only with its removal. Hence the crying necessity of a friend you can trust with your confidences.

SPAULDING TELLS HARLEMITES THEY SHOULD ORGANIZE

New York City, Oct. 10 (ANP) —"Negro citizens in Harlem have a wonderful opportunity for developing their economic freedom, providing they table all of their differences, get their heads together and go to work" said C. C. Spaulding, president of the North Carolina Mutual Insurance Company, in a statement here last week.

Mr. Spaulding has spent several weeks here studying conditions and was giving his hearers the benefit of the "way an outsider sees things in Harlem." These views included "that too many are living the wrong kind of life; that there are too many petty jealousies which tend to retard progress; and that too many permitted a color complex to cripple united action."

"We have got to cooperate with the white man" said Mr. Spaulding "and cultivate his virtues and leave off his vices. When our young people use up their energies in frivilous and fast living, they are undermining, not only the health of the racial group but also the economic foundation of the group."

GARDEN TOPICS

(Continued from Page 1)

of nitrate of soda if we use just half as much to the same volume of water. Such fertilizers as nitrate of soda or sulphate of ammonia should never be used after the middle of the summer. In fact, no fertilizer should be applied between the first of September and the middle of December. In much of our territory it would be better to set the first date as the first of August rather than the first of September The application of fertilizer at any time during the growing season is apt to stimulate new growth and this would cause the plant to suffer severely from winter-kill.

Well established plants of any of the varities of boxwood will stand full sunlight or almost full shade and are able to compete with the roots of almost any kind of trees. However, boxwood is often injured by being planted on the south side of a building where it gets too much reflected sunlight and heat, especially unless it is copiously supplied with water. Plants may also be injured by being planted where they will get no sunlight at all.

Much loss has occurred in the past and will occur in the future by people buying old boxwood plants and transplanting them because it is very difficult to dig these plants with a large enough ball of earth to not greatly reduce the absorbing area of the roots, and very few people are willing to share off anythink like as large a percentage of the leaf surface as they cut away when digging the plant. Conscientious nurserymen transplant their boxwood every other year so as to greatly increase the number of fine feeding roots. Such plants can be transplanted safely. Old plants in some man's yard, where they have neither been cared for nor fertilized for perhaps fifty years have long slender roots and when dug there are almost no fine feeding roots. No boxwood of this kind should ever be transplanted without shearing off the outer two or three inches of all twigs and branches, thus reducing the evaporating area of the plant and delaying new growth until new roots have had time to form.

In our territory it makes very little difference whether boxwood is transplanted in the fall or in the early spring. It is safe to transplant at any time for now on until the middle of March, provided we supply plenty of water to the newly set plants.

DAIRY COWS' CONTRIBUTION

(Continued from Page 1)

companies with adequate resources attempt through advertising to increase the per capita consumption of bottled milk. Their interests and their producers' interests are the same. They both hope to see more milk bottles on more doorsteps.

In this connection, this company has recently become a member of the Sealtest System Laboratories, Inc. This laboratory company supervises laboratory control and production technique in its member companies with the objective of improving quality of dairy products. The Sealtest Laboratories will also advertise the value of milk as a food both nationally and in the local markets where its member companies distribute milk.

I feel that to date milk has not received the sales impetus that results from consistent advertising which many other basic foods have enjoyed. Until recently there has been no single commercial organization sufficiently large to attempt to advertise milk on a national scale. If this laboratory system, over a period of years, is able to increase .....even slightly....the public demand for bottled milk and quality dairy products, it will have helped increase the income of daily farmers and directed consumers toward better standards of nutrition. It is the aim of this organization, aided by the Sealtest System Laboratories, Inc., to make every effort to increase bottled milk consumption in Nashville.

At the present time between 40 and 45 per cent of the ton of food consumed by the average American each year is composed of milk in one form or another. Health departments have often recommended that a fourth of the food budget be spent for milk and its products. Nevertheless, there is still opportunity to increase the per capita consumption of milk and thereby increase the cash income of our dairy farmers.

Today Americans lead the world in ice cream consumption with a little more than one medium size serving a week to their credit. The fifth of an ounce of cheese eaten by the average American each day, however, is only about one-third as much as is eaten in most European countries. Per capita butter consumption is only slightly more than half of the amount used in Canadian, New Zealand and Scandinavian diets. Although accurate figures on fluid milk consumption are not available, on the average Americans probably drink 1 1-2 glasses of milk a day. Per capita consumption is not this high however in Tennessee.

As an example of a goal to shoot for, as far as milk product consumption is concerned, we have only to examine the diet of the athletes at the Olympic games held in Los Angeles in 1932. The athletes consumed 2 3-4 glasses of milk a day, compared with the 1 1-2 used by the average person; they ate 3-4 of an ounce of cheese as against the 1-5 times as much ice cream, and nearly three times as much butter as the average citizen. We cannot all hope to qualify as Olympic athletes, but if we copied their type of diet, we might find our doctors' bills a little less burdensome.

—Nashville Banner.

QUICK MEAL MENUS

(Continued from Page 1)

flavor. Minced parsley may be sprinkled on top.

If freshly cooked vegetables are used, add the stock in which they have been cooked and reduce the milk in proportion. If tomatoes are used, add one teaspoon of sugar and 1-4 teaspoon of soda before combining with cream sauce.

Blanc Mange.

Scald two and one-half cupfuls milk, add remaining cold milk to cornstarch, stir to smooth paste and add to hot milk, stirring constantly. Cover and cook over hot water fifteen to twenty minutes. Beat egg yolk with sugar and salt, and stir into hot mixture. Cook five minutes remove from fire and stir in vanilla and fold in beaten egg whites. Pour into one large or six small molds and chill. Serve with whipped cream.

—Tennessean.

2 HUNDRED MILLION NEGROES OF WORLD THANK GT. BRITAIN

Writer Gives England Credit for Being Only Nation Fair to Dark Races

London, Oct. 10—(ANP)—All the world's 200,000,000 Negroes will thank Great Britain everlastingly if she comes to the aid of Ethiopia in her efforts to stave off Italain invasion, states Eric Walrond, well known journalist and fictionist now living in England. On the other hand, if Britain does not intervene to stop it, the 50,000,000 Negroes in her empire will feel they have been seriously let down, the writer asserts.

"For more than a century a great tide of color has been beating the age-old barriers of the white conscious," Walrond says. "You may say that the white world has managed to acquire its paramount position, its wealth and its culture, without more than a cursory interest in the private and corporate life of the Negro. But this contention neglects the immense contribution which the Negro has made to that wealth and to that culture.

"Only one Power appears to have realized its debt to the black folk—Great Britain, which is at this moment not only fighting for world peace, but with all the pacific means at her disposal, to preserve one small and independent section of the Negro race."

Walrond points out Ethiopia is a symbol of the destiny of the world's Negro millions. The attack on Abyssinia is not a colonial venture; it is a trial to prove whether the most advanced mind and conscience of the white people can remain satisfied by a new reaction which will confirm the hideous slavery of the past.

"With incredible labour, through generations of bruised bodies and broken souls, they have climbed to a position from which they justly claim to have earned complete equality with the white race. But what is equality worth if it is threatened periodically with naked force combining with cream sauce.

The journalist sets forth constant frustrations of Negro liberty everywhere which has bound them together. For reasons of racial integrity they do not wish war on Ethiopia. Mussolini, by doing so, sets back the hands of the clock. But Il Duce cannot turn back.

"If given a free hand in Africa he will stand a chance of kindling a violent war between the black and white races, which can only react disastrously on the position of the great Colonial Powers," Walrond sets forth. "Two hundred million people cannot for ever watch with complacence their destiny being torn by bayonets.

"As proof of the world-wide solidarity of the Negro, this unrest is not confined to the highly educated and super race-conscious blacks of parts of the United States and the British Empire, but is spreading unmistakably through the Negro population of Egypt and the Sudan into that impenetrable heart of darkness which is the jungle.

"Already the Negroes of the Gold Coast, Nigeria, and the Cape are restive. But they, all of them, are prepared to rally with all the means at their disposal to support Great Britain in her efforts for peace and racial justice."

MISSISSIPPI GETS JURY RULES TEST

Clarksdale, Miss., Oct. (ANP)—Counsel for the defense filed a motion here Tuesday to quash the indictment of Forde Pearson and Roosevelt Moon for the murder of a white man, on the grounds that there were no Negroes on the jury which brought in the indictment therefore they had been deprived of "due process of law."

Pearson and Moon are charged with the murder of a white merchant. At the first hearing they were indicted charged with first degree murder. Defense attorneys in the motion filed claim that the list of jurors submitted by the board of supervisors for consideration included no Negroes and that the list had been prepared with a distinct intention of omitting the names of Negroes.

Much interest is being manifested in the case this being the first time that the decision of the Supreme Court in the Scottsboro case has been brought up in this county. The records reveal there are more than 100 qualified Negro elections in Coahoma.

ADDS COURSE IN RADIO TECHNIQUE

Tallahassee, Fla., Oct 10 (ANP)—Announcement was made here last week that a course in Radio Technique and Operation had been added to the courses now offered by the Division of Mechanical Arts at the Florida A. and M. College. The new course will be under the tutelage of Prof. Orr who is an expert in radio technique.

The college opened two weeks ago with an unprecedented enrollment, which according to J. R. E. Lee will necessitate the immediate expansion of the physical plant. To relieve the present congestion the present home of the president will be used as a dormitory as soon as his new home is completed.

NO RATTLE PROVIDED FOR THE BABY RATTLESNAKES

Strange as it may seem, the baby rattlesnake has no rattle. Biologists of the United States Department of Agriculture say the young rattler has a button on the end of its tail at birth. Wihtin a few days it sheds its skin; in 2 months it sheds its skin again, and then the first ring of the rattle appears. Shortly after these snakes are born the last 7 or 8 vertebrae fuse into a solid bone, the "shaker," around which the rings of the rattle form.

When a rattler sheds, all the skin comes off entire, wrong side out—all except the part that covers the cap on the tail, which cannot come off because of the shape. This part of the skin, however, is dislodged and moves backward to become an additional ring on the rattle. The rattling noise is made by these rings of dry skin jiggling around when the snake vibrates his shaker. The biologists say a snake seldom has more than 10 rings because the vibration at the tip is so great that the terminal rings wear out or are broken off.

Biologists do not believe a lot of the notions about snakes. They say a rattler's years are not the same as the number of rings he has accumulated on his shaker. Normally one ring is added every time the skin is shed, and this is usually three times a year. But not all these snakes are alike in shedding. Some shed twice a year and some as many as four times.

Another thing, the biologists don't believe nature gave the rattlesnake his rattler as a warning device. They believe it is a call of use to them particularly in the breeding season. Anyway, it is an effective warning and saves the rattlers a lot of bother.

CHILI PEPPER POWDER IS HIGH IN VITAMIN A

It is through liberal use of chili pepper powder as a seasoning that Mexicans get much of their vitamin-A requirement, says the Bureau of Home Economics of the United States Department of Agriculture. Mexican diet, because of its apparent lack of vitamin A, was a puzzle to nutritionists until someone suggested chili powder. Most peppers are known to be good sources of vitamin A.

For vitamin tests, the Bureau used the particular variety of pepper (chili ancho Colorado) most extensively dried and ground for chili powder. These peppers formerly were imported into this country from Mexico, but are now successfully grown in Southern California. They do not do well, however, in New Mexico and Texas.

Preliminary tests indicate the vitamin-A content of air-dry chili pepper is very high—two to three times that of a good grade of butter.

BELLOWS 125 YEARS OLD

Sandwich, Mississippi, (UP)—Mrs Gertrude Wood owns the largest and oldest bellows in this part of the country. The bellows, 125 years old and about 5 feet 6 inches high, once was used by John Ellis, the village blacksmith.

National Federation of Colored Farmers Closed Successful Session

LITTLE ROCK ARK., EXTENDED FINE WELCOME

James P. Davis Re-elected As President—Other Officers Chosen

17 States were represented when the annual convention of National Federation of Colored Farmers convened for a four day session at the Samaritan building in Little Rock, Ark., Oct. 28. There were 1816 registrations.

The first business session was held at the Congregational church on Monday evening when Mrs. Tellie E. Lewis of St. Louis, Mo., made the principal address. There were three minute talks by the members also.

Tuesday morning at 10 o'clock the business session opened with a stirring address by Prof. Floyd Brown of Fargo, Ark., who represented the Negro farmers of Arkansas—holding an official commission issued by the Governor of the state, Hon. J. M. Futrelle. Prof. Brown told the members and delegates that organization was our salvation and that it meant more to the race than he could be able to stress.

Tuesday evening at the Congregational church the most interesting program in history of the federation was carried out. There were fully two hundred who were unable to gain admission into the church.

The following program was carried out in it's entirety:

Annual Convention

The National Federation of Colored Farmers, Inc., will convene in the City of Little Rock, October 28, through the 31, at which time the following program will be rendered:

PROGRAM

Monday—10 a. m.,—Oct. 28

Registration of delegates and members.

Report of Units.

Application for new members.

8:00 p. m.—selection, congregation

Invocation.

Business session.

Address, Mrs. Tillie F. Lewis, St. Louis, Mo.

Tuesday—11 a. m., Oct. 29

Address by official representatives from each state, led by Mr. Floyd Brown, Fargo, Ark.

Tuesday—8 p. m., Oct. 29

Song, assembly.

Invocation, Dr. A. T. Clarke, pastor First Congregational church.

Selection, First Baptist choir.

Welcome Address on part of white citizens: Hon. R. E. Overman, Mayor.

Response, Judge Scipio A. Jones.

Music, Mrs. Jimmie Bunting.

Welcome Address, on part of colored citizens: Bishop T. Thos Demby, Episcopal Church.

Response, Dr. Arthur Hicks.

Music, First Baptist choir.

Address, Hon. E. A. Miller, Asst. Director of Cotton AAA. Washington, D. C.

(Continued on Page 8)

ARKANSAS CITIZENS' PETITION

Over Eight Hundred From Little Rock Make Requests

Little Rock, Ark., Nov. 4, 1935, (Special to Modern Farmer)—A petition signed by 854 prominent colored women living in the city of Little Rock, Ark., was sent by special delivery mail to Dr. W. W. Alexander head of activities in PWA Washington, D. C., as follows:

1901 Pulaski, St,
Little Rock, Arkansas,
October 22, 1935
Dr. W. W. Alexander
PWA Work Relief Dept.
Washington, D. C.,

Dear Sir:—

Enclosed please find a petition containing 854 (eight hundred fifty-four) names of colored citizens, mainly of Little Rock, who have become greatly concerned because of the fact that 493 Women's Projects providing for the employment of 9,904 women have been submitted to Washington from Arkansas and that they have heard of none of these which included Negro women.

The president of the City Federation of Colored Women's Clubs and their committee members conferred with Mrs. Dot Kennon about fifteen days ago and reported that Mrs. Kennon promises the city two Negro women workers (not two projects but two women) in the city of Little Rock and that her department would furnish the thread provided the Negro organizations furnish the materials for sewing.

The petition was gotten up on the night of Thursday, Oct. 19, and as all of those getting signers are working most of the day at their regular occupations we have sent you hundreds instead of thousands of signers.

The great number of needy Negro women in our city, county and state without work should warrant several set ups of various work projects including the sewing projects and the employment of several thousands of our women.

I am principal of Bush school, which is in one of the most poverty stricken sections of the city and the needs of my pupils are a daily reminder that I am derelict of duty if I do not bestir myself in the interests of a patient, long-suffering group.

I was associated with Mrs. D. D. Terry, wife of our Congressman, for eight consecutive years, during the organization and establishment of our Phyllis Wheatley Y. W. C. A. club; with Miss Erle Chambers, State Executive Secretary of the Tuberculosis Association, during the beginning of our State Sanatarium at Alexander and in several Seal Sale drives. She and I are life long friends.

I give these two women as references as to my veracity and standing in my community, also Mrs.

PLANS TO HELP ALL FARMERS

Main Offices of Nat'l Fed. of Colored Farmers Release Following

LOAN POLICY WIDENED

The government has set up machinery to make it possible for farmers who have had their applications for loans turned down, to apply through the Resettlement Administration. Advances would be permitted to finance the purchase of farm lands and necessary equipment by farmers, farm tenants, croppers or farm laborers, and for farmers who have applied unsuccessfully for loans from the Farm Credit Administration; also farmers who have become delinquent in payments to the Federal Land Banks and in danger of foreclosure. Farm Associations are also eligible to apply under this act.

Write this office for full particulars.

FRAZIER FARM BILL SIGNED

President Roosevelt has signed the Frazier Lemke farm Mortgage Moratorium bill. The measure, designed to reduce farmer's overhead expenses, allows the property owners to turn over their assets to the courts, legally speaking, and then pay a reasonable rental for three years, and remain in possession of their land.

This bill freezes mortgage foreclosures and protects the agricultural producer for the coming three years.

WOMEN'S WORK RELIEF

Sewing rooms will be opened up in various sections of the country. Officers of sewing clubs should write Mrs. Woodward, Director Women's Work Division, 1234 New York Ave., Washington, D. C., and ask for full information.

FARMERS WILL GET FREE FERTILIZER

Farmers in certain sections of Tennessee will be furnished fertilizer free except cost of handling and haul. Members who are in position to meet requirements of the TVA, should file their applications with their County Agent at once.

HELPS FOR THE CLERGY

President Roosevelt's letter to clergy of the nation asking for their "counsel and advice" stamps him as the most original politician of all time. To go to the preachers when he might have called in the ward heelers is simply unheard of. Why if this idea is permitted to continue the day will come when "Let us pray" will mark political gatherings instead of "How much can he pay?"

But seriously, the appeal of the president, novel as it is. has many sound aspects. The preachers of the nation, by and large, are sincere, earnest, patriotic and unselfish citizens. Because of their traditional

MR. F. A. MILLER'S ADVICE

Assistant Director of Cotton Presented at Selma University

From The Selma Times-Journal

Selma, Ala., (Special to Modern Farmer) — Speaking on special phases of the government's agricultural program at the fifty-ninth opening session of Selma University Wednesday morning, F. A. Miller of Washington, D. C., assistant director of cotton, AAA; Dr. H. A. Hunt of Washington, assistant to the governor, Farm Credit Administration, and other representative figures in the AAA administration made impressive appeals to Negro farmers present to use credit sparingly and only when needed.

Mr. Miller, speaking forcefully of the importance of giving back to the producer a just share of the wealth he has made, said that contented home owners would go a long way toward solving today's problems, and he emphasized the spirit of cooperation between white and colored peoples as being a cornerstone of continued good relations.

Industry, he said, plowed up millions of men and was not criticized.

Foreign production of cotton has been greatly exaggerated, with Brazil producing less than half the expected crop, he said.

Self-help and a greater regard for the old virtue of self-denial were lauded by Dr. Hunt as means of bringing about economic improvement in the condition of the Negro farmer. He urged his hearers not to borrow except for things actually needed. Speaking of the manner in which the Farm Credit organization functions, Dr. Hall said that it is a business with no elements of Santa Claus and the Christmas tree included. The government must be repaid and the tax payer will be the person to repay. Dr. Hunt said. The trouble with too many persons is that they are looking for something for nothing, and do not realize that repayment is to be exacted.

He spoke also of the Production Credit Association through which low interest rates are extended to farmers for the period they will need the money and referred to the fact that numbers of colored farmers who have secured these loans, have made an excellent showing in repayment. Ample security must be put up for these loans, he explained. In closing he urged his hearers to be thrifty and buy land, he said. Support of Selma University, which he praised as one of the best Negro educational institutions in the country, also was urged as he praised William H. Dinkins, its president, Dr. Hunt was presented by James P. Davis of

Information For Students Wanting Aid

How Assistance May be Secured From Government

(1) Students must be between the ages of 16 and 25. Students may not participate in this program until they have reached their sixteenth birthday.

(2) They must be members of families which are receiving emergency relief from public funds (or employment on the works program) and must be able to do high grade work in school. Certification of relief status is the responsibility of the local relief authorities.

Children of families on rural resettlement projects which include families of Subsistence Homestead, Rural Rehabilitation, and Rural Resettlement are considered as having relief status for purposes of high school aid. The community managers of resettlement projects will certify the children of resettlement families for this purpose.

(3) They must be able to show that they have had to quit school for lack of such financial assistance in the past, or that they will be unable to attend this year without such assistance.

Institutions which are Eligible to Participate in this Program

(1) All institutions of less than college grade, both publicly and privately controlled (including parochial schools), are eligible to participate in the program provided they are non-profit making in character.

(2) If you are not sure that the institution you wish to attend comes under this classification, consult your public school superintendent in the city, county or other school district in which you reside.

Types of Aid Available

(1) The aid provided high school students is in the form of part-time jobs, which enable students to earn a maximum of $6 per month while attending school.

(2) In the case of individual students who are especially well qualified, or for whom the assignment of work is impractical, aid may be granted for maintaining excellence in their school work. In such cases, the assistance granted shall be in the amount determined by the student's individual need, but in no case to exceed $6 per month.

How to Make Application

(1) Make your application directly to the principal of the school you wish to attend. Forms for making application will be supplied by the individual schools.

FROM FEDERATION CONVENTION NOTES

Walter Riley from Mt. [illegible] was on hand early and late. He is a real red blooded member and certainly knows how to handle a crowd.

Thomas Gillespie, the little Napoleon from south cast Missouri came in about six hours late. He made up for lost time and was busy during the entire four days. We are looking for big things from Gillespie.

(Continued on Page 8.)

COURTS IN THREE TENNESSEE CITIES OBEY NEW ORDER

Memphis, Knoxville And Jackson Lead In Bowing To Rule Of Reason

NEW YORK—Refilling of the Jackson County (Scottsboro), Alabama, jury boxes to include the names of Negroes, upon order of Judge A. E. Hawkins who presided at the first trial of the Scottsboro boys, and swearing in of three Negroes on the grand jury of Morgan County (Decatur), Alabama, scene of the Scottsboro trials of 1933, are among the most recent of more than two score instances reported from ten states, in which the famous decision won by the International Labor Defense from the U. S. Supreme Court on April 1, 1935, in the case of Haywood Patterson and Clarence Norris, upset the usual procedure of selecting lily-white grand and petit juries, a survey just completed by the I. L. D. shows.

In many cities and towns during the last six months, Negroes were placed on jury rolls, and in some instances actually called for service, for the first time since Reconstruction days. In some cases the Negroes put on the jury rolls were not called for service; in others, Negroes called for service did not sit on the grand or petit jury when final selection was made.

Called in 27 Localities

Reports tell of 27 localities—cities, towns or counties—where one Negro or more was called for service on grand or petit juries. Negroes actually served in Harrisonburg, Spotsylvania, Williamsburg and Fairfax, Virginia; New Orleans and Jefferson Parish, Louisiana; Nash County and Guilford County, North Carolina; Jackson, Tennessee; Clarksdale, Mississippi; Elizabeth City, New Jersey; Decatur, Ala.; and Hays County, Texas.

Negroes were called for jury service, but did not actually sit, in Wilson and Wentworth, North Carolina; in Memphis, Tennessee and in Birmingham and Dothan, Alabama. In Wilson the prospective juror asked to be excused—whether or not he did so because of fear of reprisals is not known. In Wentworth several Negro jurors called were rejected through peremptory challenges by the states; in Birmingham the first Negro juror to be called in the memory of court attaches was eliminated in the same way. A prospective juror summoned in Memphis was excused for cause, by agreement between prosecution and defense. In Dothan, Alabama, two Negroes were drawn for service but their summonses were returned with the notation that they could not be found "because of inadequate addresses."

Negroes were also called for service in Fredericksburg, Norfolk and Suffolk, Virginia; in Orange, New Jersey; in Orleans Parish, Louisiana; in Knoxville, Tennessee and in Decatur, Alabama. There are no reports so far to indicate whether any have actually served.

In many other localities Negroes have been placed on the jury rolls but have not yet been called for service.

Appeal to Scottsboro Ruling in Eleven Cases

In eleven cases of litigation, defendants moved to quash the indictments against them on the ground that Negroes had been systematically excluded from service on the grand jury. In all these cases action was based on the Supreme Court decision of this year. The defendants were successful in having indictments dismissed in Fairfax, Virginia; Mobile, Alabama, and Clarksdale, Mississippi. The motion for quashing was overruled in Newark and Elizabeth City, New Jersey; in Dothan, Alabama, and in Kingdom of Callaway, Missouri. The results of the motions to quash, made in cases arising in Norfolk, Virginia; Elizabeth, New Jersey; St. Louis, Missouri and Memphis, Tennessee are not yet known.

Defendants who had been convicted moved to set aside sentence in five different cases, on the ground that Negroes were systematically excluded from the grand or petit jury or both. A death sentence was set aside in Newark, New Jersey; three motions to reverse—two made in Birmingham and one in Austin, Texas,—were overruled; and a fifth such motion, made in Memphis, Tennessee has been continued indefinitely.

In all these cases where quashing of indictments or setting aside of sentences was asked, the action was based on the Supreme Court Scottsboro decision of this year.

Certain localities have placed Negroes on the jury rolls frankly in order to make indictments stick and prevent reversal of sentences. This is notably the case in Jackson County (Scottsboro). The development of concrete movements on the part of Negro and white people to secure jury rights for Negroes will make it possible for many more Negroes to be placed on the rolls, and actually to sit on the grand and petit juries, the I. L. D. stated in making public the results of its survey.

The following instances, listed by states, have come to attention during the past six months:

ALABAMA

The state legisiature passed the Welch Bill, providing for re-filling of jury boxes. Every jury box in the state will be emptied and refilled. (August).

Mobile: Murder indictments against R. P. Vaughn and Frank Milhouse were dismissed and new indictments were sought, when Miss Rosa Gerhardt, defense counsel, contended that Negroes had been systematically excluded from the grand jury drawing up the indictments. However, new indictments were handed down by another all-white grand jury drawn from an all-white panel. (June).

Birmingham: Carlos Cartino, convicted in Birmingham early in March, 1934, of theft of interstate freight, and now serving in the Atlanta Federal Penitentiary, pleaded that he was convicted by a jury which did not include a single Negro. The plea was denied by Federal Judge Marvin Underwood on the contention that in that term of court "the names of 66 Negroes were in the jury box." Judge Underwood ruled that the fact that none of the 66 might have been drawn from jury service did not invalidate the proceedings. (June).

Birmingham: C. B. Powell, attorney for Walter Brown, moved that the verdict of a jury finding his client guilty of "attempted rape" be set aside on the ground that the indictment was returned by a grand jury from which Negroes had been systematically excluded. Motion was denied. (July)

Birmingham: For the first time in the memory of court attaches, a Negro was qualified for jury service. Lewis Dorroh was seated with 280 white prospective jurors but was the first of the panel to be struck. (October).

Jefferson County (Birmingham): 3000 names of Negroes were placed in the rolls by the county grand jury commission. (September).

Scottsboro: Judge A. E. Hawkins, who presided at the first trial of the Scottsboro boys, ordered the Jackson County Grand Jury commission to re-fill the county grand jury boxes. The new grand jury will be asked for re-indictment of the Scottsboro boys. (September)

Dothan: A motion was filed before Judge C. D. Halstead in Circuit Court in behalf of K. C. Stanford, charged with murder of another Negro, to quash the indictment on the ground that Negroes were systematically excluded from jury service in Houston County. Motion overruled. (September)

Dothan: Two Negroes drawn for jury duty at fall term of court did not appear. Summonses were returned with the notation that neither could be found "because of inadequate addresses." (September)

Decatur: Three Negroes sworn in on Morgan county grand jury. They began serving with 15 white jurors. They are Jim Sanford, Arthur Stewart and Glenn Sharpley. (October)

GEORGIA

Atlanta: C. A. Falcon, barber shop proprietor, served as a member of the Fulton County grand jury. He sat between two white jurors, retired to the grand jury room for organization and returned to hear the charge. He was the first Negro to serve on a grand jury in the memory of two court attaches. (September)

LOUISIANA

New Orleans: All-Negro grand jury was drawn. (June).

New Orleans: Taylor Segue, Negro, served on jury in income tax evasion trial of Abram L. Shurshan, high political associate of Huey P. Long. (October)

Jefferson Parish: Jury wheel was opened and names of Negroes were entered for trial of a case involving a Negro charged with "rape." (June)

Orleans Parish: Dominick St. Thomas, world war veteran, was put on the lists for grand jury service. (June).

MISSISSIPPI

Clarksdale: H. C. Armstrong, a Negro school teacher, was among 20 jurors drawn for grand jury service of Coahoma County. He sat on the jury to consider the case of two Negroes charged with the murder of a white merchant. This was the first time since reconstruction days that a Negro has sat on a grand jury in the state of Mississippi. Indictments returned by a previous all-white grand jury against the two Negro defendants had been quashed by Judge William Alcorn on the claim of counsel for the defendants that the Negroes were systematically excluded from grand and petit juries. (October)

Kingdom of Callaway: Attorney for Anderson Logan challenged the grand jury panel handing down the indictment because it included no Negroes. Judge W. C. Hughes overruled the defense attorney declaring that the case differed from the Scottsboro case in that the panel was chosen by a deputy sheriff at the order of the court. Prosecutor Sapp argued that no Negroes were qualified. Attorney Don Carter, questioning Deputy Sheriff Owens asked him if he would have chosen a Negro had there been any qualified. The Sheriff answered: "It hasn't been customary and they'd have rotten-egged him clean out of town." Logan was sentenced to die for the murder of his wife. (June)

St. Louis: Attorney for Raymond Batson moved to quash indictment for murder on the ground that there were no Negroes on the grand jury. (May)

NEW JERSEY

Orange: Dr. Walter G. Alexander received notice that he was one of 35 citizens drawn for grand jury service for first half of September before Common Pleas. Judge Van Riper. (September)

Elizabeth: Attorney for Amos Carr asked dismissal of manslaughter charge on the ground that Negroes were excluded from the panel from which petit jury was to be drawn. Union County jury commission admitted that no Negroes had been called for jury service in the county for 20 years. (April)

Newark: Counsel for Henry Jordan sought to have four robbery and attack indictments quashed on the ground that they were handed down by a grand jury on which there were no Negroes. The court denied the motion on the ground that "there is a wide distinction between the facts in this case and in the Scottsboro case." Counsel for defense showed that no Negro had been called for grand jury service for 10 years in Essex County. (June)

Elizabeth City: Attorney for Alonzo Smith, charged with liquor tax evasion in U. S. District Court, moved to have the indictment quashed because of the exclusion of Negroes from the grand and petit jury lists. The judge refused to quash but offered to allow Smith to exhaust the ten challenges due him and place ten Negroes on the jury. Smith was acquitted. (June)

Newark: The Court of Errors and Appeals reversed the death sentence against James Jones and ordered a new trial on the ground that Negroes had been excluded from the jury. As a result preparations were begun to place the names of Negroes on the grand and petit jury lists. (June)

NORTH CAROLINA

Wilson, N. C.: W. H. Barnes, merchant, was called for service on the grand jury of Wilson County Superior Court. This was the first time a Negro was ever called for this grand jury. He asked to be excused because of pressing business. (September).

Nash County: W. T. Mann, Jr., farmer, was called for petit jury duty during the civil term of court. The sheriff told newspapermen: "Mann is considered one of the best Negroes in the county and will probably wish to be relieved of jury duty." Mann did not decline and served. This was the first time a Negro had served on a petit jury in the county of over 40 years. (September)

Greensboro: David Dunn and John Gilmer served as members of the grand jury of Guilford County. They were the only two Negroes included in a list of 48. This is the first occurrence of this kind in the memory of any local inhabitant. (July)

Wentworth: Several Negroes were called for petit jury service on the panel to try George France, Negro, charged with "criminal assault" on a white woman. Each was rejected following peremptory challenges by the state. This was the first time that Negroes had been called in Rockwell County. (July)

Williamston: For the first time in more than a generation, the names of Negroes were placed in the jury box, making Negroes subject to duty on grand and petit juries in the Superior Court of Martin County. (July)

TENNESSEE

Memphis: Buddy Knox sought through his counsel to have sentence of one to four years on burglary charge set aside on ground that there were no Negroes on the trial jury. Judge Marvin Underwood ordered the hearing on the petition continued indefinitely. (July)

Memphis: Ewing J. Miller, a Negro druggist, called for jury duty and excused in one minute. The jury was to try City Judge Lewis Fitzhugh in a fine remission racket. Defense attorneys asked that Miller be excused for cause, and prosecuting attorneys agreed. Miller was one of two Negroes whose names were added to the list of 10,000 Shelby County residents eligible for jury service. (July)

Memphis: Dr. J. W. Becket and Dr. A. Ross, physicians, indicted on charges of conspiracy, filed pleas in abatement attacking the legality of the federal grand jury indictment against them on the ground that Negroes have been systematically excluded from federal grand and petit juries. (August)

Knoxville: Three Negroes—James Brice, David E. Kemp and Samuel H. Toole, were chosen for grand and petit juries in Knox county. No Negro has served on a trial jury here in 20 years. (June)

Jackson: Two Negroes were chosen for service on a trial jury as the U. S. District Court met for the Western Division of Tennessee. (September)

TEXAS

Austin: State Court of Criminal Appeals considered appeal of John Trapper, sentenced to death for murder of white policeman. It ruled that "mere absence of Negroes from a jury panel is not enough to re-

verse conviction of a Negro defendant. There must be some testimony to sustain an allegation of discrimination." (July)

Hays County Charles Connally served on a county grand jury, the first Negro to serve for many years. (August)

Hays County: George Kyle served on a grand jury in this county. (October)

VIRGINIA

Hopewell Judge Marshall R. Peterson of Hopewell Circuit Court ordered the jury commissioners to list qualified Negroes for jury service in three counties—Sussex, Prince George and Greenville. He ordered 75 names taken off the existing list of 344 and replaced with the names of Negroes. (June)

Portsmouth: Names of Negroes were included in the jury lists for the first time in more than 20 years. (June)

Harrisonburg: John Edward Black, auto mechanic and world war veteran, received a call to serve on the county grand jury, the first Negro ever to be called in Rockingham County. He served on a grand jury with six white members, although he received a written threat from the Ku Klux Klan. (June)

Norfolk: Attorney for R. G. L. Paige, lawyer, accused of embezzlement, moved to quash the indictment on the ground that no Negroes were on the grand jury. (June)

Norfolk: Negroes were selected for petit jury service. (June)

Fredericksburg: Negroes were selected for petit jury service. (June)

Suffolk: Negroes were selected for petit jury service. (June)

Fairfax: Two Negro women, Louise and Mary Carpenter, indicted for arson by an all-white grand jury, attacked the indictments because Negroes had been excluded from the panel. Fairfax officials dismissed the indictments, impanelled an all-Negro grand jury and reindicted the defendants. (June)

Williamsburg: Henry Billips, janitor, was called for circuit court jury service and served in the trial of five cases, four of which had all-white participants. This was the first time in 41 years that a Negro served on a circuit court jury here. (August)

Spotsylvania: Two Negroes were called for special grand jury service to consider the indictment against two colored men. (June)

POTATO QUOTAS BEAR HEAVILY ON MIDDLE WEST

Illinois Tax Free Total is 600,000 Bushels; Iowa Hard Hit

By Herman Gastrell Seely

Potato sales quotas announced by the AAA in the drive to bring potato prices to a "parity level" set by the highest priced peace-time decade on record bear most heavily on those states which have increased their potato crops during the last few years, a comparison of figures showed today.

The quota system thus announced in no sparer of regions or of personalities. Iowa, home of Secretary Wallace, gets an allotment of tax-free potatoes that is less than one-third the 1934 crop. The Illinois ratio is less than one-fourth. The Tennessee ratio is about one-eighth. Indiana's allowance is almost as low as Illinois.

On the other hand, some of the areas which were smitten by the 1934 drought have quotas in excess of the crops raised that year, although still well below the average normal production for the territory.

The "tax-free" sales allotment established by Secretary Wallace under the authority of the potato control act for the year beginning Dec. 1, 1935, is 226,000,000 bushels as against a probable 1935 crop of 336,000,000 bushels.

The amount allotted to each state as reported by The Associated Press, and the 1934 potato crop by states, given in the 1935 department of agriculture handbook, are as follows in thousands of bushels:

	Tax free quota, 1934 crop	
Maine	32,799	56,280
New Hampshire	955	1,665
Vermont	1,199	2,720
Massachusetts	1,466	2,560
Rhode Island	377	540
Connecticut	1,688	2,625
New York	18,321	32,550
New Jersey	6,129	9,050
Pennsylvania	14,124	34,000
Ohio	5,552	11,445
Indiana	1,688	6,200
Illinois	600	2,704
Michigan	14,767	34,304
Wisconsin	11,548	31,320
Minnesota	13,746	23,380
Iowa	1,399	4,851
Missouri	1,488	1,380
North Dakota	4,974	5,940
South Dakota	1,221	1,290
Nebraska	5,130	3,450
Kansas	2,221	1,480
Delaware	224	720
Maryland	2,100	3,267
Virginia	10,348	13,433
West Virginia	955	3,120
North Carolina	4,375	10,672
South Carolina	1,999	2,625
Georgia	333	1,360
Florida	3,087	3,250
Kentucky	1,044	4,480
Tennessee	533	4,320
Alabama	1,332	3,760
Mississippi	222	1,344
Arkansas	910	2,624
Louisiana	1,199	2,948
Oklahoma	1,221	2,760
Texas	1,910	3,780
Montana	799	1,610
Idaho	16,833	19,240
Wyoming	2,021	1,000
Colorado	10,126	5,700
New Mexico	200	490
Arizona	200	180
Utah	1,443	1,040
Nevada	444	210
Washington	5,818	7,290
Oregon	3,953	5,720
California	7,017	8,610

Potatoes sold in excess of these quotas are subject to a tax of 3-4 of a cent a pound. The secretary of agriculture has power under the act to prescribe regulations for packaging potatoes and for methods of keeping books by commercial growers to prevent sales of untax excess quota potatoes.

PLANTERS ADVISED TO WAIT FOR RULES

White Gives Suggestions on Cotton Price Adjustments

Little Rock, September 22.—Chairman E. D. White of the state allotment board advised landlords today not to attempt to make price adjustments on cotton under the government's new regulations until printed copies of the regulations reach the county agent's office.

"Producers are not in a position to obtain the necessary information at this time and will not be able to make the proper price adjustment payments to tenants until this information is in the hands of the county agents," White declared.

The payments will be determined later according to the prorated share of cotton produced by each tenant, White said. He suggested that landlords retain receipts obtained from tenants relative to the amount of cotton produced by the tenant so that he may avoid complications later when he files application for price adjustment payments.

The state allotment board chairman said that the Washington office had advised him that necessary forms for making application for price adjustment payments on cotton are in the government printing office and will be forwarded to county agents as soon as they are printed.

COTTON GINNING TAX IS CUT FROM 6 TO 5.45 CENTS

Washington, D. C., October 22—reduction in the Bankhead cotton ginning tax from 6 to 5.45 cents per pound of lint cotton, effective as of Oct. 21, was announced today by the AAA.

The Bankhead law provides that a tax shall be collected on all cotton ginned in excess of a national allotment.

Reporting a total of 29,808,220 cotton spinning spindles in place on Sept. 30, bureau of census officials said today this was the first time that the number had fallen below 30,000,000 in any month for fifteen years.

WESTERN UNIVERSITY TO ENLARGE SCHOOL FOR MORE STUDENTS

Largest Enrollment in Twenty-five Years Comes Under Bishop Vernon's Regime

Kansas City, Kansas, Nov. (By the Continental Press)—The two year's administration under complete state control of the State Industrial department of Western University located here has brought results beyond the sanguine expectation of the most optimistic of its supporters, and the widely known institution now has the largest enrollment of which it has boasted in a quarter of a century. The two year state regime under the superintendency of Bishop W. T. Vernon and the Board of Trustees headed by Bishop J. A. Hamlett, president has brought the school to an enviable place in the realm of education.

On a recent visit to the institution as the special guest of Bishop Vernon, Bishop Hamlett was shown about the buildings and spacious grounds of Western University, and expressed delight at the calibre of work done at the historical institution and the large body of students which he addressed at Assembly Hour, Friday noon.

The institution was recently visited by two other distinguished representatives of the State of Kansas: Miss Louie Lesslie, secretary from the State Board of Education, and Dr. H. E. Chandler, member of the Board of Accreditation of Junior Colleges in the State of Kansas and professor of Education at the University of Kansas. These two representatives of the state of Kansas addressed the student body and pledged bringing to bear every possible influence to have the state enlarge its appropriations so as to make this institution one of the outstanding standard "A" class Junior colleges of America. They were most lavish in their praise of Superintendent W. T. Vernon and those who have manned and conducted the affairs of the institution so well.

Others included in the long list of steady stream of recent outstanding visitors at the institution are: T. B. Watkins, well known undertaker, Kansas City, Missouri; Roy Dorsey, Coal dealer, Kansas City, Missouri; Hon. A. C. Cook, Election Commissioner of Kansas City, Kansas, also member of the Executive committee of Central Republican Committee and secretary of the Second Congressional district; Hon. Thomas A. Bigger, powerful political figure of Kansas, and Hon. Roy A. Thomas, chairman of the Wyandotte County Central Republican Committee. All of these visitors expressed their delight at the work done at Western University under Bishop Vernon's administration and were most generous in their enconiums for the men and women of the institution, recreating confidence and bringing it to such a high place in the affections and good graces of the people of this state.

Three Selected For Jury Service In Virginia

Richmond, Va., Nov. 27—(By ANP)—For the first time since the days of the reconstruction following the war between the states, Negroes will sit on a jury in felony court in Fairfax county. This fact became known here Tuesday when Gus Burke, of Centreville, Thomas P. Harris, Mount Vernon and William H. Randall, of Falls Church were selected for jury service.

The three jurors will be among those to decide the fate of Mrs. Louise Carpenter and her daughter who are charged with arson. The two women were indicted by a jury on which no Negroes were members, following which a special grand jury composed entirely of Negroes was summoned and the defendants were again indicted. The case will be called Monday morning.

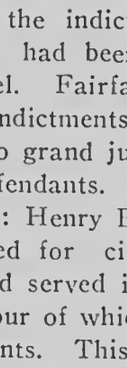
Must Serve Three Year Term For Assaulting White Man

Sumpter, S. C. Nov. 21 (By ANP)—Thomas Hawkins must serve three years in the State prison for attacking J. J. Broughton, white farmer, with a razor, according to the edict of the court here Tuesday morning. The defendant claimed that the white man attacked him and that another white man attempted to shoot him but that he succeeded in disarming him. This man was identified as Mendel Smith who testified that he went to Broughton's rescue after he had been slashed on the side of the face with the razor in Hawkins' hand.

The Best BIBLE FOR $1.00

Special Prices for Quantities

Size 5x7¼ Inches



No. 1502

NEW VALUE

About one-half former cost.

Clear Readable Black Face Type. Size of Bible, 5x7¼ inches—1082 Pages, only 1¼ inches thick, including covers.

Strong, flexible limp grained Binding, rounded corners, red edges, gold back titles.

This Bible is ideal for personal use, for responsive readings in the classroom, for the pew or any department of the Church or School.

Specimen of Type

THE LORD *is* my shepherd not want.

THE MODERN FARMER

Official organ of the National Federation of Colored Farmers, Inc.

Leon R. Harris - - Editor

Published monthly by the Modern Farmer at Nashville, Tennessee.

Office, 447 4th Avenue, North.

Devoted to the interests of the Farmer, Truck Gardener, Livestock and Poultry Breeder, the Home and the People.

Entered as Second Class Matter, April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 447 4th Avenue, North, Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, 75c for six months, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT.

OUR PLATFORM

1. A Unit of the National Federation of Colored Farmers in every community of colored farmers.
2. Co-operative buying, producing and marketing.
3. Every colored farmer a farm owner.
4. Abolition of debt-slavery, injustice and persecution.
5. A written contract for every colored farm tenant and sharecropper.
6. Better rural churches, schools and homes.

AID TO AGRICULTURE MEANS A NEW EPOCH

Is American agriculture to have permanent assistance just as industry has assistance in the tariff? Yes, President Roosevelt answers in effect when he outlines "a long-time and more permanent adjustment program" for agriculture.

Those words mark the beginning of a new economic epoch. They mark it not because Mr. Roosevelt has power to dictate a new economic epoch, but because they bring out into the open a fact that has been implicit in the AAA program from the start. Once the government started that program there was no drawing back. It is conceded now that whatever the Republicans may do next year about the other aspects of the New Deal, they will have to offer the farm states of the Middle West and the Northwest an agricultural program at least as satisfactory as the AAA. The one Republican presidential aspirant who has ventured to express himself at all, Col. Frank Knox, proposes an export bounty scheme which like the AAA processing taxes, would be a tariff equivalent.

The AAA machinery was designed and put into operation under the pressure of an emergency. It may not turn out to be the permanent machinery under its present form or even its present name. Mr. Roosevelt himself says that for permanent use it will need to be simplified and changed in various respects.

But what the AAA nas done is to make millions of growers of the great export surplus crops realize vividly what an uncompensated industrial tariff did to them when it made them buy with world-price farm dollars in highly protected industrial markets. Complaints about the burden of the processing taxes and production control on business and on the non-agricultural population will make no impression on them as they remember the hundreds of millions of tribute they have paid over the years to protected business and protected wage and salary earners.

A widespread change began when American agriculture got its teeth into AAA benefits, as American industry had so long had its teeth in tariff benefits. Anybody who assumes that the agricultural emergency can be declared over and nature left to take its course has a great deal to learn about the political physiology of the United States.

—Arkansas Gazette.

SOY-BEAN DESTINED TO PLAY BIG PART IN LIFTING FARMER TO HIGHER PROSPERITY LEVEL

After feeding man and beast in the orient for centuries, the soybean in a short time has leaped into the national spotlight. There are about 1,000 different varieties of this bean, and came originally from China. Soy-beans may be green, yellow, speckled, straw-colored, black, tan or brown. The first beans were brought to this country in 1804. They were known in the orient over 6,000 years ago. Soybeans leave soil-building bacteria in the ground and provide feed for livestock. It is a drought resisting plant.

Two thousand bushels of beans will yield 400 pounds of oil and 1600 pounds meal. The oil is now used in the manufacture of paint.

From sausages to sweets and from infant foods to linoleum the soy-bean is filling a vast range of usefulness. All the elements necessary to sustain life are found in bread made from a mixture of soy and wheat flour.

The estimated 1935 crop this year is placed at five million acres.

Soy-beans are expected to become America's leading farm product.

GEORGIA FARMER REPAYING LOANS FASTER THAN RRA DAN ANTICIPTAED

Georgia farmers are repaying their loans from the Rural Resettlement Administration faster than was anticipated when the loans were made, Philip S. Weltner, regional director, revealed Wednesday.

Out of a total of $3,000,000 loans to farmers to purchase farm stock and to finance the 1935 crop in Georgia, $500,000 already has been repaid, he said, citing a report prepared by R. L. Vansant, of Athens, Georgia director.

Additional repayments are coming in at the rate of about $20,000 a day, with the income from the cotton crop in the north Georgia counties expected to swell the total shortly.

"Surprisingly few farmers are falling down on their obligations," Mr. Vansant said. "Collections began in south Georgia in many cases before the notes were due, as farmers began to receive cash from their tobacco."

While farmers are financed through the Resettlement Administration, they also receive valuable assistance from the federal agricultural experts, both on crops and on bookkeeping. Farmers hitherto without any record of operations are keeping tab on their expenses with resulting profits.

Mr. Weltner will be in Washington Thursday, seeking to expedite release of his budget for the year in this region.

OUR DUTY IN SUPPORT OF THE AGED

(From the Series of Sunday Afternoon Broadcasts by Senator Arthur Capper Over WIBW, the Capper Publication Station, Oct. 20, 1935.)

For a number of years I have been strong for an old age pension. I introduced one of the first bills on the subject and took an active part in the fight for such legislation in the last Congress. Nearly all other countries have had old age pension legislation for a quarter of a century. The United States ought not to be the last to adopt it.

The wide interest manifested in the subject of old age pensions is the strongest evidence of the need of pensions for the aged. Within 10 years the total cost of the pension system is expected to reach 800 million dollars. This is the estimate of the actuaries of the Committee on Economic Security.

That means the actual cost of the age pension system will average something less than 100 million dollars a year, or about what it would cost to build two battleships. Today even in warfare a battleship is not very useful.

States Must Pay Half

After 1938 a considerable part of the amount needed for age pensions will be contributed, instead of coming out of public treasuries. The payments of the employer and employe unemployment insurance plan will start in 1938 and in 1942 their contributory age-pension system will begin making payments.

In the meantime half the expense of old age pensions as contemplated by the recent act of Congress, will be met by the Federal government, the rest by the states. At that, the age-pension system is said to be just half as expensive as poorhouse care.

Nothing can be done by the state of Kansas toward establishing its old age pension plan until the legislature passes an enabling act. But first it must work out certain legal problems with the law department of the new Federal security board and that department is not yet at work. A special session of the legislature can be called any time, or the program can wait until the regular session meets in January, 1937.

Government to Pay $15 Monthly

Beginning July 1, 1936, the Government will provide for monthly pensions to needy old persons over 65, on a fifty-fifty basis with the states whose legislatures have accepted the Federal program. The Government's share is not to exceed $15 a month. If a state pays a pension of $15, the Government will match it with $15, a total of $30 a month. A state may pay more than $15 a month, if it wishes to, but the Government's limit is $15 a month. States will participate by passing enabling acts.

In the same fifty-fifty way, aid for mothers and for dependent of crippled children, may be provided. Blind persons, or those mentally or physically handicapped, will not be neglected. Aid will be granted on the basis of need. Support and vocational training will be at hand for the disabled.

Next year, employers of eight or more persons will be subject to all per cent payroll tax to encourage states to set up unemployment insurance. This will be increased to 3 per cent by 1938.

Finally, by 1942, a contributory old-age pension system of from $10 to $85 a month will be started for wage-earners, to be maintained by taxing employers and employes 3 per cent each on salaries up to $3,000 a year. This will be compulsory.

Relatives Must Help if Able

About the only persons exempt from paying unemployment and old-age taxes, will be farm laborers, housemaids, Government employes and occasional workers. The cost of Kansas' share of the security program is expected to range from $1,800,000 to $3,000,000 a year.

There is a possibility that a special session of the Kansas legislature may be called to decide whether all the cost shall be borne by the counties, or whether the state shall bear a part of the expense and the counties the rest.

From 18,000 to 19,000 Kansans are expected to qualify for old age pensions the first year.

Payments may start at anywhere from $5 to $30 a month, or $60 a couple. Those who have relatives able to support them will not be eligible, although payments may be made to aid relatives in their support. No pensions will be paid to persons who have resources.

State Pensions Running Short

My friends, I am not in favor of old age pensions of less than $30 a month, that being about the least with which the average frugal old person could, or should, try to maintain himself. But it is an unfortunate fact that many of the 27 states, and the territories of Hawaii and Alaska, that began paying age pensions before the Federal government stepped in, have run short of funds. They have been paying pensions that have ranged in one case from 52 cents a month to $12.50 in another. Which is rather ghastly, if that is all a person has to live on. Under the Townsend plan, which has strong support throughout the country, all persons over 60 years would receive $200 a month.

It is the aged that have suffered most during the five years of depression, and their distress calls for immediate action. It also calls for practicable long-time planning.

Would Depopulate Poor Farms

'Over the hills to the poorhouse," will some day become an unfrequented road, I believe. But this cannot be accomplished by simply waving a wand. In August of this year, Kansas had 2,871 inmates living on 90 of its county poor farms. It is estimated that more than 1,500 of these could be returned to their homes under the old-age pension system. In the 105 counties, according to estimates, there are 4,000 inmates of poor farms. Many of these are both physically and mentally incapable of caring for themselves. Also others of these poor folks are on the border line mentally. If they had pensions they could not manage to live on them, as they need care. So we may be expecting too much if we think age pensions will make it possible to do away with all the poorhouses.

Congress appropriated nearly 50 million dollars for financing the Government's share the first year of the old age pension system. In a few years when the states reach an effective basis of operation the Government may have to raise more than triple this amount. In 10 years or by 1945, the Government's fifty-fifty contribution to the pension system, is expected to total 800 million dollars.

The states that are already granting age pensions, make 65 the eligible age. Others set the minimum age at 68 or 70. In Missouri it is 70. Fifteen states now pay the entire cost of their pension system. In all these states, with two exceptions, the pensioner must have lived a certain length of time in the state to be eligible. In several states the minimum time of residence within the state is 5 years.

Percentage of Aged Growing

In the United States as a whole, there now are 6 1-2 million persons more than 65 years old—that is, of pension age. The percentage of aged persons in our population is increasing rather fast, and the percentage of their dependency, more rapidly. This is partly accounted for because of the increasing difficulty of getting a job after the age of 40 or 50. Thirty-five years hence, or in 1970, it is estimated that the 6 1-2 million persons we now have of pension age, will have increased to 15 million.

Of the 6 1-2 million persons who have passed their 65th birthday anniversary, half of them or 3 1-4 million, are dependent on others. About 1 million are receiving public relief. It seems unlikely that many of these will ever again be self-supporting. In fact, the number of persons on relief who have passed 50 is even larger, and their chances of finding employment in the future are not too bright.

Then there is the large number of workers, now entering old age, whose savings or investments, were lost in the depression. They are now at the mercy of circumstances and can only look on the future with foreboding.

Home of Their Own Best Plan

So it appears, my friends, the age problem will become more and more pressing as time passes. Yet there is the feeling and it is the correct viewpoint I believe you will agree, that society should provide for its needy aged and do it in a way that will not break down the self-respect of these old people by branding them as paupers. Old folks do not bear transplanting well. They are happier in their own homes, no matter how humble, than they can be made anywhere else under heaven. Also they can manage to live better for less in that little home of their own, than it would cost to put them into the poor house or some other institution where they would eke out a forlorn existence under regulations that would seem harsh.

In another way, too, the numbers of aged who would be retired by the pension system would increase the amount of employment for the young workers who must have work or run the chance of losing character and self-reliance. No country can afford to have that happen to its young men and young women.

MACON COUNTY HAS ITS BEST YAM CROP

Marshallville, Georgia, September 25.—The yam crop in Macon County and Marshallville is better than ever before. Many of the potatoes are being sold to chain stores, and some are sold to the local stores. The wet spell didn't hurt the potatoes, as was feared.

POTATO PLANTS POOR

Baxley, Ga., September 25.—The outlook for the 1936 sweet potato plant industry at Baxley is gloomy at the present on account of the excessive rains which have damaged seed potatoes in the fields. The sweet potato crop for Appling County will be short of the usual quota.

REHABILITATION ROLLS INCREASE

350,720 Families Now Reported Being Aided

Washington, September 26.—(AP) The resettlement administration Thursday reported 350,720 families under rehabilitation as compared with 296,000 on the relief administration rehabilitation rolls on May 31. The rehabilitation program has since been transferred to the resettlement administration.

Under the program the families have been taken from direct relief and helped to become self-supporting, the work forming a temporary phase of the resettlement administration's activities. The work is being done in cooperation with the agricultural extension service.

The breakdown of rehabilitation clients by states as of September 15, included:

Kentucky, 1,092; North Carolina, 6,925; Tennessee, 3,200; Virginia. 3,465; West Virginia, 4,560; Alabama, 22,292; Florida, 7,193; Georgia, 12,105; South Carolina, 6,362; Arkansas, 18,687; Louisiana, 34,534 (as of August 31); Mississippi, 12,101.

Rattlesnakes have been killed with every kind of weapon from automobiles to the bare hands, but our MIDVILLE correspondent tells of the first time in history one was ever ginned to death. T. J. Parker, a Burke County farmer, brought a load of cotton to the gin operated at Midville, by Clarence Powers. Wednesday. He was scared stiff when he found that a large rattler had been riding with him in his wagon. The snake was sucked into the gin with the cotton, and was crushed to death. It is believed the reptile crawled on to the sheet in the field where the cotton was being picked.

HEN HATCHED 52 CHICKS

Brownie, a hen 5 years old, owned by J. A. Eads, owner of the Eads Airport, Iberia, Miller county, has had two broods of chickens nearly every year, and this year had three. She was set in March on 16 eggs, hatching 14 chickens; again in June on 24 eggs, hatching 22 chicks; and in September on 18 eggs, hatching 16 chicks; a total of 52 chickens hatched for one season. She is a cross between a full stock Rhode Island Red and Barred Rock, and is red and brown. She is a large hen and a very good layer. The henhouse is near the hanger and runway at the airport, but Biddy never gets alarmed at planes and takes her chicks out on the runway and up under a plane. (Prize contribution.) Missouri Ruralist.

THE FIRST TIME YOU DRESS A HOG

David L. Mackintosh

Home butchering of hogs is a worthwhile winter chore. Hogs weighing from 200 to 250 pounds will dress out a high class carcass, and keep better than either a lighter or heavier one. Hogs if kept off feed 24 hours before killing, will bleed freer, dress easier and the meat will be better. All bruises will show on the carcass and over-heating will prevent thoro bleeding. Meat from a hog in losing flesh is watery and stringy.

The only desirable way to kill a hog is by sticking. Shooting or stunning before sticking slows bleeding. The best position for a hog while sticking is on its back. An incision from 2 to 3 inches long is made from the point of the breastbone forward. The knife should be held at about an angle of 45 degrees with the backbone, the point towards the tail, and inserted to a depth of about 4 inches under the breastbone in order to cut the main arteries where they branch. Care must be taken to cut on the median line and not go too deep so as to avoid sticking the shoulder of cutting into the chest cavity.

Water May Be Too Hot

The scalding water needs to be heated to about 160 or 170 degrees F. When no themometer is at hand an easy test is to draw the finger thru three times in rapid succession and if it smarts the third time, the water is about right. If hotter water is used the hair may set.

To remove the intestines, cut down the midline. Next cut thru the pelvic bones and loosen the rectum. The stomach, intentines and liver are easily removed by loosening and cutting the gullet as soon as pulled up far enough. Next remove the tongue by cutting on each side of it just inside the jaw bone. Cut thru the breastbone to meet the first opening and remove the heart, lungs, "gullet," and windpipe by cutting the diaphram.

Wash the inside thoroly, loosen the leaf lard and allow to cool thru. Cooling is hastened to some extent if the carcass is split down the middle of the back. If the outside is allowed to freeze before the carcass is thoroly chilled there will be some animal heat retained in the center, which may cause the meat to sour. Therefore, care should be taken not to permit freezing until the carcass is chilled thruou.—Missouri Ruralist

SELL EGGS BY WEIGHT

Beginning November 1, all eggs in Michigan must be sold by the pound instead of by the dozen as ordered by James F. Thomson, agricultural commissioner. Selling eggs by the pound is fairer to both producer and consumer, Commissioner Thomson argues, but he did not count on the opposition of housewives who declare this order sets at naught all recipes calling for eggs by umber. Thomson says a dozen of ordinary eggs averages about 22 ounces and that the women can regulate their recipes accordingly. Grocers, too, are up in arms. They say it will be difficult to weigh out an exact pound of eggs without keeping different sizes on hand. It is hard for people to change old ways and habits.

—Capper's Weekly.

$1,000 IN PRIZES TO BE AWARDED

Atlanta, Ga., Oct. 26:—The offer by the Rosenwald Fund of a thousand dollars in prizes for "work stories of living Negroes" has brought in hundreds of stories from all sections of the country, according to a statement from the office of the Commission on Interracial Cooperation, which conducted the contest. These stories, the Commission announces, are now being sifted carefully by competent committees in the effort to pick those most worthy of the twenty awards that are to be given.

The papers cover all types of activities, under the five heads of agriculture, business, industry, personal service, and the professions, and in each of these classes there will be four awards—a first prize of $100, a second of $50, and two of $25 each. The process of digesting this mass of material and selecting the winners with the necessary care is not an easy task, according to the Commission, and will take considerable time. Those who have submitted stories are requested to wait as patiently as possible for the results, which will be announced both through the newspapers and by personal letters to all the contestants.

SAMPLES FOR DISTRIBUTION

Sayman Soap & Salve, St. Louis, Mo.

Hubinger Starch Co., Keokuk, Iowa.

Gen. Foods Co., Cook Books. Recipes.

Clenden Co., Woolen Threads.

Int. Harvester Co., Bulletins.

The following were given as prizes:

DONORS

Sears, Roebuck Co., 1 radio complete.

Cornell and Gasden (Amos and Andy) 1 pr. registered hogs.

E. Gov. Lowden, of Ill., $25.00 in cash.

Ball Mfg. Co., Muncie, Ind.. 6 cases of fruit jars.

Chicago Defender, 6 subscriptions.

Sen Arthur Capper. Kansas, 1 cook book and 1 subscription to Capper's Farmer.

S. L. Allen Co., 1 plow.

Stearns Foster Co., quilting outfit.

Mrs. Irene Castle McLaughn, 6 silk and linen handkerchiefs.

Saymon Soap Co., St. Louis, Mo., 1 case of soap.

Wrigley Gum Co., Chicago, Ill.. 2 boxes gum.

R. J. Reynolds, Co., 10 boxes chewing tobacco.

Mrs. S. P. Davis, 1 set dishes.

L. B. Boler, $5.00 cash.

Gen. Foods Co., 4 cases Jello.

Hardwood Charcoal Co., Memphis, Tenn., 1000 pencils.

ENHANCING VOLCANIC SPECTACULARITY

Washington, D. C.—A seventy-man unit o fthe Civilian Conservation Corps is carrying out road and trail construction on the slopes of an active volcano in the Hawaii National Park on the island of Hawaii, it was announced today by Robert Fechner, Director of Emergency Conservation Work. The unit is a part of a 200-man company.

When completed, the new truck trail will extend for eleven miles up the side of the mountain. While the trail is being constructed primarily as a fire protection measure, it will be utilized by visitors to the Hawaii National Park. Heretofore it has taken nearly two days of hard horseback riding over sharp lava fields to reach the summit of the volcano, over the new trail it will require but one day.

While the trail now being constructed does not reach the summit, some forty miles from park headquarters, it is the initial step in a proposed route to the top, 13,675 feet above sea level. The trail will be eight feet wide, surfaced with crushed rock. Efforts have been made to conserve all natural features of the surrounding area, which is all a part of the Hawaii National Park. When the trail meets giant koa trees, natives to the islands, the men build the trail around the trees rather than destroying the timber. Unique lava formations of interest to geologists are also being preserved.

Work on the trail was begun early in September and will be completed possibly next June or July. Nearly a mile has been constructed, using man power entirely.

Activities of the CCC in the Hawaii National Park this year have greatly improved the park's facilities for handling visitors. Fire hazards have been reduced, picnic sites cleared, trails prepared and general cleanup of the area completed.

According to National Park Service officials, it is possible that the volcano will erupt before the present trail construction is finished. Eruption of Mauna Loa is overdue, according to Dr. Thomas A. Jagger, volcanologist for the National Park Service, who has kept daily records of volcanic and other terrestrial activities on the island of Hawaii for more than a score of years. He predicts that the mountain upon which the CCC is building a track trail is due to have lava activity "momentarily." Day and night observation is being maintained of the mountain and its crater.

"The last great flow of lava down the side of Mauna Loa occurred in the spring of 1926, after a period of dormancy of seven years," reports E. G. Wingate, park superintendent. "The flow, which came from a rift about 5,000 feet below the summit, lasted for nearly two weeks. The stream of lava was 1,500 feet wide and thirty feet deep. It came down the mountain-side like a huge caterpillar.

"This stream of lava contained a central channel of rolling liquid lava while the sides and the top crust were of a cindery type called 'aa'. At first there was a hissing sound from the moving lava stream, followed later by a roaring sound. It was a never-to-be-forgotten sight for those fortunate enough to witness it.

"Mauna Loa erupted again in December. 1933, but no lava poured down the sides. The eruption was confined to the summit crater called Makuaweoweo, and most of those who saw the activity were passengers on commercial airplanes which made daily flights over the lofty cauldron.

"Spectacular as these outbreaks are, they are not dangerous. There is always plenty of time and opportunity for onlookers to get to places of safety. In fact a volcanic eruption in this part of the United States is more cause for celebration than for fear, as everyone rushes to see the spectacle. When huge streams of lava come down the sides of Mauna Loa, spectators approach so closely that they can poke sticks into the stream of liquid rock and cinders."

KNOXVILLE COLLEGE OFFERS CITY TWO ACRES FOR SCHOOL

Proposed Site is for New Junior High Building To Cost $125,000

Knoxville, Tenn.—Knoxville College has offered, as a gift, to the School Board of the city, two acres of land for the site of the proposed Junior High School.

If the proposal is accepted the new school will be built on Western Heights on what is now a part of the Knoxville College campus. Plans for the building call for an expenditure of $125,000. The cadet teachers of Knoxville would do their practice teaching at the junior high. It would also be used by those majoring in education for observation of various educational methods.

According to Acting-President Dr. R. W. McGranahan, the Board of Trustees of the College have endorsed this donation of land, initiated sometime ago by President Jas. K. Giffen.

Miss America Strong, Junior at Knoxville College, won first prize in the community Negro achievement essay contest which was sponsored by the Knoxville chapter of the Omega Psi Phi Fraternity. This essay writing contest was part of the program for the observance of National Negro Advancement week.

Miss Strong wrote on "Pioneers in Negro Achievement." In her paper she set forth a few of the fundamental principles of Negro achievement and how they have blazed the way, enabling modern youth to solve the problems he now confronts.

Second prize was won by a girl of the Freshman class, Ethelyn Williams.

Knoxville College will express her spirit of thankfulness this season by giving to charity the total receipts from her Turkey-day grid clash with her rival Talladega.

Three agencies will be there to share the proceeds of the football game, namely: the News-Sentinel "Empty Stocking Fund", Knoxville Colored Orphanage and the Payne Avenue Day Nursery.

The grid classic will be played at Caswell Park, home of the Knoxville minor leaguers, Thanksgiving morning. Kickoff is scheduled for 10 o'clock.

The Bulldog-Talladega conflict should prove a real grid tussel as the records of the teams show them to enter the game on even terms.

W. B. JACKSON OF BLACKSTOCK, S. C.

Among the enthusiastic readers of the Modern Farmer, none is more appreciative of the service that the publication is rendering than Mr. W. B. Jackson, who now resides at Route 2, Box 15, Blackstock, South Carolina. Although he was born back in 1854, being a good size boy when the Northern and Union Army invaded his state, his steps are slow, his sight dim, but he can think straight and is well informed, or trying to keep informed on what the race has accomplished since emancipation. He says that he appreciates the Modern Farmer and rejoices in the fact that the Negro farmers of America have now an organization that can help them solve their difficulties. Although his son subscribed for the paper in the beginning and had it sent to him, he feels that it should be kept up. One of his sons has just made an enviable record, having graduated from Brown's University, Providence, R. I., where there were six hundred white boys in the same school with him. He has also finished his course in New York City, graduating in chemistry. Mr. Jackson recently moved from Woodard, S. C., to his new address and in sending his renewal subscription for the paper asked that his address be changed.

It is a wise father that knows his wn child—William Shakespeare.

I know no way of judging the future but by the past.—Patrick Henry.

Good, the more communicated, more abundant grows—John Milton.

A mother is a mother still, the holiest thing alive.—Samuel Coleride.

To marry is to domesticate the Recording Angel.—Robert Louis Stevenson.

THE VERY BEST

Colored Picture Bibles for Children—Self-Pronouncing with Helps

A splendid little volume for any Boy or Girl.

The text is self-pronouncing, by which aid children can learn to pronounce the difficult Scripture names.

Size 5⅜x3½ Inches

Specimen of Type in This Bible

AND Bĕn-hă'dăd the king of Sȳr'ĭ-ȧ gathered all his host together: and *there were* thirty and two kings with him, and horses.

With beautiful colored views of scenes in Bible lands distributed throughout the text. Also new Practical Helps to Bible Study, especially designed for instructing children in Scriptural Information.

5204.—Dark Blue Morocco Grain Binding, with edges colored to match, round corners, gold titles $0.85

5208. Morocco Grained Binding, overlapping covers, stained edges, gold titles 1.25

Washingtonians Pay Tribute To Colonel Brooks

Washington, D. C. Nov. 21 (By ANP)—Tribute was paid Monday to the memory of the late Colonel Arthur Brooks, who for more than a quarter century commanded the Negro contingent of the District of Columbia National Guard, when citizens, and representatives of the 327th Infantry, the cadet units of the high schools and school officials gathered at the grave of the soldier and recalled his exploits.

Among those who eulogized the memory of the late regimental commander were: Col. West A. Hamilton, Major Thacker Walker, Capt. Arthur C. Newman, Dr. Garnet C. Wilkinson and Charles M. Thomas.

Two Hundred Enrollees Arrive at S. C. CCC Camp

Chester S. C., Nov. 21 (By ANP)—Two hundred and seven youths arrived here Thursday night and were enrolled in the CCC camp located near here. The camp was recently approved by Robert Fichner director of the emergency conservation work, over the protest of local white citizens.

COLORED CITIZEN OF MEMPHIS CHOSEN ON SHELBY COUNTY JURY

J. C. Oates, Undertaker, Is First Member of His Race Chosen Since "Reconstruction Days"

Memphis, Tenn.,—(Special)—J. C. Oates, well known undertaker of this city was one of the 93 jurors who qualified for three weeks' service in the criminal and circuit courts of Shelby county. In appointing Mr. Oats to jury service a custom in vogue since reconstruction days was wiped out, as far as state courts are concerned. One colored man was chosen here last week for jury duty in the Federal court. Owing to a recent Supreme Court ruling in the Scottsboro case, it is held that it is unlawful for courts to persist in their custom of race discrimination in picking citizens for jury service. The indications are that Lawyers all over the South are planning to contest cases where the custom of excluding colored citizens fr m juries is followed, and this is the reason why a number of courts have begun to call for colored jurors.

TUSKEGEE TO MAKE RARE CRAZY QUILT

Cover Will Include Names of all Who Donate to New Building Fund

Tuskegee, Institute, Ala., Nov. 15—A crazy quilt, in which will be the name of every donor to the fund for placing an argicultural building on Tuskegee's campus, as a symbol of goodwill, by the white South, is to be made by girls of the domestic science classes of Tuskegee Institute, Dr. F. D. Patterson, Institute president, has informed Mayor G. B. Edwards, chairman of the state committee waging this campaign in Alabama.

Donald Comer, Birmingham capitalist, who is chairman of the southwide committee directing the drive, suggested making of this quilt to commemorate the gift from each person who contributes toward the goodwill building fund, in a letter to Judge Grover C. Hall, the Montgomery Advertiser's editor, a member of the southwide committee, and to Dr. Patterson and Mayor Edwards. The idea was adopted and Institute students will soon begin work in designing the quilt.

Mr. Comer suggests that this quilt "be owned and held in perpetuity by the Tuskegee Institute" after it is finished, as a memorial for exhibit at the Institute.

The name of each donor will be stitched onto a small square piece of cloth, and then each square will be tacked onto the quilt, according to Mr. Comer's suggestion.

Blackburn Held On Charges of Manslaughter

Chicago, Nov. 27—(ANP)—John Blackburn and William Parnell were held here last Tuesday on charges of manslaughter in connection with the fatal shooting of Enoch Houser, 69, whom the former is alleged to have engaged in a gun battle with John Bowman. Both were held under bonds of $10,000.

The trainer of the famous Joe Louis also faces a $100,000 suit filed by J. C. Cannon, father of nine year old Lucy Cannon who was seriously wounded as an innocent bystander during the time of the alleged battle. According to reports the suit was filed Tuesday by attorneys representing the Cannon family.

Blackburn and Parnell were first charged with the assault with a deadly weapon with intent to kill, and at the hearing held Tuesday morning the charge was changed to manslaughter and the date of trial set at December 3.

BIG SEWING BEE FUND GIVES WOMEN JOBS

Creation of a gigantic sewing circle, spread out over 41 States, to provide work relief jobs for 54,199 women at a cost of $20,-218,000, has been approved by President Roosevelt.

Mrs. Ellen S. Woodward, director of the PWA women's division, announced 150 million yards of cotton cloth will be purchased to provide a six-months' supply for sewing room projects.

Distributed Free

The garments made by the women will be distributed free to the destitute through public relief agencies. Dresses, overalls, work shirts and children's wear will be included.

Women's activities will not be restricted to wielding the needle. The Federal allotment takes in a total of 613 projects, offering employment opportunities of a wide range to fit individual skill.

Some will be put to work in libraries, preparing catalogues and mending damaged volumes. Qualified artists and musicians will be given painting and orchestral assignments.

Some Clerical Jobs

Several thousand women will get clerical jobs and take part in surveys and investigations. Others will work in canning factories. try to improve cooking and budgetary methods for relief families and assist in beautifying their communities through garden and landscaping work.

The program announced yesterday will cost less than $400 per woman employed. It does not include New York city, which will have a separate program expected to run into high figures.

BILL FOR SLAVES' SALES ARE FOUND IN GEORGIA TOWN

Canton, Va., October 31, (ANP)—Pre-civil war days were recalled here Tuesday when Joe Kieth, white, while cleaning up the attic of his home discovered two bills of sale for slaves and some $50,000 in confederate currency.

One of the bills of sale for a Negro woman slave Millie," about 45 years old, dark complexion and property of George W. Welch a minor.

Tom Connally, Texas Senator, Declared His State Was Law-Abiding, Now Look!

New York, Nov. 15.—Senator Tom Connally of Texas, who wrote the N. A. A. C. P. last December that he did not intend to support the Costigan-Wagner federal anti-lynching bill because he believed the states could and would stop lynching, was asked this week by the N. A. A. C. P. to advise it of what steps the state of Texas was taking to punish the lynchers of Bennie Mitchell, 15, and Ernest Collins, 16, who were hung November 12 by a mob at Columbus, Texas. The N. A. A. C. P. telegram stated:

"Will you wire us and advise what steps if any Texas authorities will take to punish lynchers of two boys, fifteen and sixteen years old, at Columbus Texas yesterday. We ask this in the light of your bitter opposition to and filibuster last April gainst Costigan-Wagner anti-lynching bill which would have given federal aid as in kidnapping to states. You and other small group of filibusterers contended federal government had no right to interfere with lynching and that states could and would stop lynching and punish lynchers. We call your attention to statement of County Attorney Moore describing lynchings as "expression of will of people" and to statement of County Judge Hahn who violates every principle of judicial behavior by calling dead boys guilty when no trial had been had to establish their guilt. Texas has supplied country with 17th and 18th lynchings of 1935, 13 of which have occurred since filibuster, proving states cannot or will not act. Please advise if you in coming session of Congress will support federal legislation."

The Association also telegraphed a protest to President Roosevelt on the two lynchings in Texas and the lynching of a white CCC worker in West Virginia.

FARM AMENDMENT MAY SUCCEED AAA, LEADER PREDICTS

A "farm amendment" to the constitution will be demanded by the farmer if the AAA fails, midwestern leaders of the American Farm Bureau federation from 11 states declared yesterday.

"If the Triple A is found unconstitutional and it is impossible to rewrite it, we will vote for an amendment to the constitution," Edward A. O'Neal, president of the federation, quoted a group of farmers as saying.

Recently returned from a stump of the country, O'Neal said "the farmers are on fire." He pointed to gains in the recent vote on the "corn-hog program" and declared that "the boys are up on their hind legs."

Tuskegeeans Join Iota Phi Lambda

Tuskegee Institute, Ala., Nov. 14—(By ANP)—Eight members of the "Tuskegee Institute family" were initiated as members of the Lambda chapter of the Iota Phi Lambda sorority here Friday evening and as a feature of the initiation participated in a program which shows what the organization composed of women engaged in commercial pursuits are doing.

The neophytes are: Mrs. James Fair, principal of the Chambliss Model School, Mrs. G. W. A. Scott, acting principal of the Louis Adams School, Mrs. James Julius Flood, Mrs. Laura Daly, U. S. Home Demonstration Agent, Mrs. Freeman Bradley, Mrs. Richard Harris, druggist, Miss Emma Campfield and Mrs. Freda Davis.

Physicians Find Man's Heart On Right Side

Dublin, Ga., Nov. 27—A fluoroscopic examination at the local hospital disclosed Tuesday that Thomas Smith's entire viscera is transposed. The seventy year old man's heart was found to be on the right side as was his liver, thus being one of the few cases so recorded. The organs were in excellent condition and other than a "slight cold" for which Smith went to the hospital for treatment, he was in excellent physical condition, especially for a man of his age.

A NEW SONG BOOK

IS JUST APPEARING FROM THE PRESS

"GOLDEN GEMS"—Get a copy, price 25 cents; then give us the benefit of your constructive criticism. We want to know how you like this new song book. Send this back with 25 cents for a single copy or $3.00 by the dozen—We will pay the postage.

"GOLDEN GEMS" is a book that is all that its name implies. It is pure gold in spirituality, originality and in religious fervor.

Insist up your friends using "GOLDEN GEMS". Recommend that your choir use "GOLDEN GEMS". Put "GOLDEN GEMS" in your Sunday School; use "GOLDEN GEMS" in your B. Y. P. U.; put a copy of "GOLDEN GEMS" in your home. If "GOLDEN GEMS" is introduced in your state it will prove that you are 100 per cent with Henry Allen Boyd in his earnest desire to give to the Baptists the best that money can buy, and when the best costs you no more, then get "GOLDEN GEMS".

Send this back to me, I want to know who is using and supporting "GOLDEN GEMS".

COLORED MAN HAS PART IN BRINGING ANOTHER "TRUE BILL" AGAINST NINE YOUTHS WHOSE INNOCENCE IS CERTAIN

Lovers of American Liberty Called Upon for United Front in Fight to Halt Plan of Judicial Murder

(Special to Crusader News Agency)

Scottsboro, Ala. — The nine Scottsboro boys whose innocence is known the world over were re-indicted by a Jackson County grand jury this week.

When the decision was announced, the International Labor Defense, through its acting national secretary, Anna Damon, stated that the reindictments "will some day be recognized as marking one of the gravest moments in American liberty."

"The famous Dred Scott decision by the Supreme Court in 1859, which turned open the whole question of Negro slavery which was later fought out on the battlefield of the Civil War, was no more important for the history of America than the present Scottsboro case will prove to be."

Negro Juror

Creed Conyers, farmer and chairman of Board of Trustees of Negro Schools in Paint Rock, Ala., served on the grand jury. He was the first Negro drawn in Alabama for more than sixty years. Bird Hill, another Negro picked for jury duty was "excused" because he was "nine years over the age limit."

No information could be garnered here as to how Conyers voted in the jury room, but it was felt that he had been subjected to considerable pressure from the seventeen white jury members.

"The inclusion of one Negro on the Grand Jury is openly and cynically admitted to be nothing more than a measure to prevent reversal by the U. S. Supreme Court," the I. L. D. declared.

Appeal to Save Scottsboro Boys

A ringing appeal to all "friends of American liberty of justice for the Negro people" to save the Scottsboro boys was made by the I. L. D.

"Every sane person who has examined the case," the I. L. D. said, "knows that the boys are innocent."

We are determined to save these boys. This is no longer even a case of saving nine innocent boys from death. It is a case of rescuing our country from fascist terror.

"This case has risen now to such a height of social importance to the American people that all quarrels between those who wish to defend these boys must come to an end and all who wish to be counted as friends of American liberty and justice for the Negro people must unite for this defense. All who have a spark of manhood or womanhood in them will respond.

"The boys must and will be given the best defense that it is possible to supply them, and the enemies of lynching and murder must rally throughout the country to supply means for this purpose."

ASTOUNDING DEATH RATE FROM T. B. IN WASHINGTON, D. C.

Government Puts Staff of Experts to Work in Effort to Remove Evil

Washington, Nov. 21 (By (ANP) —With the beginning this week of the Tuberculosis case-finding project in Washington, the capital of the nation is being used as an experimental station. In spite of its comparatively small size, there are only two states in the United States —Arizona and New Mexico—with as high a tuberculosis death rate; and only one city with a T.B. death rate as high as that in the capital city. In 1934, it was discovered that 609 persons succumbed in the District of Columbia to Tuberculosis; of these 416 were of the Negro race.

A staff of field workers, composed of both white and colored, are attempting at the present time, to interest Washingtonians in the 10,000 free X-Rays which are being offered by the Health Departments.

After the results of these X-Rays have been determined, the real work of the project begins. The field workers will then try to interest those individuals having positive reactions in submitting to further treatment . . . or in case the individuals prove not interested in further treatment, it will be the duty of the worker to get into the homes and point out what can be done there within the home to better existing conditions and prevent the spread of infection. A great part of the worker's job will be the breaking down of superstitions and fears now connected with T.B.

The Health Department is hoping that should the project prove a success in Washington, other states might adopt similar programs, to be financed out of the State funds.

It is also the secret hope of the Health Department that this project will develop into a permanent branch of the Health Department.

Ruth Ellington In S. Carolina, Liked By Whites

Columbia, S. C., Nov. 21—(By ANP)—Presenting a floor show featuring song and dance hits, with Carl Mike Thompson as master of ceremonies and Ruth Ellington and her orchestra thrilled a mixed audience here Tuesday night, at the Township auditorium. According to the good old southern custom a special section was reserved for Negro patrons.

Missouri School Journal Praises Lincoln University

Jefferson City, Mo., Nov. 21 (By ANP)—A special convention issue of the Missouri School Journal, published by A. S. Lehr, prominent educator, in connection with the Missouri State Teachers Association in annual meeting in St. Louis last week, featured Lincoln University and its development in one of its articles.

The early history and development of the college and the phenomenal recent growth and future expansion program—the most important item of which is the two new buildings provided for by state and national government funds—were emphasized.

LeMoyne College Students Present Pageant

Memphis, Tenn., Nov. 21 (By ANP)—Lemoyne College students presented a pageant here Tuesday night at Church Park auditorium depicting the "History of Negro Music" as one of the features of the Exposition of Progress sponsored by the Autress Russell Post of the American Legion. The program featured spiritual and other selections by Negro composers.

Tuskegee President Broadcasts Speech

Atlanta, Ga., Nov. 21—(ANP)—Speaking from Atlanta, over the Columbia Broadcasting System, as the principal speaker on the Education Week Program, Dr. Frederick D. Patterson, president of Tuskegee Institute outlined the contributions of Booker T. Washington, founder of the famous school, not only to the education of the Negro but to the advancement of education throughout the world.

Dr. Patterson explained how the idea of the late Dr. Washington of "learning by doing" had attracted educators from all parts of the world, and how this idea, as well as the value of industrial training had been inculcated in the curricula of schools throughout this country as well as many foregin countries, including Africa, China, Japan and countries of South America.

"When an effort is made", said Dr. Patterson, "to state the contribution to education by Booker T. Washington, one is at once impressed with the utter impossibility of doing so in anything like a conplete way. A significant contribution once made travels like a wave which when it reaches the shore has its effect recorded though the knowledge of its source is either lost or undetermined.

"Just, however, as a statement of the size of the wave would be an indication of the distance from its origin at which an appreciable effort could be recorded; it is probable that a statement of Booker T. Washington's philosophy of education because of its sanity, wisdom and universal applicability is an indication of the extent to which it has been adopted by all civilized peoples.

"Conspicuous among Booker Washington's contribution to education was the founding and developing of Tuskegee Institute. This institution, which is often referred to as the lengthened shadow of the man, was the embodiment of his ideals of education. No successful effort can be made to evaluate his services to education which does not take into consideration this tangible expression of his philosophy. For not only during his lifetime but as long as Tuskegee Institute exists and adheres to the purposes for which it was established it will represent and signify Dr. Washington's contribution to education. The six thousand graduates and many of the twenty thousand former students have carried throughout this nation and into many fields abroad the philosophy of education and sound teachings of the founder.

Other features on the program included music by the Tuskegee choir under the direction of William L. Dawson, and addresses by the United States Commission of Education, Dr. John W. Studebaker and Dr. Ambrose Caliver, senior specialist in the education of the Negro, United States Office of Education, who was master of ceremonies.

NATIONAL FEDERATION

(Continued from Page 1)

Address, Hon. T. Roy Reed, Little Rock.

Invocation.

Music.

Address, Hon. Jos. N. B. Evans, Rural Resettlement Division, Washington, D. C.

Talk, "The Value of Organization," Hon. Chas. G. Henry, Mgr. of Mid South Cotton Growers Association.

Address, Hon. J. A. Jackson, New York, N. Y.

Awarding of Prizes, Prof. L. B. Boler, Charleston, Mo.

Wednesday—10 a. m., Oct. 30

Selection, assembly.

Invocation.

Three minute talks by members.

4:00 p. m.

Address by W. A. Banks, Humboldt, Tenn., commissioned by the governor.

Address, Prof. W. M. Hubbard, Forsythe, Ga., commissioned by the governor.

Hon. N. C. Simmons, business manager of Boley, Oklahoma the all Negro town made a very interesting talk and asked that the federation have one of its officials visit his city and state and he would give the cooperation in getting the race farmers organized.

The following telegrams were received and read to the members:

From Hon. Chester C. Davis, Administrator Agricultural Adjustment Administration: The colored farmers of the nation should be encouraged to cooperate for their good and that of their communities. I wish your organization the success it deserves.

From Hon. Henry A. Wallace, Secretary of Agriculture: The colored farmers have played an important part in the upbuilding of the south and other sections as well. Any movement aimed at cooperation for their common good deserves the support of all citizens.

From Hon. Cully A. Cobb, Director Cotton AAA: Please convey to the delegates attending the convention of the National Federation of Colored Farmers Inc., our deep appreciation for the expressions of confidence in and loyalty to the cotton program conveyed in your telegram of the 30th.

Our National Treasurer, Miss S. B. Wilson and Dr. Henry Allen Boyd wired as follows: Circumstances over which we have no control effecting our denominational work prevent either the treasurer of the Federation, Miss Wilson and your humble servant from being present at your annual session. We have just reached the city from an extended tour through many states attending state conventions and must leave immediately for the Bahama Islands. May the blessings of an Al-wise Heavenly Father be with you and His spirit guide you in these deliberations.

Upon resolution offered by Prof. L. B. Boler and passed unanimously, the following telegram was sent to Hon. Cully A. Cobb, Director Cotton, Washington, D. C.,

In annual session with representation from 17 states, we give thanks for the splendid address by Hon. E. A. Miller. We wish to go on record asking that the cotton program be continued in its entirety during 1936.

The Arkansas Daily Democrat had the following write-up in their edition of Oct. 31:

OFFICERS ARE RE-ELECTED BY NEGRO FARMERS

Annual Convention of National Association to Close Today

J. P. Davis, re-elected president of the National Federation of Colored Farmers, was to bring the four day convention of that body to a close this afternoon at 4, with an address reviewing the accomplishments of the convention and outlining the 1936 program.

"This convention just ended," Davis said today, "is without a doubt the most successful in the history of the federation. The statements of approval made Tuesday night by E. A. Miller of the cotton division of AAA would in themselves make the convention a success."

"The National Federation of Colored Farmers," Davis quoted Mr. Miller as saying, "is the only Negro farm organization of its kind recognized and endorsed by the Agricultural Adjustment Administration."

In a telegram sent today by unanimous vote of the convention to Cully A. Cobb, director of Cotton for AAA, the Negro farmers said: 'The National Federation of Colored Farmers in annual session in Little Rock with representatives from 17 states wish to go on record asking that the cotton program be continued in its entirety during 1936."

All officers who served during 1935 were re-elected for 1936. They are as follows: J. P. Davis of Little Rock, president; R. A. Byrd of Springfield, Ill., vice president; L. R. Harris of Moline, Ill., secretary; S. B. Wilson of Nashville, Tenn., treasurer, and C. R. Richardson of Richmond, Ind., chairman of the board of directors. L. B. Boles of Charleston, Mo., was chosen national organizer and S. M. Ballard of Little Rock national publicity representative. The latter two will travel throughout the entire cotton belt in 1936 in the interest of the organization.

Indications of the work done by the Federation of Colored Farmers in bringing about a feeling of cooperation and agreement between the races are given in telegrams received today from Washington, Davis said.

Chester C. Davis, AAA administrator, in a telegram to the convention today said: 'The Negro farmers of the nation should be encouraged to cooperate for their good and that of their communities. I wish your organization the success it deserves."

Henry Wallace, secretary of agriculture, in another telegram said: "The Negro farmers have played an important part in the upbuilding of the South and other sections as well. Any movement aimed at cooperation for their common good deserves the support of all citizens."

No selection as to the time and place for the 1936 convention had been made at noon today, Davis announced.

ARKANSAS CITIZENS

(Continued from Page 1)

Lillian McDermott, Pulaski County Probation Officer and a member of the Little Rock School board.

I offer myself as a volunteer worker without pay during my off hours, as I am regularly employed by the Little Rock School board. I have taught in this city for more than a quarter of a century. I have wide acquaintances with competent men and women of my race and would gladly advise the other group as to such persons, if they do not know or know of them already, who are needy and eminently capable of supervising set ups for our group.

I am in no sense a politician, but I have the missionary spirit and my life's motto is:

"Do all the good you can
In all the ways you can
To all the people you can,
Just as long as you can."

By all means get in touch with me when you come to the Negro Farmers' Conference next week.

Sincerely yours,
Mrs. A. B. Jones.

Statistics from the Census Bureau in Washington, D. C., show there are 241,554 colored women and 236,909 colored men in the state of Arkansas.

The colored population of Little Rock is given as 8,889 males and 10,809 females making a total of 19,698 or about one-third of the city's population. There are 1752 Negroes in the city of Little Rock classed as home owners.

M. F. A. MILLER

(Continued from Page 1)

Chicago, of the field service of the AAA, and a Georgia Negro.

A number of farmers, both white and colored, were on hand to hear the special address, among this number being T. J. Luckie, president of the Dallas County Farm Bureau; Capt. Glenn Deffke, foreman of resettlement farmers, John Blake, A. C. Allen, Tom Lumpkin, farm agents; A. Q. Edmondson, county agent, Wilcox; Edgar Pritchett, Camden; Lem A. Edmondson, county agent, Montgomery; I. J. Fluker, state allotment board, Auburn; Hunter Kendall, J. O. Hain, farm bureau directors; Hunt Frasier, secretary of the Chamber of Commerce.

T. M. Campbell, in charge of Negro farm extension work in southern states, and a group from Tuskegee; N. Kallock, state agent for Negro extension work in Alabama, Tuskegee, P. J. Brown, county agent, Hale county; M. S. Stratman, principal Prairie Institute, Prairie, Ala., and P. Austin, principal of the Linden Academy. A number of Negro farmers and leaders from the county also attended.

Enrollment at Selma University was good for the opening day with more students expected in Oct. 1. Collection for the school and pledges of support, resulted in a nice sum being taken in at the opening session.

HELPS FOR THE CLERGY

(Continued from Page 1)

position as fathers confessor they know perhaps more than any other group what is going on in the hearts and minds of the average person. If the president really wishes to know how the masses of the population feel toward his program, he cannot overlook the opinion of the intelligent ministry.

The request of the president will find many critics, however. It provokes the old question of the church and politics. Many ministers no doubt will disapprove of the president's action in eliciting comment from the cloth. It will appear to some that this is linking the church and the state too closely.

Whether this criticism is sound can be determined only by the manner in which the clergy accepts the invitation of the president and the manner in which the president makes use of their opinions. While clergymen individually are expected to take a keen interest in governmental matters since these matters touch so closely the social well-being of church members and society in general, it would be an unfortunate thing if ministers generally took advantage of this opening of the president's to inject the church aggressively and as a unit into the political arena. It would be equally unfortunate for the president to attempt to make political capital of whatever he finds out through the preachers.

FROM FEDERATION CONVENTION

(Continued from Page 1)

Rev. H. T. Littlejohn the minister of the cloth dignified and polished in his manners conducted several of the business meetings in the beginning. Rev Littlejohn has always been loyal to his race.

Dr. B. W. Byram from Mound Bayou, despite his illness came to be with the old guard. He has never failed to come at the right time. Dr. Byram started with the federation and well remembers just what a hard time we have had.

Our national secretary, L. R. Harris was missed. Many inquiries from the members and friends as to why he was not at the meeting.

Willie Tolliver from the Friars Point unit came in on time. He won the prize of a pair registered Hampshire hogs costing one hundred dollars. The sample of cotton brought in by Tolliver classed as the prize-winner is a credit to this member.

Prof. W. A. Boler from Mariana, won the rotary plow donated by S. L. Allen and Co., of Philadelphia. Prof. Boler has organized a large unit in his community. He has a large farm, and fine new residence and last but not least a very fine family.

SEVENTEEN TONS OF MILK FROM ONE COW

What Will Administration Do About Her?

"Calamity Nig," a Holstein cow owned by George Rasmussen of Lake Forest has just been proclaimed the foremost milk and butter producer of America.

Milked four times a day, she has yielded in a year 34,640.6 pounds, More than seventeen tons of milk. From the milk 1,658.6 pounds of butter were churned.

"Calamity Nig" is, of course, the result of breeding through generations of scientifically selected parents.

To find, in the same country and at the same time, cattle breeders constantly striving to, increase the yield of milk and butter per cow, and the government, through its AAA, trying to Reduce the supply of everything, seems, to say the least, paradoxical.

However, the cattle breeders are right.

Some time depression will end and America will regain its sanity.

Then we will give up trying to make food artificially scarce and expensive.

We will try instead to, distribute it with some intelligence, so that thousands of American families that have never had enough of butter, milk or anything else will be able to get all they need.

It would be useful, when that time comes, to have several million cows as lavishly productive as "Calamity Nig."

"PIGS IS PIGS"

Ten dollars a hundred, or 10 cents a pound, paid for top hogs at a cooperative sale of swine in Thomasville this last week, is cited as the best price received by farmers in this state in the past six years, and calls to mind the many times The Constitution has urged farmers of the state to give more attention to the production of pork animals.

Georgia imparts huge quantities of pork every year, from the choice loins to the lowly white meat; now not so lowly, at 30 cents a pound, forcing farm tenants and croppers to make inroads on their flocks of chickens to provide meat for their tables.

Atlanta's meat markets carry a varied assortment of hams, bacon and sausage, practically all from the north, Illinois, Iowa, Indiana and Ohio products predominating, and the same is true throughout the state.

There is no valid reason why Georgia should not supply all of the pork consumed in the state, with the one exception, and that is our farmers do not produce enough hogs.

The day of the razor-back is gone; it may be seen only in remote sections, and is considered a genuine novelty today. In its place has come hundreds of good herds of purebred hogs from which any farmer may secure basic stock at reasonable cost on which to build to supplement his other farm endeavors.

Reduction of cotton acreage affords ample land on which to grow corn, peanuts and pasture, and the farmer who does not have at least a few hogs—enough for his own use, and a few to sell—is simply overlooking a certain source of income that will aid his progress to prosperity and independence.

SELASSIE IS REPEATING HISTORY

In going to the front to fight, disguised as a common soldier while a double wears the official raiment of his high office, Emperor Haile Selassie of Ethiopia is following a custom of some ancient Biblical kings.

One such precedent was at the battle of Ramoth-Gilead in 897 B. C., when King Ahab of the Israelites and King Jehoshaphat of Judah fought the Syrians. "I will disguise myself and enter into the battle," Ahab told his ally, "but put thou on thy robes." The Old Testament story then goes on to say that the king of Syria had given orders to fight "neither small nor great save only the king of Israel." The Syrians spied Jehoshaphat all dressed up and would have killed him if he had not "cried out," identifying himself. During the battle a Syrian archer shot Ahab. In almost the same circumstances, King Josiah of Israel lost his life fighting the Egyptians under Pharaoh Necho at Megiddo three centuries later. An Old Testament story tells how the armies of Josiah fighting against the Egyptians "disguised himself that he might fight with him," (Necho.) But Josiah never got close enough to attack Necho. Josiah was shot down by an Egyptian archer before he could get within striking distance of the Egyptian ruler.

THE MODERN FARMER

Vol. VIII. NASHVILLE, TENN., DECEMBER 15, 1935 No. 11.

HON. CULLY A. COBB WAS GUEST SPEAKER IN TYLER, TEXAS

DIRECTOR OF THE DIVISION OF COTTON

Representative of U. S. Department of Agriculture Adjustment Administration

HIGHLIGHTS

U. S. Department of Agrieulture, Agrieultural Adjustment Administration, Washington, D. C.—NOTHING OF MORE FAR-REACHING IMPORTANCE has eome as a result of our program than the release of women and ehildren from eotton fields, made possible by redueed eotton aereage. Verily it is a new day in the South when the women of the eotton farms ean devote their time to their homes and the children ean go to sehool instead of the eotton field. The labor of these women and ehildren has been the labor that has been released from the eotton fields, and not the wholesale turning out of tenants, as the distinguished profiessor of one of our great univefsities elaimed in a statement a few days ago when he asserted the eotton program had ereated a surplus of 200,000 tenants with dependents numbering a million persons. The opposite is the faet.

BUT WHAT ABOUT OUR RIGHTS? The "inalienable Amerian right" in the past has been the "right" of cotton producers to supply the world with eheap eotton and eut eaeh other's throats. Is it not that kind of right we are trying to get away from? It is the new right to save eaeh other and the industry we are now seeking and must have.

THE COTTON PROGRAM from the beginning has been a produeer's program, as it must eontinue to be. This faet has done more to eonfound our enemies than anything else. More and more the produeers themselves will have to assume responsibility. That also is as it should be. It is my eonvietion that the program will sueeeed just so long as it is a produeers' program, and just so long as the produeers stand by it as loyally and faithfully as they have up to the present time. When it eeases to be a produeers' program, or when they tire of it, there will be no program.

WHAT WE MUST KEEP ETERNALLY IN MIND is that we have a plan and we have a purpose; that ours is a part of a great national program. We know the purpose is right. The purpose is not only right from the standpoint of those who produee eotton, but is right from the standpoint of national seeurity.

NOTHING IS MORE IMPORTANT to be remembered today as we look to the future than the very emphatic statement of the President a few days ago when he announeed that the Agrieultural Adjustment Administration had won its place as a permanent institution of Government, and is here to stay.

(Continued on Page 2)

WINDMILL MAKES ELECTRICITY

William M. Wright is Proud of His Power Plant

Owensboro, Ky.—Some farmers pray for rain to save their erops. William M. Wright prays for windy days to eut down his eleetric light bill. Mr. Wright, who operates a small garage three miles south of Owensboro on Highway 75, has hooked up a type of windmill to furnish eleetrie light. He got his idea from studying reports on how the federal government lights airplane landing fields in some seetions of the eountry.

This is the way he did it:

"First I aequired a 30-foot steel windmill tower from W. J. Mitehell, a farmer down the road," he said. "I set it up just behind the garage.

Auto Generator

"Then I got an old auto generator and rewound it for a higher voltage and slower speeds. That was one of the biggest tasks."

Next, Wright hewed out a 10 foot, two-blade propeller for the tower. It has the general shape of an airplane propeller but a slightly different piteh.

He mounted the generator just behind the propeller and eonneeted it by a three-to-one reduetion gear The traditional windmill windvane to keep the propeller's nose into the breeze also was hung on the assembly.

The whole thing was anehored to the top of the tower and set in roller bearings.

Prevents Twisting

Wires leading from the generator are first attaehed to a brush ring and then led to the ground. That prevents them from twisting off as the wind eontinually swings the unit around.

In the garage the eurrent passes thru a switeh panel and into six auto storage batteries whieh furnish the required 32 volts and

(Continued on Page 8)

TURKEY RAISING PAYS LAND TAXES

Holly Springs, Mississippi—Mr. and Mrs. Lilburn Armour, of Red Banks, have found that turkeys pay better than eotton. They have raised enough turkeys this year to pay the taxes on a 300-aere farm.

They started with nine hens and one gobbler and, in spite of many of the small turkeys being eaten by foxes, raised 66 turkeys to sell and have saved 12 hens and a gobbler for a start for next year.

Mrs. Armour made engagements for many of the turkeys in Holly Springs for Thanksgiving and Christmas dinners and the rest she sold to a Memphis firm. She averaged 19 eents a pound and the expense in raising them was small.

Besides the turkeys and ehiekens they have two hives of bees near a field of elover. They have enough honey for their use all winter and have given mueh to the neighbors.

FARMER'S RELIEF CLUB

Racketeers Take "Dues" In Goods In Report

Little Rock—(AP)—Soeieties and associations of high-sounding names and dues payable in eash or goods are netting Negro organizers a rich harvest among the shareeroppers of Eastern Arkansas, E. B. Whitaker, assistant regional direetor of the Resettlement Administration, eharged here.

The offieial said the organizers are playing on the desire among the credulent farmers to obtain aid from the Resettlement Administration. Hundreds, he said, have enrolled in the groups with the assuranee that by united aetion they ean obtain homes and farms from the government.

The result, Whitaker said, is that all persons diseovered to be members of sueh organizations are being marked off the resettlement rolls of applieants on the assumption that they are not eapable of assuming the responsibility of farm ownership.

"A few of these oragnizations were formed by Negro leaders for the purpose of aiding the members toward resettlement. In these eases no fees have been eolleeted," he said.

Whitaker charged that some of the organizers were gaining eonfidenee of prospeetive members by posing as preaehers. He said one organizer eharged a $13 membership fee and beeause most of the potential members had no eash, he sent a truek from home to home to eollect the fee in goods whieh he disposed of for whatever eash profit he could make.

The offieial said the organizers were using names such as "the Benevolent Homeless and Landless Colored Tenant Corporation" to attraet members.

Associated Press Negro Farmers should investigate before going into these unreliable organizations.

Negro farmers should investigate before going into these unreliable organizations.

FARMERS LOSE SAVINGS IN SWINDLE GAME

Talladega, Ala.—(By A N P)—Falling for a story told by a suave stranger, George Carter and his son reputed well-to-do eolored farmers living near here, were fleeeed out of $1,382 here Tuesday, aeeording to the report made to local poliee.

The senior Carter made the report deelaring that the stranger eame to him last Thursday with the proposition which involved a farm in Georgia. The stranger held deeds to the farm in Georgia and for the sum of $5,000 of which $1,400 would have to be paid in eash, he was supposed to have turned over the deeds to Carter. The eash payment was made but the deeds were not turned over as per agreement and when the seller failed to show up for three days. Carter reported the transaetion to the poliee who are now searehing for the wily salesman.

BAD USAGE OF LAND

Illinois Teachers Hear Speaker on Problems

Special to the Post-Dispatch

Urbana, Ill., —Aeute problems that face the Resettlement Administration were outlined here Friday by G. E. Young of the Division of Land Utilization, before the annual conferenee of Illinois high sehool teaehers at the University of Illinois.

Little thought has been given in the past to properly eonserving or developing the nation's land, Young pointed out. "It has been developed quiekly and used wastefully without thought of exhaustion of natural resourees or waste of human effort. Out of this has eome the problem to be found in the so-ealled submarginal farming areas estimated at 75,000,000 aeres oeeupied by 450,000 farm families struggling against hopeless odds," he declared.

"Prior to 1930," Young said, "individuals were making an intelligent effort to make a fundamental adjustment between population and natural resourees available for their support by abandoning completely many of the areas unsuited to farming. Sinee 1930, however, this adjustment in the right direetion has been eompletely reversed by the planless and misguided back-to-the-land movement."

This movement has led to Government planning, he stated.

"Studies of eonditions in some of our submarginal farming areas show that individuals have abandoned our poorest areas in an effort to bring about proper adjustments between population and natural resourees," Young deelared. "Before eomplete abandonment takes plaee, however, the last remaining resourees are eompletely exploited.

"In this unguided adjustment through individual effort, entire eommunities have been affeeted by poverty, a shrinking tax base and mounting per eapita eosts of loeal government. These eonditions existing in a eommunity are soon reflected in turn upon the eounty, the state and the nation, and must be eonsidered problems for publie aetion rather than for individual aetion."

TAX EXEMPTION OKEHED

Potatoe Growers To Be Given Stamps, Committee Rules

The national potato advisory eommittee has unanimously reeommended that all growers, whose sales reeords show that they have been selling not to exeeed 50 bushels of potatoes annually, be allotted tax-exemption stamps suffieient to eover sales in the amount of their aetual sales during the base period, 1932-35.

For example, if a grower's average sales during the base period were 20 bushels annually, he would reeeive tax-exemption stamps equal to 20 bushels for eaeh potato allotment year.

NEW AAA COTTON PLAN

Adjustment From Thirty To Forty-five Per Cent Made

Adjustments ranging from 30 to 45 per eent will be permitted in the 1936 AAA cotton program and produeers will be paid not less than 45 per eent will be permitted in produetion of the aeres taken out of eotton produetion under the new eontraets, reports the Agrieultural Adjustment Administration to Dr. L. N. Dunean, direetor of the state extension serviee.

"The new eontraet and program follow the general plan of adjustment in 1934 and 1935 but there are a number of important ehanges," Chester C. Davis, AAA administrator, said. "These were made in an effort to simplify the program, to make it more flexible, to deeentralize administration and inerease grower responsibility, and to eliminate inequalities whieh were revealed through the operations of the previous prgoram."

Some salient features of the new eontraet and program are:

1. The eontraet eovers the ealendar years 1936, 1937, 1938 and 1939 but any signer may eaneel his eontraet at the end of any year by notifying the seeretary of agrieulture by Dee. 1.

2. A total base aereage of 44,500,000 aeres has been adopted. This base or national aereage quota will be alloeated by the division of eotton of the Agrieultural Adjustment Administration among the various eotton-produeing states upon a basis eorresponding to the base aereage in 1935 in eaeh state.

3. The alloeation to the eounties within the states will be made from the state's quota by the division of eotton but 10 per eent will be held for apportionment by the State Cotton Board to be used in adjusting the aereage for eounties and individual produeers. The base for individual produeers will be determined by the produeers and the eounty commitees subjeet to review by the State Cotton Boards and the Agrieultural Adjustment Administration.

4. The minimum adjustment required for 1936 will be a reduetion of 30 per eent below the base aereage established for individual farms. The producer, however, will have the privilege of reduеing to a maximum of 45 per eent below his base aereage. The adjustment required in 1934 ranged from 35 to 45 per eent from the base; in 1935, 25 per eent with the option of inereasing it to 35 per eent. The adjustment for eontraet years following 1936 will be determined by the seeretary in eonformity with eonditions indieated for the specifie eontraet year.

5. A single adjustment payment of not less than 5 cents per pound on the average yield of lint eotton on the land withheld from produetion under contract will be made for 1936. The payment is to be made as soon as practieable after eompliance has been determined.

(Continued on Page 8.)

Director of Division of Cotton

(Continued from Page 1)

WHAT THE AAA HAS DONE FOR THE PRODUCER OF COTTON

I regard the time of this gathering as being most important as well as most significant. This is particularly true as it relates to the very effective effort the United States Government has made these last three years to apply to agriculture in a practical manner the equal privilege with other groups, which right is held as one of the great fundamentals of our Constitution. It is important now to appraise results and consider the future.

May I say at the beginning that we have come a very long way since that day in early March, 1933, when every bank within the nation was closed and when gloom hung heavily over every home. It was not prosperity that was just around the corner then as we had been repeatedly told. As I remember, it was the sheriff. Certainly there was never a time before when the sheriff was pinning more tags on the doors of bankrupt business concerns, for bankruptcies then had reached the highest point in history. There are a lot of folks that wish we would not bring up matters of this kind. Even so, they are quite worth remembering.

In passing, it is worth noting that whereas bank failure had mounted to the highest record of history when the Agricultural Adjustment Program was inaugurated, they are now at a record low. I do not believe this is a mere coincidence. I believe there is relation between the condition of banks now and the fact that a bale of cotton is now worth twice what it was worth in 1932. Figures I shall cite a little later will make even more plain the reason, at least to those who want the truth, and who want to understand.

As I have indicated already, our cotton program has a very definite purpose and was laid out to follow a very definite plan. The purpose, simple, definite, and direct is to re-establish prices to farmers at a level that will give agricultural commodities equality of purchasing power—a right they have been deliberately denied up to now. The stated plan, quite as simple and quite as definite, and that which we religiously have attempted to follow and which we must continue to follow, is "To establish and maintain such balance between the production and consumption of agricultural commodities and such marketing conditions therefor" as are necessary to achieve equality of purchasing power. It is the plan "To approach such equality of purchasing power by gradual correction of present inequalities therein at as rapid a rate as is deemed feasible in view of the current consumptive demand in domestic and foreign markets," an opportunity we have been denied in the past.

Lest we forget and to avoid confusion, it seems exceedingly important today that we recall definitely to mind both the purpose and the plan of our program that we may realize again that in the beginning we deliberately set out to reach a very definite goal, and that a definite plan was laid down which we were expected to follow. It is mighty important to know where you are going and what route you are going to take to get there.

Though far from the goal, we have been on our way now three years, and we have approached a point in our rise out of the desperate depths into which the cotton producer had been plunged in that long, downward slide through the 20's and early 30's that ended in 1933 when we plowed under a still greater disaster. I shall always rejoice in the marvelous courage and spirit of sacrifice that sets the plow-up program apart as an unparalleled achievement.

While we all realize that we have come a long way, and while we are happy in the feeling of security that has swept away the spirit of despair that was on every hand three years ago, yet, again lest we forget, it seems important to me to look back, much as you would from a mountain top, and examine the road we have traveled and the road ahead as far as we can see. We would like to know that we are traveling in the right direction and that the chosen route is the best route.

I have lived with the cotton problem all my life. The first hard money I ever made was running down cotton with an old-fashioned, steam packer in a cotton gin. As a and his neighbors discuss the desperate plight of the producers back there in the 90's when times were so hard, and we so hoped they would not come again. But periodically they have returned many times since, in fact, on six occasions since 1900, but at no time has the cotton growers' plight been harder or more desperate than in 1932 and in the spring of 1933. Somehow the return of hard times has always seemed to come about the time the second or third payment was due on the farm. and fortunate and few were the prospective home owners who were not sent back to tenancy. The fact is, it has been almost impossible to buy a home and pay for it in the Cotton Belt. The answer to home ownership in the Coton Belt is controlled production and a fair and stable price. There is no other.

From my earliest childhood, cotton growers have been discussing equality of opportunity and equality of purchasing power. They have made many attempts to these ends, but none that have gone so far toward reaching them as we have gone these three years since the present cotton program was inaugurated.

I wish, however, to pay this word of tribute to those who have gone before us. Their efforts and their failures were stepping stones towards today's success. While their efforts were more or less futile, they were not wholly in vain. As we look back, we can see that they were made in the presence of insuperable handicaps. The greatest of all being a governmental policy of special privilege to others at the expense of the farmer, which in fact made equality of opportunity and equality of purchasing power for agriculture an impossibility.

I should like to turn now to some of the most apparent results of the new policy of government and the program established under it. The cotton crop of 1932, including the value of seed, sold for an average of $37.42 a bale. Following the plow-up campaign in 1933, this figure rose to $66.17. on up to $90.30 for the crop of 1934, including income from all sources, and the prospect this year is that the figure will stand at $86.10. In 1932 we sold the crop of 13,001,000 bales, produced on 35,939,000 acres for $483,887,000. In 1933, we produced 13,047,000 bales on 29,978,000 acres, for which we received $924,733,000, including payments. In 1934, we produced 9,636,000 bales on 26,987,000 acres, and received $860,413,000. While in 1935 the crop is estimated at 11,141,000 bales, produced on 28,652,000 acres, and has a prospective value of about $900,00[illegible],000. More eloquently than words these figures emphasize why we have risen from the poverty conditions of 1932 to a point where we can see daylight again. And this year the South is doing the best job at farming in its history.

As we have risen from the depths of 1932 to the high place we occupy today, taxes have been paid, debts that have hung over us for years have been cleared, schools that have been the labor that has been released and countless churches whose work had been crippled by the depression are now able to carry on again.

Nothing of more far-reaching importance has come as a result of our program than the release of women and children from cotton fields, made possible by reduced cotton acreage. Verily it is a new day in the South when the women of the cotton farms can devote their time to their homes and the children can go to school instead of the cotton field. The labor of these women and children has ben the labor that has been released from the cotton fields, and not the wholesale turning out of tenants as the distinguished professor of one of our great universities claimed in a statement a few days ago when he asserted the cotton program had created a surplus of 200,000 tenants with dependents numbering a million persons. The opposite is the fact.

Business statistics of every character tell the story of increased buying power, of better living, and of the universal turn things have taken for the better. The daily papers are now carrying headlines like these:

"Steel profit is $7,600,000 in third quarter. In the same period last year industry lost $24,700,000."

"184 companies net 36% more than year ago."

"Freight traffic continues rise with 13% gain."

"Business is more solid than at any time in last five years."

In the "Washington Post" of Friday, November 8, the following headlines were carried:

"Steel production at five-year top."

"Montgomery-Ward sales set all-time record. October sales of Montgomery-Ward & Company were the largest for any month in the history of the Company. A 20.8 percent increase over October of 1934."

small boy, I listened to my father

"Sears-Roebuck votes special 50 cent dividend. Sales since January are running at highest rate in 6 years."

"General Motors October biggest in 8 years."

"Bank clearings here gain 30 percent over last year. Rise of 20.5 percent is the average for 22 leading cities."

The record as presented by Dun & Bradstreet showed failures down to the lowest point in 15 years, or to some 3000 in 1934 as compared with 9000, the high peak reached in 1932, with electric power production at the highest level in history. This means there are more dynamos turning in factories today than at any time in recent years. About all they were doing in February, 1932, was accumulating dust. Relatively, where one was turning in February, 1932, 23 were turning in August of the present year.

In April, 1933, the curve indicating business activiy in the Dun & Bradstreet Barometer stood at 45. Today it stands at 80. Employment is up and payrolls are up.

Advertising lineage in the same daily papers from which I have been quoting registered an almost record low as of February 1, 1933. Belonging to that fraternity, along with the rest, I descended the winding stairs of the depression that seemed at many times to lead down to an inevitable doom. But one day there was a turn for the better. It was in the spring of 1933. Since that day we have been climbing back. And strange though it may seem in the presence of complaining editorials here and there, some papers and some magazines are enjoying the most prosperous days of their lives.

In the early months of 1933, freight car loadings also took a turn for the better, and ever since have been climbing back to a more comfortable position—some roads are actually making a profit.

A recent study shows that actual carlot shipments of industrial and manufactured goods from 16 Northeastern industrial States to 10 Southeastern agricultural States increased by 38.9 percent in the first year after the cotton program and recovery program got under way.

Taking account of the situation by Federal Reserve Districts, the Cotton Belt makes an unusually happy showing.

The improvement that took place in department store sales in the twelve Federal Reserve Districts in 1934 over 1933 was greatest in the Atlanta District, while Dallas and Richmond showed the second and third largest increases.

Rural retail sales of general merchandise, as reported by the Department of Commerce, in the Southern region showed an increase of 23.5 percent in 1934 over 1933, while the increase for the Middle Western region was 21 percent, the Eastern region 20.5 percent and the total for the United States 21 percent. For the first nine months of 1935 the Southern region showed an increase of 26 percent, the largest of any of the other regions. New automobile registrations follow a similar pattern. Improved conditions have been reflected too in rises in postal receipts, insurance sales and in real estate and building activities.

At this point, and with good conscience, I can say: "I told you so." Some of you will recall the many editorial statements of mine to the effect that because of certain definite advantages the South would rise out of the depression ahead of any other region. While we shall not take time here today to recite those reasons, it is important to remember that in cotton itself the South enjoys an advantage. Cotton is the best cash crop in the world. These are facts that can't be laughed off or explained away. The old campaign song, "Happy Days are Here Again," did have a meaning.

I should like, if I may, to indulge in a little reminiscing. In an editorial on November 15, 1921, I made this statement, "It becomes more evident each succeeding day that what agriculture needs most is a national program that will embody in its scope the broader aspects of production and marketing, together with legislation that will bring agriculture in line with the other great fundamental industries. There is entirely too much risk in farming as conducted at present," and I added this prophetic conclusion, "Putting such a program together is a man's-size job." Falling to your lot and mine to put the program together and put it over, we certainly realize that it is a man's-size job—and what a job and what a privilege to have a part in it.

Earlier in that same year, I remarked editorially that "We have already yelled ourselves out of breath running around calling for help. We must make up our minds once and for all to travel a new road from now on or we'll go stuck again." We did'nt make up our minds then, and in 1926 and 1932 we found ourselves "stuck again." Since then we have been traveling the new road. If any there be who are a little weary, let it be said that there is no old road ahead. And I should like to observe that the old road leads back and down to hard times. I hope hard times are forever behind us.

One reason why we didn't travel a new road following the depression of the early 20's was chiefly because of governmental handicaps, and because of the impossibility of securing the same type of cooperation we have had under the program of today. And mind you, we could never have had the cooperation of the past three years except for the fact that we have had a Government definitely committed to the principle of equality for agriculture, and a Government that has undertaken in a determined and practical manner to apply that principle.

Nothing is more important to be remembered today as we look to the future than the very emphatic statement of the President a few days ago when he announced that the Agricultural Adjustment Administration had won its place as a permanent institution of Government, and is here to stay. He has demonstrated the fact that his words are not empty promises.

In the early days of this country, a chief task of the settlers was keeping the Indians off while they made a crop. A chief task ahead of us is the task of keeping the "Indians" off while he carry out our program. The "Indians" are not all in Wall Street. As a matter of fact, we have many enemies in our very midst who are not conscious of the fact they are enemies. There are others. They are shouting "Down with bureaucracy and up with human rights." Better take a look before you join the parade. If you are a little mad about something already, you are choice meat for these brethren. The enemies of the cotton program are "discovering" all sorts of "grave injustices." Better look for the reason. Then there are localities wanting special privilege. Chambers of

Commerce here and there are already making demands.

In the past, there was nothing that could be done to keep production from going out of bounds and prices from collapsing and it will require courage to keep them stable in the future. Fortunately control measures have proved an effective remedy during these last three years. Is it not certain that we must choose between no control and no price, and control and fair price? The promoters say no and the land speculators say no, and the big volume cotton handlers say no. I think the answer is a most emphatic yes, and I am convinced the further answer is that we not only must have control but will have control.

A little while ago we heard a lot about regimentation and inalienable American rights. The enemies of the program are telling every would-be cotton producer to demand the right to grow as much cotton as he pleases. If any of you are dissatisfied, you will find vehement sympathy at their hands.

But what about our rights? The "inalienable American right" in the past has been the "right' of cotton producers to supply the world with cheap cotton and cut each others throats. Is it not that kind of right we are trying to get away from? It is the new right to save each other and the industry we are now seeking and must have.

According to your slogan and the stated purpose of the cotton program, we are going to grow cotton in the future for the purpose of producing a better living and a better community. If we are going to have a better living and better homes and better communities that will endure on through the generations to come in Texas, we are going to have to grow other things than cotton. We must restore the fertility to the soil, of which it has been robbed through all these generations of one-crop farming. What we need to be thinking about and have opportunity to think about now is balanced production per farm, and not all cotton. And we need to worry less about our neighbor's allotment and more about our own corn cribs and smoke houses and land; and above all, about keeping the women and children out of the cotton fields. I am not decrying honest toil. It is good for the soul, but I am decrying the slavery of the past that has prematurely aged women and that has robbed our children of opportunity.

There is a certain amount of cotton that the world will take at a fair price to those who produce it. We must produce no more, or accept the hardships of the past. The certain amount of cotton that the world will take at a fair price to our producers here will preserve to us our supremacy as the world's leading cotton-producing area. Contrary to scary tales you have heard, we have not lost our foreign markets, nor is there any prospect that we are going to lose them in the future. For my part, if holding foreign markets meant 6-cent cotton, then I am ready to let them go.

You have been told repeatedly how countries abroad were gobbling up our foreign outlets. The truth is foreign countries have been attempting to take our markets for fifty years. To date there is no new threat, and the old ones have been greatly exaggerated. There is nothing in the present cotton adjustment program or in the new program that gives foreign producing countries any advantages they haven't had. We are handicapped in selling abroad by tariff barriers, by exchange restrictions, by quotas and by trade agreements. These are factors apart from the cotton adjustment program.

What we must keep eternally in mind is that we have a plan and we have a purpose; that ours is a part of a great national program. We know the purpose is right. The purpose is not only right from the standpoint of those who produce cotton, but is right from the standpoint of national security. And through three years of experience, the plan, I think, has demonstrated its practical effectiveness. In your overwhelming votes of approval you join me in this feeling. In spite of all this, the plan is not perfect, and probably never will be, but year by year as we gain experience and wisdom we shall move on to a more nearly perfect plan. There is no point or reason in arbitrarily holding on to imperfections once we know a better way.

Our 1936 program, which in full detail will be announced in a few days, and I regret could not have been announced long ago, will make many provisions for the correction of inequities and injustices that have developed in the past. Above all, it will again provide the producer with the full power of Government influence to help him help himself. The contract itself will be a four-year agreement. I should like to point out that the contract you are shortly going to have the privilege of signing is a covenant with your own fellow cotton producers. The Government is merely permitting itself to be used as a vehicle whereby cotton producers from one end of the Belt to the other can join hands in the common cause of securing and holding equality of opportunity.

I should also like to emphasize the fact that the cotton program from the beginning has been a producers' program, as it must continue to be. This fact has done more to confound our enemies than anything else. More and more the producers themseives will have to assume responsibility. That also is as it should be. It is my conviction that the program will succeed just so long as it is a producers' program, and just so long as the producers stand by it as loyally and faithfully as they have up to the present time. When it ceases to be a producers' program, or when they tire of it, there will be no program.

WHITE FARMERS ARE INCREASING

Statistics of Alabama Planters Presented By Dr. Chapman

University Alabama—A decided increase of the year 1935, over 1930 white farmers, in the number of acres held by white farmers, and in the average acres per white farm was reflected in statistics concerning the tenure of farms in Alabama.

These facts were worked out from the farm census of 1935 by Dr. H. H. Chapman, director of the Bureau of Business Research, at the University of Alabama.

The number of Negro farmers who are full owners, increased very slightly, but both the acres in farms and the acreage of the average farm decreased. The number of Negro tenants, and the total number of acres in farms held by them decreased.

In 1930 there were 63,727 white owners as compared with 69,967 in 1935, a gain of 9.8 per cent. The total land in farms for white owners rose from 7,029,564, to 7,800,749, a gain of 11 per cent, and the acres of crop lands harvested per farm rose from 28.9 to 29.2 per cent. The value of land and buildings, however, decreased from more than 193,000,000 in 1930 to less than 146,000,000 in 1935.

Statistics for white tenants showed similar increases, and again a decrease of 21.1 per cent in the value of land and buildings.

The Negro owners increased from 11,417 to 11,657, or 2.1 per cent. The total acres in farm lands for this class decreased from 916,880 to 827,038, and the average farm from about 80 to 70 acres. The decrease in the value of land and buildings here was 34.4 per cent.

Negro tenants decreased from more than 77,000 in 1930 to more than 75,000 in 1935. Total farm lands decreased 4 per cent and the value of farm lands and buildings was lowered 40.7 per cent.

There were increases in the number of farms and in the farm lands operated both by full owners and by tenants. But on the other hand, the average value per farm of land buildings declined from $2,430.37 in 1930 to $1,673.69 in 1935, a decrease of 31.1 per cent for white operators. For Negro operators the average value of a farm was $1,114.50 in 1930 and $693.58 in 1935, a decrease of 37.9 per cent.

SOY BEANS USED ON DAIRY FARMS

More Farmers To Feed Variety this Winter, Report

More dairy farmers will feed soybean hay and soybean silage this Winter than ever before, report Department of agriculture officials.

"Is soybean hay as good roughage for dairy cows as alfalfa hay?" asks one farmer.

J. B. Shepherd, of the Bureau of Dairy Industry, answers:

"Soybean hay contains about as much protein and calcium as alfalfa hay. Green, leafy soybean hay, like a similar quality alfalfa hay, is also high in carotene or vitamin A and vitamin D. Soybean hay, however, usually has coarser stems than alfalfa hay, and you waste more in feeding.

Feeding trials with dairy cows show that if the waste in feeding soybean hay is relatively small—say not over 5 to 10 per cent— the soybean hay will give as good results as a similar quality of alfalfa hay. If the hay is very stemmy, as is generally true with soybean hay, you will waste more in feeding, and it may be worth quite a little less than alfalfa hay."

Recent experiments at the Ohio and Florida Experiment Stations have shown that the feed nutrients contained in soybean silage are as effective for milk production as the same quantity of nutrients contained in soybean hay. It takes from two and one-half to three pounds of soybean silage to equal one pound of soybean hay in feeding value.

NEW POTATO PLAN

Washington, November 30. — Frankly admitting the difficulties confronting them, AAA officials today set about launching one of the most controverted of the government's crop regulation programs—tax control of potato production.

Under the potato act passed by the last Congress, any person who buys or sells potatoes dug after midnight tonight, which do not bear a government stamp, will be liable for a fine of $1000.

The AAA has fixed a national tax exempt sales allotment of 226,600,000 bushels, equivalent of the average annual sale of potatoes during the five years 1929-1933.

A tax of 3-4 of a cent a pound must be paid on all potatoes sold in excess of the allotment. State quotas have been assigned and the farmer," Dr. Taylor said. "What AAA said individual grower allotments were being made as rapidly as possible in Florida, Louisiana, Texas and California.

The first potatoes to be affected by the new law are expected to be harvested late in December.

STUDENT TEACHERS ASSIGNED TO OUTLYING RURAL SCHOOLS

Agricultural student-teachers at Hampton will again have the opportunity to supplement their training experiences with three weeks of apprenticeship teaching in out-lying schools, January 3-23.

Graduates of previous years are learning the job at first hand, and public school officials have cooperated whole-heartedly with the plan.

This year five seniors have enrolled for this course, and the tentative assignments are as follows:

W. A. Goldsborough, Chestertown, Md. Nansemond Co. Training School, Holland, Virginia, W. B. Godwin, Teacher

R. L. Sanford, of Goldsboro, N. C., Hawkins' High School, Warrenton, North Carolina, H. A. Rose, Teacher.

D. T. Stewart, of Worton, Md., Southampton Co. Training School, Franklin, Virginia, W. F. Banks, Teacher.

M. N. Sullivan, of Simpsonville, S. C., Warren County Training School, Wise, North Carolina, J. L. Bolden, Teacher

G. L. Washington, of Reading, Pa., Isle of Wight Co. Training School, Smithfield, Virginia, B. B. Jones, Teacher

ANCIENT ETHIOPIANS SAY—

By Gertrude Parthenia McBrown For ANP

"Be not haughty because of thy knowledge. Converse with the ignorant man as well as with him that is educated."

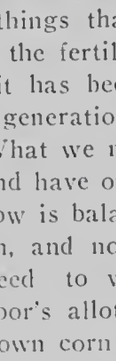
"Do not terrify the people, for if thou dost, God will punish thee. If any man saith that he is going to make himself powerful thereby, saying 'I shall reap advantage, having knowledge,' and if he saith, 'I will beat down the other man,' he will arrive at the result of being able to do nothing.

"If thou hast become a great man, having once been a poor man, and hast attained to the headship of the city, study not to take the fullest advantage of thy situation. Be not harsh in respect of the grain, for thou art only an observer of the food of God."

The Best BIBLE FOR **$1.00**

Special Prices for Quantities

Size 5x7¼ Inches



No. 1502

NEW VALUE

About one-half former cost.

Clear Readable Black Face Type. Size of Bible, 5x7¼ inches—1082 Pages, only 1¼ inches thick, including covers.

Strong, flexible limp grained Binding, rounded corners, red edges, gold back titles.

This Bible is ideal for personal use, for responsive readings in the classroom, for the pew or any department of the Church or School.

THE MODERN FARMER

Official organ of the National Federation of Colored Farmers, Inc.

Leon R. Harris - - Editor

Published monthly by the Modern Farmer at Nashville, Tennessee.

Office, 447 4th Avenue, North.

Devoted to the interests of the Farmer, Truck Gardener, Livestock and Poultry Breeder, the Home and the People.

Entered as Second Class Matter, April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 447 4th Avenue, North, Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year. 75c for six months, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT.

OUR PLATFORM

1. A Unit of the National Federation of Colored Farmers in every community of colored farmers.
2. Co-operative buying, producing and marketing.
3. Every colored farmer a farm owner.
4. Abolition of debt-slavery, injustice and persecution.
5. A written contract for every colored farm tenant and sharecropper.
6. Better rural churches, schools and homes.

ROCKEFELLER, JR., ENDS SPECIAL BAPTIST GIFTS

'Growing Convictions on Church Unity' Lead Him to Aid 'Specific and Non-Sectarian' Causes

Puts Substance, Not Form, to Fore Has Given Millions to the Faith, Been Mainstay. of the Riverside Church

John D. Rockefeller Jr., who has given millions of dollars to the Bapfirst Church and several of its agencies, has decided to contribute no more to the unified budget of the Northern Baptist Convention, governing body of the Church in the North, but henceforth to support "specific projects, chiefly interdenominational and non-denominational in character."

His public relations representatives, Ivy Lee and T. J. Ross, made public last night a letter Mr. Rockefeller wrote to the Northern Baptist Convention last March 7, stating that his action "springs from a deeper and growing desire to encourage and further those united and nonsectarian activities and agencies which emphasize above all else unity in Christian service, love of God as He is revealed in Christ and His living spirit, and vital translation of this love into Christ-like living."

Text of Rockefeller Letter

The text of Rockefeller's letter follows:

March 7, 1935.

To the Northern Baptist Convention:

Gentlemen: Some months ago I sent you my contribution for the current fiscal year and in so doing stated that it would be my final annual gift to the unified budget of the Northern Baptist Convention. Hereafter, such sums as I may donate to general religious work it is my present thought to contribute to specific projects, chiefly interdenominational or nondenominational in character, which interpret the Christian task in the light of present-day needs and which are based not so much on denominational affiliation as on broad, forward-looking principles of co-operation. Any of your specific undertakings, either in the home or foreign field, that fall within this category I shall be glad to have presented for consideration along with other enterprises.

After so many years of co-operation with your organization I naturally regret taking this action, the more so because, following the footsteps of my father, I have always been identified with the Baptist denomination, working with and supporting its various organizations. I believe in denominations—in so far as they make necessary provision for individual variation in religious experienee. I recognize the significance, the beauty and the helpfulness of ritual and creed as developed by different denominational groups. What gives me pause is the tendency inherent in denominations to emphasize the form instead of the substance, the denominational peculiarity instead of the oneness of Christian purposc. I have long felt that this denominational emphasis is a division force in the progress of organized Christian work and an obstacle to the development of the spirit and life of Christ among men. My faith is increasingly centered on the few fundamental principles of Christ's life and teaching as set forth in the four Gospels. I believe these principles can be applied with practical vision and spiritual power.

If the Church is to go forward, if it is to hold the young people of today who, generally speaking. are not greatly concerned about denominational distinctions and have a decreasing interest in seetarian missions and if their support of its activities is to replace that of older givers who pass on, these denominational distinctions are bound to fade in the forward movement of a great united Church open to all who seek to follow Christ and to find in Him the abundant life. Such a Church will, I believe, meet the needs of young people and enlist their support of its missions at home and abroad. We of the older generation should not discourage them or be instrumental in lessening their interest by passing on the divisive elements of our present-day religion. Rather should we work with them in relegating the nonessentials to a place of secondary importance and stand with them for the fundamentals of Christian unity, feeling confident that on such a foundation they will rear a Church far better adapted to the requirements of their day and generation than any we could build for them.

Relating this statement to my personal view and interest to present general trends, I am sure you will understand the action which I have taken. It does not indicate any lessening of my interest in religion and the Christian Church. On the contrary, it springs from a deeper and growing desire to encourage and further those united and nonsectarian activities and agencies which emphasize above all else unity in Christian service, love for God as he is revealed in Christ and his loving spirit, and the vital translation of this love into Christ-like living. I am therefore seeking to use such influence as I have in emphasizing the basic truths common to all denominations, in lowering denominational barriers and in promoting effective co-operation among Christians of whatever creed. Definitely to support such cooperative movement seems to be the next step for me to take in that direction.

Does Not Criticize Other Views

Lest this explanation of my position be construed as a criticism of any who think differently, let me hasten to say that I concede to others the same right to freedom of thought and action but I cherish for myself. The Baptist denomination was founded upon principles of religious tolerance and freedom that permit the fullest cooperation with all groups in sharing the Christian experience and teaching. I am simply acting in accordance with the principles of that denomination with which I have all my life been so happly associated.

With the assurance of my deep appreeitation of the consecrated, devoted service which the officers of your organization and the many organizations which it represents have rendered throughout the year, I am,

Very sincerely,

JOHN D. ROCKEFELLER, JR.

Mr. Rockefeller and his father for years have been pre-eminent among the laity of the Baptist Church. In any church controversy arising between the fundamentalists and the modernists, the fundamentalists always have identified the liberals, as represented by the Rev. Dr. Harry Emerson Fosdick, pastor of Riverside Church, with the support of the Rockefellers, especially Mr. Rockefeller Jr.

In the early years of this century the sole outside activity of Mr. Rockefeller Jr., was the Bible class of the Fifth Avenue Church, 4 West Forty-sixth Street, which in 1922 became the Park Avenue Baptist Church and less than ten years later the magnificent Riverside Church at 122d Street and Riverside Drive. Since they came to New York in 1884 the church drew much of its support from the Rockefellers.

Mr. Rockefeller Jr., consistently has advocated elimination of immersion from the Baptist ritual. After the resignation of the late Dr. Cornelius Woelfkin, he approved wholeheartedly the seleetion of Dr. Fosdick as pastor of the Park Avenue Baptist Church. Dr. Fosdick's connection with the church was not entirely favored by the Baptists as a body, and his views and the evident support which they received from the Park Avenue congregation led, in 1926, to an attempt to have the church expelled. The proposal was defeated, however, when submitted to the Northern Baptist Convention.

DELAWARE N. F. A. SPONSORS FAIR AND BANQUET

The State College chapter of the New Farmers of America, a brother organization of the Future Farmers of America, held its first agricultural fair and Father and Son Banquet, Friday, November 15, at Dover, Del.

The fair was open from nine o'clock in the morning until ten o'clock at night, and attracted all of the students and teachers of the College, and many visitors. There were 230 agricultural, home economics, and educational exhibits which ineluded canned goods, dress making, farm produce, poultry, and pet stock. Members of the Biology Department sponsored an interesting educational exhibit.

The fair was managed by the college agricultural students and judged by Mr. H. D. Jacobs of Bordentown Industrial School, New Jersey.

The day was climaxed by the Father and Son Banquet, prepared by the Home Economics Department. This brought together 75 N. F. A. boys, parents, and friends.

Previously assigned topics appropriate to the occasion were ably discussed by guest speakers.

THE WOMAN'S WORLD STYLE CHATS

(By Arden H. Duane for ANP)

Froth and foam!
Swirling silken web-like cloud
A siren dress!
A lace dress!

It will be your pride and joy. A lace dress with a shirred bodice, a billowing skirt, a captivating scarf, a silhouettt set to music with every step you take.

True feminine alure without a word of doubt. Pleated chiffon! When you walk.....A lovely, soft, rippling motion of pleated chiffon, when you stand....Quiet, subdued folds flattering a trim figure; when you sit.....A dream like fragility and graceful atmosphere circling around about you like a fan.

There's a hushed murmuring when your silhouette dramatizes the newest fashion craze....Ombre net. Use swishing crisp taffeta beneath this pictorial beauty and you are the queen of the night.

Another flashy and unusual color combination for a black suit. A moss green velvet blouse or a light green velvet blouse or a light terra cotta crepe blouse embroidered in narrow silver bands.

For the town and the country.....A sensation! Two shades that will catch the eye and stir the pulse. Sweet pepper.....A warm spicy yellow red. Reminds me of a nice red ripe pimento, and green pepper.....brisk and fresh..... just as homoey as a garden pepper.

An interesting and most unusual gown, the two piece evening gown. It's a two part dress. The top is a blouse while the skirt is just a circular length of the same material. The material is cut on the bias And.....not a hook or button or a clasp holds it on. It ties.....and circles in soft flattering drapes and folds. What ease for the woman and what a great temptation to remove the skirt to show our friends how it comes off. These gowns with all their simplicity are found to be intricate gowns to design.

What next? Women's spats! Designers thought that the chiffon clad ankles should be kept warm from the wintry blasts. So Scotch plaids are being shown in the hosiery and accessory departments. Also white or natural tones are being shown. They are slightly higher than men's spats and are to be worn with low heeled shoes. Most of them have zipper closings Smart young women about town are for the spats in a big way. We have found out that it is quite all right to be really dressed up and yet crave comfort in the winter.

Gold is still a brilliant necessary at a formal occasion. The gold kid sandal is very popular. Some are combined with a bit of the dress color. Bags and hair ornaments give an exceptional brilliancy to the evening ensemble.

A most ravishing and most flattering colored for evening....Star sapphire....The deep clear blues of the favorite jewel. Velvets hammered satins, lames, metals are made supremely beautiful in this new shade.

Champaca.....A new pure wool that you can wear ever so long, without stretching.....and wash ever so often without shrinking. The high colors are perfect under a casual sport coat or your fur swagger.

The wool velours are fast becoming important. Black and dark brown flecked with bright green, red or white. Metal buttons, metal belt, buckle, colored buttons and belts add color to the dark frocks.

Beige peppered tweeds are chosen for town coats and suits. Usually the brown belts and blouses for the contrasting color. The fabric is really a revival.....Natural biege kasha. .

Kid shoes and kid bags spotted with tiny patinas of gold. And what glitter.....There are ninety-nine shades you can have your new sandals tinted.

Some new blue notes.....Hummingbird blue, fra Angelico blue. Van Gogh's postman's blue. Blue does nice things for shades of skin. Blue has a romantic effect on men. Let's go blue again.

TURKEYS ORDERED TO 'REDUCE' TO FIT APPETITES AND OVENS

By a Staff Correspondent of The Christian Science Monitor

Washington — With statistics showing that Americans today eat less and have smaller families than their grandfathers, the Department of Agriculture is working toward a smaller turkey for the Thanksgiving table.

"Our grandmothers cooked turkeys weighing as much at 24 to 26 pounds dressed, but cooking ovens and pans in most homes today will not accommodate a dressed turkey if it weighs more than 18 to 20 pounds," says Robert R. Slocum, marketing specialist of the department. "The housewife today demands a smaller turkey to suit the needs of the average family."

The Ideal Turkey

Convinced that turkeys weighing 12 to 15 pounds when fully grown would be the ideal size for preparing and cooking, agricultural experts are working at the department's research farm at Beltsville, Md., to develop strains with relatively smaller bodies that can be raised quickly and profitably.

Farmers used to dislike raising turkeys, because they wandered over such a wide territory, but the department says that it has been found that they can be raised just as well in houses and pens. On a few turkey farms as many as 2000 to 5000 birds are raised in a season, never touching the ground from the time they are hatched until they are ready for market.

Not a Seasonal Treat

The ordinary family, in recent years, the department finds, has lost its habit of eating turkey only at Thanksgiving and Christmas. Many stores now offer turkey specials in May or June. A few markets have tried offering half turkeys for sale, but the public has not responded well.

Only about 15,000,000 turkeys will be raised this year compared with 17, 250,000 birds last year, the department estimates because many producers in the drougth area were forced to dispose of their entire flocks last year.

NEW WEATHER MAPS TELL FULLER STORY

New weather maps give a much broader foundation for daily forecasts than the old. Recent advances in meteorology and availability of modern rapid communication systems, mainly airway raido and teletype, have made the new maps possible, says the Weather Bureau. Besides observations taken at the earth's surface—all that formerly appeared — upper-air observations are now chartered.

To tell the country what sort of weather is in store, the official forecast at each of the six district and ten airway forecast centers of the Weather Bureau studies a map that pictures condition at a given instant over a certain area. He then deduces what may be expected to happen next. These maps are charted early every morning except Sunday and holidays from observation flashed to the map rooms by telephone, telegraph radio, and teletype, from about 400 field and airway stations for the Weather Bureau, from about 300 operating agencies, from foreign meteorological services, and from ships at sea. Until October 1935 they consisted essentially of isobars (lines of equal pressure, reduced to sea level), isothems (lines of equal atmospheric temperature near the earth's surface) and symbols for cloudiness, wind direction, wind velocity, and other pertinent weather facts.

Forecasters realized that, although some weather changes are "home made" by local cooling or heating—most of the changes are caused chiefly by the replacement, at a given locality, of air in one condition, by air in another condition and by the interaction of these different masses. Weather Bureau official felt that maps showing the state and location of air masses from day to day would be valuable, but they hesitated to change a reasonably successful system until exacting methods of air mass analysis had been perfected.

From observations taken by airplanes sent up to 17,000 feet each day at 25 stations, supplemented by the rest of the data available to them, a small group of specially trained meteorologists track air masses as they move—sometimes fast; sometimes slow—over the earth. Past and present performance of air masses is a valuable clue to their future performance, which in turn determines largely what the weather will be in the next 12, 24, or 36 hours.

POEMS THAT LIVE

A BALLAD OF TREES AND THE MASTER

Into the woods my Master went,
Clean forspent, forspent.
Into the woods my Master came,
Forspent with love and shame.
But the olives they were not blind
to Him,
The little gray leaves were kind to
Him;
The thorn-tree had a mind to Him
When into the woods He went.

Out of the woods my Master went,
And He was well content
Out of the woods my Master came,
Content with death and shame,
When Death and Shame would woo
Him last,
From under the trees they drew
Him last:
'Twas no a tree they slew Him—
last
When out of the woods He came.

—Sidney Lanier.

HEALTHY CHICKENS EARN BIG PROFIT

Study of Best Breeding Methods Urged by Poultry Expert

No poultryman can develop a flock of good layers from a brood of inferior chicks, says John E. Ivey, extension poultry specialist, who declares that good chicks make good birds and good birds make profitable flocks.

The best chicks come from disease-free parents, are true to breed, and develop into superior layers. A carefully bred chick receives from its parents certain characteristics which carry with them the success or failure of the poultryman.

Among the most vital factors transmitted from parent to chick are:

The ability to produce. A hen laying 175 eggs a year costs no more to keep than a bird producing only 100 eggs.

Egg size. The size of the eggs laid by a bird is a characteristic coming directly from its parents. Large eggs bring better prices than small ones.

Early feathering. This bears a direct relation to broiler prices, as every poultryman attempting to market poorly feathered birds has discovered.

Early sexual maturity Frequently the well-bred Reds or Rocks will come into production 60 days sooner than inferior birds, thus giving 60 days' extra production.

Give these things serious consideration when breeding or purchasing chicks for the coming year.

GAIN INDICATED IN COTTON USE

World Consumption Hike of American Staple is Predicted

Larger world consumption of American cotton in the 1935-36 season than last season is indicated according to the Agricultural Adjustment Administration.

Lowest price of American cotton this year in relation to foreign growths, improvement in business activity, together with prospects for further improvement, and the replenishing of depleted stocks of American cotton abroad, are some of the factors that point toward larger consumption. Stocks of American cotton in European ports totaled but 356,800 bales on Nov. 22, 1935, as compared with 758,000 bales for the corresponding date last year.

The 1935-36 American cotton crop of 11,141,000 bales is expected to bring growers larger returns than the crop of 1934-35. The total farm value of the 1934-35 cotton crop, together with benefit payments, was $860,000,000. The farm value of the 1932-33 crop, before the cotton adjustment program was inaugurated, was $483,887,00.

TUGWELL AIDE SEES TENANCY GAIN AS MENACE TO NATION

Pauperization Through Doles Must Be Stopped, Declares Dr. Carl C. Taylor in Address to County Agents, Expects RA to Aid 'Lower Half.'

"The tide of farm tenancy increase in this country must be stemmed or we will have an agricultural civilization in the United States that will rank below the present civilization of the old world," Dr. Carl C. Taylor, assistant and advisor to R. G. Tugwell, Resettlement Administrator, said today at a meeting of county and home demonstration agents at U-T farm.

"Farm boys and girls must once again be given opportunity to start at the bottom and climb the ladder of agricultural success, and as quickly as possible the trend toward pauperization through doles must be stopped."

At this time, he said, the Government is aiding 1,200,000 farm families.

"There is nothing wrong with the stock of the Southern tenant farmer," Dr. Taylor said, "What he needs is an economic opportunity with the same type of skillful guidance which the Danish tenant farmer needed when Bishop Grunvich established his people's college and folk school, and when the Danish nation decided it could no longer look with complacency or pride on a rural civilization of tenant farmers."

Dr. Taylor thought that in a short time agricultural extension forces would take over the work of Rural Resettlement in farm guidance to "the lower half" of the people engaged in agriculture.

FARM QUESTIONS

Question: What causes double yolked eggs and does the delivery of these eggs have any effect upon the birds?

Answer: Double-yolked eggs are caused by speeded ovalution and are quite common during early production and during the season of high production. The two yolks ripen about the same time and are delivered into the ovarian pocket and are then incorporated into one egg. Apparently there is no injury to the birds delivering such eggs and the formation will cease when production drops off.

Questions: What foods should be given the child for a school lunch?

Answer. A well planned school lunch should be easily digested and should also contain adequate amounts of food to maintain body requirements. Sandwiches of meat, cheese, egg, fish, peanut butter or just bread and butter should be included together with a succulent food such as a salad, raw or cooked vegetables, or pickled fruit or vegetable. Milk, either plain or in the form of milk soup, cocoa or custard, or some fruit or fruit juice are necessary.

Calls Congress to Fight Against War and Fascism

New York, N. Y.—More than 4000 delegates from all over the United States are assembling in Cleveland's mammoth Public Auditorium on January 3, 4, 5, 1936 to voice through the Third U. S. Congress Against War and Fascism, their determination that war and fascism shall not gain ascendency in the United States. The Congress, sponsored by the American League Against War and Fsacism, represents more than 2,000,000 persons. Headquarters are at 112 East 19th St. New York City.

Speakers during the three day session will be General Smedley Butler, U. S. M. C. Retired, Bishop Edgar F. Blake of the Methodist Episcopal Church, Dr. Robert Moss Lovett of the University of Chicago, and Dr. Harry F. Ward of Union Theological Seminary, N. Y. C.

Dr. Ward is Chairman of the Executive Committee and Dr. Lovett and Lincoln Steffens are Vice Chairmen.

In a statement announcing the convention, the League said: "All who desire peace and freedom much unite to defeat their enemies. It is the only organization calling all the people to unite in a common drive to keep the country out of war, to beat back the forces of repression. to achieve peace and freedom.

"Delegates are eligible from all local group and organizations opposed to War and Fascism. Every group is entitled to one delegate plus an additional delegate for every 250 members or major fraction. National, state, county and city wide bodies each are entitled to two delegates. Reservations may be made at the Convention headquarters at the Cleveland Public Auditorium or at the American League Against War and Fascism, 112 E. 19th St., N. Y. C.

Texas Boy Came Near Getting A Holiday Turkey

Houston, Tex., Dec. 5, (ANP) —John Henry Rice hasn't had a job lately so, with Thanksgiving just a few days away and no turkey in sight, John Henry decided to get one free.

At the Farmer's market John Henry saw the turkey he wanted. It was plump and sleek and he could imagine just how good it would look baked and on his table.

Now John Henry was raised in the country and knew a few tricks. First, on the pretense of examining a turkey he cut the string around the fowl's legs. Then he walked slowly away, dropping, as he went, yellow grains of corn—and the turkey followed him.

But alas for John Henry, the owner of the gobbler followed it. So when John Henry got several hundred yards from the market and turned around to grab his prize, he was grabbed himself instead.

John Henry hoped they would serve turkey in the jailhouse on Thanksgiving, for that is where he spent that holiday.

Tammany Leader Runs Restaurant

New York 5—(C) The election of Herbert L. Bruce of Harlem to the executive council of Tammany Hall has not caused Mr. Bruce to give up his restaurant business. Daily Mr. Bruce can be seen wearing his white coat as usual in The Monterery, 2339 Seventh avenue, where he is co-owner of the modernistic establishment.

Cattlemen Are Told of Grubs

Advice is Given to Destroy Pest and End Fly Menace

By destroying cattle grubs "wolves," or warbles that appear in cattle during the Winter months farmers will prevent damage to their cattle and at the same time will control, to a large extent, the heel flies that annoy the cattle in the late winter and Spring.

The painfulness of the grubs burrowing through the flesh and skin of the back and especially the annoyance of the flies that hatch from the grubs cause daily cattle to produce considerably less milk and beef cattle to make poorer gains. The annual losses caused by the cattle grubs or heel flies very conservatively estimated amount to several million dollars.

Farmers have two main ways to fight the cattle grub, says F. C. Bishop, of the Bureau of Entomology and Plant Quarantine. One is to kill the grubs in the backs of the cattle before they drop to the ground to hatch, and the other is to try to kill or keep the flies off the cattle next Spring. The thing to watch right now is the grubs in the backs of the cattle.

A common way to kill the grubs is to squeeze them out with the hand. A few stockmen who have been thorough and persistent following this method have succeeded in almost completely getting rid of heel flesh in their herds.

Some farmers have found a pair of forceps helpful in getting the grubs out. The main thing, however, is to get as many of the grubs from the cattle backs as possible.

A large number of disinfectants and powders that will kill the grubs have been offered on the market. Dr. Bishop says that one of the best is derris powder It can be applied to the grubs on the backs of the cattle either as powder or a wash.

One pound of derris powder will treat about eight head of cattle if a general application is made to each back. Shake a little the powder into each grub hole. To be surer of getting all the grubs rub the powder over the entire back, he advises.

To make a wash out of the derris powder, simply add one pound of derris powder to one gallon of water, in which about one ounce of soap has been dissolved, and rub the material into the grub holes over the entire backs of the cattle with an ordinary scrubbing brush.

To destroy all of the grubsu and thus keep them from dropping out and changing to flies, it is necessary to treat all cattle about four times at monthly intervals.

Mrs. Daisy Lampkin, Pittsburgh, vice president and field secretary of the National Association for the Advancement of Colored People; Mrs. Cordella A. Winn, New York, of the National Board of Y. W. C. A.; Mrs. Ciara B. Bruce, assistant resident manager of Paul Laurence Dunbar apartments; Mrs. Lillian Alexander, executive committee, National Association of College Women; Ruth Roberts, New York, of the National Board of Y. W. C. A.; Mrs. Carita V. Roane, manager of Harlem Branch of the State Department of Labor; Mrs. Florence K. Williams, regional organizer of Iota Phi Lambda Sorority; Miss Eva D. Bowles, formerly director of Young Women's Work of the Y. W. C. A.; Mrs. A. Clayton Powell, Sr., of the National Baptist Women's Organization, New York City; Mrs. Harriett Shadd Butcher of the Russell Sage Foundation; Belle Davis of National Health Circle; Mrs. Cecelia Cabiness Saunders, Executive Secretary of the Y. W. C. A., New York; Mrs. Julia Coleman Robinson, National Business and Professional Women's Club, New York City. .

Among the Sororities represented were Alpha Kappa Alpha, Delta Sigma Theta. Among the church organizations represented were the National Baptist Women Auxiliary, the National Mite Missionary Society of the A. M. E. Church.

Letters and telegrams were received from the following persons supporting the movement: Lucy D. Slowe, dean of Women, Howard University; Miss May Belcher, executive secretary Y. W. C. A., Indianapolis; Miss Willie May Brown of the Minneapolis Community Center; Mrs. Mary McCorey of Johnson C. Smith University; Miss Abbie Johnson, Grand Daughter Ruler of Elks; Attorney Eunice H. Carter of the College Women's clubs; Georgia Douglas Johnson, poet, Washington, D. C.

The object of the council is to unite organizations and individuals in an effort to disseminate informamethods of organized Negro womanhood to be a voice for Negro people when and where needed

NUT TREES FOR THE HOME

In the winter of 1931-32 grafted nut trees representing 16 named varieties were planted in the variety orchard at Hampton.

Up until recently Americans have had a plentiful supply of pecans and walnuts and chestnuts from wild trees in the woods or along the fence row. However, these were variable in size, in ease of cracking, and in flavor. With the destruction of our forests, there has been an increased demand for high quality nuts and this has resulted in the selection and naming of some of the best of the wild trees.

After three years, seven of the varieties at Hampton bore crops this past season. One of these was the Mahan pecan, the nut of which averaged two and a quarter inches in length. The others were the Stabler, Ohio and Thomas black walnuts, and Barcelona, Italian Red, and Early Globe filberts. One Stabler tree bore over half a bushel of unhusked nuts. All of these varieties are high in eating and cracking quality and are recommended for home planting throughout the South. Visitors are invited to inspect the trees and specimen nuts at Hampton.

BOOK REVIEW

The Collapse of Cotton Tenancy

By Charles S. Johnson, Edwin R. Embree, and W. W. Alexander..... 81 pp...Chapel Hill: The University of North Carolina Press. Price $1.

In this concise, little book, three well-known authors present their findings and conclusions regarding the present cotton tenancy system. Every agricultural leader will find it stimulating and instructive to read this sensible treatise—one of the best that has yet been written concerning a system which is characterized as America's "greatest social humiliation." The authors do not stop at pointing out the vicious aspects of the system, but they suggest "a way out" and show wherein it is both necessary and feasible.

AGRICULTURAL FAIR MARKED BY LARGE ATTENDANCE

The Institute held its fourth annual fair, October 25-26, with a record attendance. This year a special effort was made to extend the benefits of the fair to outsiders. A number of agricultural teachers, agents, and farmers, came more than a hundred miles to see the exhibits. Off-campus residents in the immediate vicinity also manifested keen interest.

This time the fair was distinctly rural in character, and Donald F. Fenn, Director of the School of Agriculture, served as general manager. Teachers and students from practically every department of the college, however, contributed to the occasion.

A large parade, designed to show the progress of transportation as related to rural life, was staged between the halves of the Lincoln-Hampton football game, and furnished a delightful diversion for the spectators.

Other outstanding agricultural features of the fair this year were: the harmonious plant decorations throughout the exhibit rooms; the 4-H Club and N. F. A. exhibits from various counties in Virginia; a twin demonstration of terracing and erosion, and another comparing surface run-off under various types of soil management; an attractive roadside market; a live-at-home farm exhibit; a display of troublesome insects and diseases; and an extensive exhibit of the wild life of Virginia. One large room was devoted to an exhibit of part-time subsistence farming.

A series of out-of-door games and contests, a liberal array of flags, plenty of good food, including a barbecued pig, peanuts, cider, apples, etc., an abundance of music and a football game, all helped to make for a fine holiday spirit.

The two-day event was closed with an agricultural "talkie," entitled "Our Daily Bread."

FOURTEEN B. S. A. MEN HAVE WON ADVANCED DEGREES IN NORTH

Fourteen of the eighty men who have received bachelor of science degrees in agriculture at Hampton since 1923, have since then completed the requirements for the M. S. degree in other institutions. Among these graduates are many of the foremost agricultural leaders of the South. Advanced degrees have been awarded as follows:

Cardoso, Paul W. Olabosipo
B. S. '25; M. S. '26 (Cornell)
Clark, Matthew Joseph
B. S. '29; M. S. '34 (Iowa)
Coruthers, John Milton
B. S. '25; M. S. '28 (Wisconsin)
Ph. D. '34 (Cornell)
Dean, Clarence Exavior
B. S. '26; M. S. '30 (Iowa)
Freeman, James Nelson
B. S. 25; M. S. '34 (Iowa)
Johnson, Bernice V.
B. S. '29; M. S. '32 (Iowa)
Jones, Doctor Coaken
B. S. '23; M. S. '30 (Cornell)
King, Cornelius
B. S. 26; M. S. '33 (Cornell)
Munday, Reuben Abraham
B. S. '27; M. S. '35 (Iowa)
Oliver, Julius Allen
B. S. '30; M. S. '32 (Iowa)
Roberts, Thomas Nathaniel
B. S. 27; M. S. '32 (Wisconsin)
Wilson, Herbert Franklin (deceased)
B. S. '28; M. S. '32 (Oregon).
Wood, Allen Thurman
B. S. '24; M. S. '35 (Iowa)
Taylorr, Solomon Bernard (deceased)
B. S. '24; M. S. '27 (Cornell)

Seven others have pursued advanced courses during the last three summers and one is at Iowa State this winter. Altogether 22 of the 80 degree graduates have enrolled for graduate courses, a record that has been equalled by no other Negro agricultural college.

National Council of Colored Women Formed

New York, Dec.—(ANP)—At the call of Mary McLeod Bethune, President of Bethune-Cookman College, Daytona, Beach, Fla., a representative group of colored women met Thursday, December 5th at the Y. W. C. A., 137 Street, New York City, to form a National Council of Colored Women.

In additions to Mrs Bethune, among those present were Mary Church Terrell, Washington, D. C., first president of the Naional Association of Colored Women; Charlote Hawkins Brown, Sedalia, N. C., educator; Addie W. Hunton, vice president of International League for Peace and Freedom; Addie W. Dickerson, Philadelphia, president of the International Council of Women of the Darker Races;

Kentucky Students See Liquid Air Demonstration

Frankfort, Ky.—Students of Kentucky State College were given an educational as well as a scientific treat at the week-end when Mr. Elliott James, skilled experimenter with liquid air, entertained in the Health Building of the college.

The frigid liquid with the almost unbelievable temperature of 312 degrees below zero solidified mercury, froze pure alcohol, froze a rubber ball so hard that when thrown to the floor it shattered like glass and it also was used to solidify kerosene with a wick forming a kerosene candle.

These are by far a few of the numerous demonstrations shown. During the process of these demonstrations Mr. James lectured, explaining and emphasizing many scientific theories and principles. The presentation was spiced with bits of humor which served to maintain the interest of the audience. The demonstration was made possible by the Science Department of the school over which Prof. W. W. Jones is the head.

Alabama To Have New Cotton Base Relief

Growers at Meeting Recommend Years of 1933-35 As Fair Period for Judging; Actual Records to Furnish Data for Allotments

Present indications are that Alabama will have a brand new base period for making allotments to individual cotton producers period will most likely be 1933, 1934 and 1935, instead of the old period, 1928-32.

Cotton growers representing every county in the state met in Montgomery the past week and unanimously recommended the year 1933-35, inclusive as the most equitable basis for the new adjustment program.

The meeting was called by the State Cotton Board, composed of J. L. Edwards, Selma, chairman; W. H. Robertson, Loachapoka; L. S. Fluker, Livingtson! J. V. Matthews, Huntsville, and Walter L. Randolph, secretary, to determinte the period farmers of the state desire used as the basis for making allotments to individual growers under the new AAA cotton program.

The farmers unanimously recommended the new basis period after a number of growers expressed their desire that the allotments under the new program be made on actual records of the past three years rather than upon "guess work" used for the years 1928-1932. They stated that the base period of 1933-1935, inclusive, will remove many of the inequities of the cotton adjustment during the past two years.

Mr. Robertson explained that the reduction for 1936 will not be made from the reduced acreage of 1933-1935 but that the allotments will be made on the acres in cotton before the plow-up program in 1933 and the actual planted acres to cotton plus the acres rented to the secretary of agriculture in 1934 and 1935.

He also explained that the new base period will have nothing to do with the allotments to the state or to the counties as these allotments will be made upon the same basis as in the past and that the new 1933-1935 period for the state will be used only for making allotments to individual producers.

The regulations for the 1936 cotton program permit adjustments to take care of farmers in the drouth-stricken areas of north and northwest Alabama counties he added.

The farmers attending the meeting were: Joe Rogers, Prattville, Rt. 2; Frank Erle, Blacksher; R. E. Bond, Clayton, Rt. 3; S. E. Reaves, Clayton; F. C. Clapp, Clayton; H. F. McCord, Centerville; C. L. Shelton, Brooksville; J. W. Shaw, Union Springs; A. L. Killough, Honoraville; E. M. Moss, Eastaboga; J. W. Clarke, Jr., LaFayette; T. A. Young, Center; O. H. McDowell, Clanton; L. C. Boney, Gilbertown; J. M. Dees, Clark County; George M. Burns, Lienville; Henry Blake, Helfin, Rt. 3; Dave Johnson, Jack; A. B. Blackburn, Jr., Colbert County W. C. Lester, Evergreen; J. R. Waldrip, Goodwater; W. H. Crawford, Nixburg; H. F. Tankersley, Kelleyton; C. E. Spicer, Andalusia; M. M. Meredith, Dozier; H. R. Lowery, Cullman; D. L. Henderson, Midland City; J. B. Hain, Selma, Rt. 1; J. H. Thompson, Fort Payne, Rt. 3; R. W. Holdridge, Fort Payne, Rt. 3; Thurman Smith, Crossville; A. D. Curlee, Wetumpka; T. A. Wall, Wetumpka, A. P. Abrams, Tallassee; D. L. Horn, Atmore; A. E. Strength, Brewton; C. E. Herring Murry Cross, Rt. 1; J. W. Miller, Glencoe; Charles Miller, Murry Cross; W. D. Stidham, Hayden; John W. Steely, Hartford; A. N. Grubbs, Eutaw; Q. L. Stewart, Greensboro; G. O. Belk, Belk; T. A Kelly, Albertville; G. D. Raley, Headland; J. E. Moody, Larkinsville; J. E. Hawkins, Dora; Rt. 1; Sam McDaniel, Vernon; A. H. Turner, Moulton; Orrin Whatley, Auburn, R. 2 James H. Tolley, Biller Mina; D. C. Till, Hayneville; J. O. Youngblood, Tuskegee.

Hendrix, Coker, Rt. 2; Herman Roberts, Jasper, Rt. 4; Hubert Taylor, Jasper, Rt. 5; E. H. Pritchett. Camden; C. B. McNutt, Haleyville Rt. 4; M. H. Lane, Roanoke, and W. S. Kirk, Roanoke.

DELAWARE COLLEGE PARTICIPATES IN STATE POULTRY PROGRAM

T. Aubrey Jeter, B. S. '29, Director of Agriculture at State College for Colored Students, Dover, Delaware, reports that his school is taking part in the Record of Performance (R. O. P.) Trapnest Project, which is being sponsored by the Delaware State Board of Agriculture.

This project is being conducted as a part of a state-wide Poultry Standardization and Accreditation Plan. The purpose of the program is to authoritatively identify poultry breeding stock, hatching eggs, and chicks, with respect to quality, by describing in standardized terms. Thus producers may be protected from unscrupulous competition and purchasers enabled to buy with confidence.

Dover State College is one of six R. O. P. breeders listed last season. The school had 100 Barred Rocks entered for official R. O. P. work and out of this number, 25 have qualified for R. O. P. Certificates. The highest individual record made was 271 eggs. This year the school has entered 300 pedigreed Barred Rock pullets for official R. O. P. work, from a flock of 950 layers.

To qualify for a home R. O. P. certificate, a female must have been raised from certified flocks or their equivalent, and have laid 200 or more eggs during her pullet year, or 180 or more eggs during her second or later laying years, under official observation. For a male to qualify, his sisters must have had a R. O. P. record of 225 eggs during the pullet year. The eggs of each bird must attain an average weight of 24 ounces or more per dozen, and must weigh at breeding season at least two ounces each, average 25 ounces or more per dozen, and white eggs must be free from tints.

CONTROL SURFACE WATER RUN-OFF MONTHS

Many farmers construct terraces to control surface water run-off, hoping to prevent the top soil of the farm land from being washed away. That, however, does not complete the process. Further preventive measures must be taken, such as fall plowing, or better still, the use of cover crops during the winter months.

The demonstration pictured above shows clearly that under the same conditions, bare unprotected fields and stubble land lose most of the water and considerable soil. Fall plowing and cover crops prevent soil washing and conserve a large part of the water for a drouth period. All rolling land should be terraced and protected with a winter cover crop.

The demonstration apparatus shown would be an inexpensive, efiective, yet simply constructed outfit for agricultural agents and teachers to use in their work. For details write the Agricultural Engineering Department, Hampton Institute, Va.

Fifteen agricultural commodities are now termed "basic" by the AAA. The list includes wheat, rye, flax, barley, cotton, field corn, grain sorghums, hogs, tobacco, sugar, peanuts, cattle, rice, potatoes, and milk and its products.

SHOT IN CHICKEN WAR

Washington, Pa.,—John Metro, Monongahela, testified today he was shot by George Dunmire, Carroll township, because he killed one of Dunmire's chickens when it got into his garden. He said he had warned Dunmire.

Metro said he was hit in the hip by slugs from a shot gun and was in a hospital five days.

WARRANT FOR HOG BET BY GOVERNORS TORN UP

Action Against Herring Is Dropped After Conferences

DES MOINES, Iowa—(AP)—Over the protests of a reluctant prosecutor, the hog-gambling charge against Governor Clyde L. Herring of Iowa was kept alive today until Monday at least. Municipal Court Judge J. E. Mershon, who yesterday issued a warrant for the Chief Executive on an information filed by Virgil Case, secretary of a local club for social justice, set a hearing for November 18 on Prosecutor Carl Burkman's motion to dismiss the action.

"I want to give every one concerned a chance to marshal their evidence as to the Governor's whereabouts November 9," said Mershon.

Burkman termed the charge "frivolous and ridiculous." He added that the wager of a hog with Governor Floyd Olson of Minnesota on the outcome of last Saturday's Iowa-Minnesota football game was not made in Polk County (in which is Des Moines) and that he had no jurisdiction. But Case insisted he had evidence that the wager, which Governor Herring paid by delivering the hog personally to Governor Olson in St. Paul yesterday, was consummated in Des Moines. He demanded that the prosecution continue.

"I raise hell with public officials and Governors," he declared. "They should be first to set a good example."

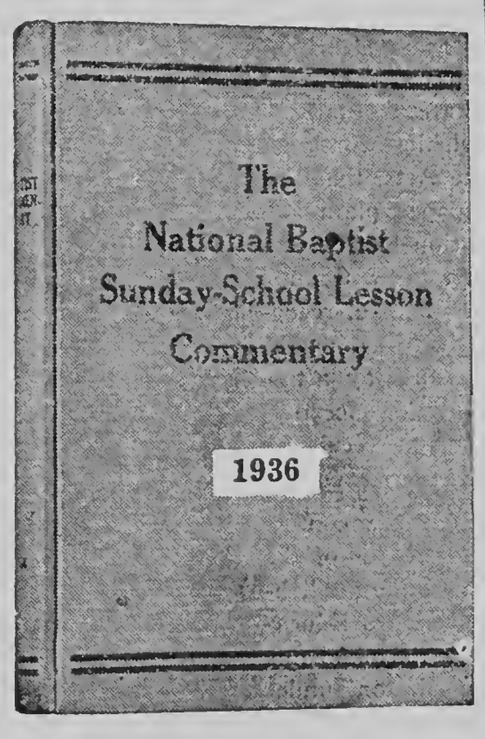
Members of the Iowa Attorney General's staff explained that the complaint was filed in Polk County, Iowa, whereas the wager was made by Governor Olson in Minnesota and accepted by Governor Herring in Johnson County, Iowa.

FIND LOST RING IN HORSE'S HOOF

West Rutland, Mass.—(United Press)—Mrs. Alfred Johnson lost her wedding ring two years ago on her farm. Her son lifted up a farm horse's hoof and found the ring around a calk.

Sunday School Lesson Commentary

1936



Every Sunday School Teacher Should Have One

Six Reasons Why You Should Use It:

First: It is the production of your own National Baptist Publishing Board which gives employment to more of our people than any similar concern in the United States.

Second: It is purely baptistic and orthodox in every particular.

Third: Its doctrines are unquestioned, and the Biblical requirements are stressed in a manner to make it absolutely dependable.

Fourth: None of the modern theories leading to skepticism are admitted.

Fifth: It aims to be true to the teachings of Jesus and whatever there is presented which has not the "Thus saith the Lord" is discarded as unsafe and destructive of the best interests of mankind.

Sixth: Thoroughly adapted to the uses of our Sunday school constituency, it stands as a beacon light to all those who would like to rise in the scale of intelligence and demonstrate the qualification necessary for the accomplishment of the "Great Work" devolving upon us as a people.

WINDMILL MAKES ELECTRICITY

(Continued from Page 1)

some 500 watts. The storage batteries give a steady flow of current and absorb the excess juice developed when heavy winds cause the propeller to rotate at high speeds.

Has Engine, Too

Wright doesn't put all his trust in the windmill developing sufficient current to keep his storage batteries charged, for he has a small gasoline electric plant, too.

Current developed by this gasoline plant also passes thru the switch panel and Wright can use either the windmill or gasoline plant, or both, to supply his electrical needs.

Wright declines the title of "Jack of All Trades," tho he has turned out saws, lathes, furniture and even air-rifles and a model steam engine for young William Allen Wright, age 5.

The windmill electric plant, however, eclipses all other experiments in "gadgetry," according to his neighbors.

12-Mile Breeze

Wright has had the windmill plant in operation for three weeks now, tho he says there had been little wind to give it a real test.

You see it takes a 12-mile an hour breeze before the propeller will turn. Wright is hopeful of increasing its efficiency by redesigning the propeller so that it will turn in an eight-mile-an-hour wind.

It might even be possible, he grins, to persuade Congress to meet in Owensboro or, maybe the Kentucky General Assembly. They surely would stir up plenty of wind, he opines.

GEORGIANS PLANNING TO PLANT GARDENS

Sparta, Ga.—(By ANP)—Working under the slogan "raise your own foodstuffs" farmers of Hancock county are preparing their lands for the largest acreage of winter cover crops and small gain they ever sown. The agricultural department of the Georgia Railroad has donated several tons of basic slag to be used under the crops while the TVA fertilizer unit has given them fertilizers for test plots in the venture.

NEW AAA COTTON PLAN

(Continued from Page 1)

The work of checking compliance will be started as soon as the planting season is over in any county.

6. The division of payments between landlords and tenants on a farm under contract will be on the following basis: 37½ per cent to the person furnishing the land; 12½ per cent to the individual furnishing the work stock and equipment, and a division of the remaining 50 per cent in the proportion that the cotton or its proceeds is divided.

7. In normal cases payments will be made directly to the persons entitled to share in the crop or its proceeds.

8. Each contract signer must name a beneficiary to receive payments in the event of death, disappearance, or incompetency of the contract signer.

9. Contract signers agree, insofar as is economically practicable, to keep the number of tenants or share croppers that were kept the preceding year and to allow them the percentage of land which they had in cotton in 1935.

10. Contract signers agree not to increase the acreage planted for sale of peanuts, tobacco, or rice beyond the acreage of these crops on the farm in 1934, or 1935, whichever acreage is larger.

11. The adjusted acres may be used for the production of food and feed for consumption on the farm but the customary acreage on the farm growing crops for sale must not be increased.

Alabama Principals, Older Boys Hold Annual Meeting

Montgomery, Ala., November 30—One hundred ten high school principals and high school teachers met in annual Principals Conference simultaneously with seventy-two boys registered from thirty-eight high schools who met in the Tenth Annual Older Boys Conference here at Alabama State Teachers College the Thanksgiving weekend following the big Tuskegee-Alabama State game that had drawn more than 3000 out-of-town visitors on Thanksgiving Day.

The principals met at the call of State Supervisor E. G. McGehee of the State Department of Education, heard State Superintendent J. A. Keller in an encouraging challenge, shared discussions led by Ralph Bullock of the National YMCA, Mrs. Ollie Reynolds Phillips of Thomaston, Principal A. L. Jackson of Stillman Institute at Tuscaloosa, Principal W. D. Gay of Drewry High School at Talladega, State Director J. S. Lambert and President H. Councill Trenholm, and enjoyed two luncheon courtesies, a banquet and a reception offered by Alabama State Teachers College.

The seventy-two boys were in session from Thursday night through Sunday morning, shared four discussion periods led by Ralph Bullock of the National YMCA, John Dillingham of Lincoln Academy (Kings Mountains, N. C.), James T. Hardwick of the University of Alabama and Franklin O. Nichols of the National Tuberculosis Association, heard stimulating addresses from Al Monroe of the Chicago Defender, B. T. Harvey of Morehouse College, J. Ward Nelson of Huntington College, Prof. M. H. Griffin of Lexington, Ky. and Rev. Arnold E. Gregory of Dexter Avenue Baptist Church (Montgomery), shared two very stimulating sight-seeing trips that included the State Capitol, the State Reform School, the Montgomery Museum of Fine Arts, the Alabama Journal newspaper plant and the Rural Rehabilitation Demonstration Farm in Montgomery County, and enjoyed a special banquet-reception on Saturday night following the football game on Thursday afternoon and the outstanding concert on Friday night by Bohumir Kryl and his Symphony Band.

Plans were made at the conferences for the other activities of the school year that include the publishing of a Yearbook on Negro Education in Alabama by the Alabama State Teachers Association under the direction of President H. Councill Trenholm, Statistical Secretary, the conduct of the 1936 Elks Oratorical Contest, the 1936 Academic Meet for High School Seniors and the appearance at a number of Alabama high schools of the State College Band and the State College A Cappella Choir which were both heard to such advantage throughout the sessions of both conferences.

Louisville College Gets Historic Flag

Louisville, Nov. 27—(By Hazel Broune Williams for ANP)—Mr. Maurice H. Thatcher, Representative at Congress for the State of Kentucky, 1923-25, 1925-27, presented to the Louisville Municipal College, Friday, November 16, 1935, a flag which has flown over the Capitol of the nation. Mr. Thatcher says he had kept this flag since his days in Congress, but desiring to give it to a worthy institution, he chose the Louisville Municipal College because of a keen interest in the school, and "there has never been a question of loyalty on the part of the colored race." President Raymond A. Kent accepted the gift on behalf of the trustees, faculty and student body of the college.

PICKENS INTERESTS OKLAHOMA IN N. A. A. C. P.

Oklahoma City, Okla.—(ANP)—Whites in many parts of Oklahoma are manifesting great interest in the N. A. A. C. P., according to Williams Pickens, field secretary, and Roscoe Dunjee, editor of the Black Dispatch, who are now touring in interests of that organization.

In Oklahoma City Sunday night a white audience in the Congregational church heard Pickens discuss the race problem and afterward crowded around him for an hour, asking questions. He received invitations to speak at Oklahoma City U. and at the state university in Norman. At Ardmore, near the Texas line, curious whites attended the meeting and many joined the organization which was formed with 71 members. One of the joiners is an Ardmore ex-mayor and another white was elected to the branch executive committee.

Pickens and Dunjee plunged south into Texas. They plan to return to this state December 2 for the Jess Hollins re-trial, and then go back into the Lone Star State for another month.

Alabama Educators Discuss Problems

Montgomery, Dec. 19 (ANP)—With representatives of 110 high schools and secondary schools present, educational problems faced throughout the state were aired here for two days, closing Thursday, at the Alabama State Teachers College. Plans were outlined for the publication of a year book and ways and means of raising the standard of rural schools were studied.

Simultaneously with the meeting of the high school principals and teachers was that of seventy-two boys representing thirty-eight school constituting the Older Boys Conference of the State of Alabama. Among the speakers who addressed the conference of youth were H. Council Trenholm, president of the Alabama State Teachers College, E. G. McGehee of the State Department of Education and W. D. Gay, of Talladega College.

Thief Says Rabbi's Robe "Too Hot To Hold"

Macon, Dec.—(ANP)— Declaring that the rabbi's robe which was part of the loot stolen from a local synagogue was "too hot to hold" Bubber Middleton surrendered to police here Thursday morning and confessed to the robbery. In his confession, Middleton told the police that he had thrown the robe in the river but that he just could not refrain from giving up.

The synagogue was burglarized on the night of November 21 and the identity of the thief was complete mystery until Middleton made his sensational confession Thursday morning. A mirror which was the other part of the loot was found at a pawn-shop where Moore said he had borrowed fifty cents with which he bought something to eat.

THE MODERN FARMER

Vol. VIII. NASHVILLE, TENN., JANUARY 15, 1936. No. 12.

NEW FARM PROGRAM

Agreement in Congress on Essential Features

President Roosevelt's request for repeal of the cotton, tobacco and potato compulsory control cuts forestalls invalidation by the U. S. supreme court and puts the farm relief situation right back where it was three years ago.

However, congress has the benefit of experience in legislating along this line and the new measure now taking form should reflect improvement accordingly. Both houses are busy on bills which have most of their important features in common and whose differences should be ironed out in joint committee without much difficulty.

The measure now up for consideration in the senate is the domestic allotment plan in the main, providing for production control, payment for soil conservation and for subsidies on percentage of basic commodity crops needed for domestic consumption. Direct payments to farmers would be made only until December 31, 1937. Beginning with 1938 federal grants would be made to states to be paid out as benefits for carrying out the foregoing program.

In the house the bill of Representative Marvin Jones of Texas, reported out by the house committee early this week and thought to have administration approval, contains essentially the same provisions. In addition the original bill provided the act was to be administered by the land grand or agricultural colleges. The committee has amended this clause to read, "or some other agency approved by the secretary of agriculture."

As state plans under this proposed act are approved the federal government will make allotments from which benefits shall be made to producers based on their treatment or use of their lands.

Grants made to states insure constitutionality of the plan. Federal funds for highway are provided in this way. But there is opposition to the plan of having "48 little AAA's,' as it has been referred to. There are doubts whether 48 states could cooperate in a national farm program. Also there would be nothing to prevent transferring surplus production from one state to another, critics say. All of which calls for ironing out before the final measure is produced.

A proposal to have the government purchase surplus acreage as a means of permanent crop control is receiving increasing attention and may be attached to the bill which finally emerges. The plan as outlined is for the purchase of 50 million acres of both highly productive and sub-marginal land, without buildings, between a range of $5 to $100 an acre.

With the government owning such land crop control on it would be simplified thru leases. Such land could be leased at low enough rentals to constitute a subsidy

(CONTINUED ON PAGE 8)

LARGE HARVEST IS PREDICTED

Should Reduce Prices of All Commodities

The final report issued by the United States department of agriculture on the 1935 harvest showed that the total production of crops was substantially above the 1934 volume, which was sharply curtailed by a drought, according to an analysis by the Alexander Hamilton Institute. Of twenty-three principal crops, the yield of only three, potatoes, pears and buckwheat, were smaller than in 1934. The yields of a number of crops showed extraordinarily large increases. The rye crop for instance, rose from 16,000,000 bushels in 1934 to 57,900,000 bushels in 1935, an increase of 261.9 per cent.

As compared with the five-year (1928-1932) average yield, production in 1935 was not as favorable as when compared with the 1934 volume. However, the yield of eleven of the twenty-three crops were above the 1928-1932 average yields Of the twelve crops which showed curtailment, the largest decreases were shown by wheat with a drop of 29.9 per cent and by cotton with a drop of 27.2 per cent.

The wheat crop was below domestic requirements but this deficit was offset by the carryover. The total supply, however, was not great enough to provide an exportable surplus. In the case of cotton, there was a sufficient supply to meet both domestic and foreign requirements, due to a large carryover.

The larger harvest in 1935 than in 1934 means that a greater supply of food will be available in 1936 than in 1935. As a result, not only food prices. but the prices of all other commodities should be more reasonable, with the purchasing power of the nation consequently benefiting, the institute survey states.

The most favorable feature of the 1935 harvest was the increase in the output of feed crops. This will permit the raising of a larger supply of live stock in 1936. This will ease the meat shortage and make for lower meat prices, thus removing one of the chief obstacles which hinder progress toward recovery in 1935, it is said. The combined output of the three chief feed crops — corn, oats and hay—amounted to 168,000,000 tons in 1935 as compared with 104,000,000 tons in 1934, an increase of 61.5 per cent.

GIGNILLIAT NAMED FHA FIELD DIRECTOR

L. R. Gignilliat, Jr., formerly assistant field director of the Federal Housing Administration, today was promoted to the post of field director.

Mr. Gignilliat, who has been in Washington with the FHA since its creation, succeeds W. D. Flanders, reeently appointed deputy administrator of the housing agency.

DISCRIMINATION REPORTED

Missouri Farmers Complain of Injustice

Negro farmers in Mississippi county held mass meeting in Charleston and passed resolutions instructing committee to send in petition to Governor Park at Jefferson City and Secretary H. A. Wallace, Washington, D. C., complaining of their inability to secure any recognition from the local director of Rural resettlement.

Complaints were made that any number of Negro farmers have stood in line for hours daily at the court house in Charleston attempting to file their applications and were given absolutely no satisfaction or recognition. One farmer said after making three trips to the offices he was told to go back home as there was nothing could be done for him. He was not permitted to make a statement or file an application. White farmers were being received and given consideration.

Negro farmers are a part and parcel of this country. They are the actual producers of the bulk of the cotton grown in this country. They are tax payers and voters entitled to the same consideration as any other racial group.

Ministers of every church in the county have pledged their support to carry this complaint to the President at the White House. Another mass meeting is scheduled for an early date, at which time the Rural resettlement division at Washington will be asked to send a special representative from Washington to be present and make a special investigation.

CLOVER MAY HAVE ARRIVED IN AMERICA AS STOWAWAY

When the first red clover came to America has never been determined. but it quite probably came as a stowaway.

Records in the Bureau of Plant Industry indicate that the hold of the tiny vessel which brought the Pilgrims from Holland in 1620 may have carried a few precious bags of red clover seed, a crop that had been a standby in the "Low Countries" for many years. It is definitely recorded that a ship sent from Holland in 1625 carried, among other needs, "all sorts of seed."

Sir Richard Weston, a successful Surrey farmer who sought refuge from religious persecution in Flanders, returned with seed of red clover to England in 1645, where it was known as "English grass." A New England record of 1663 reports "English clover grass thrives very well." In 1670 Long Island produced "Excellent English grass....which they sometimes mow twice a year." In 1679 there were in the same locality fields covered with clover in blossom.

A Boston newspaper in 1729 advertised "good clover hay seed" for sale. Twenty years later red clover was growing on the hills of New York and better methods for hulling the seed were described.

TO AID TENANT FARMERS

Administration Work of Mr. Rexford G. Tugwell

As a part of the Agricultural Adjustment Administration work, Rexford G. Tugwell, chief of the Resettlement Administration, announces an attack on the south's tenant farmer problem, involving the removal of 1,000 tenants onto small farms of their own, as an experiment in developing a farm-ownership program that will eventually put the better class of tenants on a better plan for carrying on the industry of farming.

The plan calls for the administration to buy land and resell it to the tenants under a long-term agreement, probably less than 40 years. Farms sold to tenants would remain under supervision of extension service and resettlement officials during the period of the loans, and administrative help would be given to assist tenants to gain a self-supporting basis.

North and South Carolina and Georgia are among the states mentioned as being on the list where the experiment would be started in time to have tenants on farms to plant next year's crops. They will be chosen by local extension workers and local rehabiliation committees in order that the selections may be farmers of the type who will not only appreciate the opportunity to secure a farm of their own on easy terms, but who can be expected to succeed under extension service advice.

The movement is soundly constructive and should be expanded as rapidly as possible. The Bankhead-Jones plan, proposed during the last session of congress, would set up a $50,000,000 fund for long-term loans to finance farm purchases by tenants, and while it carried some objectionable features, these could be changed, making it a measure of vast benefit to the class of tenants who are ambitious to acquire homes of their own and make a success of farming.

With the all-cotton plan rapidly becoming obsolete, diversification increasing and the live-at-home program becoming a part of farm activities, the farm owner now has a real opportunity to prosper, and eventually become independent. Of course their always will be tenants and croppers who are irresponsible and shift from place to place with the seasons, but with the government for the first time in history coming to the aid of the ambitious, the ranks of the tenants can be greatly reduced and the new home owners become of real worth to the sections in which they live and carry on farming activities.
—Atlanta Constitution.

OLD OWL ROOSTS WITH CHICKENS

HOOD RIVER, Ore.,—(United Press.)—Poultryman Charles Goddard was surprised to find an old horned owl roosting among his chickens. He was more surprised when he saw that none of his chickens were missing or harmed. He woke up the owl and released it.

SEEDS BOMBED SAYS WRITER

Corn Experiments of Dr. W. J. Deason, Reporter

By Malcolm McDowell

Bombarding seed corn with electronic shells to make it sprout much sooner than ordinary sounds like nature faking, but a north side physician has done this very thing. He subjected kernels of field and pop corn to the action of electrical long and short waves, giving the seed a hurry-up treatment, as it were, with the idea of pepping up its germination energy. The result was that the "treated" corn beat its "untreated" rivals by more than a full day in the sprouting sprint event.

In one of his "thermogenic" laboratories in the Parkway hotel, 2100 Lincoln Park West, Dr. Wilborn J. Deason has a minature experimental farm—three window boxes in which rows of tiny cornstalks flaunt their graceful leaves. They are the "subjects" in Dr. Deason's present research work—a bit of agricultural experimentation in which the so-called "fever" machines play a leading role. These machines induce synthetic fevers in human bodies and physicians use them to produce these artificial temperatures for the treatment of arthritis, anemias, neuritis and other ailments. Thousands of Century of Progress visitors became acquainted with the fever machine, for it was demonstrated in General Electric's House of Magic in the Electrical building. Now let Dr. Deason tell what his diathermy and radio wave "fever" machine did to the corn which is growing in his midget ranch.

Accelerated Growth

"Well," he said, "the corn kernels which had been treated with the fever machine, both long and short wave, certainly showed that something had stirred them to an accelerated growing speed, for they sprouted from twenty-six to twenty-eight hours ahead of the untreated corn. And since all the seeds were planted at the same time, in the same soil and have been kept under like conditions of temperature and moisture, there can be no doubt that the electronic bombardment, if I may call it so, was entirely responsible for this speedy sprouting.

"What this may lead to is more than I can say now. The results of my very simple experiment may induce agricultural scientists to go further than I can with this idea of giving seed electronic treatment; they may discover something which will prove to be of great value to corn-belt farmers.

Accidental Experiment.

"Ever since graduating from the University of Chicago, in 1909, I have been conducting research work along thermogenic lines. It all started when I, then a young medic, was given thirty dogs, sick with distemper, for laboratory study. A steam pipe burst in their room, raising the temperature to 115 degrees; we had to keep the pooches in that superheat for three days and when normalcy was restored we found, to our amazement, that all but two

(CONTINUED ON PAGE 8)

HOW TO SMOKE TURKEY

Smoked turkey will be on the table of families at the Tribune Wheaton farm many times during the next year while tests are being made of this rare delicacy. A red snouted gobbler already has been selected for the first trial and soon his plump "carcass'" will be hangin' high in a dense cloud of smoke rolling from a fire pot filled with hickory chips.

Other turkey raisers are planning to try out the smoking of turkeys, using suggestions sent in by readers who answer an appeal sent out by men at the farm recently. The interest in this method of curing fowl started when one of the men received a smoked turkey for a Christmas present.

In making the first test the Wheaton farm manager will use the method suggested by John Schmidt, 14624, an expert on smoking turkeys, says the recipe is simple, reliable, and has proved satisfactory where instructions are carefully followed.

He writes: "Here is the recipe requested by the boys on the Tribune Experimental farm:

"Dress the bird carefully. Remove the insides, rinse off with cold water and hang in a cool place, where the bird can be thoroughly chilled. Then remove the wings. Mix thoroughly these ingredients—common table salt 3 pounds; nitrate of soda or Chile saltpetre, 8 ounces, and white granulated sugar, 12 ounces. Rub one pound of this mixture inside and outside the turkey. Place the bird in a large jar and allow it to stand for about 24 hours where the air is cool, approximately 38 degrees Fahrenheit.

"Take the balance of the mixture and dissolve it in two gallons of boiling water. After the solution has cooled down to about 40 degrees pour it over the turkey, using enough to cover the bird and allowing it to stand for approximately seven days. At the end of the week take the bird out of the brine and soak it in lukewarm water for 15 minutes. Wipe the bird dry with a clean cloth, and allow it to hang for three days in a temperature of about 40 degrees where it will dry.

"The turkey is then ready to smoke. Split the body open, tie stout twine around the legs and neck. Use a dense smoke made of hardwood chips or hardwood sawdust, preferably hickory chips. The temperature of the smokehouse should be between 90 and 100 degrees Fahrenheit. Avoid strong drafts which tend to dry out the muscles of the bird.

"It requires from 48 to 60 hours to smoke the turkey, depending upon the smokehouse and the degree of smoking desired. After removing from the smokehouse allow the bird to hang for seven days, which gives the meat or muscle time to age and develop a tender, well flavored bird. This method is adapted for handling turkeys and is infallible in producing a high quality product.

"The smoked turkey may be eaten without being cooked. It also may be roasted or fried. Where the bird is to be cooked it should first be parboiled for thirty minutes at a temperature of 165 to 170 degrees Fahrenheit. It should be roasted slowly in the usual way for 1 hour and 45 minutes to 2 hours."

There are 882,850 thousand Negro farmers in the U. S. They are located in every state. There are Negro farm owners in every state.

Under different branches of the government they are able to secure loans to improve their homes, secure advances to make their crops, which of course means a better standard of living.

Through organization Negro farmers are now massing their production and shipping in carlots to the large terminal markets.

Recent figures from the Census bureau in Washington reveal the following Negro farm population:

Mississippi, 182578.
Georgia, 86787.
Texas, 85940.
Arkansas, 79,556.
Tennessee, 35123.
Alabama, 93795.
South Carolina, 77331.
North Carolina, 74636.
Florida, 11010.
Louisiana, 73734.
Kentucky, 9104.
Missouri, 5844.
Oklahoma, 15172.

The Modern Farmer is the only periodical published by and for Negro farmers that is purely agricultural.

DRIED BEANS FOR ECONOMY

HUMBLE possessor of more food virtues than any other vegetable, the lowly dried bean rolls out on 1935-36's food stage in quantities a fifth greater than last year, to make its bid for consumer favor.

TO consumers in pursuit of variety on meatless days, this is front-page news, for the high carbohydrate and protein content of beans makes them a good energy and body-building food. They count, too, as a good source of iron, calcium, and Vitamin B. While their protein is not "complete" enough to depend on without other proteins—such as in meat, milk, and eggs—beans have more of this nutrient than any other vegetable. Cheapest of all vegetables all the year, this year, with such abundant supplies, they should be especially cheap.

WHEN money is scarce, therefore, nutritionists say "look to your beans." The imaginative cook knows how to translate them into mouth-watering baked beans, into the good old-fashioned bean soup, into Hopping John, **chile con carne Y trijoles,** bean salads and sandwiches. If she doesn't she can find out from the Bureau of Home Economies which has prepared recipes for each. Two basic rules only she must observe if she is to use beans economically: Cook them a long time; keep left-overs cool and use them soon or they will spoil.

HOW many of the many varieties of beans we can buy were brought to our shores by sailors, nobody knows. But certainly many of them came from abroad—from Chile and the Orient, from Mexico and Western Asia, from Brazil and France—and many a sailor has breakfasted, lunched, and dined on them. Easy to preserve, easy to store, big value for little money tucked into small space, beans have long been standard fare for those who embark on long and strenuous expeditions.

BEST known of all the varieties is the pea, or navy bean. Michigan leads in its production, and in 1935 provided some four and a half million bags, each bag holding 100 pounds. Most epicures of Boston baked beans look for a species of pea bean for their prized dish, and some of them swear only by the yellow-eyed species. Michigan supplies most of the raw material for canned pork and beans, too. Pea beans are white and small, the smallest of the more commonly used varieties.

ANOTHER important center of production of pea beans is western New York State, whose crop of these, kidney beans, and a few other varieties in 1935 ran about one million bags.

CLOSE relative, in appearance, to the pea bean is the "Great Northern" or white bean, which comes from Idaho, Montana, Wyoming, and Nebraska. Not good for canning, because they mush too much, these white beans are excellent for home consumption. Supplies in 1935 came to around one and a half million bags. Each white bean looks about twice the size of the little pea bean, but somewhat flatter.

LIMAS, even if "babies," come larger than any of the other white beans. One of the earliest records of this appearance in this country is by way of one Captain John Harris, U. S. N., who secured the seed in Lima, Peru, in 1824 and brought it back to this country to grow on his farm in New York. Later limas were cultivated generally in eastern States. Now California is the most important single producer. Limas sometimes go by the name "butter beans."

PANSY-FACED, with its dainty oval of black around the eye, or germ of the bean, the blackeye bean (or cowpea) has a distinctive appearance easy to remember. California produces about 95 percent of commercial production of the blackeyes in this country. Most important consumers of these beans, which came to us from the Orient, are the Negroes.

PINTO beans add still more of a decorative touch to the bean family. They are of a pinkish cream color, mottled with brown. Colorado and New Mexico are major produeers of this bean which is especially prized by the Mexican population as well as by other southern consumers. It is only occasionally found in northern shops. Bean production in the pinto area in 1935 was approximately two million bags.

DELICATELY tinted, "pinks" are honestly named. They are small, bigger than pea beans but sometimes not quite as large as white beans. Mexican people in the Southwest prefer them to the white varieties. Some canners have been known to use pinks as substitutes for the red kidney bean in making chili con carne. California is the major producer in this country of this variety which came originally from South America and Mexico.

MAHOGANY colored kidney beans, bigger than pinks, are quickly spotted by most consumers. They are a product particularly of western New York State, though grown in other areas, and are especially popular in New England regions.

MANY other variations of this important seed—each with its distinctive coloring and shape—are grown in different sections of the country. These seven—pea, white, lima, blackeye, pinto, pink, and kidney beans—head the list in quantity of production.

THIRTY thousand farmers produce most of the beans commercially sold. For about two-thirds of this number, beans are the farmer's main source of income. In May the northern farmer will plant his beans, by machine, down long straight rows, two and a half feet apart. Three or four times during the season he will cultivate the field. From late August until sometime in October is harvest time. With a sled machine, which has knives on each side to cut under the surface soil he will drive down the rows. If he can, he will do the cutting in the early morning or in the evening when the plants are damp so that the beans will not shell out of their pods. Ordinarily the plants are hand-bunched, and left piled up in shocks or stacks to dry. When they are hauled from the field to a thresher, which knocks the beans from the pod. Cast-off pods and straw are used for feed.

AFTER threshing, beans must be cleaned and recleaned to make them ready for market. This is usually done by commission men and dealers at central shipping points. There the beans are usually run through a series of machines. First they are thoroughly screened to remove stones, broken beans, bits of stem and pods and other matter. In some areas beans are hand-picked in addition. This is a more common practice in New York, Michigan, and in the Great Northern area. There may be a second screening by machine in other areas to make sure that all foreign matter is removed. Finishing off is done by polishing the beans. Some develop a high polish, some a dull one, depending on the conditions under which the beans were grown and harvested.

CONSUMERS cannot buy dried beans by quality grades, but practically all of them are bought by dealers on Federal Government standards or other comparable standards. Government grades are U. S. No. 1, into which class about 80 percent of the beans fall; U. S. No. 2, which covers about 15 percent; U. S. No. 3, and Unclassified, accounting for the remaining 5 percent. Unclassified grade beans may be used for feed and never reach the retail market. Canners usually will buy only beans of the top grade, and in some instances they demand only the hand-picked product.

TENTATIVE consumer standards for canned dry beans—with or without tomato sauce, with or without pork—have been worked up by the Bureau of Agricultural Economies of the U. S. Department of Agriculture. It now remains for consumers to demand the inclusion of the proper grade legends on labels. Insist on buying canned pork and beans and other canned fruits and vegetables bearing truthful statements of grade.

TOP year for bean farmers came in 1929 when the total farm value reached $79,000,000, for 12,240,000 hundred-pound bags. The price per bag, $6.77, was 50 cents less than 1928's all-record price, but because 1929's crop was larger and consumer's pocketbooks were still bulgy, total returns were more than $10,000,000 greater.

SINCE 1929, the farm price per bag of beans has touched lows not before recorded. By 1932, it had reached $1.63 as against 1928's price of $7.27, and bean farmers took in a total of only $17,000,000. In 1933 the farm price had picked up to $2.71, still lower than any predepression figure. Total returns came to $33,383,000. In 1934 the average farm price had reached $3.46 and total farm value $35,159,000.

NOT once since 1928 has the production of beans amounted to less than 10 million bags.

A WORD of caution about extra meals. Don't go too hard on starches and sugars. Soup, stew, or salad for the snacks will help to keep the diet in balance.

In only 2 of the 10 years preceding 1929 was there a 10-million-bag crop. Yet prices which farmers could earn for these bountiful crops in depression and recovery years have been a fraction of those they received in predepression years. In 1935, with a bigger crop than any since 1930—experts expected it to total 13 million bags—the estimated farm price did not even touch its 1934 level.

RECORD of prices consumers pay for dried beans during the past 2 years has included limas, blackeyed peas (or beans), and navy beans. Previous to that, prices on navy beans only were recorded. Trend of average retail prices of navy beans follows the route of the average farm price for all dried beans. 1929 was the peak year when a pound of navy beans cost consumers an average of 14 cents. Lowest prices came in 1932 when the average had dropped to 5.1 cents. In 1935 navy beans sold around 6 cents a pound, blackeyes at a little over 8 cents, and limas for about 10 cents.

ONE boost for bean farmers came in 1933 when the Federal Surplus Relief Corporation purchased 5 million pounds to distribute to families on relief. Again in 1934 a purchase was made, this time of 1,875,000 pounds which were sent to relief families in Puerto Rico.

THE VERY BEST

Colored Picture Bibles for Children—Self-Pronouncing with Helps

A splendid little volume for any Boy or Girl.

The text is self-pronouncing, by which aid children can learn to pronounce the difficult Scripture names.

Size 5⅜x3½ Inches

Specimen of Type in This Bible

AND Ben-ha'dad the king of Syr'i-a gathered all his host together: and *there were* thirty and two kings with him, and horses.

With beautiful colored views of scenes in Bible lands distributed throughout the text. Also new Practical Helps to Bible Study, especially designed for instructing children in Scriptural Information.

5204.—Dark Blue Morocco Grain Binding, with edges colored to match, round corners, gold titles $0.85

5208. Morocco Grained Binding, overlapping covers, stained edges, gold titles 1.25

5215. French Morocco Leather, overlapping covers, round corners, red under gold edges 2.00

Ten per cent. (10%) on any of above styles for orders of 12 or more copies. All sent postpaid.

These purchases served the double purpose of helping to increase farm prices and of providing a nourishing food for families unable to buy beans at any price. Under the AAA there has been no production control or marketing-agreement program for bean farmers marketing agreements were proposed in 1934, but when drought cut down supplies of some types of beans, the proposals were abandoned.

"RAISINSEED oil may some day occupy a regular place on your table beside the vinegar cruet," says a trade journal. Those modern alchemists, the researchers in by-products, have been at it again and have developed this new edible oil.

PAINTERS like it for canvas because it spreads rapidly and dries slowly. Epicures esteem it for salads and cooking. Growers use it to keep seeded raisins from sticking together and to make them shine. California growers used to be embarrassed by about four tons of raisin seed a year, which they couldn't do anything with. Now a firm collects the seeds and washes off the pulp that sticks. They recover alcohol and brandy from the wash water. Then they cure, grind, cook, and press, the seeds, just as if they were cottonseed. About 15 percent of the weight is oil. The remaining cake is used for feed, fuel, or fertilizer.

—Consumers Guide

SURVEY SHOWS TOO MANY FERTILIZER GRADES SOLD

Most farming areas which use large quantities of commercial fertilizer could be supplied by a dozen or so properly selected grades such as 4-8-4, 2-12-6 and others. Yet farmers as a whole must choose from more than a thousand grades when they buy fertilizer.

Almost 40 percent of the three and a quarter million tons of fertilizer sold in 1934 was of five popular grades, 3-8-3, 3-8-5, 4-8-4, 2-12-6, and 4-8-7. The remainder, a little more than 60 percent was divided among more than 900 grades, according to a joint survey by the Bureau of Chemistry and Soils and The National Fertilizer Association. This information, in investigators say, might well be used as a basis for reducing the number of grades.

Only 21 grades were sold in Mississippi—the smallest number in any State using large quantities of fertilizer—as compared to 425 grades sold in Florida. In Mississippi 85 percent of the fertilizer was of one grade. In Florida, total sales for each of more than 200 grades were 25 tons or less.

"In most States fertilizer manufacturers are compelled to competition and other circumstances to make and stock many grades," says Dr. W. W. Skinner, Assistant Chief of the Bureau. "Fertilizer bags and tags have to be printed, chemical analyses made, and storage space provided for each grade. The cost of these items is about the same whether 5 or 5,000 tons are sold."

"Farmers can help eliminate many unnecessary grades by finding out the few well-selected grades that will serve their needs. This would help the local fertilizer manufacturer to produce tonnage instead of grades and sell his products for less money."

Results of the joint survey are summarized in a report. Plant Food Consumption in the United States in 1934. Copies may be obtained as long as the supply lasts from the Bureau of Chemistry and Soils, Washington, D. C.

SMALL, FAST GRASSHOPPERS INCREASE IN GRAIN STATES

In most of the grain-growing States overrun by grasshoppers in the last few years, small, strong-flying hoppers last year supplanted those too large and clumsy to get far in a single flight. This migratory, inch-long reddish brown hopper, with a black patch on its collar, was the most numerous from Michigan westward, according to the Bureau of Entomology and Plant Quarantine.

Poison bran on hopper breeding grounds kills them before they spread far. If this is not done before the migratory hoppers get their wings, they may fly for miles to lay eggs and even reinfest land effectively treated earlier.

The fall survey shows the differential grasshopper—an inch and a half long, usually yellowish, with clear, glassy hind wings—that travels on foot or by short flights, increased along the water courses of South Dakota, Nebraska, and Kansas, where drought had reduced its numbers. Another hopper that made a rapid comeback from drought where succulent food again was plentiful, is characterized by yellow stripes down each side of its brown back.

The red-legged grasshopper, also cut down by the drought, reappeared in numbers in alfalfa fields and grasslands in the eartern parts of the infested territory. Farther west, prairie grasshoppers did more damage than for some time on grazing lands and on adjacent cultivated fields.

As usual, small-grain fields suffered most from grasshoppers in 1935, but alfalfa fields—especially in Montana, Utah, Colorado, and Nebraska—and grazing lands also were badly damaged. Hoppers chewed grasses to the ground on Montana and Wyoming ranges and on grasslands and cut-over land in Wisconsin and Michigan.

THE COLDER THE AIR

THE THINNER THE ICE

A paradox noted by Great Lakes fishermen, that ice sometimes grows faster and thicker in zero than in subzero weather, is really orthodox, according to Dr. W. J. Humphreys of the Weather Bureau.

Ice, he explains grows faster when its upper surface is coldest. The temperature of the surface depends on whether it is clean or covered with snow, and whether the air over it is clear or foggy. A layer of snow on the ice or a blanket of fog acts as an insulator, retarding the escape of heat from the under, or growing, surface.

In zero weather, not much fog is likely to drift in from open water farther out in the lake. Often there is enough wind to keep the ice swept clean of snow. In subzero weather, on the other hand, "frost smoke" from the steaming of deep water remains unevaporated and may spread over the ice. It also may deposit a sheet of finely powdered snow.

When the air is clear and the surface of the ice clean, ice at 0 degrees Fahrenheit is bound to thicken faster— and often become thicker—than when the air is foggy and the surface snowy, even if the temperature is 20 degrees to 30 degrees below zero.

EGGLESS WINTERS ARE OUT OF DATE

By Bert S. Gittins

In this day of scientific care and feeding, there is no longer any excuse for an eggless winter.

Not so many years ago, the owner of an average flock just about gave up hope of getting more than enough eggs to supply the family breakfast table—once the cold weather of winter had set in. And the most unfortunate part about it was the sad fact that this is the very time of year when egg prices are highest.

Now, things are different. Almost everyone who practices modern methods to any extent whatever has at least a few eggs for sale in winter, and some breeders have handled their flocks in such a way that they get maximum production during the months of higher prices.

Next to the improvement and development of higher laying strains, it might be said that success along this line depends largely on the flock owner's ability to duplicate, in winter the favorable conditions which cause hens under natural conditions to reach their maximum egg production in the warm sunny weather of springtime.

In the spring come longer days, giving the hen more time to eat and absorb the food materials necessary to manufacture eggs. The modern poultryman duplicates this condition in winter by installing lights to lengthen the working day of his hens. It is surprising to drive in the evening along rural roads in certain sections of the country and see how widely the practice of artificially lighting poultry houses has been adopted. Those who have electricity and wish to learn how lights should be installed can secure bulletins on poultry house lighting from their state agricultural college. In some areas, the power companies have men who can supply helpful information. Those who do not have electricity can secure gasoline lanterns designed especially for use in the poultry house.

Another condition of spring is an ample supply of drinking water—at comfortable temperatures. Many hens do not lay in winter because their water supply freezes up, and since eggs have a very high water content, no water means no eggs. It is important then, during cold weather, to supply warm water at frequent intervals—or to keep the water warm with a heated fountain. Most poultry supply dealers have such fountains, heated with an oil lamp or electricity, in case you are not "mechanically inclined" enough to rig one up yourself.

Cod liver oil, mixed with the feed, also helps duplicate springtime conditions in winter. It supplies the necessary sunshine Vitamin D, and is strongly recommended by feeding authorities. Of course spring is the natural season for green foods, so a good winter ration must contain something green—such as sprouted oats, alfalfa leaf meal, green leafy alfalia or soybean hay, mangel beets, and so forth.

Spring weather is much warmer and more pleasant, so poultrymen nowaday take the sting out of winter by housing their flocks in warm, insulated houses. Many people in the colder climates have installed heating systems, with favorable results on egg production.

But important as all these things are, they will not do the trick without the right kind of feeding. In the spring, a hen on range can just about balance her own ration. She can catch worms and bugs for protein, and perhaps pick up enough limestone to manufacture egg shells. But in winter this haphazard method of ration balancing is almost sure to fail, hence the necessity of supplying such feeds as laying mash of high protein content (to make egg whites), oyster shell (for the egg shells), and all the other things which go to make up a balanced ration.

EDUCATIONAL SURVEY FOR NEGROES OPENED

Hope to Determine What Opportunities Exist

A survey of vocational education and guidance programs, to determine what opportunities exist for Negroes and to what extent they should be modified or enlarged, had been launched by J. W. Studebaker, U. S. commissioner of education, it was announced yesterday.

The work will be finished by a $234,934 relief appropriation already approved by President Roosevelt, and will furnish employment to 450 Negroes of the "white collar" class. Dr. Ambrose Caliver, senior specialist in education of Negroes, will direct the study.

Africa Is Rich

Africa because of the Ethiopian war has become the cynosure of all eyes. Ethiopia (which means burnt face) is the "hot spot" in world affairs. This country is the chief grab bag of the world because of its reputed riches.

This land is rich in lore and lineage. It has the longest continuous dynasty of any on earth—a line of over 4,000 years. The present Emperor claims direct descent from the Queen of Sheba, who was one of Solomon's Sweethearts (was Solomon wise to have 300 wives and 700 concubines?)

Mr. W. L. Allimono in his pamphlet, **"Facts About Ethiopia"** has given to the world a most illuminating treatment of this country that has the vast stores of the world's gold, silver, diamonds, cocoa and ivory. The tin of the world is dependent upon Africa for its oil. A copy of this pamphlet should be in the hands of every student of world affairs. Copies may be secured by writing Mr. Allimono in care of the Morris Memorial Building, Room 225, Nashville, Tenn.

Ethiopia is the only country that has never been conquered.

In speaking of Haile Selassie, learned and cultured, Emperor and absolute ruler, Dr. Thomas Jesse Jones said, "He bears the closest resemblance to the best art pictures of the world, of the Savior of Mankind. He is kindly and wise in appearance to a striking degree."

Africa sheltered Jesus the world's greatest person when his life was sought and then gave him back to the world unharmed. The world owes Africa a debt today!

NEW YORK POINTS WAY TO ELIMINATE ROAD DEATH

New York City, with its 850,000 motor vehicles and its 1,300,000 licensed motorists, pointed the way for America in its path to traffic consciousness and highway safety, the shrinking death and accident toll proved yesterday.

Police Department authorities announced sensational gains during the month of January, 1936, in traffic safety, over the same month a year ago.

In all, there were 1,555 accidents death toll to almost 50 per cent of the previous year, there was a reduction last month of 742 injuries. The total number of persons injured in traffic accidents during the month of January, 1936, was 1,794, compared to 2,537 for the same month in 1935.

Accidents Down 599

In all, there were 1,555 accidents this year, compared to 2,154 in January, 1935—a reduction of 599.

That record, for the largest, most populous city in America, was hailed as a miracle of safety consciousness by traffic authorities everywhere.

THE NEED FOR MEN

God give us men! The time demands
Strong minds, strong hearts, true faith and willing hands—
Men whom the lust of office does not kill;
Men whom the spoils of office cannot buy;
Men who possess opinions and a will;
Men who have honor; men who will not lie;
Men who can stand before a demagogue
And damn his treacherous flatteries without winking;
Tall men, sun-crowned, who live above the fog
In public duty and in private thinking.
For while the rabble with their thumb-worn creeds,
Their large professions and their little deeds,
Mingle in selfish strife, lo! Freedom weeps!
Wrong rules the land, and waiting justice sleeps!

J. G. Holland.

THE MODERN FARMER

Official organ of the National Federation of Colored Farmers, Inc.

Leon R. Harris - - - Editor

Published monthly by the Modern Farmer at Nashville, Tennessee.

Office, 447 4th Avenue, North.

Devoted to the interests of the Farmer, Truck Gardener, Livestock and Poultry Breeder, the Home and the People.

Entered as Second Class Matter, April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 447 4th Avenue, North, Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, 75c for six months, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

6. **Better rural churches, schools and homes.**

EDITORIAL

A GOLDEN OPPORTUNITY

At a time when the South is about to grasp the golden opportunity of breaking the shackles of farm tenancy, that portion of the public in the best position to be of help has failed to bestir itself.

Aside from a few scattered individuals and an equally small number of newspapers, the attractive possibility of administering a crushing blow to tenancy is met only with lack of interest or passive resistance. The ultimate success of such a movement would prosper more were it met with open opposition.

Why have luncheon clubs, civic organizations, public spokesmen, merchants, bankers and all others who might be expected to take a part in any program that looks to advancement failed to respond with greater vigor?

Perhaps there are many who have not yet been acquainted with the significance of the fact that the public and the government is in a more favorable mood to strike at this basic evil than ever before. But this factor has not been as great a handicap as has the widespread delusion that the continuation of whatever economic well-being the South has enjoyed is dependent upon the existence of tenantry upon its present scale.

The belief that prosperity can be built upon tenantry is a malicious one. The very nature of tenancy is such that it fosters laziness, lack of ambition, instability and thriftlessness leading inevitably to poverty, disease and ignorance. Under any form of government other than a democracy such conditions would be no serious cause for alarm. But under a democracy such conditions are a threat to the existence of the republic.

What merchant had not rather have a small, independent farmer for a customer than a tenant? The former being attached to the community in which he lives must guard his standing. The latter being a human derelict cares not where he anchors in most cases. The former is more apt to be self-suffic ient as far as food and other basic necessities are concerned, and hence he is able to buy a greater volume of other goods.

What banker had not rather deal with independent farmers instead of being dependent upon men whose lands are tilled by tenants and share-croppers? It is true that those who deal with the latter may, in some years exact exorbitant rates of interest, but there always comes a time when the failure of crops must be borne by some one other than the tenants in the case of the latter.

What citizen had not rather live under a Commonwealth free of the instability that prevails when a large portion of the electorate are tenants? Tenants and share-croppers, because they pay no great portion of direct taxes, are not interested in the conduct of government. They are the first to yield to the inducements of the demagogue. On the other hand, men who pay taxes and who are able to see the direct connection between the conduct of government and their own success are not as easily misled.

Even the man who owns vast tracts of land stands to benefit by any reduction in tenancy. If he has not yet come to the realization that the tenant system over a long period of time will not pay, he has the privilege of keeping his land. But if he sells a portion of his own, or others like himself in the vicinity sell theirs, he will profit from the general improvement in conditions. Land is invariably worth more in communities where those who work the land own it.

Take any two sections of Alabama—one in which there is a large proportion of tenancy and another in which the small farm-ower predominates—and compare the two. The history of the section in which tenancy is prevalent will likely be a chronicle of occasional prosperity followed by periods of bankruptcy, want and ruin. In comparison, communities built upon families that live on their own farms are more able to "dig in and take it."

The tenant is neither a good customer nor a desirable citizen as a general rule. He is not interested in the future and not greatly concerned with the past. He is in almost every case a definite liability. The farmer-owner in contrast is everything that the tenant is not.

Why then, does not the work of the Resettlement Administration, the status of the Bankhead tenant farm bill and the general problem of farm tenancy become the chief topic of conversation wherever the welfare of Alabama is discussed?

VOTING STRENGTH OF THE NEGRO

Reeent figures from the Census office in Washington show the Negro population in the following large cities in the United States.

New York	327,706
Chicago, Ill...	233,903
Philadelphia, Pa.	219.591
Baltimore, Md.	142,106
Detroit, Mich.	120,066
Memphis, Tenn...	96,550
St. Lolis, Mo.	93,589
Cleveland, Ohio	71.899
Pittsburg, Pa....	54,983
Cincinnati, O.	47,818
Louisville, Ky.	47,354
Indianapolis, Ind.	43,967
Nashville, Tenn.	42,836
Los Angeles, Calif.	38,984
Newark, N. J.	38,880
Kansas City, Mo.	38.574
Chattanooga, Tenn. .. .	33.289
Columbus, Ohio..	32,774
Winston Salem, N. C.....	32,556
Charlotte, N. C...	25,163
Boston, Mass.	20.574
Kansas City, Kans.	19,872
Durham, N. C.	18,717
Gary, Ind.	17,922
Knoxville, Tenn.	17,093

Practieally ninety percent of these voters are orginally from the farms in the south. These votes may play an important part in the coming national election this fall.

PLANT QUARANTINE FINDS BIGGEST JOB IN INSECTS

The Japanese beetle and the gypsy moth were responsible for most of the violations of domestic plant quarantines in the year ended June 30, 1935. Plant quarantine inspectors of the United States Department of Agriculture at the principal railway terminals examined 1,000,000 package shipments and 1,000 carlot shipments of plants and plant material subject to Federal plant quarantines to determine whether they were properly certified as free from certain insect pests and plant diseases. They found and stopped 1,942 shipments—the largest number since 1932—in violation of the law. These were: Japanese beetle, 1,225; gypsy moth, 408; narcissus bulb pests, 149; white pine blister rust, 73; satin moth, 36; black stem rust, 30; Mexican fruit worm, 18; pink bollworm of cotton, 2; Dutch elm disease, 1.

Farm Notes

Trinity Mt. Zion Unit of National Federation of Colored Farmers located near Lexington Miss., are now the owners of a large truck. The members have agreed to plant a large acerage in vegetables and send their products to large terminal markets. The sales will be made co-operatively and each member to receive his pro-rata share of the returns from all sales less marketing expense.

Recent figures released from the Census Bureau in Washington show that Negro farmers outnumber white farmers in Holmes county, Miss., by nearly five to one.

A. Price, prominent coal merchant of Atlanta, Georgia, is planning to handle in a large way all farm products another season. He says, after making an exhaustive survey that there is a fine opportunity to aid Negro farmers in the selling of their farm prodults. He plans assembling these products in Atlanta and making carlot shipments to the larger markets both east and west.

A represenative of the N. F. C. F. will visit Atlanta during March and hold conference with these leaders, with the idea of assisting in making the plan a success.

Robert H. Cawthorne, J. B. Smith and other leading race farmers living in eastern Virginia through their unit have applied for a loan of ten thousand dollars from Rural Resettlement Division for the purpose of erecting factory and warehouse building near Dunnsville, Va., and operating a eannery. Land has been purchased by the unit, plans drawn for the building and contracts drawn for the machinery. Officers say they hope to have the cannery ready by harvest period next summer.

This is one of the largest tomato producing seetions in Virginia and we predict success for this active unit. An application for a Women's Work Relief Sewing Room to be operated in the same bulding is also another feature of the plan, and application has already been filed.

Robert H. Sanders owner of a hog farm in Wright County Missouri suffered loss or his home in Gary, Indiana by fire the first week Feb. ruary.

Robert H. Sanders owner of hog farm in Wright County Missouri suffered loss of his home in Gary, Indana by fire the first week in February.

Mr. Sanders says he will rebuild. He is one of the oldest members of the N. F. C. F., and was delegate at large from Missouri to the last annual convention of the N. F. C. F. Small loans to farm families in dire need pending aid from the Rural Resettlement Administration have been announced by Mr. R. C. Smith regional direetor for Illinois and Missouri.

The officers of the regional director are located in Champaign, Ill. Families who are destitute or near destitute should apply to Mr. Smith at once for consideration.

Hon. Charles H. Hall Chief Statistician Censns Bureau Washington, D. C., has furnished the Modern Farmer with valuable statistics on agriculture in the United States and more in particular that part which in relation to the Negro farmer Mr. Hall has been connected with the Census for nearly thirty years. A few of the inteersting facts are as follows:

More than two million fewer horses and mules than in 1930 are shown in the United States summary of the 1935 Farm Census. Texas leads with 393,800 and Missisippi 230,958 ranking seeond. Missouri isthird in place with 219,367. Georgia has 206,078 and North Carolina 205,117. Alabama 207,657, Arkansas 168,404, Tenn., 177,549 and Kentucky 180,779.

The number of hogs on farms in the U. S., Jan. 1st, 1935 was thirty-seven million two hundred twelve thousand nine hundred and sixty-seven On April 1, 1930 there were sixty million two hundred eighty-seven thousand nine hundred twenty.

Iowa ranks first in number of hogs, with Illinois and Indiana ranking second and third. All southern states show substantial increases since 1930.

It will pay farmers to increase the number of hogs on the farm.

Advices from Washington, D. C. to the effect that the government will soon send out checks covering amounts due share landlords, renters, eash tenants and landlords for parity bonus on the cotton produced last year. Subsidy payments will also be made, and farmers who have not received this money should apply to their County Agent and in event they are unable to get satisfaction you should write to the Cotton Division of the Department of Agriculture Washington, D. C.

Andrew Cross prosperous race farmer living in Pulaski county Illinois suffered the loss of his house and furnishings by the fire last week. Mr. Cross has been successful as a farmer. He was named and commissioned by Gov. Honer to represent the Negro farmers of Illinois at the last annual convention of the N. F. C. F.

James P. Davis of Chicago was selected as Chairman of the farm group committee during the National Negro Congress which met in Chicago Feb. 14th for a four day session. Over 25 states were represented at this gathering.

MULE BOOM

The Tribune Experimental farm's effort to buy a mule and to find a good name for it seems to have stimulated suddenly a new interest in this lowly hybrid of the animal kingdom. From readers particularly city readers, come many questions concerning this odd creature that is practically always sterile and therefore not capable of reproducing his kind. Some of the questions will be answered from time to time in this column.

It is common knowledge among farmers that the mule is produced by crossing a jack with a mare of the horse family. Breed authorities say that mare mules have been known to produce colts when bred to either stallions or jacks, but this phenomenon is rare. There never has been an authentic record of a mule begetting a foal. Sterility among male mules is therefore, accepted as universal.

Spanish explorers are credited with having brought the first jack to this country. George Washington is sometimes credited with being the first farmer to introduce the mule into America, but authorities hold that there were a few jacks in use before the Spanish and French governments gave the general jacks and jennets. Nevertheless, Washington was first in stimulating widespread interest among American farmers in the raising of mules. Accordingly he is ordinarily considered America's mule breeder.

Animal husbandry experts find special breeds of jacks once were used in producing mules in the United States. These jack breeds are not so genrally known among farmers as are the breeds of horses, cattle, hogs, and sheep. They include Catalonian, Maltese, Andalusian, Italian, and Majorcan. The Catalonian breed of jacks is considered by many authorities in the United State to be the best of the imported breeds. The native jack in common use in the mule states is a mixture of many breeds.

Back in revolutionary days, shortly after the war, Gen. Washington was presented with a jack by the king of Spain. The jack was known as "Royal Gift." Lafayette also sent Washington a jack known as "Knight of Malta" because he came from the Island df Malta. Many splendid mules were produced from this stock. How much of the blood of these aristocratic jacks has been handed down to the native jack from in the corn belt today is not known. Authorities relate that the domestic jacks come originally from the wild ass of northeastern Africa and have been developed to a great extent during the last century.

Raising mules in the United State is more profitable now than it was a few years ago. When the population of the mule fell off fifteen years ago it was natural that the value of the jack declined. Wayne Dinsmore, secretary of the Horse and Mule association of America, says that in 1920 there were 780,697 mule colts under 2 years old in this country. It required more than 9,700 jacks to sire them. Ten years later, 1930, there were only 168,345 mule colts under two years old. It took only, 2,100 jacks to sire this number.

As a result, many good jacks were sold for as low as $2.50 a head— many at $5—and they were used for hog feed. Other jacks were led to the boneyard and shot, simply to get them out of the way. Now farmers wish they had them back, because jacks are again in demand and bringing high prices. Good ones are hard to find. The same jacks that were shot or sold for $2.50 per head two or three years ago would bring today $500 ahead if they were available.

RAPHAEL, 65, MAROONED 3 WEEKS, DECLARES COW MAN'S BEST FRIEND

(Chicago Daily News)
By Edward Peace James

"Now," said Raphael Raffe, Lake county farmer, marooned for three weeks, "there can be no more argument as to what animal is man's best friend."

So dogs go bite yourselves and horses get a kick out of this, if you can. Mr. Raffe presents the lowly cow as the best in beastly value..

If Mr. Baffe isn't an authority on the subject, then no one is. For the last four days he has been without food or fuel on his farm about ten miles northwest of Waukegan.

Tells Story Over Phone

Mr. Raffe hasn't been able to move out of his yard for three weeks and when he got down to a milk diet, he called for help. Today after his first substantial meal in ninety-six hours, he told his story over the telephone. He said:

"This has been the worst winter I ever experienced in my 65 years. I thought it was going to be a lark to be snowbound for a while because I had plenty of food and wood for a two week's seige. But when the two weeks drew near an end and I saw no chance of getting out, I began to conserve my supplies.

"But wood and food ran out four days ago. So about the time I thought I was going to freeze in the house, and starve to boot, I suddenly got the idea to go out and live with the cows. So I spent every day out there. These animals can sure keep a follow warm.

Milks Them Regularly

I "milked 'em regularly and drank warm milk for my three squares a day. My dog was helpless in this crisis. He was dependent on the cows too, and lived on milk. Lucky enough, I had plenty of oats for the cows, or I wouldn't be telling about it today.

'At night, I went in the house and pulled all my blankets around me so I was plenty warm. Yesterday, I decided I couldn't hold out much longer— on milk alone —couldn't get water as the well was frozen. The telephone was still working, so I called up Waukegan. They sent a plow out and food got in last night. A supply of coal came today so now I'm sitting pretty."

"Ready for another good blizzard, Mr. Raffe?"

"Let her blow I guess I proved this time that I can take it, eh?"

NOT A RAIL PASSENGER LOST

Railroads of the United States made an enviable record in 1935. According to a report of the National Safety Council they went thru the year without the accidental death of a single passenger charged up to them. The record for 1934 showed 27 passengers lost their lives among the 4,652 fatalities on railroad property that year. However, of this number, 2,566 were trespassers, most of them stealing rides on freight trains.

HOW TO GET YOUR BONUS

Blanks to be used in applying will be mailed immediately by the Veterans' Adminstration to all its field officers and local officers of the veterans' organizations.

If a veteran has not borrowed on his certificate and has it in his possession, he should send it with his application to the nearest regional office of the Veterans' Administration or to the central office in Washington.

If a loan is outstanding against the certificate, the application should be sent to the Veterans' Administration office where the loan was obtained.

If the veteran has made a certificate loan at a bank, he should send his application direct to the Veterans' Administration in Washington.

After filing his application, the veteran need take no further action. His account will be checked by the Veterans' Administration, forwarded to the treasury, and the amount due him will be sent him in bonds dated June 15, 1936, of $50 each, with any odd amounts covered by a government check.

DIGS UP POSTS, FINDS $500 IN FRUIT JARS

Special to The Chicago Daily News—

Peoria, Ill., Feb. 19,—Digging up fence posts at a spot designated by his dying cousin, Charles Toland, Plymouth farmers today found two fruit jars containing more than $500 in cash.

Nearly two weeks ago "Deacon" Cox, lying on his death bed, told Toland of the buried treasure, but Toland paid little attention to it at the time. He thought it a dying man's imagination.

Today he dug up at the spot designated by Cox and found the money.

HELP FOR 30 MILLIONS

PRESIDENT ROOSEVELT has signed the bill which "brin s into law" a Social Security Program he hopes will provide old age pen sions, jobless insurance and care of dependents. "At least some protection to 30 million of our citizens." Main points in the bill include:

Federal grants to states on a 50-50 basis for pensions to needy old persons over 65 are provided thru a 49 3-4 million dollar authorization for the 1936 fiscal year. The govenment's share in such pensions is restricted to a maximum of $15 a month.

Beginning in 1942, contributory old age pensions, ranging from $10 to $85 a month, are planned. These will be raised by eventually taxing employers and employes 3 per cent each on salaries up to $3,000 a years.

In 1937, 1938 and 1939, the tax on employers and employees will be one-half per cent each, increasing one-half per cent each every 3 years until 1949 when it becomes 3 per cent each. This is expected to cover almost 25 million workers, and by 1950 to raise $1,877,200,000 annually.

Employers also will be taxed on their pay rolls to encourage states to set up unemployment insurance system. Deductions up to 90 per cent will be allowed for payments made to state funds, and benefits will be fixed by state laws.

Beginning next year, employers of eight or more persons will be taxed 1 per cent for the unemployment benefits, increasing to 2 per cent in 1937 and 3 per cent in 1938. This is expected to raise 826 million dollars annually beginning in 1938.

Farm labor, domestics, government and casual workers are excluded from both unemployment and old age taxes. A federal subsidy of 4 million dollars in 1936 and 49 million dollars subsequently is provided to assist states in administering unemployment insurance laws.

In addition, appropriations totaling 50 million dollars the first year for aid to dependent or crippled children, mother's aid and other welfare activities are provided. All would be matched by the states. Missouri Ruralist for August 24, 1935

FARM LOANS AVAILABLE FOR FARM ORGANIZATIONS

The Federal Resettlement adminstration will make loans to farmers to help them in co-operative organization, it was announced yesterday by Regional Director R. C. Smith, whose office is located at Champaign..

Mr. Smith also said that Maurice E. Hays, midwest agriculturist, will be in charge of the program for Illinois, Iowa, Ohio, Indiana and Missouri. Under the new program, the adminstration will make "organization" loans to farmters aready receiving loans for feed, machinery and stock and to families on resettlement project.

RACE WOMEN PETITION GOVERNMENT FOR WORK RELIEF SEWING ROOM.

At a recent meeting held in Memphis, Tenn., prominent Colored women of Shelby county signed a petition asking the P. W. A. in Washington for favorable consideration in the establishment of a work relief sewing room to be located in their vicinity to be operated by women of the race.

The petition has been forwarded to Washington and they are now awaiting reply.

Census figures show the Negro population of Memphis 96,550 which is over thirty-eight percent of the total population.

WATCHWORDS ON WASTE

Some surface defects can mean bargains, but others warn wise consumers against damage to the fruit and vegetable budget.

Blights that blemish and spots that spoil may all have the same meaning to the fruit and vegetable man—reduced prices—but the careful consumer should know a bad buy from a bargain.

SELDOM do vegetables and fruits travel alone on their pilgrimage from farm to table. No matter how carefully they are handled or how perfectly refrigerated, wilts and blemishes, rusts and rots—thieves of sales appeal to the market man, thieves of economy to the budget—will try to steal a ride.

SOME DISEASES like "blackleg" in potatoes and turnips begin their underground work in the field and travel as stowaways. Hitch hikers, such as "blue mold", join fruits on their way to market, usually gaining access through small breaks in the skin. If the products have successfully evaded such fellow-travelers, there are still pestilences that walk in the darkness of storage chambers. Spoiled vegetables in your refrigerator may mean that some of these free-riders went home in the family market basket.

LAST YEAR the Department of Agriculture made a survey in Knoxville to find out the whys and wherefores of losses of fruits and vegetables occurring in the market or kitchen. Government agents first went to the railroads and trucks to learn how much produce came in, what kind it was, and where it came from. Trucks brought in about half and railroads the rest. Then they saw what happened to the produce after it was in the city, and how long it stayed in the hands of wholesalers, jobbers, and grocers. Wholesalers and distributors in some establishments kept records of their losses and the Government agents inspected spoiled fruits and vegetables every day to see what caused them to spoil. In other establishments the Government agents counted the losses when the produce was being received or the bad pieces sorted out.

HOUSEWIVES HELPED this study by keeping records of their purchases and losses. They received one chart with descriptions of diseases and another chart to hang in the kitchen so that they could make records of spoiled fruit as they discovered it. The Government agents helped them to diagnose the causes of loss. When records of spoilage were complete, these agents divided the number of bushels, dozens, or pounds that spoiled by the total number purchased to get the percentage lost, and made a table showing losses and the causes of loss.

SIGNIFICANT RESULTS from the completed tables showed that losses from more highly perishable vegetables were small in comparison with losses from those that usually store well. Careless handling accounted for 15 percent loss of cabbage, 12 percent loss of onions, while losses on lettuce and peas were only 8 and 3 1-2 percent, respectively.

CONSUMER LOSSES during the Knoxville survey are recorded in detail in the table along with some of the causes. The table tells the same tale as the dealers' table. Consumers' largest losses were on lettuce, onions, oranges, sweet potatoes, and strawberries, while less than 5 percent of beans, cantaloupes, eggplant, and peas spoiled.

IT PAYS family purchasing agents to be familiar enough with common fruit and vegetable defects to distinguish between those that actually inpure the eating quality and the surface blemishes that merely make things less attractive to the superficial shopping eye and so lower the price.

BARGAINS that spoil before you can use them are expensive at any price. Look for marks of careless handling. Small cuts open the way for infection just as they do on animals. Irregular shapes, bruises, and growth cracks may mean losses in preparation. Withered skin often indicates age and toughness. We list here some common fruit and vegetable defects which mean bad appearance only and some that mean unfitness for eating.

DON'T MISS meals because of this list of fruit and vegetable afflictions. They may slip by the grocery man but no half-way cook will let them reach the table. Taste usually warns.

POTATOES of irregular shape with knobs or deep growth cracks cause waste in preparation, cuts or bruises are warning signs of possible infection. "Scab" makes rough corky elevations or pits on the surface which are easily cut off with the peel and cause little waste. More serious diseases mean large or total loss. Look for discolorations which are easily concealed by dirt. They may mean sunburn or late blight. Both taint flavor. "Blackheart," aptly describing a condition in which there is a black, sometimes slimy, center, ruins the flavor but can only be detected by cutting. Freezing usually makes a dark ring inside the peel, but may not show on the outside. Rots can be spotted by soft, moist, or discolored areas.

SWEET POTATOES are far more perishable than their Irish cousins. Small, dark, clay-colored spots, sometimes found on them, are harmless. Serious wastes result from even small decayed spots, because the spoiled flavor usually ruins the whole vegetable. Dampness may mean freezing injury. Wet areas may come from contact with spoiled potatoes, in the same package.

GOOD CABBAGE is bright in color, firm, crisp, and heavy. Sometimes wilted or discolored outer leaves may be removed, leaving sound food. But remember, the greener the cabbage, the more Vitamins A and G. Heads with leaves separated from the stem are likely to be tough or strong. Soft heads are edible but usually of inferior quality. Wilted, yellow heads often indicate age and toughness. Worm injuries are common in all leafy vegetables, but they are so apparent that the only moral for the consumer is "look before you buy." Brussels sprouts, too, suffer from worms and plant lice.

CELERY is usually trimmed and washed before it reaches the retailer The tiny white bunches, commonly tied together in twos or threes, frequently indicate waste has already been cut away. They may be economical buys. Suspicious looking celery should be inspected for stringiness or pithiness which mean poor quality. "Blackheart" and "footrot" ruin celery. You can easily check on these and possible insects by pulling the stalks apart to look at the inside.

LETTUCE that looks good and fresh is sound. Reddish color at cuts or bruises is due to a natural change in the juice of the lettuce and is not a sign of decay. Bruised, ragged or wilted leaves may be cut away and leave plenty of salad for your money. Brown areas on the edge of leaves warn of tip burn—probably more spots inside.

CAULIFLOWER is at its best when the "curd" is heavy, compact and creamy white. "Riciness" or spreading of the head hurts the looks and perhaps the price—but not the flavor. Spots or bruises on the curd will probably cause waste. "Gray mold" "watery soft rot" and "black spot" ruin cauliflower. Soft spots and discolorations give the warning.

CARROT TOPS and roots tell their own story. Fresh feathery tops are usually enough recommendation. If the roots are still bright, withered tops may be ignored. Cold water often brings back crispness to wilted roots. Avoid soft or watery spots. They mean waste.

ONIONS that are "stained" or "sunburned" may be good buys. Only the outer skins are affected by "stain." "Sunburn" may go deeper but won't injure taste. For more serious defects look to the neck of the onion. If coarse, prominent, or hollow, it means a woody core. Dampness gives away "soft rot" or "freezing injury."

TOMATOES lose much sales appeal but little consumer value from "catface" and growth cracks. These are blemishes that mar the appearance but do not affect taste. "Catface" is a pucker at the blossom end. Growth cracks usually radiate from the stem end or form concentric half moons around it. Either of these conditions or misshapen fruit may lower prices. The only serious disadvantage to consumers is possible waste in serving. Because such fruits are easily injured they do not keep well. Any bad spot on a tomato usually ruins it for eating. "Phoma rot" or "ripe rot" goes hard with winter tomatoes. It usually begins with irregular black spots near the stem and progresses to complete decay with fungi sometimes growing out of the spots. Apparently only tomatoes with broken skins are subject to it. "Buckeye rot" is another fungus decay. It looks much like a horse chestnut under the skin. It may penetrate unbroken skins or even wrappers. "Watery rot" is usually odorless, the fruits shrink and often grow "whiskers" the interior breaks down and the skin becomes a water bag which usually spills its contents. "Rhizopus rot" enters the fruit through wounds. It works fast and usually spoils the vegetable completely in a few hours You can spot "rhizopus" by the sour smell.

PEPPERS and eggplant are victims of a number of decays, which usually spoil them for food unless there are tiny spots. "Anthracnose" starts with tan, gray or black spots on peppers and with brown spots on eggplant. Even if it does not ruin the vegetable completely it opens the way for other organisms. "Fruit rot" is the commonest market ailment of eggplant. Round tan spots appear with a soft spongy decay under them, which penetrates the fruit. "Rhizopus rot" and "buckeye rot" attack peppers and eggplant as well as tomatoes. "Gray mold rot" or "botrytis" is common in peppers but also attacks most vegetables. The spots are at first greenish and water-soaked but later turn brown. "Botrytis" works fast but seldom makes a bad odor.

STRING BEANS are edible but may be tough when wilted. Irregular dark areas that are sunken may mean "anthracnose" or "russet"—dry spots which cause waste. They enlarge slowly "Watery soft rot" spreads rapidly and usually causes total loss.

APPLES and pears like tomatoes, may have blemishes on the skin which do not affect the taste. "Flyspeck" and "sooty blotch" often go together. They are caused by fungi and are important only because they hurt the appearance and lower the price of affected fruits. They do not harm the apple and are readily scraped off.

ANOTHER common complexion fault of apples is "scab." It begins with dark velvety spots and later becomes rough brown areas surrounded by dark green or black.

A MORE serious defect is "scald" which is caused by the gases which apples and pears produce in storage. External symptoms are irregular brown areas which are light at first but become dark. They mean real damage to the quality of the fruit. Apples stored the modern way in oiled paper packing usually resist scald because the oil absorbs the harmful gases.

DISCOLORED spots on apples are bad news. They may mean "black rot" "bitter pit" or "internal breakdown" due to freezing or age. If you have a clinical interest in what rotted the apples, keep them for a few days. "Black spot" causes the rotten areas to turn black. Small pimples of the same color dot the surface. "Bitter pit" blemishes may look like hail injury. They are usually small and wet at first, then develop into highly colored areas. If an apple affected with bitter pit is kept long enough the spots will turn dark and sink into the flesh. The fruit does not become bitter. "Internal breakdown" is the breaking down and browning of the interior of the apple. Outward signs are not always present. If you are buying a good many apples, have one or two cut open. For methods of avoiding waste in quantity buying see CONSUMERS' GUIDE for May 20, 1935. Internal breakdown often follows freezing or water core and occurs more frequently in late or over-mature apples.

"BLUE MOLD" is among the most destructive of rots attacking fruits. It is common on apples, pears and oranges in storage and transit. Dealers who spot the characteristic bluish growth, destroy the fruit. Occasionally one is offered fruit with soft watery spots of light tan which increase in depth and diameter very rapidly, but only develop the blue "whiskers" after they are safely at home in the fruit rack.

CITRUS fruits are frequently russeted. Some markets buy the brownish fruit in preferance—but there is no difference except in appearance. Even small, soft, or decayed spots on citrus fruits are serious because even a small spot can ruin the taste of the whole fruit. Be suspicious of any softness. If watery, it may mean "blue mold," one of the worst enemies of citrus fruits. The Knoxville study found an instance where 500 bushels of oranges out of a shipment of 600 were lost because of "blue mold." The oranges were carelessly unloaded with a shovel, and the injuries made a foothold for the rot. "Stem end rot' begins with soft colorless spots near the stem which destroy the whole fruit chiefly by rotting from within. "Brown rot," which affects only lemons, is at first a greasy scalded spot which turns brown and is covered by a cobwebby growth.

LIMES and tangerines are subject to the same diseases as oranges. Limes sometimes show scald. Purple or brown irregular spots make them less attractive but usually no less palatable.

BANANAS that are firm with small dark flecks on the skin are delicious eating, but don't try to store them. Bananas sometimes suffer from "fruit rot" which makes them mushy and sour-smelling. Withered, thin, bruised or very soft fruits are short on flavor and food value.

STRAWBERRIES, raspberries, blue berries, huckleberries and other berries are extremely perishable. Overripe berries are apt to be dull and soft. Stains on the boxes may mean leaky berries, expensive buys. Berries should be carefully inspected for mold before buying. It is wise to pour boxes out in the hands to be sure that the sound layer on top does not hide wasty, bruised or rotten fruit.

PEACHES are usually as good as they look. Color and firmness indicate ripeness. Beware minute imperfections—they may mean worms have taken liberties. Brown rot—the worst market enemy of peaches—begins with small circular brown spots and works fast.

—Consumers Guide.

Louisiana Republicans To Hold State Convention at New Orleans

New Orleans, La. Feb. 22, 1936.
TO THE REPUBLICAN VOTERS OF THE STATE OF LOUISIANA:

In pursuance with a call of the Republican National Committee held in the city of Washington, D. C., Dec. 16, 1935, and pursuant to a call of the Republican State Central Committee at a meeting held in New Orleans, La., Feb. 22, 1936, you are hereby notified that a Republican State Convention will be held in the city of New Orleans, La., on March 11, 1936, at two o'clock P. M., at L'Union Francaise Hall, 928 N. Rampart Street, to elect four delegates and four alternate delegates to the Republican National convention to be held in the city of Cleveland, Ohio, June 9, 1936, to nominate a candidate for President and a candidate for Vice-President of the United States. The delegates to the Republican State convention to be held in the city of New Orleans, La., on March 11, 1936, from the several Congressional districts of the State of Louisiana are also authorized to elect one delegate and one alternate delegate for each of the eight Congressional districts of the State of Louisiana to the Republican National Convention to be held in the city of Cleveland, Ohio, June 9, 1936, to nominate a candidate for President and a candidate for Vice-President of the United States. The election of delegates to the said State Convention shall be by mass meetings to be held in the wards of the Parish of Orleans and the various parishes of the State of Louisiana, under the supervision of the members of the State Central Committee of the several wards of the parish of Orleans and of the parishes throughout the State, said mass meetings to be held on March 7, 1936. Credentials of delegates selected shall be sent by the Chairman and Secretary of said mass meetings and countersigned by the member of the State Central Committee of the ward or parish as set forth above, and the said credentials shall be forwarded to S. W. Green, Secretary of the State Central Committee, 507 Pythian Temple, New Orleans, Louisiana, immediately after the election of the delegates, so as to enable the Secretary of the State Central Committee to make up a temporary roll of the convention, in keeping with the resolution adopted providing for the call of said convention. The appointment of delegates by wards and parishes is as follows: Each ward of the City of New Orleans and each parish, is entitled to one delegate for every five registered Republican voters, or a fraction thereof.

PAUL L. MARSHALL, Chairman

WHAT PRICE GLORY?

The World War, all told, cost—apart from thirty million lives—400 billion dollars. With that money we could have built a $2500 house, furnished it with $1000 worth of furniture, placed it on five acres of land worth $100 an acre and given this home to each and every family in the United States, Canada, Australia, England, Wales, Ireland, Scotland, France, Belgium, Germany and Russia.

We could have given to each city of 20,000 inhabitants and over, in each country named, a five million dollar library and a ten million dollar university. Out of what was left we could have set aside a sum of 5 per cent that would provide a $1000 yearly salary for an army of 125,000 teachers and a like salary for another army of 125,000 nurses. —Nicholas Murray Butler.

Love's Pleadings

"Peace, Frightened Soul, I know thy way is dark;—
May will Supreme permitted it to be.
Canst turn from fears that tauntingly would cark,
And trust my Wisdom with what burdens thee?
To one so trusting fruitage brings no grief."
"Lord, I believe. Help Thou mine unbelief!"

"Hark, Anxious Soul, by very worst assailed,
And face to face with all yet deemed most dread,
He who helps thee never once has failed,
And will not fail, though every hope seems dead.
Fear not! Believe! 'Tis thine my Power to see."
"Lord, helpless, torn, my hope hold on thee!"

"Hush, Soul Redeemed. Wilt, for the time, be still,
And yield to touch that sternly would lay bare
That which thy heart with sorrow now may fill
And ope afresh the hurt yet bleeding there?
My love, abiding, will itself reveal."
"Lord, trembling, waiting, to that Love I kneel."

SALLY NEILL ROACH.

THE CASE AGAINST BEER

Beer never built a cottage. It never stuffed a hungry little stomach. It never inspired a kiss of purity. It never planted a garden or sent a happy little girl to swing upon the gate in anticipation of father's return. It never made a contented hearthstone or bred a yeomanry to inspire their country with sturdy pride.

It deals in mortages and evictions. It wrenches bread from the fingers of childhood. It triumphs in blows and hate, in suspicion and fear, in lust and disease. It tramples upon the flowers, strikes the hinges from the gate and sends the little one flying from the father's approach. Selfishness, hopelessness, decay smite the land in which it rules. In our land, it shall not rule.—Reprinted from the Voice of 1914.

Atlantans Celebrate Negro History Week

Atlanta, Feb. 27—(ANP)—What the Negro has contributed to civilization as well as the development of the United States, the country to which he was brought and sold in bondage, was outlined by history scholars here last week during the annual observance of National Negro History Week, in which students of the various colleges located here and citizens cooperated.

Speakers during the week included Dean Charles Leander Hill, of Morris Brown University, H. S. Murphy, Professor Jesse B. Blayton, Atlanta University, Willis Laurence James, Spellman College, Dean Charles D. Hubert, Morehouse College, and Francis Johnson, a student at Spellman College.

SOUTHERN PACIFIC'S OLD LOCOMOTIVE

The "C. P. Huntington" Was the First Engine

Constructed by Danforth Cooke and Company of Patterson, N. J.

New Orleans, La. — The "C. P. Huntington" was built by Danforth, Cooke & Co., Patterson, N. J., in the year 1863, was shipped around the Horn on sailing vessel "Success", and went into service at Sacramento, California, April 6th, 1864, where the first few miles of the Western link of the first transcontinental railroad were then under construction. This pioneer engine was named in honor of Southern Pacific's first Vice President, Mr. Collis P. Huntington, who was famous as one of the "Big Four" builders of the Central Pacific and Southern Pacific properties, his associates being Leland Stanford, Mark Hopkins and Charles Crocker. At the time of his death in 1900 Mr. Huntington was President of the Southern Pacific Company and recognized as one of the Nation's most outstanding railroad executives. He was responsible for the purchase or construction of many of the present Southern Pacific properties in Texas and Louisiana, including the Morgan's Louisiana and Texas Railroad and Steamship Company, Louisiana Western Railroad, Texas and New Orleans Railroad, Houston and Texas Central Railroad, Galveston, Harrisburg and San Antonio Railroad, and the Southern Pacific Terminals at Galveston.

The "C. P. Huntington" is a wood burner with cylinders 11 x 15 inches. Its over all length is 29 feet, including the fuel and water compartment, which is permanently attached to the engine frame. The total weight of the locomotive, in working order, is 39,000 pounds and it has a tractive power of 3510 pounds. Modern oil burning locomotives of the largest type now used on the Southern Pacific weigh approximately 640,000 pounds and have a tractive power of 124,300 pounds, being about 35 times as powerful as the light wood burner of the early sixties.

Just prior to its retirement from active service about 1895 this engine was in local light passenger service between Oakland and West Berkeley, California and is now being carefully preserved and used only for exhibition purposes. The little locomotive is in good mechanical and operating condition and works under its own steam. In recent years it has been used in the filming of several motion pictures having a railroad theme and has never failed to perform its part creditably and successfully.

This engine is being shipped from Sacramento to New Orleans where it will take part in the opening ceremonies and dedication of the new Mississippi River bridge which will be used by all Southern Pacific trains crossing the river in and out of New Orleans. The "C. P. Huntington" will move over the bridge under its own steam in advance of one of the largest freight engines designated "General Service—1" now in use on the Texas and Louisiana Lines of the Southern Pacific.

Notwithstanding its age and miniature size, the "C. P. Huntington" is a fine example of skill and workmanship of the locomotive builders of the early days and the fact that it served the Southern Pacific in regular service for a period of thirty years and is now capable, at the age of seventy-two years, of operating under its own power and doing as much work as it ever could, is a testimonial to the thorough workmanship of its designers and builders in the early 1860's although as regards power and efficiency in contrast to the modern locomotive it furnishes a striking example of the tremendous technical advancement in the design and construction of railroad power during this seventy year period.

James was having a hard time centering his attention on the discussion of carbohydrates, proteins, and fats. Noticing the lack of attention, the teacher asked: "James, what three foods are essential to man's physical welfare?"

"Breakfast, dinner, and supper," answered the boy.

A farmer was trying hard to fill out a railway company claim sheet for a cow that had been killed on the track. He came to the last item:

"Disposition of the carcass." After puzzling over the question for some time, he wrote: "Kind and gentle."

Schoolmaster—This makes the fifth time I have punished you this week. What have you to say?

Youth—I am glad it's Friday, sir.

Teachers BIBLE

No. 4408 REDUCED PRICE **$2.95**

LARGE BLACK FACE TYPE
8 VO. SIZE 5½x8 INCHES with Family Record, marginal references, full Helps to Bible Study.

The best intrinsic value ever offered in a Bible for Adult Readers, Teachers, Preachers and Students. The durability of materials, mechanical excellence and value of contents are equal to any Bible at double this price.

NEW FARM PROGRAM

(CONTINUED FROM PAGE 1)

without cash outlay so that if other forms of payment should be thrown out by the courts the land purchase plan could be substituted. By the same procedure increased production of any crops desired could be brought about. In case of changes in foreign trade, production could be expanded or contracted as desired on these federal owned areas.

This land-purchase idea has revived the old question of whether it might not have been better all around for Uncle Sam to have kept title to part of the land, at least, awarded to homesteaders.

—Cappers Weekly

SEEDS BOMBED SAYS WRITER

(CONTINUED FROM PAGE 1)

of the dogs were cured of their distemper. We then said the cure was effected by a 'friendly fever'; now we call it the thermogenic treatment. So I shall give some corn and other seed a 'friendly fever' treatment, plant them in a garden plot on my ranch in northern California this summer and await results."

Dr. Deason is president of the Society of Thermogenic Therapy, which he founded four years ago. The society is holding its semiannual convention at the Parkway hotel, during which the delegates will give lectures, clinics and demonstrations. An exhibit of new equipment for producing "artificial" fever is part of the convention. Doctors who specialize in the thermogenic treatment are present from many parts of the country.

FILLING IN THE BARE SPOTS

One of the most difficult but absorbing of garden problems, is the covering of bare spots when one group of flowers fades and leaves an ugly gap. A little planning, however, will provide a succession of bloom to follow with color after color.

Take that shady bare spot left by your early spring bulbs at the side of the house, and allow the Forget-Me-Not (Myosotis Palustris Semper florens) to spread it's fast growing creepers among them, to provide a long blooming carpet of blue for the rest of the summer. Violets in all their lovely shades and pansies thrive in this spot too.

In the sunny spots, dwarf ageratum and annual phlox, allyssum and lobelia provide a colorful ground cover where spring blubs bloomed so gaily only a few weeks before.

Plant tulips and daffodils near your perennials, that their brilliant spring colors may be supplanted by the lovely color of your perennials as they come into bloom. Zinnias, planted among your tulip bulbs will provide riotous hues until fall frost cuts them down.

The deep color of Iris can be followed successfully by summer blooming bulbs like Gladiolus, Tigridia or Montbretia. Zinnias and Snapdragons are useful here too or Poppies broadcast over the entire bed.

Gladiolus or Nasturtiums can bloom among your peonies without disturbing the dormant peony roots in the least.

Fading Oriental Poppies can be supplanted by perennial Babybreath and African Marigolds.

When Delphinium fades, a background of Globe Thistle and Chinese Larkspur in the foreground will fill in the color gap, until the Delphinium comes into its second bloom.

Quite a choice is allowed in interplanting among the deep lying lily bulbs. Forget-Me-Nots, Veronica, Heuchara and any low growing annuals will cover the lily stalks and provide the necessary color. In the shady spots where lilies once bloomed, nothing is lovelier than Ferns. Primulas and Campanula Carpatica.

Half the fun of studying your garden bare spots is the planning of new color and new garden companions from year to year. But remember to work in a little plant food in these spots to provide for the extra drain upon the soil, and your efforts will be rewarded with an abundance of colorful happy flowers.

Mother Home Life Magazine

HOG KILLING BELOW NORMAL

Although the number of hogs slaughtered under federal inspection throughout the country during January was the largest since December, 1934, at 3,427,799 head, indicating that the pork packing industry is recovering from the effects of the drouth and AAA restrictions the total was smallest for a January since 1911, barring a year ago. The January, 1935, total was down to 3,047,533.

For the thirteen months' period, January 1, 1935 to January 1, 1936, the slaughter reached an aggregate total of 29,485,426 hogs, compared with 48,406,057 for the preceding thirteen months.

More cattle and fewer calves were slaughtered in January, this year.

The sheep slaughter at 1,589,735 was the largest for any January since 1932, when 1,678,571 were killed the only larger January total on record. Figures for three years follow:

	January Slaughter.		
	1936.	1935.	1934.
Cattle..	906,189	814,120	831,356
Calves	464,831	476,435	471,222
Hogs .	3,427,799	3,047,533	5,390,940
Sheep.	1,539,735	1,344,727	1,406,646
Total.	6,338,554	5,682,815	8,100,164

*In January, 1935, 163,583 government owned cattle and 35,088 calves were killed for the relief is included in above figures.

FARM PROPERTY DEMAND BETTER, REPORT SHOWS

Pronounced betterment in farm real-estate conditions was manifest in the 7th federal reserve district, comprising Iowa, southern Wisconsin, Michigan, northern Illinois and Indiana, as well as in the United States as a whole, in 1934, and the year just closed has continued the improvement, states the Federal Reserve Bank of Chicago.

"In these years," says the report, "demand for farm land has increased, evident at first in the case of high-grade, well-improved farms and in more recent months extending to less well improved and less fertile land. A considerable portion of the demand for the better farms has emanated from investors paying cash.

"Heightened demand for farm land and removal from the market of much distressed acreage has had its reflection in improved prices.

"In Illinois, Iowa and Indiana the increase in value of the higher grade farm land probably has been as high as 20 per cent from 1933 through 1935, and in Michigan and Wisconsin probably 5 per cent to 8 per cent."

RELIEF OFFICES OPENED

Aid to Be Given 504 Coahoma County Unemployables

CLARKSDALE, MISS., Nov. 29—Offices have been opened in the McWilliams building as headquarters where relief will be administered to some 504 unemployables in Coahoma County, according to officials of the local relief board. Mississippi's emergency relief funds will be used to buy fuel and food for these unemployables.

Mrs. E. W. Still was recently selected to administer relief in Clarksdale and will be in charge of the local office. Assisting Mrs. Still in the distribution of the relief will be Dr. J. N. C. Knight, director of the Coahoma County health unit; T. G. Wilsford, Lula; Harry Hungerford, Jonestown; John T. Chism, Frairs Point; Roy Chapman, Rena Lara.

FARMERS' PRODUCTION CREDIT GROUPS TO MEET THIS WEEK

Members of Co-operative Associations Eligible to Loans; Misssouri and Illinois Dates Set.

Members of the Missouri farmers production credit associations will hold their annual meetings this week at various cities and towns throughout the state, F. W. Niemeyer, president of the Production Credit Corporation of St. Louis, announced yesterday. Meetings of Illinois farmers will be held the first week of February.

The associations are co-operative organizations of farmers who may obtain loans for production of crops and livestock, and for general agricultural purposes. Loans are for a year or less and bear 5 per cent interest.

Missouri association meetings are: Tomorrow, Caruthersville, Jefferson city and St. Joseph; Tuesday, Albany, Rolla, Sikeston and West Plains; Wednesday, Brookfield, Farmington and Ozark; Thursday, Unionville and Warrensburg and Friday, Hannibal. Illinois meetings: Feb. 3, Belleville, Decatur, Kewanee and Monmouth; Feb. 4, Amboy, Bloomington, Harrisburg and Macomb; Feb. 5, Jacksonville, Oregon, and Ottowa; Feb. 6, Charleston, Joliet, Robinson and Woodstock, and Feb. 7, Carlinville, Champaign, Geneva and Vermilion County.

Nurses' Conference

Chicago, March 5—(ANP)—Chicago's Registered Nurses' club is busy preparing for the regional conference scheduled to take place here April 10 and 11 at the Wabash Y. M. C. A. The conference will consist of all graduated nurses in Illinois, Missouri and Indiana.

A FUNNY PROPOSITION

Man comes into into this world without his consent and leaves it against his will. During his stay on earth, his time is spent in one continuous round of contraries and misunderstandings. In his infancy he is an angel; in his boyhood he is a devil; in his manhood he is everything from a lizard up; in his duties he is a damn fool! If he raises a family he is a chump; if he raises a check he is a thief, and then the law raises hell with him; if he is a poor man, he is a poor manager and has no sense; if he is rich, he is dishonest, but considered smart; if he is in politics, he is a grafter and a crook; if he is out of politics, you can't place him, as he is an undesirable citizen; if he goes to church, he is a hypocrite; if he stays away from church, he is a sinner; if he donates to foreign missions, he does it for show; if he doesn't he is stingy and a tight-wad. When he first comes into the world everybody wants to kiss him—before he goes out they all want to kick him; if he dies young, there was a great future before him; if he lives to a ripe old age, he is in the way—only living to save funeral expenses. Life is a funny proposition after all.
